Mr. Speaker, I know of no more effective form of mass education in American history and the American tradition than the manner we used on February 12, 1959. It had the compelling impact of an immediate news event. A Lincoln, a Jefferson, a Hamilton, a Washington celebration draws into a massive cooperative mechanism the Government itself and all its branches. It puts to work the vast and farflung apparatus of all forms of communication media—radio, television, the public prints. It adds to all these the finest and noblest living spirits and organizations in American culture. It is, or can be, a brilliant interlock of public and private enterprise aimed to excite the American heritage, needed so much in these times.

Therefore, Mr. Speaker, permit me to ask unanimous consent to set aside 2 hours of the proceedings of this House on Wednesday, May 18, to commemorate the centennial of Abraham Lincoln's nomination for the Presidency of the United States.

Mr. SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. SCHWENGEL. Mr. Speaker, the implications of the action then taken by the national convention are clear to all of us. An unknown prodigy from the prairies would contend with illustrious statesmen for the highest office in the land. A compromise candidate would be elected by a minority of the people.

But this proposal for suitable observance is not made in any spirit of proprietary pride or party consciousness. On the contrary, it is intended to discover what lessons the canvass of 1860 may impart to all of us, whatever our allegiance, 100 years later, as we approach another critical, another climactic campaign.

Then, as now, decisions were fraught with difficulty and dissension. Then, as now, issues, momentous and portentous, were taut and fragile. Then, as now, passion, prejudice, and panic threatened reason. The two-party system, under which the country had flourished and prospered, could find no accommodation and finally was abandoned. Ancient loyalties were forsaken for strange, transient, and uncomfortable fealties. Anger broke the land and the hearts of its inhabitants. It was a parlous, a reckless time. "The better angels of our nature" had failed us.

Surely, from the perspective of a century we should gain wisdom, perception, and that strong, sturdy sense of steadfast reconciliation. We should confront our problems with keener minds and sounder judgments. We should be guided exclusively by principle and belief, making our choices with the detachment and objectivity which only free men can enjoy. And we should listen, attentively listen, as Mr. Lincoln reminds us:

> It is now 72 years since the first inauguration of a President under our National Constitution. During the period between then and now, 15 different and greatly distinguished citizens have, in succession, administered the executive branch of the Government. They have conducted it through many perils and, on the whole, with great success.

Our new President, whoever he may be, whatever his party, will be a greatly distinguished citizen to whom we shall all wish great success.

Mr. Speaker, on the 18th I shall discuss the importance of the decisions made at that convention and the other political conventions of that year; and I invite all my colleagues to whatever observation they may desire on how their own States influence was felt in shaping the destiny of our Nation.

Mr. Speaker, at the annual meeting of the Lincoln Group of Washington, D.C., last April 28, Mr. Lloyd Dunlap, consultant for the Civil War observance for the Library of Congress and an able, dedicated, and thorough student of Lincoln, gave an excellent paper on Lincoln's nomination in which he captured the atmosphere and spirit of the convention, discussed in some detail the events that led to Lincoln's nomination and related the drama developed there and the program adopted which became so important in shaping the history of our country. Because this may be helpful to those who are planning to share with me the time that the House has so graciously extended for May 18 in planning their own remarks in relation to the importance of this event to their own State and their own political party, I am asking unanimous consent that this fine dissertation by Mr. Dunlap be placed in the RECORD at this point.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

(The matter referred to is as follows:)

A century past there were four national political conventions and one real issue. In that darkening year and in the darker ones to follow, men stood for, or against, several things; but there was no question on what the trouble was really about. Slavery was the problem; and only a few years before, the way some men felt about it had led them to leave old parties and form a new one. These men—radical, conservative, moderate—the Republicans of 1860—now were gathering in Chicago for their second national convention. Only a few weeks before, the way other men, in another city, had felt about the question had split the Democratic Party, and created a situation whereby the next President of the United States would not be the choice of a majority of the voters. In a time charged with conflict and cleavage, men would act in an atmosphere of crusade, compromise and carnival to reach a decision of vast and enduring significance to their Nation and to generations then unborn. The prayer opening the third day, with its reference to the "evil in our midst" and the hope that the action of the delegates will somehow prevail against it and shape the pattern of things to come, has a prophetic ring.

But in Chicago on Saturday, May 12, men did not busy themselves with reflection and cloudy speculations. There was work to be done. A convention and a campaign lay ahead. A morning paper sounded the call: "Come all and put a shoulder to the wheel, for tonight the ball begins to roll and the signal guns of the approaching contest between freedom and slavery will be fired."

These magnificently mixed metaphors were an invitation to the dedication of the wigwam, a crude wooden building hastily erected to house the convention. Here thousands of the partisan and curious paid 25 cents admission to listen to bands, admire the gas lighting, and cheer the oratory of half a dozen orators, including the Reverend John Johns, a delegate from Fort Dodge, Iowa, who had walked 150 miles to reach a railroad to bring him to Chicago.

Described as the largest auditorium in the United States, the Wigwam, 180 by 100 feet, was built on the southeast corner of Lake and Market Streets. Intended as a prototype of other wigwams, large and small, throughoutout the country (at least in certain parts of the country) and modeled after the Crystal Palace in New York, the structure was basically three wooden sides anchored to a brick wall. The delegates were seated in oblique rows, half facing the audience, on a large stage divided by a dais. The secretaries worked immediately in front of the chairman and on the far edge of the platform was space for the press. Facing and below the stage was a series of wide landings sloping upward. Above all was a three-sided gallery. For $7,000 the Republicans had erected, in a remarkably short time, a building which had good lighting, excellent acoustics, wide aisles and exits and, most significant, space for 10,000 people. A new dimension would be added to this convention, the contagious nature of mass enthusiasm.

The raw interior was decorated with bunting, rosettes, evergreens, a gilt eagle, abstractions of Truth and Justice, and portraits and busts of American statesmen.

Although the convention would not begin until Wednesday, by Sunday, three persons who would play a large part in what happened were in Chicago and at work.

In the elegant Richmond House, armed with confidence and apparently vast sums of

money, a New Yorker dispensed champagne and cigars. This was Thurlow Weed, who wanted to nominate William H. Seward. In the Tremont House, equipped with the influence of a great newspaper, another New Yorker gave out predictions and suggestions. This was Horace Greeley, who wanted to nominate anybody but Seward—preferably. Edward Bates, but anybody but Seward. Also in the Tremont House, utilizing the advantages of geography, the unique appeal of his candidate, an understanding of men and politics, and a flexible conscience, a portly judge from Bloomington, Ill., worked arduously to accomplish his mission. This was David Davis, who wanted to nominate Abraham Lincoln. Around Davis, the self-proclaimed and unofficial leader, dedicated to the extent of personally footing the bill and bribing of the proprietor for rooms, was a group of Lincoln's friends and colleagues—Norman B. Judd, Jesse K. DuBois, Leonard Swett, Jesse K. Fell, Ward Hill Lamon, Orville H. Browning, Gustave Koerner, and others. There is no lack of men willing to accept credit for nominating Lincoln.

On Monday, the campaign clubs were parading the decorated streets; a dozen railroads were bringing more thousands to jam the city; there was an abundance of fireworks, cannon, oratory, and occasions for another parade and more noise. For example, the early hours of Tuesday were shattered by the reception given the Pennsylvania delegation; 600 strong, including 2 bands, all traveling in the interests of a protective tariff and Simon Cameron, and through the courtesy of Col. Thomas A. Scott and the Pennsylvania Railroad.

Weed had noted the size of the Wigwam and the New York contingent required 13 cars to transport 1,000 highly vocal, aggressive, confident men, including the heavyweight champion and a remarkable reporter, wise in the ways of conventions. He wrote that the New Yorkers could "Drink as much whisky, swear as loud and long, sing as bad songs, and 'get up and howl' as ferociously as any crowd of Democrats you ever heard or heard of."

But from the small towns and farms of Illinois came the greatest number of visitors. The word had spread; the railroads had cooperated; and thousands of Illinoisans jammed the hotels, slept on billiard tables, cheered for a man they knew, and gaped at the Wigwam and the rival attraction displayed outside, ominous in its connotations. A bowie knife, 7 feet long, weighing 40 pounds, symbolized how far men from Virginia and Wisconsin were growing apart. A sharp clash in Congress had brought a challenge, acceptance, and a choice of knives for weapons.

By 11:30 on Wednesday morning, the ticketholders had been admitted, and this was the scene as the doors were thrown open:

"Three doors about 20 feet wide each, were simultaneously thrown open, and three torrents of men roared in, rushing headlong for front positions. The standing room, holding 4,500 persons, was packed in about 5 minutes. The gallery, where only gentlemen accompanied by ladies were admitted, and which contains nearly 3,000 persons, was already full. * * * Ladies to accompany gentlemen were in demand—schoolgirls were found on the street, and given a quarter each to see a gentleman safe in. Other girls * * * were much sought after as escorts. One of them being * * * offered half a dollar * * * excused herself by saying she had already taken two men in at each of the three doors."

A woman carrying a basket of washing and a souvenir-selling Indian squaw were among other escorts noted.

Edwin D. Morgan, of New York, national chairman, opened the convention at 12:10. David Wilmot, of Pennsylvania, was made temporary chairman; and after the customary speech, the routine of organization began, with many of the delegates noticeably reluctant to begin work. By 2 o'clock, when the convention adjourned, little had been done, largely because the Chicago Board of Trade had invited the delegates to an excursion on Lake Michigan, thereby setting off a series of resolutions, cheers, self-righteous reminders of business to be done, and parliamentary tangles which led nowhere.

The delegates reconvened at 5:15 with George A. Ashmun, of Massachusetts, as permanent chairman. A select committee reported that the board of trade had informed them that the steamer would leave in an hour and suggested that the convention could meet on deck and use the cabins as caucus rooms. Another lake became involved when Judd presented Ashmun with a gavel made from Commodore Perry's flagship and suggested that the convention motto be: "Don't give up the ship." In November they could further quote by wiring Washington, "We have met the enemy, and they are ours."

Ashmun's acceptance speech contained the required reference to the harmony among the delegates. The cynical observer commented that "his hearing is deplorably impaired." Certainly he could not have been among the Seward men where the mildest description of Horace Greeley was "damned old ass."

A committee on resolutions was appointed and the convention adjourned until 10 o'clock Thursday. The important events of Wednesday obviously did not take place before 10,000 people.

On Thursday morning, the Seward backers marched in confident splendor behind a band playing "Oh, Isn't He a Darling." Opposite the Tremont House three cheers for Seward were given for the benefit of Horace Greeley and the adherents of the man who was emerging as their chief rival, Abraham Lincoln.

In the Wigwam the Seward men filed into the favored positions they had occupied the day before. Gilmore's band from Boston entertained the packed house, before Ashmun opened business by clearing the stage and finding room for the delegates.

The first clash of the convention was a successful test of Seward strength. The majority report from the rules committee called for a majority of all the States to nominate; the Seward bloc insisted that the figure should be a majority of those actually present. Knowing their early strength and anxious for a quick decision, the Seward men succeeded in sending the report back to committee and getting their figure, 233, established as the total necessary for nomination.

The credentials report brought heated words. A Texas delegation, with a distinct Michigan and Seward flavor, was challenged. This raised the question of the validity of the delegations from Virginia, Kentucky, Maryland, and the District of Columbia. Wilmot charged that no Republican organization existed in these States. The Border State men replied that they were the ones who had really suffered for the cause. Further, they were not attending the convention as Republicans, not under the banner of the People's Party as was a part of Pennsylvania. Charles Armour of Maryland pronounced dramatically: "We are unpurchased, and unpurchaseable. And we tell Pennsylvania to put that in her pipe and smoke it." This question was also referred to committee, and again New York prevailed when all the delegations were admitted, thereby making it possible for Virginia to cast more votes for Lincoln's nomination than did Illinois.

The afternoon session began at 3:15. Again the Wigwam was jammed and outside were packed 20,000 more who were placated by speakers sent out from the hall.

The official record is at times a most confusing document. Resolutions were put and then lost sight of, at times no one was certain of the question, and occasionally the reporter admitted frankly that he could not hear what had been said. There are also enough instances of interruptions, hootings, and laughter, and rudeness to make it obvious that the convention on occasion must have been nearly chaotic.

The confusion rose to a crescendo on the afternoon of May 17. First, there was the question of the platform. Joshua Giddings of Ohio rose to speak. David K. Cartter, also of Ohio (a hopelessly divided delegation), insisted on shutting off discussion, but no motion to adopt the platform had yet been made nor had copies of the resolutions been distributed. The crowd began to shout for Giddings; aids began handing out copies. In the disorder Cartter was voted down; questioned the votes; and was voted down again.

When Giddings could be heard he asked only that the second section of the platform be amended to include the words of the Declaration of Independence. In the debate, Cartter rudely referred to "this amendment and the gas expended upon it," and Eli Thayer remarked that he believed in the Ten Commandments but he did not necessarily want them in the platform. The amendment was voted down. The old man rose and said: "I will detain this convention no longer. I offer this because our party was formed upon it. It grew upon it. It has existed upon it, and when you leave out this truth, you leave out the party." Then, the observer continued, "the old man quickly rose, and made his way slowly toward the door. A dozen delegates begged him not to go. But he considered everything lost, even honor. * * * And now the Declaration of Independence had been voted down. He must go." But at the New York delegation Giddings was stopped and "comforted by assurances that the Declaration would be tried again."

George W. Curtis and William M. Evarts, New Yorkers, made eloquent appeals. Curtis, moving a resolution substantially the same as Giddings', asked the convention "Whether they are prepared to go * * * before the country as voting down the words of the Declaration of Independence." Frank Blair of Missouri made a point of order to reverse a decision of the Chair, the amendment was put and carried. Giddings then, according to one recollection, threw his arm around Curtis and said, "Thank God, my boy, you have saved the Republican Party."

By holding his coattails, Gustave Koerner prevented John A. Andrew of Massachusetts from rising and launching a debate on another section, and by 6 o'clock the platform was passed. The convention entered into a "transport of enthusiasm." "A herd of buffaloes or lions could not have made a more tremendous roaring."

Goodrich of Minnesota, a Seward State, moved to adjourn, but hearing cries for "Ballot! Ballot!" he quickly withdrew the motion and moved instead that "we now proceed to ballot for a candidate for the Presidency." Before there was a vote the Chair announced that the "tally sheets had not been prepared, and that it would subject the clerks to great inconvenience to proceed to a ballot at that time." Another source states that the announcement was that the sheets "would be ready in a few minutes." In any event, before Goodrich's motion was acted upon, Benjamin Eggleston of Ohio moved to adjourn. Another Buckeye, R. M. Corwine, moved to ballot; and the record breaks down to the simple statement: "Great disorder and cries of Ballot, Ballot." Then Cartter, accurately described as being "more frequent than eloquent" in the convention, got the floor and said: "I call for a division of ayes and nays, to see if the gentlemen want to go without their

supper." The record covers the events of the next few minutes with the words: "On motion, the convention adjourned." There is no record of the vote that ended what might have been Seward's day.

By 8 o'clock Friday morning the streets were full; and soon after 10, when the hall was opened, the Wigwam was again jammed. The mob outside would depend for news upon an observer stationed at the skylight and a chain of men to relay the information to the edge of the roof where it would be shouted to the crowd below.

In the audience, however, there was a difference, significant and of portent. On Wednesday and Thursday the Seward men had marched to the Wigwam and taken a favorable position inside. On this morning of decision, however, the march ended abruptly for their seats were taken, and there was nothing that many of them could do but join the throng outside. There is a recurrent story, supported by a host of recollections, that on Thursday night one, or some, of the Lincoln managers, Ward Hill Lamon or Jesse K. Fell, obtained 1,000 extra tickets, had signatures forged, and distributed them complete with instructions, and two cheerleaders.

An observer could also have noted the placement of the State delegations, an arrangement in the hands of Judd and Joseph Medill of the Chicago Tribune. New York was at the far end of the platform, surrounded only by delegations solidly for Seward. The crucial Pennsylvania delegation was seated at the opposite end of the stage, flanked by Illinois. If enthusiasm is contagious, let it infect the right parties, was apparently the thought.

When the convention opened, five men had more than token or complimentary support. In addition to Seward, they were Lincoln, Simon Cameron, S. P. Chase, and Edward Bates. By Wednesday night some observers could recognize a rapidly rising tide for Lincoln; others saw it but still gave him little chance; and late Thursday night, Horace Greeley was resigned to the inevitable and wired his paper that nothing could prevent Seward's nomination.

The balloting began at noon and what followed has been described as something requiring "rather the talents of a hog caller than those of party delegates. It was a tournament of noise, a colossal contest of yelling between the followers of Lincoln and Seward." William Evarts, in the short statement then customary, nominated Seward, and the applause was only "enthusiastic." When Judd named Lincoln, the "response was prodigious, rising and raging far beyond the Seward shriek." One supporter shouted, "Abe Lincoln has it by the sound now, let us ballot." The usually staid Stephen T. Logan reportedly announced: "Mr. President, in order, or out of order, I propose this convention and audience give three cheers for the man who is evidently their nominee." The Seward men did not accept the challenge until after their man had been seconded by Michigan and Wisconsin. Murat Halstead described the effect:

> "As all the fiends from heaven that fell
> Had pealed the banner cry of hell.

"Hundreds of persons stopped their ears in pain. The shouting was absolutely frantic, shrill and wild. No Comanches, no panthers ever struck a higher note, or gave screams with more infernal intensity * * * nothing was to be seen * * * but * * * a black mighty swarm of hats flying with the velocity of hornets over a mass of human heads, most of the mouths of which were open. * * * The wonder of the thing was, that the Seward outside pressure should, so far from New York, be so powerful."

"Now the Lincoln men had to try it again, and when Delano of Ohio seconded the nomination, the uproar was beyond description. Imagine all the hogs ever slaughtered in Cincinnati giving their death squeals together, a score of big steam whistles going * * * and you conceive something of the same nature. I thought the Seward yell could not be surpassed; but the Lincoln boys were clearly ahead, and feeling their victory * * * took deep breaths all round, and gave a concentrated shriek that was positively awful, and accompanied it with stamping that made every plank and pillar quiver.

At the close of the first ballot Seward had 173½ votes, 70 of them coming when Evarts had mounted his chair, waited dramatically for order, and cast the solid New York vote for Seward. Lincoln was far ahead of the rest with 102 votes, which was about where his managers wanted him to be. The plan was to stop Seward on the early ballots and by an impressive, steadily increasing show of strength, aline the opposition behind Lincoln. The votes cast for Lincoln, Cameron, Bates, and Chase could easily nominate any one of the four. The trick was to unite the strength behind one man. To that end Davis and his coworkers had labored with persuasion, fact, histrionics, and, almost certainly, with unauthorized promises in the pivotal vineyards of the Pennsylvania, Indiana, and New Jersey delegations. The argument they repeated was simple, practical, and double-barreled. Seward could not carry these States, and probably not the Nation. Certainly with him State tickets would lose. Their own candidates could do better locally, but not so well as Lincoln nationally. It was the second choice strategy spelled out by Lincoln in March.

In the tension preceding the second ballot, "the partisans of the various candidates were strung up to such a pitch * * * as to render them incapable of patience, and the cries of 'Call the roll' were fairly hissed through their teeth." When the complimentary votes of the first ballot began to switch to Lincoln, the New Yorkers started as if an Orsini bomb had exploded. From New Hampshire came 2; from Vermont the entire block of 10. Then Pennsylvania, which had previously given 47½ votes to Cameron and 4 to Lincoln, announced that her delegation now voted 1 for Cameron and 48 for Lincoln. Weed paled as he heard the change in the vote of Pennsylvania, startling the vast auditorium like a clap of thunder.

The vote at the end of the second ballot stood: Seward, 184½; Lincoln, 181. Far behind were Bates with 35 and Chase with 42½. Lincoln had gained 79 votes, Seward only 11, and the trend was plain.

Hundreds of informal tally sheets recorded the inexorable swing to Lincoln on the third ballot. Conceding defeat, Weed sent an emissary to Greeley with a desperate proposal—hold on for Bates, and if the third ballot produced no nomination, the Seward men would rally behind the Missourian. But while they spoke Seward backers were deserting in droves.

It was now a question of stopping Lincoln, and when his total stood only 1½ votes short of the nominating figure of 233, it was obvious what would soon happen. The ubiquitous Halstead described the next few minutes:

"I looked up to see who would be the man to give the decisive vote. * * * In about 10 ticks of a watch Cartter, of Ohio, was up * * * and everybody who understood the matter at all, knew what he was about to do. He is a large man with * * * an impediment in his speech * * * and * * * had been quite noisy during the * * * convention but had never commanded, when mounting his chair, such attention as now. He said, 'I rise (eh), Mr. Chairman (eh), to announce the change of four votes of Ohio from Mr. Chase to Mr. Lincoln.' The deed was done. There was a moment's silence. The nerves of the thousands, which through the hours of suspense had been subjected to terrible tension, relaxed, and as deep breaths of relief were taken, there was a noise in the wigwam like the rush of a great wind, in the van of a storm and in another breath the storm was there. There were thousands cheering with the energy of insanity.

The observer on the roof shouted, "Old Abe. Hallelujah" and the salute was fired, picked up by the whistles of the steamers on the lake, and made completely inaudible by the roar of voices. Only by the puffs of smoke drifting by the open doors did those inside know that a cannon was being fired. The delegates were wildly waving State placards torn from standards, except in the New York delegation where Evarts was saying ruefully, "Well, Curtis, at least we saved the Declaration of Independence."

When he could be heard, Cartter announced that Ohio's vote was now unanimous for Lincoln, State after State clamored for recognition to correct or change votes to Lincoln. During this procedure, a huge picture of Lincoln was brought in "and held up before the surging and screaming masses." When the roll was completed it was announced that Lincoln had 364 of the convention's 466 votes.

Evarts graciously and eloquently moved that the nomination be made unanimous, but the official record does not show that this motion was ever voted. Apparently it was lost in the excitement of seconding speeches, motions for adjournment, moves for balloting for Vice President, and comments from Judd and Browning.

What happened in Chicago between noon and 1:30 on Friday, May 18, was not, in a Lincoln phrase, "the result of accident." Numerous factors, of varying degrees of complexity, were involved. These combined to create a situation extremely favorable for Lincoln's nomination. Seward was to radical; Bates was too conservative; Chase and Cameron were opposed even within their States of Ohio and Pennsylvania. Only Lincoln had availability. Only Lincoln gave promise of winning electoral votes without losing control of State legislatures where U.S. Senators were named. Add to this, Lincoln's almost preternatural political talents, his record, his identification with free labor, the site of the convention, and the dedicated, practical, and amoral labors of Davis and others in Chicago, and a case could be made for the statement that it would have been more surprising had the convention named anybody else.

But in Chicago men knew only that something had changed, that something intangible and important had been established, that a corner had been turned and things would never be quite the same again.

In the Tremont House a man shouted: " 'Talk of your money and bring on your bullies with you. The immortal principles of the everlasting people are with Abe Lincoln. * * * Abe Lincoln has no money and no bullies, but he has the people, by God. * * * Go to the devil—what do I want to eat for, Abe Lincoln is nominated * * * and I'm going to live on air—the air of liberty.' And this was one of thousands," the reporter concluded.

Along the Fort Wayne and Chicago heading east that night, "At every station * * * until after 2 o'clock, there were tar barrels burning, drums beating, boys carrying rails; and guns, great and small, banging away. The weary passengers were allowed no rest, but plagued by the thundering jar of cannon, the clamor of drums, the glare of bonfires and the whooping of the boys, who were delighted with the idea of a candidate for the Presidency, who 30 years ago split rails on the Sangamon River—classic stream now and forevermore—and whose neighbors named him 'honest.' "

THE PROBLEM OF DETECTING NUCLEAR UNDERGROUND TEST EXPLOSIONS

The SPEAKER. Under previous order of the House, the gentleman from California [Mr. HOLIFIELD] is recognized.

Mr. HOLIFIELD. Mr. Speaker, for 18 months, representatives from the United States, Great Britain, and the U.S.S.R. have been negotiating at Geneva, Switzerland. They have been exploring the possibility of a treaty agreement which would prohibit future testing of nuclear weapons.

Because of the present technical difficulty of conducting tests in far off space, and the advanced capability for detecting tests which occur in near space and the atmospheric area, the main discussion has been on the problem of detecting underground tests.

The Joint Committee on Atomic Energy deemed it to be in the public interest to explore the technical aspects of this problem. Representative MELVIN PRICE, chairman of the Subcommittee on Research and Development, and Representative CHET HOLIFIELD, chairman of the Subcommittee on Radiation, conducted joint hearings from April 19 to 22, 1960.

The purpose of the hearings was to place all known technical facts regarding nuclear test detection and identification before the Congress and the public. We specifically excluded from testimony the policy of whether a test cessation was desirable or undesirable. Our mission was to collate and summarize pertinent testimony from experts in the fields of seismology, geography, electromagnetics, and weapons effects, as related to detection and verification through inspection techniques.

It was appropriate to specialize on the phenomena of underground tests, as this poses the greatest and most urgent problem area at this time. Of additional concern is the problem of detecting nuclear tests in high altitudes and in space, which the hearings also covered. A great deal of research and development is likewise needed in these areas before we will have any assurance that a control system will work.

We were careful to select the witnesses who had been most active and expert in conducting the underground nuclear tests in Nevada and the chemical underground tests in Louisiana. We also selected a balanced group of scientists with opposing views as to the desirability of conducting further tests, so we would avoid the charge of bias. For instance, it is well known that Dr. Edward Teller, Dr. Harold Brown, and others favor continued testing. It is also well known that Dr. Hans Bethe, Dr. Richard E. Roberts, Dr. Jay Orear, and Dr. Harold Urey are outspoken opponents of further nuclear testing.

All of these witnesses and other expert witnesses from the commercial world of oil exploration, mining, and electrodynamics, were allowed complete freedom of expression during the hearings. They were allowed to challenge opposition testimony and invited to submit additional technical papers.

It should be understood that the Joint Committee on Atomic Energy is not charged with making or reviewing treaties in the nuclear weapons testing field. The executive branch of Government and another committee of Congress has this responsibility.

The Joint Committee on Atomic Energy, however, is peculiarly fitted by experience and staff to develop and make known to departments of Government, the Congress, and the people the scientific facts related to atomic energy. The Joint Committee has carried out this type of function in various hearings during its existence. Extensive hearings on the effects of fallout from nuclear-weapons tests, the biological and environmental effects of a nuclear war on earth's population and environment, and the problem of radioactive waste disposal are instances of studies which are used as valuable textbooks in our educational, industrial, and scientific fields.

We realize collections of facts are, or at least, should be, used for the formation of policy. It is true, however, unless facts are known, the formulation of policy in the political and diplomatic fields may lack the basis for understanding or justification.

It is understandable that interpretation of the facts may vary the effect of newly discovered facts may not be welcome to negotiators who have obligated themselves to a preconceived position or objective.

We note the acceptance by the United States and the United Kingdom negotiators of additional data developed by the Hardtack II series of tests in the fall of 1959 and the rejection of this data by the negotiators of the U.S.S.R. Scientific facts, nevertheless, are cold and dispassionate realities once they are established. They cannot be eliminated by refusing to recognize them. New scientific facts do not always lend themselves to the support of political or diplomatic positions, however desirable those positions may be to their advocates.

The negotiations on nuclear-tests cessation have dragged along for 18 months in Geneva. The debate has been on a mixture of scientific and political problems that seem to be impossible of untangling. The scientific part of the problems have been based mainly on disagreement as to the capabilities for detecting and identifying hidden underground nuclear tests.

The problems of inspection of suspicious events, the number of allowable inspection trips, procedures, drilling operations, logistical problems of supply and communications, and so forth, are, of course, most difficult. These problems have never been resolved, and in most instances they have been ignored.

In view of the lack of understanding and the scarcity of reliable information in this field, the Joint Committee on Atomic Energy believed it was in the public interest to explore the subject matter. We reasoned it was important to collect the information from reliable sources and publish it so we could properly relate it to our diplomatic objections.

What were the most important facts established and in general agreement by and between our witnesses?

First. It was the unanimous opinion of all witnesses that a vigorous and sustained program of research and development is necessary to improve our instrumentation and our techniques of detection, identification, and inspection of nuclear explosion tests. The witnesses agreed that the Berkner panel report of over 1 year ago to the President had not been properly implemented in this regard.

The so-called Berkner Panel, consisting of a number of eminent American scientists appointed in December 1958, by Dr. Killian, the President's special assistant for science and technology, recognized the original position taken by our scientists in 1958 on test detection capability was based on inadequate data and was wrong by at least a factor of four. They recommended an aggressive program or research to develop better detection devices and better techniques.

Our witnesses testified these recommendations had not been carried out by the President.

In March 1959, the Berkner Panel recommended a research and development program for 2 years which would cost $52.8 million. Testimony showed that over 1 year later, only $8.5 million had been allocated, and of this, only $5 million obligated.

Testimony also reflected that although $60 million had been requested for the research and development program by those in the Defense Department having responsibility for its success, these urgently needed funds were not included as a line item in the Department of Defense fiscal year 1961 budget. To be available, the money would have to be taken from other projects or sources.

Our committee brought these facts out in our hearings last month. We made available to the Executive Department—through the State Department, the Defense Department, and the Atomic Energy Commission—copies of the hearing transcripts and, as early as May 2, 1960, preliminary copies of our summary analysis of the hearings. We notified them, on May 5 and 6, 1960, our summary would be made available to the press on Saturday, May 7, for Monday, May 9, release.

On May 7, 1960, the President hastened to announce that approximately $66 million would be required in fiscal year 1961 for implementing the Berkner Panel recommendations for improving our detection capability. We approve this recognition on his part and can only speculate why he did not recognize it as early as mid-1959, when it was brought out by the panel.

The delay is inexcusable in view of the known deficit of detection capability, and in view of its importance in connection with the nuclear test cessation negotiations.

I will also be interested in seeing if, in addition to the delayed recognition, the President will now direct or authorize the Defense Department to request any of these funds as a line item supplemen-

tal appropriation, or must the money come from other also needed projects.

Second. The testimony of both Dr. Hans Bethe and Dr. Edward Teller, established the fact that the cowboy series of chemical explosion tests in Louisiana had proven the "decoupling" theory. This new technique in reducing the telltale seismic vibrations of an underground explosion by factors up to 300, was admitted to be a fact by all the scientists present. This is accomplished by exploding a chemical or nuclear device in an underground cavity rather than in close proximity to surrounding earth.

This is a most important scientific fact. It casts strong doubt on the theory of presently detecting tests of 20 to 30 kilotons. It destroys, for the present, the basis of our test cessation proposal if we relate it to our capability of detecting fully or partially decoupled 20-kiloton tests by seismic recordings of 4.75 magnitude or higher.

If the Soviets want to test tactical weapons of 1 to 10 kilotons, they can do so with impunity, without muffling under the Geneva control system as presently planned. Even with the recommended improvements in the Geneva system, it is going to be hard to identify unmuffled shots below 5 kilotons.

But with decoupling or muffling, it makes the problem of detection and identification 10 to 300 times more difficult. With full decoupling—muffling—a 10-kiloton device can be made to register about 30 tons. Even with partial decoupling a 10-kiloton shot can be made to register about 300 tons. This could be accomplished in a hole of approximately 115 feet in diameter.

There was testimony that about 250 underground cavities have been constructed in the United States alone for storage of petroleum products ranging in size up to about 218 feet in diameter—200,000 cubic yards. Larger cavities have been constructed for brine production in salt domes. Since the U.S.S.R. has salt domes and oilfields, it is prudent to assume similar cavities exist in the U.S.S.R., capable of being used for decoupling of nuclear underground tests.

The seismic recordings resulting from these low energy explosion effects change completely the distances needed between detection stations and they raise tremendously the number of unidentified seismic events.

We have been discussing with the Soviets the location of 21 detection stations in the U.S.S.R. They have not agreed to this number. Dr. Bethe testified instead of just 21 stations, we would now need 600 additional unmanned stations because of the new decoupling technique—if we wanted to detect a 20 kiloton, fully decoupled, explosion.

Dr. Bethe later changed the figure, by letter to the Joint Committee on Atomic Energy, to an estimate of 200. His letter will be printed in full in the hearings. A notation of his new estimate number was reported in our summary-analysis.

Dr. Richard E. Roberts of Carnegie Institute testified he believed at least 125 stations would be needed. In either event, the change in numbers of detecting stations in the U.S.S.R. is substantial and must become a serious fact for diplomatic consideration.

Third. The scientific fact was established without contradiction that a whole new field of tactical nuclear weapons could be developed and proven feasible by nuclear testing up to a size of 20 kilotons. The committee did not consider one way or the other the desirability of developing additional low-yield nuclear tactical weapons. We were only concerned with the scientific facts relating to the problems of detecting and identifying tests of 20 kilotons or less and their technical significance in weaponry.

Fourth. The cost of installing a control system and developing improved seismic and other detection devices to meet the problem of cheating, was not within even a near area of agreement.

The estimates ranged from around a billion dollars to 5 billion or more dollars. The time period for such development ranged from 2 to 5 years, based on program priority and dollar support of the effort.

It was also pointed out that the art of concealing tests—of cheating—offered opportunities for improvement based on effort and dollars expended in that direction by a potential violator.

In conclusion, let me assure you these facts are not to my personal liking.

I cannot sweep them under the rug because of my hopes for a genuine program of disarmament and my fervent desire for peace—a real peace and not a "peace in our time," arrived at because of wishful thinking, ignorance of existing facts, or political expediency.

Mr. Speaker, under unanimous consent, I include the summary-analysis of our hearings herewith as part of my remarks:

SUMMARY-ANALYSIS OF PUBLIC HEARINGS ON TECHNICAL ASPECTS OF DETECTION AND INSPECTION CONTROLS OF A NUCLEAR WEAPONS TEST BAN

CHAPTER I. INTRODUCTION

The possibilities and problems of detection and identification of nuclear test explosions, as a part of a test ban control system discussed at Geneva for the past 18 months, have become questions of great national and international importance. The summit meetings beginning May 16, 1960, and followup discussions at Geneva and elsewhere in succeeding weeks and months, will undoubtedly consider these matters extensively.

A large part of the basis of a control system to support a test ban treaty or international agreement depends on technical data of a rather complicated nature. Such technical information can and should have a profound effect on the establishment of an adequate control system. For example, the report of the original Conference of Experts at Geneva in July–August 1958, on which the test ban negotiations are based, has been found to be highly dependent upon data derived from the single U.S. "Rainier" underground test shot in September 1957 which subsequent tests have proved to be inadequate.

In order to clarify the technical basis of a test ban control system, the Joint Congressional Committee on Atomic Energy, through its Special Subcommittee on Radiation and Subcommittee on Research and Development, held 4 days of public hearings on April 19, 20, 21, and 22, 1960. It was intended that the hearings would help dispel many of the confusing reports and conflicting statements as to technical problems and possibilities which may or may not exist as to means of detection and identification of nuclear tests.

The hearings covered the technical aspects of nuclear test detection and control, including the basis of the original proposed Geneva control system of 180 stations; analysis of the basis for improvement of the Geneva system under present knowledge; consideration of means of concealment and muffling of tests; discussion of basis of "on-site" inspections; consideration of detection and identification of nuclear tests in outer space; discussion of technical significance of further weapons development through clandestine tests and review of research and development programs aimed at improving capabilities for detection and identification of nuclear tests.

The subcommittee made every effort to emphasize the technical aspects of the test ban system, and to avoid discussions involving general policy, political, and philosophical aspects of disarmament and a test ban. Naturally, in the discussion of control systems questions of policy inevitably arose. However, insofar as possible, the discussion was confined to the technical aspects of such questions.

In accordance with past practice in the fallout hearings, the subcommittees selected a representative group of the leading scientists and technical experts in this field. Each witness was selected on the basis of his personal competence and his degree of knowledge and experience in the individual topics on which he testified. Many of the witnesses were members of or consultants to the technical delegations to the conferences and panels discussed in these hearings. Others were selected for their skills and experience in the field application of the techniques discussed throughout the hearings. A list of all witnesses is attached as appendix I. A detailed biography of each witness is included in the print of the complete hearings.

The Joint Committee in its preparation for, and conduct of, the hearings received the cooperation of the Atomic Energy Commission, the Department of Defense, and particularly the Air Force Technical Applications Center, and various individual scientists and scientific organizations of widely differing views.

One of the highlights of the series of hearings was a panel discussion on the entire question of the feasibility and capability of test ban control systems. The panel members were a selected group from the scientific community whom the committee felt represented the most complete spectrum of opinion on these vital questions. It was considered by the committee that the bringing together of such a group would tend to pinpoint the major conflicts of opinion which exist today concerning the problem of providing an adequate control system. The panel consisted of the following scientists and engineers:

Dr. Roland Beers, seismic consultant, Troy, N.Y.

Dr. Hans Bethe, Physics Department, Cornell University, Ithaca, N.Y.

Dr. Harold Brown, Lawrence Radiation Laboratory, Livermore, Calif.

Dr. Dean S. Carder, Chief Seismologist, U.S. Coast and Geodetic Survey, Washington, D.C.

Dr. Alvin C. Graves, Los Alamos Scientific Laboratory, Los Alamos, N. Mex.

Dr. Richard Latter, Rand Corp., Santa Monica, Calif.

Dr. Jack E. Oliver, Lamont Geological Observatory, Columbia University, New York, N.Y.

Dr. Jay Orear, Physics Department, Cornell University, Ithaca, N.Y.

Dr. Richard E. Roberts, Carnegie Institution, Washington, D.C.

Dr. Carl F. Romney, Headquarters, USAF, Air Force Technical Applications Center, Washington, D.C.

Dr. Edward Teller, Lawrence Radiation Laboratory, Livermore, Calif.

Dr. Harold Urey, University of California, Scripps Institute of Oceanography, La Jolla, Calif.

In order for the layman to understand the technical aspects of a control system, it is necessary that certain technical terms and concepts be defined in layman's language. To assist the layman a number of technical terms and concepts have been defined and appear in appendix II. To further assist in reviewing the summary-analysis certain key definitions and concepts will be discussed below.

The nub of the problem of detection and identification of underground nuclear tests is, first, to detect the event on a seismograph; second, to distinguish the difference in the recorded signature of a nuclear event and the recorded signature of a natural earthquake. The following definitions may prove helpful in a consideration of this problem:

1. Yields of nuclear weapons

(a) Kiloton: Nuclear explosive energy release equivalent to 1,000 tons of the chemical high explosive, TNT. The nuclear bomb detonated at Hiroshima, Japan, in World War II was the equivalent in size to 20 kilotons of TNT.

(b) Megaton: Nuclear explosive energy release equivalent to 1 million tons of the chemical high explosive, TNT.

(c) Low yield weapons: Those nuclear weapons ranging in yields of approximately 20 kilotons and below. This class is often referred to as "tactical weapons."

(d) High yield weapons: Those nuclear weapons ranging in yields of approximately 50 kilotons and more, to include megaton yields. This class is often referred to as "strategic weapons."

(e) Fractional kiloton weapons: The term applied to those "tactical weapons" of a yield which is a fractional part of 1 kiloton. This class of weapons is rated in yield ranges of tons rather than kilotons.

2. Detection instruments

(a) Seismograph: An instrument for detecting and recording small vibrations in the earth's crust. The detector portion usually consists of a mass suspended from a frame either by springs or as a pendulum, in such a manner as to tend to remain in one position while the earth-mounted frame moves with the earth. The relative motion of the frame and mass is usually magnified and recorded as a seismic disturbance either natural or manmade. Various types of seismographs exist, including seismographs for long periods, intermediate periods, short periods, and high frequency.

(b) Magnetometer: An instrument for measuring the natural magnetic field of the earth to discover any distortion in this field by manmade ferrous articles, equipment, pipes, etc.

(c) Electromagnetic induction detectors: An instrument which radiates a low frequency electromagnetic field and is sensitive to any distortion in this field due to the presence of conducting material such as iron or copper pipe, wire, landmines, etc.

3. Types of rock or earth considered in these hearings in which nuclear tests or earthquakes may take place

(a) Nevada tuff: A weakly cemented, rather crumbly rock, formed from volcanic ash. The underground nuclear explosions of Hardtack II, as well as the Rainier explosion, occurred in this rock. Experiments indicate the explosions in this rock produce stronger seismic signals than are produced by the same size explosions in salt or granite.

(b) Granite: A natural igneous rock formation of visibly crystalline texture. It is very hard and is believed to be more elastic to nuclear detonations than Nevada tuff, resulting in smaller seismic signals.

(c) Salt: A colorless or white crystalline compound, chemically designated as sodium chloride, occurring abundantly in deposits in the earth in solid form. It is similar to granite in relation to nuclear detonations.

(d) Limestone: A rock consisting chiefly of calcium carbonate. It is sometimes formed by chemical precipitation, but chiefly by accumulation of organic remains such as shells and coral.

4. Decoupling (muffling), coupling, and tamping

(a) Decoupling: The process of reducing the size of the seismic signals from an underground explosion by detonation of the explosive in a large hole deep underground.

(b) Coupling: In this report, coupling refers to that fraction of the total energy released in an underground explosion which is transformed into seismic waves in the earth. The greater the coupling of a particular explosion the larger will be the seismic waves and the easier it will be to detect by seismographs at some distance from the explosion.

(c) Rainier coupling: The Rainier shot (1.7 kilotons) conducted 900 feet underground in intimate contact with Nevada tuff on September 19, 1957, was estimated to have transmitted about 2 percent of its energy into seismic waves. This observed degree of energy transformation from the explosion to seismic waves in the earth (coupling) has been taken as a standard of reference for subsequent calculations of seismic signals generated by underground nuclear explosions.

(d) Tamped shot: An underground explosion detonated in close contact with the surrounding earth or rock so as to transmit to the earth or rock the largest possible fraction of its energy.

It was apparent to the subcommittees that there is a wide divergence in the degree of knowledge concerning test control systems. Moreover, much of the technical data concerning test control systems is drawn from purely theoretical calculations, while some have an experimental basis. Many of the "practical" aspects involving application of theoretical data have yet to be investigated on an extensive basis.

However, the hearings of the subcommittees did serve to narrow the differences of opinion as to certain scientific facts and judgments. Specifically, there was general agreement as to the following:

1. The Geneva control system of 180 stations will require augmentation and improvement to restore the capability for detection and identification of underground seismic events to the value of 5 kilotons estimated by the 1958 Conference of Experts (hereinafter Experts).

2. It is possible to increase the difficulty of detection and identification of underground seismic events by decoupling nuclear explosions by a factor of up to 300.

3. To establish a capability for the Geneva control system to detect and identify underground seismic events of yield equivalent to that of a 20 kiloton fully decoupled explosion, it will be necessary to increase greatly the number of stations and to improve the instruments and techniques of seismic detection.

4. A vigorous and sustained program of research and development is necessary to improve our instruments and our techniques of detection, identification, and inspection of underground nuclear explosion tests.

5. An increase in the number of stations in the Geneva control system, in order to lower the threshold of underground seismic events which it can detect and identify, will result in a considerable increase in the number of unidentified events which may require inspection.

Certain differences as to scientific facts and judgments were also brought out. These included:

1. The degree and practicality of decoupling by means of large cavities;

2. The extent and practicality of further improvements in detection networks and devices;

3. The significance of further weapons development through clandestine tests.

The subcommittees were also impressed by the importance of the time factor in relation to nuclear test cessation. The United States has not tested any nuclear weapons since its Hardtack II series in the fall of 1958. It appears from the testimony that at least for the next several years it will not be possible to identify underground events whose seismic signals record the equivalent of a nonmuffled nuclear explosion of 20 kilotons or less, although they may be detected. Further, it appears that for this same time period it will not be possible to detect muffled tests of 100 kilotons or more set off deep underground in large cavities. Therefore, it seems that for the next several years and possibly thereafter there could be a race between improved means of detection and identification as against improved means of concealing and muffling nuclear tests.

CHAPTER II. SUMMARY

The experts' system

The system of 180 control posts recommended by the conference of experts, August 1958[1] (hereafter referred to as the experts) was designed primarily with the detection and identification of nuclear explosions underground, underwater, and in the atmosphere up to altitudes of about 30 miles. The conference concluded that by the methods of acoustic, seismic and electromagnetic detection and nuclear debris sampling, supplemented in some cases by onsite inspection, there would be a fairly high probability of detecting and identifying nuclear explosions of 1 kiloton or more in the atmosphere up to altitudes of 30 miles. It was recognized that there were large areas over the oceans, particularly in the Southern Hemisphere, where the detection capability of the control system would be somewhat degraded as a result of the large distances between control posts.

For underwater explosions deep in open oceans the experts concluded that by means of the hydroacoustic, the seismic, and the nuclear debris-water sampling methods, nuclear explosions of 1 kiloton or more could be detected and identified with a fairly high probability.

The experts considered that the problem of detecting and identifying underground explosions is one of the most difficult, and that to a large extent it determines the characteristics of the network of control posts. They concluded that, by the seismic method alone, underground explosions within the continental areas of the world could be detected and located down to yields in the 1 kiloton to 5 kiloton range if the 180 control posts were established at intervals of 1,000 kilometers (600 miles) in the seismic regions and 1,700 kilometers (1,000 miles) in aseismic regions.

It was realized that the seismic method alone could not identify underground nuclear explosions. It was concluded that the seismic system could, however, identify

[1] Report of the conference of experts, dated Aug. 20, 1958, a copy of which is contained in the printed hearings to study the methods of detecting violations of a possible agreement on the suspension of nuclear tests.

about 90 percent of the earthquakes which produce seismic signals equivalent to an underground explosion of 5 kilotons or more under Rainier coupling conditions and a few percent of the earthquakes between 1 and 5 kilotons equivalent. This would leave annually a thousand or more earthquakes throughout the world between 1 and 5 kilotons equivalent (Rainier coupling) and about 100 earthquakes of 5 kilotons equivalent and above (Rainier coupling) which could be suspected of being nuclear explosions. The Soviets estimated the number above 5 kilotons equivalent as 20. Thus, the experts' report contains the estimate of unidentified events above 5 kilotons equivalent as 20 (U.S.S.R. estimate) to 100 (U.S.-U.K. estimate) on all continents annually. These numbers of unidentified events were subsequently found to be too low as a result of new seismic data from a later series of tests, Hardtack II. (On-site inspection is the best method known for identifying a seismic event which has been detected but not identified as either an earthquake or a nuclear explosion.)

The experts recognized the possibility that for underground nuclear explosions in rock media other than Nevada tuff, coupling to the earth might be larger or smaller by a factor of a few and hence such explosions might be either more or less difficult to detect.

In the case of nuclear explosions at high altitude and in space the 1958 Conference of Experts noted that various methods for detecting such explosions were possible—i.e., gamma rays and neutrons—but made no recommendations for including such techniques in the experts' system.

Detection and identification of underground nuclear tests

As a result of data from the Hardtack II series of underground nuclear explosions conducted by the United States after the 1958 Conference of Experts report, the following conclusions were made by the Berkner Panel: [2]

(a) The estimates of the experts concerning identification of underground nuclear explosions of 5 kilotons or more apply more accurately to yields of 20 kilotons or more.

(b) Estimates of the numbers of earthquakes equivalent to various nuclear yields below 20 kilotons must be revised upward by considerable amounts.

(c) The annual number of unidentified events above 1 kiloton equivalent would exceed that estimated by the experts by about a factor of 10.

In addition, subsequent theoretical predictions increased the estimated degree of decoupling (muffling) possible by firing nuclear devices in large underground cavities from a factor of 2 to 3 as agreed at the experts' conference up to a factor of 300. This was confirmed experimentally by the Cowboy series of small chemical explosions.

The Berkner Panel recommended in March 1959 an intensive program of research and development to improve methods of seismic detection. In addition they recommended the following specific immediate improvements to the Geneva system to restore the original capability of detection and identification estimated by the experts:

(a) Large arrays of up to 100 seismographs at each control post.

(b) Long-period seismographs at every control post.

(3) Seismographs in deep holes (thousands of feet).

(d) Unmanned seismic stations at spacings of 100 to 200 miles between the wider spaced control posts of the experts' system.

Technical working group II, consisting of technical experts from the United States, the United Kingdom, and the U.S.S.R. met in Geneva during November and December 1959 to reexamine the problem of underground tests and to attempt to reach agreement on techniques and instrumentation that might improve detection and identification of seismic events. The U.S. report to the technical working group II set forth worldwide earthquake statistics and criteria for identification.

Based on these statitsics and criteria, preliminary calculations were made of the estimated annual number of continental seismic events in the U.S.S.R. and the number that would not be identifiable by seismic instruments.[3] It was calculated that about 100 naturally occurring seismic events per year occur in the Soviet Union above magnitude 4.75 of which an estimated 70 could not be identified as earthquakes by seismographs of the Geneva system.

A formula was then established for determining a quota of onsite inspections on the basis of 20 percent of all estimated earthquakes above magnitude 4.75 (100). An alternative basis was 30 percent of the estimated unidentified events above magnitude 4.75 (70). The quota obtained by either method was about 20 onsite inspections to be permitted annually in the Soviet Union and was contained in the United States February 11, 1960, proposal at Geneva.

During the hearings Dr. Richard Latter of the Rand Corp. presented for the first time a report evaluating the expected performance of the Geneva system in the U.S.S.R. This report using less rigorous criteria for identification of earthquakes, and applying these criteria only to events within 600 miles of each control post, where seismic data are more reliable, stated that the annual number of unidentified events in the Soviet Union would be 53.

This report covered the effect of increasing the number of seismic control posts in the Soviet Union from 21 to 30. If the 30 stations were installed, Rand estimated that only 9 earthquakes per year would remain unidentified at magnitude 4.75 (20 kilotons, Rainier coupling) and 36 unidentified events per year at magnitude 4.35 (5 kilotons, Rainier coupling). Rand concluded that such a system would essentially restore the capability estimated by the 1958 conference of experts. The Rand study did not take into consideration the effects of decoupling.

The estimated cost of the complete Geneva control system was reported by the Advanced Research Projects Agency of the Department of Defense to be $1 billion in round numbers with an annual operating cost of about one-quarter of a billion dollars. A contractor study presented an estimate of $1 to $5 billion for installation of 22 stations of the Geneva system seismic network in the U.S.S.R. alone.[4]

Means of concealing underground nuclear tests

Seismic signals from underground nuclear tests can be reduced by decoupling in large holes deep underground. Witnesses agreed that decoupling factors of up to 120 were proven experimentally in Series Cowboy. They further agreed that an additional decoupling factor of 2½ between salt and tuff exists because of the difference in the physical properties of these two materials. Finally, they were in agreement that these two factors combined resulted in an overall factor of 300 reduction in seismic signals from a decoupled shot in salt compared to a tamped shot in Nevada tuff. These decoupling tests were conducted in the fall of 1959 by the AEC in a Louisiana salt dome. Holes in diameter of 12 and 30 feet were used. These chemical explosions ranged from 20 to 2,000 pounds in size.

Deep large cavities can be washed in underground salt domes of which exist some 200 or more in the United States and an unknown number in th U.S.S.R. Holes can be constructed by conventional solution mining or leaching by continuously pumping fresh water or sea water into the cavity through a cased-drill hole and withdrawing the salt in a brine solution.

Witnesses testified that it would not be necessary to dig the large holes required for maximum decoupling (300 to 1). Smaller holes, comparatively, could reduce the seismic signal to a level which would be difficult if not impossible to detect. For example, Dr. Albert Latter testified that a decoupling factor of 30 could be obtained in a hole one-thirtieth of the optimum volume. Dr. Bethe disagreed and contended that a decoupling factor of 30 would require a hole one-tenth of the optimum volume for maximum decoupling. Since the optimum hole volume is 91,000 cubic yards (at a depth of about 3,000 feet) per kiloton, a decoupling of a factor of 30 would require excavation of about 3,000 cubic yards, according to Latter, or about 9,000 cubic yards according to Dr. Bethe.

The diameter of holes required to provide decoupling factors of 30 and 300 were calculated by Dr. Albert Latter for each of several sizes of explosions.

Testimony indicated that nuclear explosions might also be concealed by firing them at such a time that the resulting seismic signals would be masked by the signals from large earthquakes. Theories of other possible techniques to prevent accurate location or to destroy the usefulness of the first motion criterion for identification were discussed. However, these possibilities were not considered as significant as concealment by decoupling.

Improvement in Geneva experts system

The improvements recommended by the Berkner Panel listed above under "Detection and Identification of Underground Nuclear Tests" were expected to restore the capability of the experts system to that estimated in 1958, which was based on a 21-station installation in the Soviet Union.

The committee heard several proposals for improving the detection and identification capability of the control system by increasing the number of seismograph stations.

Rand Corp. study presented by Dr. Richard Latter indicated that increasing the number of control posts, complete with 100-element arrays, to 30 stations within the U.S.S.R. would leave about 9 unidentified earthquakes within the U.S.S.R. per year above magnitude 4.75 (20 kilotons under Rainier coupling conditions). About 36 unidentified events per year within the U.S.S.R. would remain unidentified above magnitude 4.35 (about 5 kilotons Rainier coupling).

Dr. Roberts of the Carnegie Institute proposed a system of about 125 unmanned stations in the Soviet Union, spaced at 250-mile intervals, for detecting tamped explosions as small as 10 tons or decoupled explosions of about 3 kilotons. However, he pointed out that there would be no way of discriminating between these small explosions and earthquakes. He based his recommendation on his experience with 1 ton high explosive charges fired in water and on additional experiments with quarry blasts.

On this basis he estimated that 10 tons fired in rock could be detected at 250 miles

[2] The Berkner Panel was a panel on seismic improvement consisting of a number of scientists under the chairmanship of Dr. Lloyd V. Berkner. It was appointed by the Special Assistant to the President for Science and Technology on Dec. 28, 1958. It reported its findings on Mar. 16, 1959, which were made public on June 12, 1959. The report is contained in the printed hearings.

[3] These calculations were made by the Office of the Special Assistant to the President for Science and Technology utilizing the best information available at the time (Jan. 6, 1960).

[4] See secs. IV and V.

under favorable circumstances, particularly if small arrays of seismographs were used at each station.

Dr. Bethe proposed in his testimony before the committee on April 20, 1960, a network of about 600 unmanned seismograph stations in the U.S.S.R., at intervals of about 125 miles. This network was designed to identify a high proportion of the earthquakes equivalent in size to a 20 kiloton fully decoupled explosion (about 70 tons closely tamped).

He estimated there would be 5,000 seismic events of this magnitude in the U.S.S.R., of which about 500 would be unidentified. Dr. Bethe further stated that since we are interested only in decoupled explosions we would have to inspect only that part of the 500 unidentified events which were located in salt dome areas.

Hopefully, he reported this might involve as few as 5 events per year, since he estimates that only 1 percent of the 500 unidentified events would occur in salt dome areas of the U.S.S.R. This estimate is based on Dr. Bethe's assumption that 20 kiloton decoupled explosions could most easily be conducted in salt beds.

In a communication to the committee dated April 27, 7 days later, Dr. Bethe offered a revised statement which is printed in the appendix to the hearings. In this later statement he indicated that it would be possible, according to his new calculations, to reduce the 600 unmanned stations to 200 unmanned stations.

Engineering study of large arrays in U.S.S.R.

An engineering study of the feasibility of installing large arrays of seismographs at 22 locations in the U.S.S.R. was presented to the committee.[5] This study revealed that the maximum number of seismographs which on the average can be used in an array is more like 30 than 100. This conclusion results from the practical problems of successfully finding a large number of quiet seismic locations within the 2-mile-diameter circle determined to be optimum for a large array. Thus, it is possible to achieve in a "realistic" array installation of about 30 seismographs an improvement in signal-to-noise level of a factor of 4 rather than the theoretical estimate of a factor of 10 for a 100-element *"ideal" array.*

The study further indicated that of the 22 control post locations spaced as recommended by the 1958 conference of experts, 16 stations can be located on good geology with 6 on fair, poor, or very poor geology. Thus, 6 of the 22 stations of an actual Geneva system of seismic arrays in the U.S.S.R. can be expected to have a capability lower than that theoretically expected by the experts.[6]

The report outlines the practical problems of engineering and logistics for stations from the Arctic areas to the deserts and high mountains of the southern part of the U.S.S.R. The project is compared in engineering difficulty to the multibillion-dollar DEW line project and is roughly estimated to cost $1 to $5 billion just for control posts in the Soviet Union alone.

Onsite inspection

The 1958 conference of experts recognized the difficulty of identifying a carefully concealed underground nuclear explosion. In the experts' report they stated:

"When the control posts detect an event which cannot be identified by the international control organ and which could be suspected of being a nuclear explosion, the international control organ can send an inspection group to the site of this event in order to determine whether a nuclear explosion has taken place or not."

How many annual onsite inspections would be necessary or permitted in the U.S.S.R. has been the subject of continuous controversy between the U.S.S.R. and United States-United Kingdom negotiators at Geneva. The U.S. February 11, 1960, proposal discussed above, under "Detection and Identification of Underground Nuclear Tests" was an attempt to overcome the Soviet refusal to agree to inspection rights on all suspicious events by setting a specific number of annual inspections as a quota with a direct relationship to the technical requirement.[7] The hearings discussed the methods by which onsite inspections would be made. Inspection would consist of aerial overflight of an area of 40 to 200 square miles, subsequent ground survey of suspicious smaller areas located from the air, and, finally, actual drilling operations to locate radioactivity at the point deep underground where the explosion may have occurred.

In the first phase, aircraft equipped with conventional and infrared photographic equipment, and airborne magnetometers, would search for unusual vehicular traffic, mining or drilling activities, communication or powerlines, craters, rock slides, cracks in the earth, disrupted vegetation, etc.

In the second phase, ground examinations of selected smaller surface areas would utilize scientific equipment such as sensitive magnetometers, electromagnetic metal detectors, refraction shooting equipment, etc. The objective would be to attempt to locate, hopefully within a circle of about 500 feet in diameter, the spot directly over the suspected underground nuclear explosion. Magnetometers and induction detectors may locate remnants of cable, drill tips, or drill casing, or other construction material which may have been used in preparing for the shot. Reflection and refraction shooting may be useful in locating underground cavities. Surface inspection on foot or horseback would be required to look for unusual signs of human activities connected with preparations for the test.

The third and final phase of inspection would be drilling. This phase would not be started until the successful conclusion of the second phase. By successful conclusion is meant that one or more areas equivalent to a circle of the order of 500 feet radius can be selected for drilling operations. Drilling operations must then be conducted in each one of these localized areas. The probability of success in such operations is given in the following table presented by Dr. Gerald Johnson, Lawrence Radiation Laboratory, Livermore:

Probability of discovery of radioactive zone from tamped explosions within a 500-foot circle

Yield (kilotons)	5 holes	10 holes
	Percent	*Percent*
1.7	3	12
20	26	94
100	100	100

It was variously estimated by scientific witnesses that the overall probability of success of an onsite inspection in locating and identifying a single underground nuclear explosion varies from very nearly zero to a probability of 100 percent success if the inspection were conducted in an exhaustive manner for a period of several years at a cost of tens of millions of dollars.

Detection and identification of nuclear explosions at high altitude and in space

The problem of detecting nuclear explosions at high altitudes and in space may be solved by detection equipment mounted on the surface of the earth in conjunction with detection equipment based in satellites in prescribed orbits around the earth or the sun. Techniques suggested by technical working group I (July 1959) for installation at control posts of the experts system are tabulated below:

Method:	*Approximate theoretical range (miles)*
Direct optical	300,000
Fluorescence	500,000
Backscatter radar	3,000
Cosmic noise absorption	1,000–10,000
Electromagnetic pulse	3,000

Techniques for employment on earth or solar satellites are listed in the following tables:

Method:	*Approximate theoretical range (miles)*
Thermal X-rays	200,000,000
Prompt gamma rays	300,000
Delayed gamma rays	300,000
Prompt neutrons	100,000
Delayed neutrons	10,000
Trapped electrons	30,000

Ground techniques appear to have possibilities for detection out to ranges of 300,000 to 500,000 miles. Five of the six suggested satellite techniques are similarly limited to ranges of about 300,000 miles from the satellite. At distances beyond 300,000 miles from an earth satellite system, slightly more than the distance to the moon, it is significant to note that only the X-ray technique will record radiation from a nuclear explosion. Thus, in more than 99.99 percent of space available for nuclear tests by a violator only the X-ray technique has the necessary detection range. Furthermore, this X-ray technique is subject to degradation in range by the technique of shielding by a potential violator to reduce the intensity of X-rays from the explosion. It is estimated that the above range for an unshielded explosion would be reduced by a factor of 10 or more for explosions in the megaton yield range and by a factor of 100 or more for explosions of the order of 10 kilotons in yield by shielding.

Very little is known about the natural radiation of gamma rays, neutrons, and X-rays in regions where satellites would be installed. The effectiveness and reliability of the satellite system will therefore depend greatly upon the degree to which pulses of radiation similar to those produced by nuclear explosions in space might be produced naturally.

Significance of further weapon developments through clandestine tests

As previously discussed, the witnesses agreed that the 180-station Geneva system would not have a capability of detecting and identifying seismic events below 20 kilotons equivalent as originally thought. All witnesses also agreed that seismic signals from underground tests could be reduced by decoupling up to a factor of 300. Accordingly, with the present state of knowledge, detection of an underground low-yield test by a violator attempting to conceal it will be extremely difficult if not impossible. Similarly, it was agreed that clandestine testing of high yield weapons in space could be conducted within the present scope of missile and satellite technology.

In view of this, the question naturally arises as to the importance or significance

[5] This study was made by United Electrodynamics Corp. for the Air Force Technical Applications Center, Apr. 15, 1960.

[6] It should be noted that problems of rapid and secure communication of signals and information both within the external to the test detection system were not covered to any extent during the hearings. Limitation of time prevented a discussion of this problem.

[7] The Soviets have consistently held that agreement on the quota should be settled as a political question independently of the problem of the number of unidentified events.

of clandestine tests. In the opinion of the scientists, who testified at these hearings, further underground tests at yields smaller than 20 kilotons would permit development of new weapons in the low kiloton range. They also agreed that further testing in space would permit full-scale tests of weapons developed by underground scaled-down tests, as well as permit development of improved models of high-yield nuclear weapons.

The witnesses differed, however, on the relative military significance of such developments compared to the stockpiles of sophisticated weapons presently available to the three principal nuclear powers, the United States, the United Kingdom, and the U.S.S.R. For example, Dr. Teller considers such developments of very great importance, while Dr. Bethe considers they would be of only nominal importance.

The importance to the United States of future development of low-yield nuclear weapons, as well as improvements in high-yield weapons, is determined by military requirements—strategic and tactical. These are the responsibility of various agencies in the executive branch, including the Office of the President, the Department of Defense, and the AEC, as well as designated congressional committees in the legislative branch. However, the military significance to the United States of possible future nuclear weapons must also be considered and assessed in relationship to the overall diplomatic and foreign policies of the United States. While these hearings were concerned primarily with the technical problems of a nuclear test ban, it is recognized that diplomatic and policy matters of great importance must also be considered in the final evaluation. The latter, however, were not within the scope of these hearings.

Research and development required for seismic improvement

It was the unanimous opinion of all witnesses that a vigorous and sustained program of research and development is necessary to improve our instrumentation and our techniques of detection, identification, and inspection of nuclear explosion tests.

The Berkner Panel proposed a comprehensive research program in seismology and recommended a systems development program directed toward the specification of equipment required for a worldwide seismic system for monitoring underground nuclear explosions. The March 1959 Berkner report recommended a total expenditure of $22.8 million for the first year and $30 million for the second year.

A U.S. research and development program, designated Project Vela Uniform, was assigned to the Department of Defense's Advanced Research Projects Agency (ARPA) in September 1959. The Advanced Research Projects Agency authorized implementation of the program in February 1960 by the Air Force Technical Applications Center (AFTAC).

This program was allocated $8.5 million in December 1959, of which $5 million was obligated by April 19, 1960. Testimony indicated that there is no line item in the fiscal 1961 Department of Defense budget for this program and future funds thus would have to be obtained from other Department of Defense projects or sources.

Under Project Vela Uniform, AFTAC has undertaken the following major tasks:

(a) Equip a large number of world seismological observatories with standard calibrated seismographs and auxiliary equipment and provide for the free exchange of data accumulated throughout the continuous operation of such equipment. This program is designed to provide uniform and quantitative seismic data in support of research on the nature of earthquakes and the characteristics of seismic waves produced by them. A special panel established by the National Academy of Sciences will provide recommendations on equipment specifications and on deployment and use of this equipment. Procurement, installation, and distribution is to be handled by the U.S. Coast and Geodetic Survey of the Department of Commerce with the first 50 sets of equipment expected to be available in mid-1960.

(b) Stimulate basic research in seismology through the establishment of programs at universities and other research organizations to include investigations on the generation and propagation of seismic waves, studies of the structure of the earth, and the development of new types of seismic instruments. These efforts are expected to contribute to the solution of detection problem and to result in a significant increase in the number of trained scientists who would be required for the technical operations of a control system.

(c) Carry out a systems development program to include the construction and operation of a Geneva-type station recommended by the 1958 Conference of Experts and the design and operation of a systems development laboratory and seismograph station based on Berkner Panel recommendations. Characteristics of the latter station will be continually modified in the light of technical advances.

(d) Investigate the magnitude and characteristics of seismic effects from both underground nuclear and high explosive detonations for the purpose of obtaining data on the difference in signals generated, the effects of depth of burial and geology and to obtain possible additional criteria for differentiating between natural and artificial seismic events. Extensive measurements to be made at distances from a few feet out to distances as far as 2,000 to 3,000 miles from these explosions would provide data which are expected to result in major improvements in detection capabilities. (Nuclear explosions were considered essential by most of the witnesses for a research program of this nature.)

Research and development required to determine feasibility of detecting nuclear explosions in space

The March 1959 report of the Panofsky Panel[8] proposed a program of research and development to determine the feasibility of systems for detecting nuclear explosions in space. The U.S. Government is considering a major program of research and development based on the recommendations of this report. This program, designated Vela Sierra (ground-based techniques) and Vela Hotel (satellite-based techniques), is the responsibility of the Advanced Research Projects Agency (ARPA).

Scientific opinion at the hearings unanimously supported the requirement for an intensive program of research and development to determine the feasibility of detecting nuclear explosions in space. A program of research and development was presented by ARPA which amounts to the threefold task of (1) surveying the background levels of radiation in space to be encountered by satellite detectors; (2) developing adequate detection equipment for satellites, launching, tracking, and data-reduction systems; and (3) developing equipment for detection of nuclear explosions in space from control posts of the 1958 Geneva experts system.

The program contemplates utilizing the facilities of the Department of Defense, the Atomic Energy Commission, and the National Aeronautics and Space Administration in the most effective way possible to accomplish the program in the shortest possible time. It is estimated that a program of 3 to 5 years of research and development will be required to determine the feasibility of a system for detecting nuclear explosions in space.

ARPA has requested $20 million for fiscal year 1961 to pursue the program of research on surface and satellite techniques for detecting high-altitude explosions.

[8] The Panel on High Altitude Detection under the chairmanship of Dr. Wolfgang Panofsky was appointed by the Special Assistant to the President for Science and Technology and on Mar. 16, 1959, submitted its final report.

PRESIDENT EISENHOWER'S OPPORTUNITY TO STAND UP FOR FREEDOM

Mr. COFFIN. Mr. Speaker, I ask unanimous consent that the gentleman from Ohio [Mr. FEIGHAN] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Maine?

There was no objection.

Mr. FEIGHAN. Mr. Speaker, today, May 10, we commemorate Rumanian Independence Day which has long been celebrated by Rumanian patriots in all parts of the world as a day of national unity.

The Rumanian Nation, history tells us, was constructed by the descendants of the Roman colonists many centuries ago. Down through history Rumania has stood as one of the strong and sturdy ramparts of European freedom and the noble cause of Christianity. As a consequence of her geographical position as well as her strong loyalty to the cause of an advanced civilization, Rumania has often been the scene of war and martyrdom.

Today this historic nation of some 20 millions of people suffers under the heavy yoke of Russian Communist imperialism. While it is true that the Rumanians have known the cruel whip of Moscow in past generations, the Communist whip now in the hands of the Kremlin masters is more cruel, brutal, and inhuman than any before lashed over the backs of the Rumanian people. All freedom-loving Americans, therefore, on this, the traditional Rumanian Independence Day, pay tribute to those loyal and sturdy Rumanian patriots who stand fast in their faith for the future of Rumania and all mankind.

Within 6 days the summit meeting at Paris, France, will be held. This meeting presents a marvelous opportunity for President Eisenhower to become the champion of freedom and national independence for all people and nations by insisting that the agenda to be considered at the meeting include the right of all nations, large and small, to determine their own destiny, their own form of government, by free and unfettered elections. Insistence upon this right at the summit meeting may be offensive to the cruel, inhuman leader of the Russian Communists and the international Communist conspiracy, Khrushchev, but it would be in strict conformity with the previous agreements signed by the Soviet Union, Great Britain, France, and the United States.

The Captive Nations Week resolution, which is Public Law 86–90, enacted by Congress and signed by the President July 17 of last year, means that we deeply share the aspirations of all the captive nations for their national independence, freedom, and individual liberty. It also signalizes to Moscow that it should make no mistake about

our spiritual alliance with the captive millions and that in no circumstances will we ever sacrifice their goals for national independence, freedom, and individual liberty in any deal.

By insisting upon the right of self-determination of nations to be included in the summit agenda, President Eisenhower will have the complete support of Congress and the acclaim of the American people and all people throughout the world who are anxious for a peace with justice.

I am confident that the God-fearing people of the great nation of Rumania, once again, given an opportunity to determine their own destiny by free and unfettered elections, would repudiate the Russian proconsuls and Russian stooges who are in control of the Government. They would replace them with loyal patriotic Rumanians worthy of the great tradition and heritage of true Rumanians.

WAGING PEACE

Mr. JOHNSON of Colorado. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. JOHNSON of Colorado. Mr. Speaker, I would not want this RECORD to close, in the light of the remarks made earlier today, without some comment about waging peace. The events of the past 15 months have given many Americans hope that the administration was indeed engaged in waging peace, but Americans have been unnerved by the swift succession of events in the past 10 days. So much attention has been given to the flight across Soviet territory that the greater risk to the nuclear test conversations at Geneva has almost slipped from view.

In 1958, our international discussions of nuclear tests had come close to the point of an agreement. All of the scientists felt that a treaty could have been settled then, but we insisted on further nuclear explosions and, while we tested small bombs, the Russians perfected the H-bomb for carriage in a missile. We resumed conversations.

Finally on February 12 of this year we offered a new proposal calling for a program of joint research and experimentation to develop the detection of small tests underground. In the White House statement at that time it was said "the United States is determined to make all possible progress toward the ultimate objective of the negotiations," and "a joint program of research and experimentation would permit the ban to be systematically extended to the remaining areas underground where adequate control measures are not now possible to incorporate."

Out of these negotiations had come further agreement so that there remained to be settled at the forthcoming summit conferences only three major questions: The question of the length of the moratorium, the completion of the control group, and the number of on-sight inspections.

Most scientists believed that these partially political questions could be resolved in an acceptable manner at the forthcoming summit conferences and that this would be one step forward toward building a lasting peace. But, again, even as others have indicated their willingness to accept our offers, we again appear to be torpedoing our own offer.

On last Friday, the President stated that we would not have joint research but coordinated research, which is a far different thing. On Saturday he announced that we would proceed to carry out underground nuclear tests, thus indirectly withdrawing the offer of February 12 for joint research, just 4 days before the conference resumes meetings to work out joint research. In this time of tensions, Mr. Speaker, it is essential that we try to increase rather than decrease the area of trust. If we would be trusted, we must proceed in good faith ourselves. A coordinated research program in which the other parties to the research will not know fully what is being done may very well undermine the opportunity for an agreement on a nuclear test ban.

This morning's Washington Post, in a UPI dispatch from Geneva, indicates that neither the British nor American delegations had been informed in advance of the Washington move. They were obviously irked at its timing and feared months of tedious conference activities might have been wasted because of it. A Reuter's dispatch indicates that Britain is opposed to the unilateral resumption of nuclear testing by either the United States or the Soviet Union unless it is carried out within the framework of current negotiations, which is to say, under joint research. Certainly we should not act without consultation, especially at this stage.

Mr. Speaker, the American people have a right to be told the truth by their public officials. The issues with which we deal are of such great importance that deception may invite national destruction. The confidence of our adversaries in our truthfulness has already been badly shaken by the events of the past weekend. Now we risk shaking the confidence of our allies and friends as well.

I call upon the President to retract the announcement of last Saturday and to affirm his offer of February 12, to help assure that a nuclear test ban, as the first step toward world disarmament, may be achieved. President de Gaulle reminded us 2 weeks ago that this is the last moment for reaching agreement. Otherwise we may expect many more nations to join the nuclear club, we may expect agreement to be more difficult, and the risk of nuclear war, even by accident, to mount.

Mr. Speaker, I am distressed that there are public officials who in this hour preceding a world conference of heads of State would seek to justify or condone provocative acts which threaten the lives of hundreds of millions of people the world over. I invite my colleagues to read the following English translation by Tass of the remarks of Premier Khrushchev, which appeared on page 16 of today's New York Times. The uncommitted world will be listening to us as well as to Premier Khrushchev. They will be judging the actions of the United States as well as of the U.S.S.R. May our words and our deeds henceforth indicate an unswerving desire to wage peace, in order that mankind may live to enjoy freedom. Even those who have not yet experienced the freedom of the Western World have no desire to be liberated by incineration.

[From the New York Times, May 10, 1960]

TEXT OF KHRUSHCHEV'S SPEECH WARNING NATIONS WITH BASES USED BY U.S. PLANES

Dear Comrade Dvorak, Ambassador of friendly, fraternal Czechoslovakia.

Dear friends, comrades, gentlemen.

We are very pleased to attend the reception held on the occasion of the fifteenth anniversary of the liberation of the Czechoslovak Republic, the celebration of Victory Day, which indeed is a holiday for all the peoples. The Soviet people, at one with all other peoples, sincerely want that there should be no more war, that this war should be the last, that it should be remembered by the peoples and should go down in history as the last war.

We are doing our utmost to achieve this indeed. That is precisely why the Soviet Union submitted at the United Nations its proposals for general and complete disarmament. We not only insist on the necessity of reducing armed forces but already now, without waiting for such decisions by the Western countries, we unilaterally cut the armed forces of the Soviet Union by one-third.

When we have reduced our armed forces to 2,400,000, some time will pass, and we shall think it over and evidently we shall further reduce our army. Comrade Zhadov [Gen. Aleksandr A. Zhadov, deputy commander of Soviet ground forces] over there scratched the back of his head—another reduction.

No, this will not be done now, Comrade General, but later.

We shall do this if the situation favors such measures. Of course, we shall not cut our armed forces to such a level which would prejudice the security of the Soviet Union. You should bear in mind that we do not reduce our armed forces for financial reasons. No, the financial situation of our state is splendid and, if need be, could not only forbear from reducing the army and navy, but increase them. I repeat, if this were necessary we could do this without tense efforts. But as good masters we say: Why have bigger armed forces than we need?

CONTROLS NOT FEARED

If our partners agree we are willing to accept total disarmament and we shall effect it honestly. We are not afraid of control. If you please, gentlemen, then you could fly over our territory, check, take pictures, do what you please.

Such an issue as now could not arise then. The Department of State explains the incident with the downed reconnaissance plane more or less as follows: One cannot, they say, admit, nor can one deny. It turns out, as in the well-known joke, that here is a maiden who is also not a maiden for she has a child. The marriage was not registered, therefore one can regard her as a maiden in a way. But she gave birth to a child. Can one regard her as a maiden or not?

This does not happen in real life. We tell the Americans: Your plane flew over our country on an intelligence mission. We tracked its flight and it flew to the Sverdlovsk area, where it was brought down. That is how you got into a mess and you are in a mess. Pluck up your courage and say: Yes, there was such a disgraceful fact. And this is a big disgrace for America since everyone sees now how disgraced in the eyes of the world are those who committed such a

shocking act of aggression. The whole world wants peace, a relaxation of international tension while certain quarters in the United States stage such a provocation.

What were the purposes of this flight? A provocation. This is bad, very bad indeed.

TIMING FOR SUMMIT SEEN

I have already said, comrades, and now I repeat, that this was done deliberately and deliberately timed for the summit meeting in Paris. It is said that it was the work of the military. Only the military? What kind of state is this if the military do what the Government opposes? How can the Government tolerate this? If any one of our military allowed himself to do such a thing, we would pull him up immediately. The Government and the country are strong when the entire machinery functions smoothly, when everything is subordinated to the Government. Therein lies real strength. Understand me rightly: When everyone pulls in a different direction what kind of state is this and what confidence can one have in the policy of such a state?

There can be no confidence in the policy of such a state. The statement that the aggressive flight was made without the will and instructions of the Government, that nothing was known of it in the State Department, does not give credit to the Department of State of the United States. And what about Allen Dulles?

For he knew about all this and he also is a member of the U.S. Government. For this is Allen Dulles' aviation. It turns out that the State Department's reply is, as the saying has it, too thin.

It is possible, I do not know this for certain, but I do not preclude the possibility that the Government of the United States of America knew of this flight. But I, so to speak, confide it to you.

STATEMENT HELD ALARMING

In diplomatic language it would be better to say: It knew, but it stopped its ears and closed its eyes and now depicts the matter as if the Devil led astray some official. However, let it be, with this Government and with its way of issuing statements on all this.

One thing is alarming in this statement. It is vague. More, this statement blames us for not allowing to fly over or travel across our country those who want to study our defenses, to discover secrets. And that is why they, that means the American Government, had been impelled to send planes on intelligence missions. This is a very dangerous explanation. It is dangerous because it does not denounce but tries to justify such a flight and seems to say that such flights are possible in the future, too, because the Soviet Union does not think to reveal its secrets to countries that pursue unfriendly policy toward us.

Using this as the only justification, some gentlemen intend to gain the right in the eyes of public opinion to fly over our territory in the future, too, gleaning important military secrets.

I repeat once again this is very dangerous, let alone that it is wrong in principle and not in keeping with the spirit of international peaceful relations. If someone intends to fly over our territory, reconnoitering objectives and gleaning state secrets, we shall bring down such planes, just bring them down.

More, if such flights are repeated, we shall take appropriate countermeasures.

OTHER COUNTRIES WARNED

I should say this: Those countries that have bases on their territories should note most carefully the following: If they allow others to fly from their bases to our territory we shall hit at those bases. Because we assess such actions as provocations against our country.

We tell the governments of those countries, if you leased your territory to others and are not the masters of your land, of your country, hence, we shall have to understand it in our way. Those who lease your territory, operate against us from your territory. Their lands are far from us while your land is near. That is why as a warning to remote targets, we shall find the range to the near ones. Let them draw the appropriate conclusions.

I should not like to heat up passions because even in wartime people long for peace, await an end to the war and dream of peace. There is no war now. Our strength is being tested. Therefore, let us not draw conclusions aggravating relations between countries, such conclusions as would hamper us in the future, I should like to say, even in building good relations with the United States of America. Today I declare once again that we want to live not only in peace but also in friendship with the American people. The American people want no war, I am sure of this.

On the eve of the Paris meeting the aggressive circles wanted to bring strong pressure to bear upon us. We say: Let us conclude a peace treaty with Germany. Some of our former wartime allies are against this.

WEST BERLIN STAND DECRIED

But why? Plainly speaking, why need the United States of America, France, and the United Kingdom West Berlin? They need it as a dog needs a fifth leg. West Berlin does not give them anything. By the way, no one encroaches on West Berlin. It is said, freedom is at stake, but who encroaches on freedom?

Let the West Berliners continue to live as they do now and let them have the regime they like. The Soviet Government has long since declared that to select a regime is a matter for each people and that everyone should live as he prefers to. If the Western Powers do not want to sign a German peace treaty we shall have to sign a peace treaty with the German Democratic Republic.

The point is that even after we conclude such a treaty with the German Democratic Republic they would like to exercise those rights which flow from Germany's surrender, to exercise them in defiance of the peace treaty we would have signed. But if we sign a peace treaty with the German Democratic Republic, the terms of war will be ended and, hence, the terms of surrender will also be ended. They will cease to operate. If after the signing of a peace treaty some one would like to force his way into West Berlin which we would like to see a free city, our force will resist this force.

Aware of this, some leaders in the United States of America decided to teach Khrushchev a lesson; since it is said that force will resist force, we shall teach a lesson to the Soviet Union, we shall fly over your territory and we already flew over it and returned home.

EARLIER FLYOVER NOTED

This happened, for instance, on April 9. I have already spoken of this. Even now this flight is denied in the United States. In this case the ethics is: If the thief is not caught, he is no thief. But this time we caught the thief and now the whole world knows of it.

The reconnaissance plane should have been brought down on April 9, too. But our military, to put it mildly, let a chance slip by. And we, as one says, took them to task for it. On May 1 the reconnaissance plane was shot down. The military splendidly coped with the task when the opponent grew bold. For the American military thought like this: If the April 9 flight passed off with impunity, that means they cannot hit it at such an altitude, and the aggressive military wanted to demonstrate their strength once again 15 days before the summit meeting.

Well, Khrushchev, what are you boasting of? We fly over your country and you can do nothing about it. They expected to fly over Soviet territory this time, too, to fly over Sverdlovsk and to show that we can do nothing about it. Indeed, an unpleasant situation. And now when he hit the air pirate with a rocket, as the saying has it, it is time to dismount from the horse.

S. M. Budenny: "One must slash down to the saddle, and everything will go to pieces."

Nikita Khrushchev: "I believe that this cavalry rule is quite appropriate."

Attempts are still made to frighten us because in the West bombers are flying on round-the-clock vigil * * *.

ROCKETS ON VIGIL

I should like to tell those people: "Listen, gentlemen, we also have bombers, but they are not on vigil, in our country rockets are on vigil."

It is common knowledge that V bombers, as a rule, fly at an altitude ranging from 12,000 to 17,000 meters, they cannot rise higher because designers still cannot overcome technical difficulties. The plane which committed the diversion on May 1 flew at an altitude of 20,000 meters. They say it was an unarmed V plane. It was because it was unarmed that it could fly at such an altitude. They expected that such a plane will be invulnerable for a long time to go. They even expected that this will be almost for all time.

I shall say further, when Twining, the then Chief of Staff of the United States Air Force, arrived here we welcomed him as guest and entertained him. He left our country by air and next day sent a plane flying at great altitude to our country. This plane flew as far as Kiev. The question arose: Should we protest? I proposed that no protest should be lodged. Only an animal might act like Twining which, eating at one place, might do its unpleasant business there. From such behavior we drew the conclusion: To improve rockets, to improve fighters. Our fighters can fly as high as 28,000 meters. But the difficulties of a fighter are that though it can rise high, it is not so easy and simple to find the target in the air; a plane in the air is like a needle in the ocean.

But the rocket finds its target itself. This is the advantage of the rocket and we use of it. We have both fighters and rockets. That is why I say: If there are still politicians who would like to rely on bombers, they are doomed to failure. With the up-to-date military techniques bombers will be shot down even before they approach the target. We also have good aviation. I flew to America in a TU–114. This plane is a modification of a bomber with a flying range of 17,000 kilometers. I mentioned this to the President of the United States. However, the ceiling of the bomber is within the sphere of operation of fighters. It is now not so difficult to bring down a bomber.

The Americans can do this, but we can do it even better.

That is why one should abandon this exchange of threats. It would be better to speak of peace and friendship, how mutually advantageous it is to trade, how good relations can be established between peoples, how cultural contacts and tourist travel can be developed. This would be a far more useful and lofty job and all the peoples of the world would welcome this. This is precisely what our stand is, comrades. The peoples demand tranquillity, they are against wars and military conflicts. Let us try and meet these just demands of the people.

SOVIET GOALS CITED

When we were preparing the recent session of the Supreme Soviet we did not envisage the discussion of any military questions. We drafted a law on the abolition of

taxes paid by factory and office workers and a law on the completion of the transition to a 7 and 6-hour working day. We prepared for discussion at the session the question of increasing by 25 billion to 30 billion rubles expenditures for the expansion of industry manufacturing consumer goods so as to emerge to first place in Europe during this 7-year-plan period, and to catch up with the United States 5 years later. What lofty aims from the attainment of which not a single people, not a single individual in the world, would suffer.

And here, as one says, to "cheer us up," they timed such an aggressive act for the great proletarian May Day holiday. But the aggressors themselves did not expect that they would indeed cheer us up. When Marshal Malinovsky mounted the mausoleum on May Day to make his speech, I could already congratulate him on the shooting down of the plane. He replied that he had learned this just before motoring to Red Square. This was good news before the minister's speech at the May Day parade.

Comrades, today we are celebrating the day of victory in the war in which we lost more people and wealth than any other country. We mourn over the dead but at the same time we celebrate and rejoice in our victory.

HAILS WAR VICTORY

We rejoice because our people not only rehabilitated the devastated economy but far surpassed the prewar level of development. This victory is also being celebrated in countries that were our allies in the last war. The Ambassadors of those countries are also here. We have just clinked glases with the American Ambassador, Mr. Thompson. But after our "clinking" in the air, are ringing of our glasses in the Czechoslovak Embassy—is already not the proper ringing.

I respect the Ambassador of the United States and I am convinced that he had nothing to do with this incursion, that he could not have anything to do even if he wished to.

I am convinced of the ethical qualities of this man. Since I know him I think that he is not capable of such a thing. Evidently he feels this incident as a big annoyance for his country and for himself as the representative of the United States in the Soviet Union. This must be taken into consideration.

Comrades, I propose a toast to the victory, to the nations and people who fought against Nazi Germany and with us won a great victory.

I propose a toast to friendly Czechoslovakia, to the remarkable people of Czechoslovakia, to the hosts of this house, the Ambassador of the Czechoslovak Republic, Comrade Dvorak, and his wife, to all who represent the fraternal Czechoslovak Republic in the Soviet Union.

I raise my glass to the end of wars, to the end of provocations, to peace and friendship between the peoples.

HEALTH CARE PROPOSALS

Mr. SMITH of California. Mr. Speaker, I ask unanimous consent that the gentleman from Wisconsin [Mr. BYRNES] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. BYRNES of Wisconsin. Mr. Speaker, the Committee on Ways and Means is presently working in executive session on possible amendments to the Social Security Act. One of the important subjects under consideration in this activity is concerned with the establishment of a health and medical care program for the aged.

Basically there are two proposed approaches presently under consideration to provide the aged with protection against health care costs. One of these approaches is the Medicare plan recommended by the administration as outlined to the committee by the Secretary of Health, Education, and Welfare, the Honorable Arthur S. Flemming. The other approach is contained in legislation, H.R. 4700, sponsored by my distinguished committee colleague, the Honorable AIME J. FORAND, of Rhode Island.

Important factors involved in the evaluation of the relative merits of these two approaches include eligibility or coverage, scope of benefits, cost, and financing. So that factual information may be available on these important points, I have had a table prepared presenting a comparative analysis of the administration proposal and the Forand proposal.

As a part of my remarks at this point in the RECORD I will include this table so that the information contained therein may be publicly available:

	Administration proposal	Forand, H.R. 4700
I. Eligible group	All persons 65 and over who pay no income tax, or persons who do pay taxes and whose adjusted gross income, plus social security, railroad retirement benefits, and veterans benefits do not exceed $2,500 ($3,800 per couple): Total, eligible group 12,400,000 — Public assistance 2,400,000; Non-taxpayers 9,500,000; With adjusted gross income of $2,500 or less 500,000	All persons 65 years or older receiving social security plus widows over age 62 and minor dependent children eligible for social security benefits.
II. Enrollment fee	$24 per person per year. No enrollment fee for public assistance recipients.	None.
III. Old-age-assistance recipients	Covered: Total, 2,400,000	660,000 covered of the 2,400,000 total.
IV. Persons with low income	Individual with less than $2,500, or $3,800 per couple, of adjusted gross income covered: Total, 12,400,000.	Only low-income group receiving OASI would be covered.
V. Persons with higher income	Persons with an income in excess of $2,500, or $3,800 per couple, not covered: Total, 3,600,000.	All of high-income group receiving OASI would be covered.
VI. Benefits per year:		
(a) General	Pays 80 percent of all medical costs in excess of the first $250, or $400 per couple, of medical expense incurred by the beneficiary in the year.[1]	Pays only dollar cost of first 60 days' hospital care; 120 days' nursing home care, less time in hospital; surgery.
(b) Hospital care	180 days. (At national average of $30 per day less coinsurance of 20 percent, this equals $4,300.) [1]	60 days. (At national average of $30 per day, this equals $1,800.)
(c) Skilled nursing home care	365 days. (At national average of $8 per day less coinsurance of 20 percent, this equals $2,336.) [1]	120 days less total number of days spent in hospital. (Hospital admittance required prior to entrance in nursing home. Assuming 1 day of hospital care, 119 days, at $8 equals $952.)
(d) Organized home care services	365 days	None.
(e) Surgical procedures	Yes; no limit	Yes; no limit.
(f) Laboratory and X-ray services	Up to $200, less coinsurance of 20 percent [1]	None.
(g) Physicians' services	Yes; no limit	Do.
(h) Dental services	do	Do.
(i) Prescribed drugs	Up to $350, less coinsurance of 20 percent [1]	Do.
(j) Private duty nurses	Yes; no limit	Do.
(k) Physical restoration services	do	Do.
VII. Optional coverage	Yes; participants could purchase a major medical health insurance policy from a private carrier or group. If so, the Federal and State Governments would pay 50 percent of premium cost up to a maximum of $60.	Do.
VIII. Administration	State administered	Federally administered.
IX. Cost	Total estimated costs $1,383,000,000 — Annual Federal share 600,000,000; Annual State share 600,000,000; Eligible individual annual contributions 183,000,000	The first year expenditure could be $1.1 billion. Because it would be necessary to increase the payroll tax on a level premium basis, the contribution to the fund during the first year would be $1.64 billion.
X. Financing	General revenues	Payroll tax increase, based on 1st $4,800 of earnings: 1/10 of 1 percent per employee, employees cost (approximately) $750,000,000; 1/10 of 1 percent per employer, employers cost (approximately) 750,000,000; 1/10 of 1 percent per self-employed, self-employed cost (approximately) 140,000,000 — Total estimated benefit cost 1,640,000,000

[1] Public assistance recipients receive 100 percent coverage.

AGRICULTURE APPROPRIATION BILL

Mr. SMITH of California. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. BROOMFIELD] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. BROOMFIELD. Mr. Speaker, in our consideration of H.R. 12117, the agriculture appropriation bill. I would like to make it plain to my colleagues why I oppose this measure.

The report issued with this bill by the House Committee on Appropriations is a telling indictment of the waste, the confusion and the loss of the income to our farmers because of our present farm policies.

May I quote directly from the report on one portion of the agriculture appropriation bill, that having to do with production controls:

> What we have been doing hasn't worked. After spending or committing ourselves to spend nearly $26 billion, the record shows the situation to be three or four times worse in terms of surplus inventories of CCC.
>
> Any future farm program must provide that farm income shall come from the production of that quantity of product necessary for domestic and foreign markets. In the interest of the overall national economy, such production must reflect farm costs plus a reasonable profit. Such income should come from the market place.

To me, there is a simple and permanent way of accomplishing this purpose as outlined by the report. It is just a case of getting the Federal Government out of the price control and subsidy business. It is a case of putting the destiny of our farmer in his own hands rather than that of the Federal Government.

Apparently, a great many members of the House Committee on Agriculture have no confidence in our farmer and his ability to compete with his goods in the world market.

This being a presidential election year, I can well recognize the fact that there is a noticeable reluctance on the part of some Members of both Houses of Congress to upset any applecarts. Yet, it is my belief that the time has long since passed when expediency should be considered national policy.

Our constituents should be told the truth. Are the taxpayers of this Nation going to be faced with supporting a large segment of our population forever? Or are efforts going to be made to permit the farmer to once again find his freedom, to live his own life as he sees fit, to get out from under restrictive and liberty destroying edicts by the Federal Government?

There are those who contend our agriculture community must be planned down to the last iota, that the lives of those who make their living off the land they love must be regulated, controlled, used as a vehicle and an excuse for hiring countless more Federal employees who will play big brother, controlling his every effort to grow what he wants, where he wants.

My answer to these people is this. Congress has not yet found a means of repealing the law of gravity. It has not found a way to repeal the law of supply and demand.

Congress does not have it in its power by joint resolution or otherwise to stop the course of the earth around the sun or the moon around the earth.

Yet we are told by those who look at the farmer as a specimen on a microscopic slide or a substance in a test tube that all that is necessary is further laboratory conditions for the farmer, further isolation of him and his family from the economic ups and downs of our national economy, further emphasis upon sterility and stagnation of the farmer's initiative and his hopes for the future.

Fortunately, farmers are not grown in test tubes, and their horizons are limited to the four walls of the social science laboratory. They are living, breathing beings with confidence in our Nation and hope for their future if we will but give them the means of having hope and the freedom to have a hand in their own salvation.

Some claim that the farmer will wilt and die if he and his family are exposed to the open air of free competition. I do not believe this to be true.

We have a huge surplus of farm goods in our warehouses, and we certainly cannot consume all that we grow.

But we cannot claim that there are not ample markets for our agricultural products in other parts of the world if our farmers were but permitted to compete for these markets on a realistic basis.

Our farmers do not want an existence in which their only hope for the future is further Federal subsidies. They want back their freedom. Our consumers do not want artificially rigged prices which cost them millions of dollars annually in higher food costs. They want to buy food at a reasonable price. Our beef and poultry producers do not want to see their profits eaten up by feed costs which have no bearing on the world market price. They want to raise their beef, their poultry, as cheaply as possible.

It is time that Congress face the farm problem on the basis of national need and benefit, rather than as a field in which political promises far outweigh accomplishments.

The best thing we can do for the farmer is to let him alone and permit him the necessity of liberty rather than trying to entice him with the luxuries of subsidies and price controls.

PERSONAL ANNOUNCEMENTS

Mr. SMITH of California. Mr. Speaker, I ask unanimous consent that the gentleman from Massachusetts [Mr. CURTIS] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. CURTIS of Massachusetts. Mr. Speaker, on rollcall No. 68 on Wednesday, May 4, on adoption of the motion for the previous question on the motion that further proceedings under a rollcall be dispensed with, I was absent. Had I been present and voting I would have voted "nay."

On rollcall No. 69, on a motion to dispense with further proceedings under a rollcall, I was absent. Had I been present and voting I would have voted "nay."

J. EDGAR HOOVER

Mr. SMITH of California. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. HALPERN] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. HALPERN. Mr. Speaker, I would like to add my commendations to those already expressed about J. Edgar Hoover on this the 36th anniversary year of his becoming Director of the Federal Bureau of Investigation. Few Americans are held in greater respect and admiration than this quiet fighter against lawlessness, crime, and subversion.

His dedication to duty, his remarkable record, his personal integrity are magnificent testaments of his character and his devotion to the public service.

As an administrator he reorganized a second-rate Federal bureau, enhanced its services and facilities, and restaffed it with competent, young men.

As a leader, he drove his men hard, but smashed the gangster wave of the thirties, the backwash from prohibition and depression. In the forties and fifties his vigilance was directed against Communists and subversives with such effect that Communist party membership has been reduced to its lowest ebb and the Nation made safer as a result.

As a patriot, he has given unstintingly of his talent and time in the preservation of the national heritage.

As a man, he has won the affection and respect of the entire Nation.

It is a privilege and a pleasure to salute him today on this his 36th anniversary with the Bureau. May the years ahead continue to be blessed with his courage and dedication and may the honors that have been bestowed upon him by a grateful Nation be multiplied again and again in recognition of a great public servant and an outstanding man.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. HOSMER (at the request of Mr. MAILLIARD), for today, on account of illness in the family.

Mr. SHELLEY (at the request of Mr. KASTENMEIER), for today and the balance of the week, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House following the legislative program and any special orders heretofore entered, was granted to:

Mr. HOLIFIELD, for 30 minutes today, to revise and extend his remarks and include extraneous matter.

Mr. RANDALL (at the request of Mr. MCCORMACK), for 10 minutes, on tomorrow.

Mr. SCHWENGEL, for 2 hours, on Monday, May 18.

Mr. PUCINSKI (at the request of Mr. COFFIN), for 15 minutes, on tomorow.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. ALGER.

Mr. BRADEMAS.

Mr. CURTIS of Missouri and to include extraneous matter.

Mr. MARSHALL, and also to include certain charts in his remarks today in Committee of the Whole.

Mr. AVERY, his remarks in Committee of the Whole today during colloquy with Mr. MICHEL and to include extraneous matter.

Mr. FORD, his remarks in Committee of the Whole today and to include a chart and a table.

Mr. CANNON.

(At the request of Mr. MCCORMACK, and to include extraneous matter, the following:)

Mr. BOLAND.

Mr. BROOKS of Louisiana.

(At the request of Mr. SMITH of California, and to include extraneous matter, the following:)

Mr. WIDNALL.

Mr. VAN ZANDT in two instances.

Mr. DEVINE.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills and a joint resolution of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 1217. An act to suspend for 2 years the import duty on certain amorphous graphite;

H.R. 1456. An act for the relief of Universal Trades, Inc.;

H.R. 1752. An act for the relief of Wilhelmina Ordonez;

H.R. 2082. An act for the relief of James Demetrios Chrysanthes, also known as James Demetrios Chrysanthacopoulos;

H.R. 3786. An act for the relief of Chan Kit Ying and James George Bainter;

H.R. 3934. An act for the relief of Mrs. E. Christine Williams;

H.R. 4562. An act for the relief of Stanislaw Grzelewski;

H.R. 4825. An act for the relief of Jean K. Simmons;

H.R. 5349. An act to provide for the conveyance to Orange County, Calif., of all right, title, and interest of the United States in and to certain real property situated in Orange County, Calif.;

H.R. 6083. An act for the relief of Mary V. Jones;

H.R. 6493. An act for the relief of Robert Dolton;

H.R. 6843. An act for the relief of Daniel Wilging;

H.R. 7226. An act for the relief of Mr. Hughie D. Martin and Ione Martin;

H.R. 7254. An act for the relief of Simeen Helena Chaghaghi;

H.R. 7363. An act for the relief of Chester A. Spindler;

H.R. 8280. An act for the relief of Clarence T. Tolpo;

H.R. 8383. An act for the relief of Maj. Jack E. Hudson;

H.R. 8456. An act for the relief of Capt. Jack Rubley;

H.R. 8672. An act for the relief of Dr. Deh Chang Tao;

H.R. 8868. An act for the relief of the Albertson Water District, Nassau County, N.Y.;

H.R. 8941. An act for the relief of Mrs. Alice Anderson;

H.R. 9084. An act to repeal certain retirement promotion authority of the Coast and Geodetic Survey;

H.R. 9216. An act for the relief of Daniel C. Turner;

H.R. 9464. An act to remove the requirement that, of the Chief and Deputy Chief of the Bureau of Ships, one must be specially qualified and experienced in naval engineering and the other must be specially qualified and experienced in naval architecture;

H.R. 9476. An act for the relief of George E. Williams and William L. Johnson;

H.R. 9760. An act for the relief of Sam Doolittle;

H.R. 9861. An act to continue for a temporary period the existing suspension of duty on certain istle or Tampico fiber;

H.R. 10045. An act to amend the act entitled "An act to provide better facilities for the enforcement of the customs and immigration laws," to increase the amounts authorized to be expended;

H.R. 10164. An act to change the name of the locks and dam No. 41 on the Ohio River at Louisville, Ky.;

H.R. 10401. An act making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1961;

H.R. 10550. An act to extend the Export Control Act of 1949 for two additional years;

H.R. 11415. An act to provide for the designation of a portion of the District of Columbia as the "Plaza of the Americas"; and

H.J. Res. 598. Joint resolution to extend the time for filing the final report of the Lincoln Sesquicentennial Commission.

ADJOURNMENT

Mr. COFFIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 38 minutes p.m.), the House adjourned until tomorrow, Wednesday, May 11, 1960, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2135. A letter from the Under Secretary of Commerce, transmitting a draft of proposed legislation entitled "A bill to authorize the Secretary of Commerce to utilize funds received from State and local governments and private organizations and individuals for special meteorological services"; to the Committee on Interstate and Foreign Commerce.

2136. A letter from the Chairman, Federal Trade Commission, transmitting a copy of the Federal Trade Commission's Annual Report for the fiscal year 1959; to the Committee on Interstate and Foreign Commerce.

2137. A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation entitled "A bill to permit the Secretary of the Interior to revoke in whole or in part the school and agency farm reserve on the Lac du Flambeau Reservation"; to the Committee on Interior and Insular Affairs.

2138. A letter from the Under Secretary of Commerce, transmitting a draft of proposed legislation entitled "A bill to amend section 502 of the General Bridge Act of 1946, and for other purposes"; to the Committee on Public Works.

2139. A letter from the Secretary of the Army, transmitting a draft of proposed legislation entitled "A bill authorizing additional appropriations for prosecution of the channel improvement feature of the authorized project for the Mississippi River and tributaries"; to the Committee on Public Works.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. ASPINALL: Committee on Interior and Insular Affairs. H.R. 5098. A bill to provide for the application and disposition of net revenues from the power development on the Grand Valley Federal reclamation project, Colorado; with amendment (Rept. No. 1594). Referred to the Committee of the Whole House on the State of the Union.

Mrs. PFOST: Committee on Interior and Insular Affairs. H.R. 11706. A bill to authorize an extension of time for final proof under the desert land laws under certain conditions; with amendment (Rept. No. 1595). Referred to the Committee of the Whole House on the State of the Union.

Mr. THOMPSON of New Jersey: Joint Committee on the Disposition of Executive Papers. House Report 1596. Report on the disposition of certain papers of sundry executive departments. Ordered to be printed.

Mr. EDMONDSON: Committee on Interior and Insular Affairs. H.R. 8860. A bill to stabilize the mining of lead and zinc by small domestic producers on public, Indian, and other lands, and for other purposes; with amendment (Rept. No. 1597). Referred to the Committee of the Whole House on the State of the Union.

Mr. HENDERSON: Committee on the Judiciary. H.R. 4271. A bill to validate the salary overpayments made to certain officers and employees incident to the salary adjustment provisions of the Federal Employees Salary Increase Act of 1955, and for other purposes; without amendment (Rept. No. 1599). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. LANE: Committee on the Judiciary. H.R. 7670. A bill for the relief of Edwin A. Haddad; without amendment (Rept. No. 1598). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ELLIOTT of Alabama:

H.R. 12125. A bill to amend the Library Services Act in order to extend for 5 years the authorization for appropriations, and for other purposes; to the Committee on Education and Labor.

By Mr. INOUYE:

H.R. 12126. A bill to provide that the Secretary of Agriculture shall study and investigate the desirability and feasibility of establishing and maintaining a national botanic garden; to the Committee on Agriculture.

H.R. 12127. A bill to amend title II of the Social Security Act so as to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits thereunder; to the Committee on Ways and Means.

H.R. 12128. A bill to repeal certain provisions of the Federal Employees Health Benefits Act of 1959 to eliminate the distinctions in such act with respect to dependent and nondependent husbands, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. LANE:

H.R. 12129. A bill to amend the Internal Revenue Code of 1954 to provide a credit against income tax for certain employers who employ individuals 50 years of age and over; to the Committee on Ways and Means.

By Mr. MONAGAN:

H.R. 12130. A bill to amend part II of the Interstate Commerce Act in order to require proof of payment of State and local taxes as a condition to transferring a certificate or permit issued to a carrier by motor vehicle under the provisions of such part; to the Committee on Interstate and Foreign Commerce.

By Mr. WESTLAND:

H.R. 12131. A bill to acquire lands to construct an approach road into the Ozette Lake region in the Olympic National Park in the State of Washington, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. CLARK:

H.R.12132. A bill to provide that certain subcontracts may be entered into only in accordance with rules and regulations prescribed by the Small Business Administration; to the Committee on Banking and Currency.

By Mr. DINGELL:

H.R. 12133. A bill to amend the Natural Gas Act to prohibit a rate increase from becoming effective, subject to bond, before a pending rate increase proceeding has been finally determined; to the Committee on Interstate and Foreign Commerce.

By Mr. HERLONG:

H.R. 12134. A bill to amend section 902 of the Internal Revenue Code of 1954 with respect to foreign taxes paid by certain predecessor corporations; to the Committee on Ways and Means.

By Mr. JOHNSON of Colorado:

H.R. 12135. A bill to amend the Internal Revenue Code of 1954 to repeal the tax on the transportation of persons, effective July 1, 1961; to the Committee on Ways and Means.

By Mr. PRICE:

H.R. 12136. A bill to amend the Federal Trade Commission Act to strengthen independent competitive enterprise by providing for fair competitive acts, practices, and methods of competition, and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 12137. A bill to amend the Federal Trade Commission Act to provide for the issuance of temporary cease-and-desist orders to prevent certain acts and practices pending completion of Federal Trade Commission proceedings; to the Committee on Interstate and Foreign Commerce.

By Mr. ROGERS of Colorado:

H.R. 12138. A bill to amend the Federal Trade Commission Act to provide for the issuance of temporary cease-and-desist orders to prevent certain acts and practices pending completion of Federal Trade Commission proceedings; to the Committee on Interstate and Foreign Commerce.

By Mr. UDALL:

H.R. 12139. A bill to authorize the transfer of a Bureau of Reclamation bridge across the Colorado River near Needles, Calif., and Mohave County, Ariz.; to the Committee on Interior and Insular Affairs.

By Mr. KOWALSKI:

H.R. 12140. A bill to amend the National Defense Education Act of 1958 in order to make student loans under title II of such act available to teachers attending summer sessions in institutions of higher education; to the Committee on Education and Labor.

By Mr. COFFIN:

H.R. 12141. A bill to amend the act of August 11, 1939, with respect to the allocation of funds available under that act, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. ANFUSO:

H.R. 12142. A bill to amend the act of August 11, 1939, with respect to the allocation of funds available under that act, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. LENNON:

H.R. 12143. A bill to amend the act of August 11, 1939, with respect to the allocation of funds available under that act, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. GEORGE P. MILLER:

H.R. 12144. A bill to amend the act of August 11, 1939, with respect to the allocation of funds available under that act, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. OLIVER:

H.R. 12145. A bill to amend the act of August 11, 1939, with respect to the allocation of funds available under that act, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. PELLY:

H.R. 12146. A bill to amend the act of August 11, 1939, with respect to the allocation of funds available under that act, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. THOMPSON of Louisiana:

H.R. 12147. A bill to amend the act of August 11, 1939, with respect to the allocation of funds available under that act, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. AUCHINCLOSS:

H.R. 12148. A bill to provide for a Commission on Presidential Office Space; to the Committee on Public Works.

By Mr. COHELAN:

H.R. 12149. A bill to provide for Federal grants and contracts to carry out projects with respect to techniques and practices for the prevention, diminution, and control of juvenile delinquency, and for the training of personnel; to the Committee on Education and Labor.

By Mr. STRATTON:

H.R. 12150. A bill to provide a program to test the effectiveness of promoting the consumption of fluid milk through advertising and other means; to the Committee on Agriculture.

By Mr. UDALL:

H.R. 12151. A bill giving the consent of Congress to a compact between the State of Arizona and the State of Nevada establishing a boundary between those States; to the Committee on the Judiciary.

By Mr. RAINS:

H.R. 12152. A bill to relieve hardship for displaced families and businesses by assisting in their relocation and by providing them with mortgage financing under a new low-rent private housing program, and for other purposes; to the Committee on Banking and Currency.

H.R. 12153. A bill to promote homeownership and achieve high-level stability in residential construction, and for other purposes; to the Committee on Banking and Currency.

By Mr. HALEY:

H.J. Res. 703. Joint resolution directing the Secretary of the Interior and the Secretary of the Army to investigate and report on alternatives of the Kinzua Reservoir project, New York, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. RABAUT:

H.J. Res. 704. Joint resolution to remove copyright restrictions upon the musical composition "Pledge of Allegiance to the Flag," and for other purposes; to the Committee on House Administration.

By Mr. PELLY:

H.J. Res. 705. Joint resolution to promote the conservation of ocean fish and shellfish; to the Committee on Ways and Means.

By Mr. SIKES:

H. Con. Res. 689. Concurrent resolution to establish a Joint Committee on National Security Intelligence; to the Committee on Rules.

By Mr. STRATTON:

H. Res. 523. Resolution to authorize the Committee on Agriculture to conduct an investigation and study comparing the operations of Federal mi'k marketing orders in the New York and New England milksheds; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. HAYS:

H.R. 12154. A bill for the relief of Gregoire A. Kublin; to the Committee on the Judiciary.

By Mr. KEOGH:

H.R. 12155. A bill for the relief of Mrs. Jane R. Moore; to the Committee on the Judiciary.

By Mr. McDONOUGH:

H.R. 12156. A bill for the relief of Dr. Kamel Said Michel Baladi; to the Committee on the Judiciary.

By Mr. MOSS:

H.R. 12157. A bill for the relief of Mrs. Barbara J. Rhodes; to the Committee on the Judiciary.

By Mr. PUCINSKI:

H.R. 12158. A bill for the relief of Mrs. Wladyslawa Brzezinska; to the Committee on the Judiciary.

By Mr. CONTE:

H.R. 12159. A bill for the relief of Antonio Pellegrini; to the Committee on the Judiciary.

By Mr. DONOHUE:

H.R. 12160. A bill for the relief of William J. Heffern; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

456. By Mr. BARR: Petition of members of Teamsters Local Union No. 135 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America for a hearing on the right to elect

its officers; to the Committee on Education and Labor.

457. By Mr. NORBLAD: Petition of Tex Shively and other residents of Salem, Oreg., relative to H.R. 10478 and any and all similar legislation designed to impose restrictions on the right to own and bear arms; to the Committee on Ways and Means.

458. By the SPEAKER: Petition of C. Nemetz, owner and manager, Hotel Pendleton, Pendleton, Oreg., requesting inquiry and investigation relative to the American Federation of Musicians Case 995, 1959–60, *Dewey Taylor* v. *The Pendleton Hotel et al.*; to the Committee on Education and Labor.

EXTENSIONS OF REMARKS

Loyalty Day, 1960

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. VAN ZANDT. Mr. Speaker, the Veterans of Foreign Wars of the United States planned to observe Loyalty Day, 1960, at Valley Forge State Park, Valley Forge, Pa., on Sunday, May 1, but because of inclement weather the program was canceled. Another effort was made on Sunday, May 8, to stage the program, but rain again interfered, with the result that it has been necessary to abandon this year's observance of May Day at Valley Forge.

Having been invited to deliver the principal address at the May Day program at Valley Forge, I am inserting in the RECORD at this time the address which I had prepared for the occasion:

SPEECH BY REPRESENTATIVE JAMES E. VAN ZANDT, LOYALTY DAY CELEBRATION AT VALLEY FORGE STATE PARK, VALLEY FORGE, PA., SPONSORED BY THE VETERANS OF FOREIGN WARS OF THE UNITED STATES, SUNDAY, MAY 1, 1960

The 1960 Loyalty Day celebration recalls years of effort by the Veterans of Foreign Wars of the United States to have May 1 of each year permanently designated as Loyalty Day.

This occasion is further enhanced by the very nature of our geographical location, Valley Forge, which truly signifies heroic devotion to the principle of American loyalty.

The events that occurred here at Valley Forge almost 200 years ago have become sacred chapters in the annals of America's heritage.

It was a great honor to accept the invitation to bring you a loyalty day message and—as many of you know—my interest in this particular day holds both pride and affection.

After years of persistent effort to have May 1 of each year designated as loyalty day—in 1958 the Congress endorsed a House joint resolution which it was my privilege to introduce as a Member of the House of Representatives.

The resolution was duly signed by President Eisenhower on July 18, 1958, and thus May 1 of each year was established as Loyalty Day.

This legislation requests that the President of the United States issue an annual proclamation inviting the people of the United States to observe loyalty day with appropriate ceremonies—"In which all of our people may join in the expression and reaffirmance of their loyalty to the United States."

The 1960 loyalty day proclamation of President Eisenhower reminds us that "the existence of the United States as a free Nation is dependent upon the unswerving and enlightened loyalty of its people," that "our priceless heritage of freedom is in constant danger from forces inimical to our traditional concepts of Government—among which is our fundamental principle of liberty under law"—and "that on one special day of the year we give grateful expression to our country's deep hold upon our hearts and minds."

Fellow Americans, we can do no less than give these ideals so ably expressed by President Eisenhower our earnest attention as loyal and liberty-loving citizens of this great Republic.

Before I give you some of my thoughts on the subject of loyalty—I should like to extend a well-deserved tribute to the Veterans of Foreign Wars of the United States.

It had long been the goal of the VFW to secure a definite means by which we could counteract the demonstration of the Communists on May Day which often grew to large proportions in many cities, especially along our eastern seaboard.

Someone has said the VFW is not regarded as merely a lot of ex-servicemen engaged in giving more lipservice to lofty ideals.

Since its inception in 1899—the VFW has to its credit an endless list of projects which have benefited communities across our entire Nation.

The "good of the public" has been kept in mind at all times.

The VFW has realistically believed that its members want to continue their service to their country through broad activities in time of peace to help strengthen the foundations of the Nation they helped defend by bearing arms against enemies on foreign battlefields.

It was appropriate—indeed—that the Veterans of Foreign Wars of the United States should take the initiative in establishing Loyalty Day.

This adds one more chapter to the VFW's record of patriotic service to America.

It is not incidental that the Veterans of Foreign Wars of the United States on February 22 of this year was again honored by the Freedoms Foundation at the foundation's 11th awards-presentation program.

It was the 10th consecutive year that the VFW has been named to receive a Freedoms Foundation distinguished service award—which was based on the VFW's nationwide leadership in the observance of Loyalty Day—May 1.

Fellow Americans—what should we emphasize today in our thoughts about loyalty to our country?

Often historical illustrations are overlooked in our rush to launch another satellite or another missile, however important such efforts may be.

It has been said that Americans today are living examples of the terse comment that "the one thing we learn from history is that we learn nothing from history."

May I relate to you a very interesting coincidence of history.

Just as Edward Gibbon was nearing the completion of his monumental work, "The Decline and Fall of the Roman Empire," a small group of men, assembled in Philadelphia, was creating a new republic in the Western World.

No writer had ever attempted a larger task than Gibbon in the history of Rome.

No one would have believed that so many pages would ever again be required for the portrayal of such an epic.

We might well ask ourselves today these questions:

(a) Will some future historian record on an equal scale the decline and fall of our Western civilization?

(b) As the years pass will there be an erosion of American ideals?

(c) As in many countries will the tide of our national ideals be turned back by a sudden reversion to a dictatorial form of government?

The Republics of Rome and America are not identical.

But some points of similarity might well give solemnity to the warning that the same fate which overtook the one might easily overtake the other.

Rome based its dominion on the powers of the Caesars, but the strength of our Western Republic is derived from the people.

Rome collapsed when it became drunk with power.

On the other hand, America faces the choice of maintaining the bulwark of its Constitution or slowly submitting to the numerous "isms" which crowd into the headlines of our lives.

Therefore, we are faced with these questions:

(a) Will the American people continue to uphold the Constitution?

(b) Can we continue to maintain our political and social equilibrium without destroying our liberty?

In considering these questions—one may wonder if the makers of the Constitution dreamed that such questions would arise in regard to that document.

The spirit of the Constitution is set forth in the words of Madison when he said that the general opinion of the Convention was to secure the private rights against majority factions—and at the same time—to preserve the spirit and form of popular government.

It is evident, therefore, that the American people must be brought to the realization that these objectives must be maintained or constitutional government will give way.

American ideals can be maintained—my fellow Americans, through the repetition of ideas—ideas that point up loyalty to our way of life.

Likewise, the repetition of ideas, which are contrary to our way of life will ultimately result in the acceptance of something less than the American form of government.

Does the average American citizen recognize that we are being literally deluged with propaganda of all kinds?

Since 1917, and with intensified force for the last two decades, the Communist masters of the Soviet Union have sought to sell the American people the thesis that the Communist system represents the tide of the future.

On the other hand, there has been a tendency in America to dwell upon our shortcomings and to place our thoughts upon the faults of our own system—a system that in reality is the envy of all the world.

It is unthinkable, yet true, that in some circles the very word "loyalty" has been frowned upon as being old fashioned and somewhat ridiculous.

It has been stated that the United States is both an obstacle to communism and a target for it.

Yes, it is an obstacle because our whole way of life reveals the falsity of the Communist claim that people find happiness and prosperity only under Communist rule.

Yes, it is likewise a target because our economic and industrial strength is built upon free institutions which Communist theory condemns as unworkable and doomed to failure.

Communist activities, therefore, should be of grave concern to loyal Americans.

To combat communism effectively we need to know how Communists are organized and how they operate.

We need to know and recognize their strategy and tactics.

The graveness of the threat to a Nation's security from Communists within its borders cannot be measured merely by their numbers.

In fact, the Communists have been a minority—and often a very small one—in the countries they have taken over.

So we cannot afford to take lightly the possible danger from Communists in this country just because the number of party members in our midst has been small.

The Communist Party in the United States was outlawed by an act of Congress—signed by President Eisenhower on August 24, 1954.

Membership in the party is not a crime.

But the Communist Party in the United States was stripped of the rights, privileges, and immunities of legal bodies created under the jurisdiction of the laws of the United States or any of its political subdivisions.

Presumably this means the party cannot hold bank accounts, obtain aid from the courts in enforcing contracts, or run candidates for public offices.

The Communist Party in action has two parts.

One appears on the surface and its actions are open to view.

The other part operates underground.

The chief underground operations are espionage and conspiracy against the Government of the United States.

The use of the printed word has become increasingly important to the Communist in light of our Government's ability to expose subversive activities of the Communists of the United States.

Congress has passed a number of laws dealing with specific problems in curbing the Reds.

For example, individuals and organizations acting on behalf of foreign powers in the United States are required to register with Federal authorities.

In addition, the Smith Act made it illegal to advocate overthrow of the Government by force and violence.

The Congress also voted to take American citizenship away from any person convicted of conspiring to advocate violent overthrow of the Government of the United States.

Today peacetime spying is subject to the death penalty.

Fellow Americans, it is common knowledge that the Soviet Union betrayed the great alliance of World War II by launching the cold war that envelops the world at this moment.

The task of the Communists everywhere in the world is to undermine resistance to the Soviet Union and Red China through their phony appeals for peace.

Nations are persuaded to disarm, and confidence of the people of a free nation in their leadership is destroyed.

In short, free nation is set against free nation.

Therefore, it is paramount that in defending ourselves against Communist infiltration and Communist fronts, we be alert to identify and expose the real enemy and not attack each other.

There are weapons the average citizen can use to combat communism.

We might appropriately call them indispensable tools designed for daily use by each loyal American.

These weapons in our arsenal are many.

For example, information is a very important weapon.

In this field, we should keep abreast of current affairs because freedom of the press and freedom of speech are essential to political liberty.

Where men cannot freely convey their thoughts to one another—no freedom is secure.

One may ask in all sincerity, "How can we distinguish truth from propaganda?"

The answer is—

(a) We must analyze rather than follow blindly the conflicting ideas that constantly enter a free society.

(b) We should maintain an intense and active loyalty to the principles upon which our Nation was founded—and finally—

(c) These principles are a splendid guide to use in determining what is true and what is false.

Another worthwhile weapon in our stockpile is "alertness."

In this connection, no one should permit himself to innocently support Communist causes.

To the contrary—we should pay more attention to what Communist leaders tell us about the techniques they intend to adopt to underline the structure of our form of government.

Fellow Americans—loyalty day is a day which should bring us to our feet to salute the flag of our country.

Also it should bring us to our feet in a state of alertness to the factions that would undermine our Nation.

There is no doubt that the trend toward stricter control and greater unity of Communist thought and action throughout the world has intensified during the past 18 months.

Khrushchev's visit to the United States in the fall of 1959 and his activities since have made it clear that though the Communist leader emphasized in general terms his desire for peace, he reacted negatively to any proposal for a compromise on the concrete issues dividing the free world and communism.

We recall his appearance before the United Nations on September 18, 1959 when he proposed general total disarmament within 4 years, but confined himself to generalities, as the Soviet Union had done in two previous proposals of a similar nature made to the League of Nations by Soviet spokesmen.

It seems that we go through periods of hope for peace and goodwill and at times grow lukewarm toward the cold war which is all around us.

Those who expected Khrushchev's visit to the United States would change in substance the issues of the cold war have been disappointed.

Mark you, disappointment often breeds indifference.

Therefore, America must remain alert to new and more provocative incidents that overnight can affect the position of the United States in the eyes of the world.

There are many bright spots on the horizon as we view our world today, but there are also many dark spots.

Unfortunately, the basic problems have not been solved.

It is appropriate at this point to recall a statement made by President Eisenhower on March 1 of this year during his South American tour when he said in Santiago, Chile:

"The peace that we all seek, in justice and in freedom, can be based only on one thing, mutual understanding. Unless we have that among peoples, and eventually governments which are always seemingly behind the people rather than ahead of them—unless we have that kind of understanding—mutual understanding—we are not going to have true peace.

"Each of you that helps in the tiniest way to bring about this understanding is thereby promoting the peace for himself, his children, and those who are to come after him."

Fellow Americans, in striving for universal justice and freedom, it is essential that we keep in close touch with America's attitude toward its way of life—and its attitude toward political and economic problems.

Our loyalty demands that we be proud of many things—but it also demands we bear in mind that we are not perfect.

Our loyalty demands that we avoid the vice of self-complacency.

We should acknowledge the fact that the American system has many safeguards.

With the proper forces at work in the minds and hearts of the American people in the future—as in the past—the spirit of liberty will flourish in our beloved land.

Finally, my fellow Americans, our loyalty must keep this country militarily strong, mentally alert, and above all, ever mindful of the heritage on which we as liberty-loving Americans base our hopes for a peaceful future.

J. Edgar Hoover—A Dedicated American

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. DEVINE. Mr. Speaker, today marks the 36th anniversary of John Edgar Hoover as Director of the Federal Bureau of Investigation. I feel privileged to join my colleagues in paying tribute to this truly dedicated American on this occasion.

It was my good fortune, nearly 20 years ago, to accept an appointment from Mr. Hoover as a special agent in the Federal Bureau of Investigation. The following 5 years gave me an excellent opportunity, as a member of his team, to learn firsthand that Mr. Hoover lives by the slogan he adopted for the FBI—Fidelity, Bravery, and Integrity.

Often maligned by those engaged in activities inimical to the welfare and security of this country, Mr. Hoover has steadfastly maintained the Bureau on a high plane and has unswervingly carried on the fight in resisting communism wherever it may be found.

He has successfully demonstrated that a governmental agency can be efficiently operated free from political influences. Further, he selects his agents after careful investigation to determine whether they can meet his high standards, and they function on the basis of merit and ability, free from civil service restrictions.

Mr. Hoover is highly respected, not only in this country, but around the world. He has earned this respect by his true dedication to the highest principles of law enforcement. Cooperation with local law enforcement bodies and his resistance to a national police force have added to his fine reputation.

The men of the FBI have great admiration for their Director because he

never requests any agent to perform any function that he himself has not or will not do.

The members of Congress should be proud to single out J. Edgar Hoover as the perfect example of a successful dedicated American who has devoted his life to useful service to his country.

Senator Thurmond's George Washington Award Speech to Senator Goldwater

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 10, 1960

Mr. MUNDT. Mr. President, at the annual George Washington Awards dinner of the American Good Government Society on April 30, attended by many of our colleagues in the Senate and the House, Senator BARRY GOLDWATER, of Arizona, and Congressman GRAHAM BARDEN, of North Carolina, were the award recipients. It was a great occasion attended by nearly 700 distinguished Americans.

Senator STROM THURMOND, of South Carolina, made the awards presentation speech to Senator GOLDWATER and I ask leave at this point to have his address printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR THURMOND IN MAKING PRESENTATION OF THE GEORGE WASHINGTON AWARD TO SENATOR GOLDWATER AT THE ANNUAL GEORGE WASHINGTON DINNER OF THE AMERICAN GOOD GOVERNMENT SOCIETY, APRIL 30, 1960

I feel very highly honored tonight to have the privilege of making the presentation of a George Washington Award of the American Good Government Society. This award carries much distinction and honor because it is presented by a great organization which stands for the highest American principles and traditions and also because the award is based on the lofty ideals of the greatest American, the Father of our Country, George Washington. I am particularly pleased to have the opportunity to make the presentation of this award to one of my most valued friends, a man who has never hesitated to place principle above expediency, country above party, and honor above profit.

This man possesses all the basic qualities which are so vital in winning and holding the respect and confidence of his fellow man. He is a man of great intellect, wisdom, judgment, industry, integrity, sincerity, and courage. In addition, he is one of the most handsome and personable gentlemen in public life. All of these qualities have played an important part in the outstanding success he has attained as a businessman, an Air Force Reserve officer, and as a public servant.

Of all the qualities I have mentioned in describing the recipient of this award, there is one upon which we must place a premium in our country today, especially for public servants, and that quality is courage. Winston Churchill has well said that "courage is rightly esteemed the first of all human qualities because it is the quality which guarantees all others."

I do not know of any man who has demonstrated this priceless quality to a greater extent in performing his duties as a U.S. Senator than the recipient of this award. He has opposed the demands of special interest groups when their demands were not in the interest of the public. He has exposed and moved to correct the corrupt practices of big labor bosses in the interest of the working people even in the face of attempts by the labor bosses to retire him from public life. He has fought to preserve personal liberty during this period when conformity appears to be the order of the day. He has defended our great free enterprise system against the rising tide of socialism. He has stood up for the Constitution and the rights of the States as against usurpation of power and a centralization of government in Washington. He has spoken up against deficit financing and in favor of fiscal sanity and a balanced budget. He has advocated a program of national defense which would insure adequate strength and readiness to cope with the aggressive intentions of any enemy power. And he has proposed a bold foreign policy program of strength and wisdom in seeking victory for the free world in our struggle against the dictatorial and godless forces of communism.

The Republican Party of South Carolina, as well as his home State party, recently selected this man as their favorite nominee for President. Knowing the southern people as I do, it is my opinion that if he should be selected as the nominee of either major political party, he would carry the South; and if elected, he would make a great President.

It is a unique and distinct pleasure for me to present this very coveted award to an able Senator, an outstanding soldier, a dedicated statesman, a true patriot, a distinguished citizen, and a great and courageous American, my good friend, BARRY MORRIS GOLDWATER.

TEXT OF CITATION ON SCROLL—RESOLUTION OF TRIBUTE AND HONOR

BARRY MORRIS GOLDWATER

Merchant and soldier, statesman and political leader, has dedicated half of his adult years to the service of his fellowmen—in the Army Air Corps, in the city council of Phoenix, and in the U.S. Senate.

Knowledge, energy, integrity, and courage characterize the service of this distinguished Senator. His belief that the protection of God-given personal liberty is the first purpose of national independence has made him a leader of those who would revive and restore the blessing of liberty in this country.

Instilled with the American heritage of Anglo-Saxon law, he is a resolute foe of those who would erase the sacred rights of mankind. Thus, he repudiates the idea that our National Government can delegate a sovereign power to tax men and to rule commerce and industry to trade unions. Senator GOLDWATER has enriched the field of politics, the noblest calling any man can choose.

The Wall Street Journal Opens New Printing Plant in Chicopee Falls, Mass.

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. BOLAND. Mr. Speaker, the nationally respected business daily newspaper, the Wall Street Journal, achieved a new milestone in its history Sunday when its seventh printing plant began operations in Chicopee Falls, Mass.

Thus, the eastern edition's printings of this great newspaper now speed to subscribers along the east coast from three different cities, New York, Washington, D.C., and Chicopee Falls, to keep pace with the ever-increasing demand for the Wall Street Journal.

The highly automated facility in Chicopee Falls is a near-duplicate of the Journal's new plant in Cleveland, Ohio, where publication began 5 weeks ago. Operations at Chicopee Falls will be coordinated completely with all other editions of the Journal.

The central control over editing, layout, and other news and advertising functions will be maintained by the Wall Street Journal in New York, but once these tasks have been accomplished, the Chicopee Falls plant is fully equipped to produce a complete newspaper to serve subscribers in New England, upper New York, and eastern Canada.

Mr. Speaker, I wish to take this opportunity to welcome the Wall Street Journal and its plant manager, Assistant Managing Editor Larry Farrell to our community and the Second Congressional District of Massachusetts.

Tribute to Poland

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. WIDNALL. Mr. Speaker, the world looks upon the United States and others of the free nations as champions of the cause of liberty for peoples everywhere—and rightly so. America has fashioned down through the years a glorious record of both symbolizing freedom and fighting to preserve it.

But it occurs to me that a nation does not necessarily have to enjoy political, social, religious, and economic freedom in order to make a major and continuing contribution to the achievement of this goal.

A notable case in point is Poland. The courageous people of that country, despite enslavement behind the Iron Curtain by ruthless communism, never have yielded their hearts and minds to their godless captors. At gunpoint they have existed in unwilling submission to the material might of the materialistic Soviet hierarchy. They never have abandoned their concept of and dedication to liberty, nor accepted as their way of life the Communist ideology. It is this fearless adherence to principle that serves as inspiration to those on both sides of the Iron Curtain in their quest for universal freedom.

For the past 20 years Congress has taken time out annually to recognize the anniversary of the May 3 Polish Constitution of 1791. I heartily join with my colleagues in paying tribute to the people of this great country. The celebra-

tion in 1960 of this anniversary is particularly significant. It follows by one day House approval of a concurrent resolution espousing the fundamental freedoms and human rights of the people of the captive nations. This resolution was passed by the House of Representatives without a single dissenting vote, which reflects the profund understanding of the Congress of the tragic situation into which Poland and its sister nations have been forced, and a firm resolve to speed the day when freedom will be restored. Further, the resolution reaffirms the belief of Congress in the inalienable right of the people of the captive nations to live under governments of their own choosing, and urges the President to pursue energetically at the forthcoming summit conference the restoration of the fundamental freedoms and basic human rights of the people of all captive nations.

The 1960 observance is significant also because this year marks the 100th anniversary of the birth of one of the world's greatest musicians, Ignace Jan Paderewski, beloved in America and Poland as a great patriot, statesman, and humanitarian as well as artist. And 150 years ago Frederic Chopin was born in Poland, and the world will never cease to be grateful for the glorious music of that gifted composer.

There is unfinished business in Poland, and it will remain unfinished until liberty returns. In this business, all free peoples are joined with their Polish friends in a partnership that will not fail.

Supremacy of the Nuclear Submarine

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. CANNON. Mr. Speaker, tomorrow the Navy's largest nuclear-powered submarine, the U.S.S. *Triton* returns to her home port at New London, Conn., having completed history's first submerged circumnavigation of the world. Retracing the route of Magellan, the *Triton* made a nonstop submerged voyage that covered a distance of 41,517 miles in 84 days at an average speed of about 18 knots. The purpose of this voyage was to gather geophysical and other scientific information regarding the subsurface regions of the oceans. On behalf of the House Appropriations Committee I wish to extend congratulations to Captain Beach and the fine crew of *Triton* for their historic accomplishment.

The magnificent performance of the *Triton's* nuclear propulsion plant is a great tribute to the significant technical accomplishments of Admiral Rickover and his staff. The voyage of the *Triton* is indicative of the lead which we now have in the field of nuclear-powered submarines. It further emphasizes the vital importance that the executive branch of the Government must give to steps which will free our technical leaders of the administrative harassments which prevent these leaders from attaining even greater technical accomplishments—accomplishments which are necessary if this country is to achieve better than second place in competition with the Soviets. This committee has given, and will continue to give, its full support to Admiral Rickover and the expansion of our nuclear-powered Navy.

Citizenship—Free and Responsible

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. VAN ZANDT. Mr. Speaker, the United Churchwomen of Altoona, Pa., observed May Fellowship Day on May 6, 1960, at the Westminster Presbyterian Church in that city.

With representative groups of churchwomen present it was my privilege to deliver the following address:

CITIZENSHIP—FREE AND RESPONSIBLE

(Speech by Representative JAMES E. VAN ZANDT, Member of Congress, 20th District of Pennsylvania, for the May Fellowship Day program, sponsored by the United Churchwomen at Westminster Presbyterian Church, Altoona, Pa., May 6, 1960)

It is a privilege to be invited to participate in the May Fellowship Day observance sponsored by the Christian social relations committee of the United Churchwomen of Altoona.

The theme "Citizenship—Free and Responsible," adopted for May Fellowship Day 1960, is timely since the joys of citizenship and freedom have been lost by over a billion of God's children now living in servitude under the banner of world communism.

We are reminded by the theme of this May Fellowship Day of the priceless possession we enjoy in being citizens of a freedom-loving nation and of the responsibility we are charged with in safeguarding our birthright of liberty and freedom.

Since 1960 is a national election year this program gives added emphasis on the necessity of taking inventory of our efforts to preserve our glorious heritage of American citizenship.

The extent of a Christian's responsibility in this day and age has not changed from the responsibility prescribed when God gave Moses the Ten Commandments as an eternal rule of love and faith.

That rule of life designed for all generations of mankind was further exemplified when our divine Lord said in defining the first commandment "and Thou shalt love the Lord thy God, with all thy heart and with all thy soul, and with all thy mind—and with all thy strength * * *."

And the second is like; namely, this, "Thou shalt love thy neighbor as thyself, there is none other commandment greater than these"—Mark 12: 30–31.

Despite this divine injunction when we discuss the responsibilities of citizenship from a Christian standpoint we find it becomes a controversial subject filled with misunderstanding and too often avoided in discussions.

I do not know all the answers, but it is my sincere hope that today we can in some measure take home a little "food for thought" from your well-planned meeting.

Someone has said that christianity does not remove a person from the world and its problems; it makes one fit to live in the world, triumphantly and usefully.

It is on that thesis that we can proceed to discuss your theme for this May fellowship day—"Citizenship—free and responsible."

To further clarify this occasion, I speak to you as a layman on the Christian's responsibility to the state.

We live in a nation where church and state are entirely separate, but this fact was never intended to mean that Christian citizens should not actively participate in politics.

Indeed, throughout our history, our political leaders and statesmen have emphasized the need for Christian citizenship in these United States.

In 1954 the words "under God" were added to the pledge of allegiance to our flag.

This was accomplished through passage of legislation by Congress and subsequent Presidential approval.

I recall there was some objection from some corners of our country to the addition of the words which revised the pledge to read "one Nation under God, * * *"

There was warning that by adding the words "under God" we were not keeping church and state separate, that we were acting contrary to existing principles.

It will be 4 years next June 14, Flag Day, since "under God" was added to the pledge of allegiance, and I trust that anyone who objected has now learned that our citizenship is of no real value to us unless we can open our souls before God and before Him conscientiously say, "I am an American."

Upon every coin of our Nation, down to the last penny, we impress the words "In God we trust."

If we remain true to this motto, we will uphold and obey our laws; strive without malice and indifference toward the things we know to be right; live and work for the American principles of freedom, justice, and equality.

Then our lives will be a vindication of our faith.

Our citizenship will be a credit to us.

Perhaps what I have just said will in some measure clarify my opinion of our theme.

There have always been people who have echoed one of the complaints which we often hear, namely, that religion and politics do not mix."

You recall that one of the charges against Jesus was that he threatened the stability of the Roman Empire and its stranglehold on downtrodden peoples like the Jews.

Whatever else His death represents—and it represents a great deal more—it represents in part the attempt of the Roman Empire to get rid of someone who was fast becoming a political nuisance.

John Calvin and John Knox—and all the reformers—got into difficulty themselves when they discovered that to take the Christian faith with full seriousness meant that full involvement in political life, political decisions, and political responsibility was inevitable.

In our own day, there have been ministers, for example, who have discovered that to preach Jesus Christ means preaching about the political and economic situation in which their congregations live.

They have also discovered that the people who control the political and economic situation—whether Nazi or Communist—take a very dim view of this sort of thing, with the result that a great many ministers in Germany especially, have had to answer with their lives for speaking with such boldness.

It is apparent that one of the reasons people keep on insisting that "religion and politics do not mix" is that they are not at

all sure they will like the result that emerges from the mixing.

They have a right to be perturbed.

The times of greatest vitality and strength in the history of Christian faith have been the times when it was recognized as a revolutionary faith—as a faith that made demands—that challenged the status quo—the way things were going politically.

But this kind of talk can remain very abstract.

We want to come down to earth and talk of some of the ground rules of Christian citizenship.

A current writer has suggested that Christianity gives no precise answer to any of the problems of life—certainly not the political ones.

But it provides what is more important: direction, understanding, commitment.

There is no exact Christian position in the U.S. House of Representatives, but there are better and worse positions, relatively just and relatively unjust acts.

The Christian should seek what is good and just.

A Christian citizen in the United States has the most compelling reasons to concern himself with politics.

It is a major error for any Christian citizen to look down on politics because he regards the whole political world as a bit shady.

However well or badly the political affairs of the Nation may be conducted, politics is the process by which a nation or a community makes decisions.

The decisions that are made by political means often have momentous moral significance.

As a Member of your Congress I am singularly aware of this.

In this 20th century world, government has become more important than ever before, it touches all our lives every day.

The sort of world in which we live, the kind of jobs that are available, the education our children receive, the extent of freedom and security we enjoy, are all vitally affected by government.

Politics is the human activity which creates government.

We cannot escape politics.

If we try to ignore politics, it will not ignore us.

Taxes, roads, schools, housing, and atomic power are all political problems.

The question is, therefore, are you willing to sit back and let others make the basic decisions which will control your destiny?

The individual who does is both foolish and irresponsible: foolish because he lets others run his life for him; irresponsible because he refuses to accept the obligations and duties which our Republic requires of its citizens for the continued enjoyment of rights and privileges.

Political decisions may determine whether we will have war or peace.

Political decisions may determine whether ours will be a nation in which certain factions are intimidated or a nation whose citizens preserve civil liberties and preserve a general atmosphere of freedom.

Certain political decisions profoundly affect the efforts of our country to move into the area of lasting peace.

Christianity most certainly has a stake in such issues.

I have said there is no "Christian position" in the Congress.

I would like to amplify that observation.

We can expect Christians to differ in their choices of political parties, in their choice of emphasis in regard to social goals.

This is apparent, for example, in the constant problem of aid to underprivileged nations.

It is possible for two Christian persons—two members of the same denomination, in fact—to hold a difference of opinion on many issues.

William Lee Miller has written a little volume entitled "The Protestant and Politics" which is published by the Westminster Press.

While I do not agree with all the theories set forth by Mr. Miller, I would like to quote the following:

"Morally earnest Americans often say that they are independent in politics, and not tied to any party: 'I don't vote a straight party ticket, the way a party tells me to; I vote my honest convictions.'

"The implication seems to be that conscientious citizenship necessarily requires independence of political parties and that independence is morally superior to party allegiance. But it is not.

"There are, of course, many different positions that Christians may, and do, take in American politics.

"These include allegiance to one of the major parties (Republican or Democratic) independence of any party, allegiance to a minor party (Socialist or Progressive), or even good old-fashioned apathy."

These are all possibilities.

However, I cannot believe that apathy, or the more extreme or violent political positions taken by some of the political parties cited above by Mr. Miller would coincide with the political beliefs of a Christian citizen.

Have you ever noted that on occasion some Christians are shocked to see that there is conflict even in a Christian community.

A student at a youth conference, shaken after the first day of floor debate came to the chairman to say that he had never believed Christians could fight with one another that way.

But they can as any battle-scarred veteran of church meetings knows.

In certain contexts, they should.

It is the obligation of a Christian to defend what he sees to be true and valuable.

There is a common feeling, my friends, that political parties and the type of political life that is lived close to party organization must always be so much involved in compromise, or so close to corruption, that a Christian citizen would do well to assume the role of the independent voter.

There is no doubt that the independent voters do have some wholesome influence on our political party system—they keep both parties worried.

Perhaps there are people who by temperament or vocation should be independent voters.

Idealistic Christians should come to realize the enormous importance of party organizations as instruments for creating a consensus that is necessary for decision and action.

Also, they should see that while the independent voters do have some influence on party organizations from the outside, they are limited in their choice to candidates and programs.

Candidates and political platforms emerge from areas of controversy within the party.

Intraparty debate and struggle bring out the best party candidates—the best party policies.

Actually, the independent voters leave the most difficult, the most unappreciated, work to the faithful party members in local clubs and committees.

In any threat to free government in America, religious people have more to lose than any other class.

If the basic freedoms were to go, not only would the churches be closed, but the mouths of believers as well.

If the church people will vote during the week as they vow on Sunday, representative government will gain a victory, whichever candidates win.

Many a great American out of our past has spoken in eloquent terms concerning this subject.

John Quincy Adams said:

"My own deliberate opinion is that the more of pure moral principle is carried into the policy and conduct of a government, the wiser and more profound will that policy be."

Henry Clay said:

"Government is a trust, and the officers of the Government are trustees; and both the trust and the trustees are created for the benefit of the people."

William Jennings Byran has been recorded as saying:

"The humblest citizen of all the land, when clad in the armor of a righteous cause, is stronger than all the hosts of error."

More recently Herbert Hoover stated:

"A citizen has a complex duty.

"He ought to learn to express his opinions and to make up his own mind on the principal public issues.

"He ought never to miss the ballot box.

"And when he casts his vote for somebody, he should weigh that somebody in the scale of morals—which includes intellectual integrity."

The Christian citizen can have no part in a partnership which breeds bitterness and untruth; which leads politicians to raise false issues or to trifle with grave matters of policy for a political advantage.

True partisanship requires much moral patience; it must accept a strange assortment of bedfellows.

But it should remain self-critical and in sight of the purpose of the whole process.

It should seek to make the party a more consistent instrument of that purpose.

The belief in a judging and forgiving God—who stands beyond all our human enterprises—should introduce a certain modesty and bring a greater immensity to Christian citizenship.

It has been suggested that evil does not have one address, like Moscow, or just one instrument, like war, communism, or corruption in a Federal office.

The evils of our time—which free and responsible citizenship should be the first to recognize—reappear in constantly changing forms.

Citizens are humans—not gods—and for this reason alone the free and responsible citizen should recognize the need to apply Christian principles to the control of our destiny.

If Christians are to hold on to free and responsible citizenship they must participate successfully in government and politics.

Further they must know what is happening around them.

The blessings of our country were gained long ago by struggle and vigilance on the part of those who have gone before us.

We must safeguard our American heritage with the same enthusiasm, with the same determination and with the same political insight.

The oft-quoted line "eternal vigilance is the price of liberty" is never out of date.

Christians can make a great contribution to a community by assisting in maintaining spiritual health, without which politics become hopelessly corrupt.

By the same token Christianity will not make its best contribution to politics unless it encourages Christian citizens to associate themselves with the machinery of politics and take an active part in the political life of the community.

Free and responsible citizenship takes more than repeating the pledge of allegiance to the flag and repeating the Lord's Prayer.

In these stormy times things of momentous importance to future generations are afoot.

Often the issues are not discernible amid the noise.

However, we do have the benefit of the faith and character of our forefathers at their best.

Will posterity wonder why we, who have the privilege of living now, did not better understand the spiritual, social, and economic problems of our time?

These are years of tremendous change.

Not long ago nations, races, and religions were fairly well capsuled by geographical isolation.

Each nation could live for itself.

But at times it seems that the peoples of the world have suddenly been poured into one container.

We can be certain of one thing.

We cannot get out of the cold war and solve our other problems in a hurry.

But the abiding factors of this last half of our 20th century are its vitalities: Our ideals, our demands for life, liberty, and the pursuit of happiness, our endeavors to better our conditions.

Serene incidents have not been the creative epochs in human history.

Serene incidents did not bring forth the dawn of Christianity—or the birth of the Presbyterian Church.

Nor did serene incidents bring forth the birth of our own Nation.

Responsible Christian citizens cannot avoid the conflict.

They cannot avoid the throbbing issues that through satisfactory solution will culminate in continued freedom for America.

We often hear this period of our history classified as an age of abundance, in contrast with past ages of economic scarcity.

The promises of America's political future are great. But its perils are so real that we cannot evade the challenge which this new age brings to the Christian conscience.

To the shallow expression "We have never had it so good," the free and responsible Christian must reply, "We have never had such heavy demands upon the Christian conscience."

Formal Presentation of Official Flags of the U.S. Navy and Marine Corps to the Committee on Science and Astronautics

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, on April 29 it was my great pleasure and honor as chairman of the Committee on Science and Astronautics to accept on its behalf the formal presentation of the official flags of the U.S. Navy and the Marine Corps.

These flags have now taken their place on the rostrum of the committee, alongside the American flag and the official emblems of the Army and the Air Force, which were previously presented to the committee.

The flags of the Navy and Marine Corps were presented to the committee by the Honorable William B. Franke, Secretary of the Navy.

Under leave to extend my remarks, I wish to place in the RECORD the statements made on this occasion by the Secretary and myself.

Secretary FRANKE. Mr. Chairman, members of the committee, on April 24, 1959, the President signed an Executive order which gave the Navy its first official flag in its 184-year history. Prior to that time the U.S. Navy infantry flag was the one used during ceremonial parade and display occasions. In contrast, the Marine Corps has for many years had its own distinctive banner, its familiar red and gold flag, which has inspired men and thrilled the hearts of onlookers on many occasions.

It is an honor and a privilege for me to present to this committee these flags. One very new, one hallowed by years of tradition; flags that are truly representative of the Navy and the Marine Corps.

When we see flags such as these, we see not only the bunting, and the distinctive insignia, but we also see and are reminded of the organizations they represent, the U.S. Navy and the U.S. Marine Corps.

I see in these flags almost two centuries of sacrifice made by men and women in the naval service in defense of this great Nation of ours.

I am reminded of the sincere dedication of spirit and effort of these people, not only for our own freedom, but for the entire free world.

These flags remind me of naval and marine units deployed to the far corners of the earth at this very moment. The men of these farflung units are going about the world taking care of the day-to-day tasks of our country in readiness for defense, and in the serious business of being good will ambassadors.

I think it is fitting therefore that these flags be placed in this committee room, beside our national flag and the flags of our sister services.

It is a fitting place for our Navy and Marine flags because this committee and this room are symbolic of man's desire for knowledge and freedom.

It is fitting because this committee has such an important part and responsibility in reviewing and passing upon the scientific programs of our country.

I ask you to accept these flags as a token of the Department of the Navy's solemn pledge to continue to extend the maximum effort in concert with our sister services and all of the agencies of our Government in the extension of knowledge and in the defense of our country and the free world.

The CHAIRMAN. Thank you, Mr. Secretary.

This is indeed a beautiful and a historic moment, when you formally, accompanied by representatives from the services of the Navy and Marine Corps, appear before this committee to present us two flags, one from the Navy and one from the Marine Corps. It is true, as you say, that one flag is entirely new and one is hallowed by years of tradition and service.

On the other hand, to my mind, and I am sure to the minds of the members of this committee, both flags are hallowed by the service, traditions, personnel, and the exploits of the men of the Navy and the Marine Corps. This committee itself, it is true, Mr. Secretary, has an obligation to advance new ideas, new inventions, new developments, new devices that will assist this Nation in its defense. In performing these duties we work with pleasure with men of the Navy and of the Marine Corps to the unified effort that we give proper defense to the United States of America.

Your service, Mr. Secretary, as represented by the Navy and the Marine Corps, has already done a magnificent job in research and development.

You, for instance, represent that Naval Research Laboratory that had the responsibility during the first International Geophysical Year over the Nation's first satellite program, the Vanguard. You placed into orbit Vanguard No. I, which will circle the earth for hundreds of years.

At this very moment Navy Vanguard I is sending back to earth its signals that already have changed fundamental scientific concepts regarding the nature of the earth. It is also the Navy that has developed in research and development the Polaris, which is not only a missile, but is a new concept of warfare. Your service has pioneered and developed a new means of defense for our country.

The Marine Corps, through its precept and example, has given all America a firmer feeling of devotion for the principles of freedom which we share with the Western World.

So, on behalf of the committee, I take much pleasure in accepting these flags, the one from the Navy and the one from the Marine Corps. They will join the flags of their sister services on the rostrum of this committee.

This is merely a temporary committee room, Mr. Secretary, but as time moves on we will have a new building across the way. We have splendid quarters set aside for this committee in the new building to the west of us. We already have selected a place in the permanent rooms of the committee for these flags which are symbolic of the cherished devotions to freedom which guide the United States.

Thank you very much.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of May 7, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, May 7, 1960)

The Department of Defense appropriation, 1961, was the focal point of a full legislative week which showed an increased tempo in House activity. The appropriation bill, of approximately $39.3 billion ($39,300 million) is our largest annual spending bill, equaling half the total national budget. Personnel, pay and allowances, get $11.8 billion, split among Army, 870,000 Active, 700,000 National Guard and Reserve; Navy, 794,000 Active and 174,000 Reserve; Air Force, 825,000 Active and 134,000 Guard and Reserve. Operation and maintenance take $10.3 billion. Procurement (of equipment and supplies) gets $13 billion. Research and development, testing and evaluation get $4.2 billion. These funds allocated by service branch are as follows: Army $9.4 billion, Navy $11.9 billion, Air Force $16.8 billion, and Office of Secretary of Defense $1.2 billion.

Our military objective is to maintain "adequate deterrent forces" so adequate or strong that no nation or combination of nations will dare attack, thus risking their almost certain destruction by our forces. So it is that we must maintain a mixed attack force so that our forces at no time could be wiped out no matter of what nature the surprise attack. Our Strategic Air Command bombers (airborne missile launching platforms), our unmanned bombers, the missiles of all types (short, intermediate, and long range), our nuclear submarine forces are some of these mixed attack forces, so maneuverable and flexible they could not be simultaneously destroyed, but would in combination retaliate to destroy the attacker. All of this retaliation rests on our warning systems so we continue to improve these systems to give us time between attack origination and hitting us. Research, of course,

underlies all these efforts. Here the factor of "time lag" enters, the time between discovery of a practical new weapons, or warning system and the time of readiness for use. Here, too, is a large part of the cost through obsolescence and surplus.

Our military preparations are basically wasteful, since we must always be in readiness and then discard the weapons and ammunition never used, and be glad. The missile gap (if there is one will be closed by 1963), the airborne alert, the airlift, the sealift, all were part of the debate and received careful attention.

Yet valid criticisms remain involving unnecessary waste and duplication by the military, including unbusinesslike supply management, wasteful handling of surplus goods, uneconomic ownership and operation of real estate and other business properties, excessive travel and living allowances, and others. All excessive spending should be trimmed and the military leaders be held accountable to the taxpayers.

Most important of all, as I see it, is the need to remember that a strong military position rests on a strong economy and our economy rests on free enterprise and private initiative, not federally planned bureaucratic regimentation of our lives. If we fail to eliminate nonessential, nonmilitary expenses (as well as military waste), and our taxpayers end up under Federal domination—in or out of war emergency—we have already lost the fight for freedom.

The Area Redevelopment Act was the prima donna bill of the week. In the effort to delay or kill it on Calendar Wednesday, 14 separate rollcalls were demanded, 11 of them being votes, 3 attendance quorums. The House did not adjourn until 9:40 p.m. The bill passed 201 to 184. It would authorize a new Administrator to designate depressed areas, industrial or rural, and Federal funds would be provided with almost no limitation, as to who gets it, except the amount of money on hand. At this time the amount asked was $251 million. There would be Federal help for hardship resulting from technology change (so we'd have subsidized buggy makers when autos came in), migration of industry to other areas, shifts in demand, and depletion of resources. Under this act, employees in summer resort areas could be subsidized the rest of the year. Beyond the obvious fallacy of this not being the role of Federal Government, there were many others. The same criticism condemns equally an administration effort (although only one-fifth as much in cost as the Democrats' bill) to provide a palatable solution.

The administration medicare program of help for the aged is a new development in the health field, in which the AFL–CIO is trying to brew up a political storm and an election issue by backing the Forand bill. The Forand bill would impose a special payroll tax on the first $4,800 of everyone's pay to provide Federal health care for those over 65 and covered by social security. The medicare program will permit those over 65, who do not pay income tax (i.e. whose income is less than $2,500 or $3,800 per couple) to pay $24 enrollment fee and then be eligible for extensive insurance coverage providing they pay the first $250 per person ($400 per couple) and 20 percent of the entire cost. This rather ingenious system is quite a different approach and deserves careful study. Enclosed is a statement I put out earlier in the week when the plan was first proposed.

STATEMENT OF BRUCE ALGER, FIFTH DISTRICT OF TEXAS, MAY 4, 1960, RE ADMINISTRATION MEDICARE PLAN FOR THE AGED

For my part, I am not categorically for or against this new suggestion since there are Federal and State problems—medical and insurance viewpoints—and taxpayers to take into account before evolving final legislation.

I do not agree with Secretary (Flemming) statement that "Executive branch of Government fully recognizes and accepts the fact that the Federal Government should act in this field. A careful consideration of facts such as the following can lead to no other conclusion." The hearings on the Forand bill did not establish an area of need. As a matter of fact, the medically indigent and needy are already taken care of by government under Federal-State public assistance under social security. To that extent the Government is indeed in the field already and is meeting the need aided by the most important contribution of local efforts, community chest, churches, charities and free medical care for anyone who cannot afford to pay.

I am interested in this proposition because it avoids many of the basic flaws of the Forand bill which would not help those who need the help. I am interested because this could be a more businesslike approach to public assistance and not a further pyramiding of Federal programs, rather a replacement or shift of cost currently paid by Federal tax money.

The only Federal program even needed is one that better does the job. Can this one do a better job that needs to be done by Federal Government? Is this a better way to care for the medically indigent? If it is and the cost is shifted in public assistance rather than generate new spending programs the budget may not be jeopardized.

The answer to these questions and others can come only from study of the facts, judiciously without political expediency. The facts can come from hearings where all interested parties can be heard. The Ways and Means Committee has a responsibility to Congress and our people to do this job and do it well. This administration approach deserves our full study and consideration. No final answer is possible until the Secretary provides us more information. This includes at the least his analysis of State share of costs, State by State, the Federal-State equalization formula, further data on administration costs, including personnel, information on present State programs of public assistance and more detailed information on total cost.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. CURTIS of Missouri. Mr. Speaker, the 10th of May marks, for free Rumanians all over the world, the date when Rumania finally shook off the shackles of Turkish domination and became a free kingdom in 1877. Its observance provides an occasion for recalling the country's historical steps toward independence, steps which have been nullified by the virtual colonization of the country today by Soviet Russia.

Observance of the 10th of May as Rumanian Independence Day gives us an opportunity to draw world attention to the present enslavement of the Rumanians, and to note that its people continue to struggle for the restoration of true freedom. The Soviets who now dominate Rumania hope to dim the significance of this day by substituting another day as the important national holiday and thereby erase this symbol of freedom.

The Rumanians, however, join other captive peoples in refusing to accept communism and in clinging to their hope for freedom. In the free world there are organizations such as the Rumanian National Committee which are dedicated to keeping this hope alive. It is nourished by the knowledge that the American people will never be satisfied with a world order that leaves the peoples of Eastern Europe under the domination of a foreign power and an alien way of life.

"The Federal Government and Higher Education"—Address by Senator Joseph S. Clark, of Pennsylvania, at the 17th American Assembly, May 7, 1960

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. BRADEMAS. Mr. Speaker, it was my great privilege last week to take part in the 17th American Assembly which was held at Arden House, Harriman, N.Y., to discuss the subject of "The Federal Government and Higher Education."

A cross section of educators, businessmen, labor leaders, and public officials listened to an excellent address on the subject of the conference delivered by the distinguished senior Senator from Pennsylvania, the Honorable JOSEPH S. CLARK.

Senator CLARK's keen analytical mind and his appreciation of the profound importance to American society of higher education makes his address one of the most valuable discussions of this problem I have ever heard. As Senator CLARK said at Arden House, "The purpose of higher education is the staffing of freedom."

I commend to Members of Congress the reading of Senator CLARK's remarks:

THE FEDERAL GOVERNMENT AND HIGHER EDUCATION

Reasonable men cannot study American higher education in any depth without concluding that drastic steps must immediately be taken to equip our colleges and universities to turn out more and better educated students in the years ahead.

Reasonable men who study higher education must also agree that such steps must facilitate:

1. A much larger, much better trained and much better paid corps of university and college professors and instructors.

2. A very large expansion of academic facilities—libraries, laboratories, and classrooms.

3. The admission into college, and the maintenance through graduate school, of all high school graduates who have the capacity and character necessary to assimilate college and graduate work.

Since you are all reasonable men and since you have been considering American higher education for the last 2 days at Arden House, I will assume that you have reached these conclusions. I shall accordingly not reiterate the obvious but devote the time we have together to discussing how we can do what needs to be done about higher education in America.

WHERE ARE WE GOING TO GET THE MONEY?

It is obvious that while money alone will not solve the problems of our colleges and universities, these problems are not going to be solved without a lot more money than is now available. Some years ago there was a Congressman from the central part of Pennsylvania who used to enter every debate on the floor of the House which involved the expenditure of Federal funds with the inquiry: "Where are you going to get the money?" So perhaps we should start our discussion with the same question: Where are we going to get the money?—you and I and the millions of other Americans who understand that in the immortal if tautological words of one of my congressional colleagues: "This is no ordinary crisis which confronts us."

I would answer that we are going to have to get the money we need from wherever we can lay our hands on it. For, in all likelihood, the total amount we can raise from all sources, at least in the next decade, is not going to be enough.

In our democracy there is always in peacetime, and sometimes even in war, an inordinate lag between challenge and response—between the acknowledgment of a need in the minds of the well informed and a meeting of that need by the considered action of our free society.

WE CANNOT AFFORD TO WAIT A GENERATION

As I had occasion to remark some years ago: "The philosophy of the reformers in the universities becomes the action platform of the liberal politicians of the next generation." The trouble is, we cannot afford to wait a generation to do what so many of you know must be done in the field of higher education.

The need in dollars has been well established, nowhere more clearly than by Messrs. John A. Perkins and Daniel W. Wood in their penetrating study "Issues in Federal Aid to Higher Education" which all of us have recently read. Let us accept their figures and assume we will need to triple the annual level of expenditures for operations during the next decade—rising to a level $6 to $9 billion higher than the present $3.5 billion—add another $15 to $33 billion for capital growth over that period to provide America with a first-class system of higher education by 1970. I repeat the question: Where are we going to get the money?

I reply: Some of it will come from the annual gifts of the graduates and friends of our colleges and universities. But most of this kind of money will help the richer institutions to do better the good job they are already doing. It is not a source which will spread the wealth where it is most needed.

Some of it will come from bequests from the wealthy. This will be largely, though not entirely, for facilities rather than operations. And, again, it will tend to go to richer institutions which are already doing a first-class job in terms of quality, and whose capacity and desire to handle increased enrollment are limited.

Some of it will come from tuition and other payments by more students. Some may come from increases in these charges, but there is not much liquid in the bottom of this barrel and there are strong reasons of sound national policy for making higher education cheaper, rather than more expensive, as Messrs. Perkins and Wood have well pointed out.

CORPORATE GIVING FOR EDUCATION A LIMITED SOURCE

Some of it will come from corporate giving—in fact, quite a lot of it. I would hope that educational administrators and fund raisers would intensify their efforts to obtain money from this source—thereby, because of our Federal tax exemptions, making Uncle Sam a silent partner to the extent of more than one-half of each gift. Again, we must note the limitations of this source of funds: the gifts will tend to fluctuate substantially in amount with the ebb and flow of our economy. And they will tend to enrich schools of business and the natural sciences at the expense of the humanities and the social sciences. Thus it will cover only a part of a part of the need.

Some of it will come from private foundations and, on balance, this kind of money comes closest to being spent where the need is greatest. But no one will contend that the private foundations can do the whole job.

Some of it will come from State taxation. The States are not presently doing enough. They will have to do more. But most of them are incapable, as a practical matter of doing much more quickly. The reasons are obvious—regressive tax systems frozen by outmoded constitutions which are well nigh impossible to change; domination of State legislatures by conservative elements who have little understanding of the need; a heavy demand for other State services which are not being adequately provided, among them the requirements for aid to local school districts; and, finally, the ordinary selfish motivation of ordinary decent citizens who hate taxes and don't understand the problem.

Not much of it will come from local taxation, although here and there a community college will be helped. The resources of many a school district are already spent or pledged, or both, to the limit. The others will have a hard enough time keeping up with primary and secondary education requirements. And, by and large, their tax systems are even more regressive than those of the States.

THE NATIONAL GOVERNMENT USED BY A FREE PEOPLE TO SOLVE NATIONAL PROBLEMS

So what have we left? Only the Federal Government. Government is the agency which, you will recall, Lincoln referred to as existing to do for people that which they cannot do or do as well for themselves. The National Government is the usual means by which a free people tackles a problem public in its character and national in its scope.

We use our Federal Government to wage war, to conduct diplomacy, to guide the national economy in a score of areas. We use it to operate a nationwide system of social security, to construct great public works, and to support our industry and commerce in many different fields. It operates our post offices and our national parks. It helps build houses and clear slums. It helps build hospitals and engages in extensive welfare operations. Without it, most of the progress we have made in this country during the 20th century would have been quite impossible.

Yet, whenever the suggestion arises that we use our Federal Government to tackle a new problem—any new problem—a cry of horror arises. When Federal action is proposed to help solve the crisis in higher education, the outcry comes from many sides, including such strange allies as the United States Chamber of Commerce and certain of the more lush groves of academe.

This stereotyped reaction deserves some basic attention. Why are we Americans, perhaps alone among the civilized peoples of the earth, so reluctant to use this great instrumentality which we control and which lies at our disposal?

Surely democratic government is a tool to be used by the people to solve their collective problems and to improve their collective lot. Yet a multitude of influential Americans regard their National Government with that same measure of suspicion and hostility with which the ancient Aztecs greeted Cortez and his Spanish army in the mountains of Mexico. One would think, to hear the talk, that to turn to Washington in a time of need would be more like surrendering to a foreign power than utilizing one's own resources. The conventional wisdom in America still agrees with Jefferson that "that government is best which governs least." If chaos results and problems are swept under the rug, never mind, we are the same free people who drove the minions of George III into the Atlantic.

DISTRUST OF GOVERNMENT CAN BE DANGEROUS IN 20TH CENTURY

This inbred and deep-seated distrust of government may have had sound historical roots in the 18th century, but it is dangerous indeed in the 20th. For it is only our National Government that can mobilize and direct the resources of our society when they must be mobilized. And we should all ponder whether the United States as an unmobilized society can long compete with the determined, mobilized, aggressive society that confronts us today from the other side of the Iron Curtain.

This district of government has always been present in American thought, going back, as noted, to our unfortunate experiences with King George III, heightened by the excesses of the French Revolution and of Bonaparte, and strengthened by the physical distance between the frontier and Washington, D.C. But the distrust did not break out into open warfare until the days of Franklin Roosevelt, when—from the standpoint of many powerful persons in our society—the worst suspicions anyone had held about the evil nature of the National Government were confirmed. Mr. Roosevelt set out, through the Government, to regulate the stock exchange, to impose a death sentence on utility holding companies, to use the taxing power as a means of coercion and regulation, to engage in direct competition with the electric power and the lending industries, and, most important, to proclaim what he called a Magna Carta for labor's right to organize. Being unable to prevent or repeal these specific invasions of government into the domain of the plutocracy, powerful opponents of the New Deal set out to discredit government itself.

Thus, in the publications which they controlled—and these were legion—the fine old term "public servant" disappeared from the lexicon and the derogatory word "bureaucrat" took its place. "Citizens" became "taxpayers"—usually depicted by cartoonists as clad only in a barrel. The word "taxes" was rarely seen without the prefixed adjective "confiscatory" or "crippling" or the synonym "burden." Public spending was referred to always as a "cost," never as a benefit, and normally with the prefix "wasteful." Government activities of all kinds were freely termed "socialism," with dark allusions that beyond the so-called "socialism" of the New Deal lay communism. Ultimately, you will recall, the groundwork was so well laid that when the McCarthy witch hunt was on and public servants were burned alive at the stake of publicity, a

large portion of the American public celebrated as though we had just defeated the Communists on the battlefield.

LIPPMANN, STEVENSON, FULBRIGHT CRITICAL OF STARVATION OF PUBLIC SERVICES

We have recovered a bit from the worst of the anti-Government crusade. There are now thoughtful and sensitive men, like Walter Lippmann and Adlai Stevenson and Senator Fulbright, suggesting that the fiscal starvation of public services like education is a matter for national shame rather than national pride. Yet the conventional wisdom has not been greatly modified. I speak with assurance, because the conventional propaganda output flows across a Senator's desk by the ream.

To support the conventional thesis that the Federal Government is essentially evil and should be dismantled, a whole school of economics has grown up.

We are told that the oppressive weight of Federal taxation is destroying enterprise and stifling investment—even though the Federal Reserve Board believes it necessary to pursue a stringent tight money policy to curtail investment and restrain enterprise.

THE ANTI-GOVERNMENT CRUSADE

We are told that Federal debt is climbing out of control and threatening the soundness of the dollar—even though our debt burden, in relation to our income, has steadily declined and is now but half the percentage of our gross national product that it was a little more than a decade ago.

We are told that Federal spending is dangerously inflationary, even when the budget is balanced. And this comes from the same people who are constantly encouraging private citizens through every medium of communication to go into debt spending money they don't have for things they don't need and didn't know they wanted until the "hidden persuaders" went to work on them.

We are told that the Federal Government is costly and inefficient and therefore the States should do the job—when every objective test shows that Federal employees are better selected, better trained, and better supervised on the average than State employees, and that the Federal tax system is more equitable and more efficient than State tax systems.

Thus the case is put together against action by the Federal Government at any time for any purpose.

THE NEW ANARCHY

I have called this anti-Government fixation "the new anarchy." And if anyone present doesn't believe these neoanarchists exist, just let this assembly go on record tomorrow in favor of comprehensive Federal aid for higher education. Then you will hear from them. I can tell you in advance that nearly every major business organization in the country will oppose you. So will the journals of plutocratic opinion which guide and reflect the conventional wisdom of the business community.

I assume that in this conference we are prepared to brave the wrath of the neoanarchists. I assume also that we are prepared to follow where the facts of the crisis, rather than our prejudices, lead us. If the projections of needs and resources told us that Federal aid is not required, no one would have been happier than I. But despite the labored statistics of the Council for Financial Aid to Education, Inc., and the wishful thinking of the Committee for Economic Development, they don't. Since the facts lead us toward the Federal Government, let us be calm. Let us keep our heads and repeat together:

"The Federal Government is not our enemy, it is our friend. It is not an alien power, it is the creature of the American people. It will do what they want it to. It is not a monster which can ignore their will."

I will not dwell at length with the objection that Federal aid will lead to Federal control, as so often asserted by those who fear change. I am sure you have analyzed this argument fully in the last 2 days. I will only say that, in my opinion, it is a myth that Federal aid means Federal control. Truly we are wise enough to legislate and to administer so as to prevent an end result we don't desire. I will only say to those who oppose Federal assistance: What is your alternative, and is it not clear that the only real alternative is a second-class educational system?

HOW CAN FEDERAL AID TO EDUCATION BE PROVIDED?

Let us turn, then, to how Federal aid to higher education can best be provided.

You will be disappointed, perhaps, when I start by saying that finding the answer to this question is more your job than mine. Government programs do not ordinarily spring full-grown to life from the brows of Senators. A public need must be established. So must public awareness of that need and public support for its satisfaction.

Leadership must come from people who are determined and informed.

We got a Federal aid for public schools bill through the Senate this winter because the National Education Association knew what it wanted and lobbied its program across.

Something like the Forand bill, providing health insurance for the elderly will, in all likelihood, pass the Congress largely because the AFL–CIO knows what it wants and is working hard to get it.

The Hill-Burton hospital construction plan sails through Congress with new appropriations each year because the organized hospital administrators and their trustees worked out a sound plan and lobbied to get it passed.

We have a college housing program because the colleges and universities are united in support of it.

CITIZENS INTERESTED IN HIGHER EDUCATION MUST ACT

Unfortunately, citizens interested in higher education do not yet seem to know what else they want. And this includes trustees as well as college presidents and their faculties.

Let me give you an example of what I have in mind. Three years ago the President's Committee on Education Beyond the High School, chaired by my good friend, Devereux Josephs, presented a series of recommendations. Included was a proposal for Federal grants for higher educational facilities on the pattern of the Hill-Burton Act.

Now, Hill-Burton Act grants for hospitals are made pursuant to a carefully worked out plan to meet hospital needs prepared with the cooperation of the American Hospital Association and other hospital groups. It cannot be transposed to the higher educational field without careful rethinking which must be participated in by the universities themselves.

Yet that rethinking has never been done. The idea put forward by the Josephs Committee 3 years ago died as completely as if it had never been born. Why did higher education drop it? Wasn't there anybody in the field with interest or initiative enough to pick up the thought, refine it, agitate for it, and eventually get it seriously considered by both the President and the Congress? Apparently not.

I don't know myself whether the suggestion of the Josephs Committee is feasible, but the higher educational community should know and, if it does not, it ought to find out.

Politicians should be out in front of the people, I agree. We have a duty of leadership. But we cannot afford to get too far ahead of the people we lead. For if we do, there is a great risk we will be shot down from behind on election day.

CAN EXISTING EDUCATIONAL ORGANIZATIONS DO THE JOB?

I wonder whether existing organizations in the field of higher education are set up to do the needed job of working out a proper plan for Federal aid and then lobbying vigorously for it? I suspect that, to some extent, they are immobilized by internal divisions on the basic questions, first, of whether Federal aid in any form is desirable and, second, if so, who should get it? The American Council on Education, the American Association of Land Grant Colleges and State Universities, the Council for Financial Aid to Education, Inc., the Association of American Colleges, the Association of American Universities, the Council for the Advancement of Small Colleges, the Association for Higher Education of the National Education Association, and the American Association of Junior Colleges are a rather heterogeneous group to unite on a legislative program. Would it not be desirable to organize an ad hoc committee of leading educators and other citizens who are convinced of the need for Federal aid so that, when they meet, they need not argue whether, but only how?

Let us remember that educators are not monks who take a vow of poverty, both for themselves and for the institutions they serve. They, too, are American citizens with the right, indeed the duty, to petition for redress of grievances and to indicate to their elected representatives how they would like those grievances redressed.

SOME TIMID SUGGESTIONS FOR A CITIZENS ORGANIZATION FOR FEDERAL AID TO EDUCATION

Were such a citizens organization for Federal aid to higher education to be organized, I should like to sit down with it and be presumptuous enough to offer a few timid suggestions:

First. The "educational foundation" approach suggested by Messrs. Perkins and Wood deserves careful and detailed exploration. So does their view that allocations by such a foundation should include both operating and facilities moneys paid directly to recipient institutions. Faculty salaries should, in my judgment, have the highest priority; academic facilities the next. When these problems are reasonably well solved, it will be time to turn our attention to further scholarships and loans to students. There isn't much to be gained in substituting a slightly brighter boy or girl for one who now wins admission to college if, when our bright student arrives on the campus, there is no place for him to sit or lie down, no books or laboratories available and not enough professors really qualified to teach him what he needs to know.

PENNSYLVANIA SITUATION CITED

Second. The hardest thinking must be done in the field of who gets how much aid. The situation in Pennsylvania is a good illustration of the difficulty.

My State has 109 different institutions of higher education. But those 109 include no public community college, no public liberal arts college, and only one State university. Less than 2 percent of our college students are in junior colleges, none of which is public.

State aid goes principally to four large universities: Penn State (which is also a land-grant college receiving Federal aid); the University of Pennsylvania, a reasonably well-endowed Ivy League institution, with Federal Government research contracts in substantial amount; Temple University, founded since the turn of the century as a community college, which has grown into a full-blown university; and the University of Pittsburgh, with its support from the Mellons and its Cathedral of Learning.

However, 14 teachers' colleges are supported entirely by the State and located principally in rural areas. Tuitions and faculty salaries are low, curriculum necessarily limited. Between these extremes are 91 private institutions which, by and large, defy classification. Some are rich; most poor. Some are widely renowned; others so small that they cannot support a strong faculty or a broad curriculum. They are Baptist, Methodist, Lutheran, Catholic, Quaker, and nonsectarian.

If someone in the audience will tell me how public aid should be distributed among such a complex variety of institutions, I would be happy to report it to Governor Lawrence's committee on education, which is presently wrestling with just this subject. Frankly, I haven't the faintest idea.

All I know is that if Pennsylvania does not substantially increase its State aid to higher education and get substantial additional help from the Federal Government, we are headed straight for trouble. To reiterate, this is no ordinary crisis which confronts us.

Third. Federal aid should not be limited to special projects, or research, or science, or defense-related subjects. It should be across the board. It should go to the heart of the university, not just to its periphery. In the civilization of the future, the natural sciences may well predominate pragmatically, as C. P. Snow has recently suggested in his stimulating Rede lecture on the Two Cultures, but the social sciences and the humanities are of equal importance, remote though the latter are sometimes thought to be from practical application to the modern world. Assuredly, man does not live by bread alone.

THE PURPOSE OF HIGHER EDUCATION IS THE STAFFING OF FREEDOM

I suspect you will agree that in these 3 days at Arden House we will not have solved the problem of the Federal Government and higher education. But I hope we have crossed one bridge over which we will not return. The river of doubt over which that bridge was built asked the question as it flowed under us: Is Federal aid to higher education necessary? I hope that bridge will be burnt here tomorrow so that none of us can return.

There are other rivers of doubt ahead. They ask the questions of how much, how, to whom and what for. I am confident that bridges can be built also across these rivers, fabricated from sound answers to these puzzling questions.

In fact, we have to build these bridges and cross them. For the purpose of higher education in America is the staffing of freedom. If we cannot staff freedom adequately, history will again take note before the end of this century, as it has before, that an unmobilized society cannot compete successfully with one that is fully mobilized.

This is a conclusion to which no free American living in the richest country the world has ever known, in a society founded on the Magna Charta, the Declaration of Independence and the Constitution of the United States can willingly accept.

SENATE

WEDNESDAY, MAY 11, 1960

The Senate met at 12 o'clock meridian, and was called to order by the Vice President.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

God of our fathers, bewildered by the wild confusion of this clamorous world, at noontide we would wait in quietness, that the roiled waters of discussion may become clear and our disturbed spirits tranquil pools of prayer and peace.

Thou knowest our hearts. Thou seest that in spite of the worst things in us, which we despise, in our highest hours when we look unto the hills of vision, our deep desire is to be the true servants of Thy will in this troubled time.

Amid the tempests of the temporal, may we keep clear the ultimate sovereignty of the eternal.

In the unending struggle of truth and error, liberty and tyranny, give us the comforting assurance that we are not alone, that we do not stand alone, that we do not fight alone, but that Thy increasing purpose is bound up with all this human struggle toward the shining goal of earth's redemption from ignorance, misery, suffering, and fetters of the mind and body.

We ask it in the dear Redeemer's name. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, May 10, 1960, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, and withdrawing the nomination of Dodd M. Fisher, to be postmaster at Mount Storm, W. Va., which nominating messages were referred to the Committee on Armed Services.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE—ENROLLED BILLS AND JOINT RESOLUTION SIGNED

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bills and joint resolution, and they were signed by the Vice President:

H.R. 1217. An act to suspend for 2 years the import duty on certain amorphous graphite;

H.R. 1456. An act for the relief of Universal Trades, Inc.;

H.R. 1752. An act for the relief of Wilhelmina Ordonez;

H.R. 2082. An act for the relief of James Demetrios Chrysanthes, also known as James Demetrios Chrysanthacopoulos;

H.R. 3786. An act for the relief of Chan Kit Ying and James George Bainter;

H.R. 3934. An act for the relief of Mrs. E. Christine Williams;

H.R. 4562. An act for the relief of Stanislaw Grzelewski;

H.R. 4825. An act for the relief of Jean K. Simmons;

H.R. 5349. An act to provide for the conveyance to Orange County, Calif., of all right, title, and interest of the United States in and to certain real property situated in Orange County, Calif.;

H.R. 6083. An act for the relief of Mary V. Jones;

H.R. 6493. An act for the relief of Robert Dolton;

H.R. 6843. An act for the relief of Daniel Wilging;

H.R. 7226. An act for the relief of Mr. Hughie D. Martin and Ione Martin;

H.R. 7254. An act for the relief of Simeen Helena Chaghaghi;

H.R. 7363. An act for the relief of Chester A. Spindler;

H.R. 8280. An act for the relief of Clarence T. Tolpo;

H.R. 8383. An act for the relief of Maj. Jack E. Hudson;

H.R. 8456. An act for the relief of Capt. Jack Rubley;

H.R. 8672. An act for the relief of Dr. Deh Chang Tao;

H.R. 8868. An act for the relief of the Albertson Water District, Nassau County, N.Y.;

H.R. 8941. An act for the relief of Mrs. Alice Anderson;

H.R. 9084. An act to repeal certain retirement promotion authority of the Coast and Geodetic Survey;

H.R. 9216. An act for the relief of Daniel C. Turner;

H.R. 9464. An act to remove the requirement that, of the Chief and Deputy Chief of the Bureau of Ships, one must be specially qualified and experienced in naval engineering and the other must be specially qualified and experienced in naval architecture;

H.R. 9476. An act for the relief of George E. Williams and William L. Johnson;

H.R. 9760. An act for the relief of Sam Doolittle;

H.R. 9861. An act to continue for a temporary period the existing suspension of duty on certain istle or Tampico fiber;

H.R. 10045. An act to amend the act entitled "An act to provide better facilities for the enforcement of the customs and immigration laws", to increase the amounts authorized to be expended;

H.R. 10164. An act to change the name of the locks and dam No. 41 on the Ohio River at Louisville, Ky.;

H.R. 10550. An act to extend the Export Control Act of 1949 for 2 additional years;

H.R. 11415. An act to provide for the designation of a portion of the District of Columbia as the "Plaza of the Americas"; and

H.J. Res. 598. Joint resolution to extend the time for filing the final report of the Lincoln Sesquicentennial Commission.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour, and I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

AUTHORIZATION OF COMMITTEE ON ARMED SERVICES TO FILE REPORT

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Committee on Armed Services have until midnight tonight to file the report on House bill 10777, the military authorization bill.

The VICE PRESIDENT. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. MANSFIELD, and by unanimous consent, the Antitrust and Monopoly Subcommittee of the Committee on the Judiciary and the Committee on Finance were authorized to meet during the session of the Senate today.

FAMILY FARM DEVELOPMENT ACT—PETITION

Mr. HUMPHREY. Mr. President, about a week ago I was visited by a group of farm people from the State of Minnesota, headed by one Edwin Christiansen, president of the Minnesota Farmers' Union, who acted as chairman of the group. He brought to me the petitions which I have on my desk. The petitions contain the signatures and addresses of 15,000 farm people in Minnesota. Every one of them is a farmer. The petition reads as follows:

REQUEST TO CONGRESS

The undersigned do hereby urgently request the Members of Congress of the United States to give their earnest attention to the price, income, and marketing problems facing agricultural producers.

BENSON PROGRAM A FAILURE

We respectfully point out that the present Benson farm program has brought about a reduction in farm purchasing power to the lowest point in 20 years. There is nothing to be gained by more of the same Benson policies.

BETTER PROGRAM NEEDED

We urge that the Congress recognize the failure of the Benson corn program of low prices and unlimited acreage and reject this plan with regard to any other farm commodity, and replace this type of program with one of price supports or direct payments at a fair level, together with authority for farmers to vote on application of workable crop or marketing allotments.

REPLACE THE SOIL BANK

We recommend that the soil bank conservation reserve be replaced by a land-use adjustment program under the ACP, designed to fit into good cropping and conservation practices.

FARM COMMODITY PROGRAM DEVELOPMENT

We recommend that producers of the various major farm commodities be given opportunity to participate through duly elected representatives in the development of price and market stabilization programs.

Mr. President, the recommendations which have been made in this petition support, in the main, a bill I introduced last year known as the Family Farm Development Act. The proposal emphasizes the importance of the farmers themselves designing farm programs in cooperation with the technical services of the Department of Agriculture, and provides that the programs ultimately be placed before the farm producers in a national referendum. If two-thirds of the producers agreed to the program, it would become operative, unless Congress, within 30 days, overruled it. Congress would, thereby act as the guardian of the public interest.

The Family Farm Development Act also would provide for national goals of farm production. It would provide for expanded land use, a conservation program, and a program for certain types of assistance loans for marginal farm producers.

Mr. President, I ask unanimous consent that the petition be referred to the Committee on Agriculture and Forestry.

There being no objection, the petition was received and referred to the Committee on Agriculture and Forestry.

RESOLUTIONS OF UPWA–AFL–CIO DISTRICT COUNCIL NO. 2

Mr. HUMPHREY. Mr. President, District Council No. 2 of the United Packinghouse Workers of America, AFL–CIO, at its meeting in Albert Lea, Minn., April 1 and 2, approved two resolutions: one, commending the work of the U.S. Meat Inspection Service and the other, urging that the Food and Drug Administration help consumer, farmer, and packinghouse worker alike by requiring that an increased amount of pork be put in every can of pork and beans.

Mr. President, I ask unanimous consent that these resolutions be printed in the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION ON MEAT INSPECTION

Whereas the United Packinghouse Workers of America, AFL–CIO, are well aware of the fine and valuable work of the U.S. Meat Inspection Service in protecting the health of the consuming public and assisting meat producers and meat processors in supplying a wholesome, safe product: Now, therefore, be it

Resolved, That District Council No. 2, UPWA–AFL–CIO, in convention assembled at Albert Lea, Minn., reiterate our approval and appreciation of this service and request that Congress continue to provide adequate funds for its efficient operation; and be it further

Resolved, That copies of this resolution be sent to the 12th constitutional convention of the International United Packinghouse Workers of America, AFL–CIO, to effectuate this resolution.

RESOLUTION REQUESTING THE PURE FOOD AND DRUG ADMINISTRATION TO LEGALIZE THE AMOUNT OF PORK TO GO INTO A CAN OF PORK AND BEANS

Whereas there is no legal quantity of pork specified by the Pure Food and Drug Administration to go into a can of pork and beans; and

Whereas present consumption of the product labeled as "pork and beans" amounts to a billion pounds annually, or six pounds for every man, woman, and child in the United States; and

Whereas the pork content in a can of pork and beans presently is of the minimum and is there only to give credence to the label "pork and beans"; and

Whereas if the amount of pork in a can of pork and beans was only increased to a 2-ounce piece of pork for every pound of beans, the consumption of pork by the American public would increase annually by about 125 million pounds and thereby would assist economically the packinghouse workers, the farmers, and the consumers alike: Therefore, be it

Resolved, That Local No. 50, United Packinghouse Workers of America, AFL–CIO, go on record requesting the Pure Food and Drug Administration to make every effort to take whatever steps are necessary to increase the pork content in a can labeled "pork and beans"; and be it further

Resolved, That copies of this resolution be sent to our Congressmen and Senators requesting them to use their offices to effectuate this resolution; and be it finally

Resolved, That copies of this resolution be sent to the 15th annual district No. 2 convention of the United Packinghouse Workers of America, AFL–CIO; the 12th constitutional convention of the International United Packinghouse Workers of America, AFL–CIO; the national AFL–CIO; the State labor organizations in the livestock-producing States; and all farm organizations requesting them to take similar action.

RESOLUTION OF ST. PAUL AFL–CIO TRADES AND LABOR ASSEMBLY

Mr. HUMPHREY. Mr. President, America's industrial strength is great for many reasons and one of the most important is the skilled craftsmanship of our laboring men and women. This skill and pride of craftsmanship is the direct fruit of the apprenticeship system.

To pay appropriate tribute to this system and its great value to our economy, the St. Paul AFL–CIO Trades and Labor Assembly has proposed a U.S. postage stamp commemorating "The Nucleus of Craftsmanship: Apprenticeship."

Mr. President, I ask unanimous consent that the Trades and Labor Assembly resolution proposing this stamp be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

To print a U.S. postage stamp—"the Nucleus of Craftsmanship: Apprenticeship"—recognizing the basic philosophy of

bona fide apprenticeship and bringing to the attention of the American public the value of the apprenticeship system to our national economy.

Whereas millions of our fellow workers, throughout the years, have given of their time and effort in the promotion of this philosophy, for the purpose of training competent craftsmen for the industrial welfare of our Nation; and

Whereas the future status of skilled manpower in the United States is becoming increasingly dependent upon apprentice training; and

Whereas there is a need to acquaint the American public with the gigantic strides, activities and efforts in establishing the philosophy of bona fide apprenticeship, and the efforts that are being taken by Labor and Management to provide the public with the highest possible grade of products and services in conformity with approved practices of safety and skilled craftsmanship; and

Whereas it is the desire of the St. Paul AFL–CIO Trades and Labor Assembly to pay tribute to these fellow workers, apprentices, and to Labor and Management representatives who have voluntarily contributed their time and effort to this very necessary industrial activity: Now, therefore, be it

Resolved, That the St. Paul AFL–CIO Trades and Labor Assembly go on record as approving, and to petition Postmaster General Arthur E. Summerfield to have printed, a U.S. postage stamp using a facsimile of the imprint on this resolution and the attached analogy; also to request our congressional delegation to so petition the Postmaster General.

RESOLUTIONS OF INTERCOLLEGIATE OUTING CLUB ASSOCIATION

Mr. HUMPHREY. Mr. President, at the 1960 spring conference of the Intercollegiate Outing Club Association, delegates of 100 affiliated clubs discussed many issues of interest not only to naturalists but to all interested in our natural resources.

Mr. President, I ask unanimous consent that the resolutions of this conference held April 23 at Camp Skymont in Bentonville, Va., be printed in the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION ON THE WILDERNESS BILL

Realizing that wilderness is an exquisite resource, rare and irreplaceable, needed for the spiritual and recreational well-being of this and future generations. If not preserved by the authority of a national legislative policy, it will be bartered and forever lost to materialistic "progress"; and

Extensive hearings have been held throughout the Nation on the wilderness bill, and careful Senate committee and staff endeavors have rewritten the bill to meet all reasonable administrative, congressional, and public objections; and

Present obstruction of the wilderness bill in the Senate Committee on Interior and Insular Affairs is not logically justified and must be condemned as an attempt to frustrate and defeat the real purpose and needs of this legislation:

The 1960 conference of the Intercollegiate Outing Club Association respectfully insists that the Senate Committee on Interior and Insular Affairs report the wilderness bill out at once.

Furthermore, realizing that every year of delay causes an irreparable loss of wilderness to Americans of an infinite future, the Intercollegiate Outing Club Association urges the House Committee on Interior and Insular Affairs to consider and report out at once H.R. 10621 before this 86th Congress adjourns.

RESOLUTION ON THE ALLAGASH WILDERNESS

Realizing that the finest remaining wilderness east of the Mississippi lies in the Allagash region of the State of Maine, and that this region contains incomparable canoe trails, famed since the days of Thoreau; and

A dam at Rankin Rapids and its reservoir would obliterate 97 percent of the Allagash River, and a highway from Daaquam in the west to Ashland in the east would bisect this primeval wilderness and open its heartland to unsightly highway developments:

The Intercollegiate Outing Club Association, which for 30 years has enjoyed canoe and hiking trips in the Maine wilderness, urges that Big Rapids Dam and Lincoln Dam, which would preserve the Allagash, be constructed instead of Rankin Rapids Dam, and that no highway be constructed through the heartland of the priceless Allagash wilderness.

RESOLUTION ON RAINBOW BRIDGE NATIONAL MONUMENT

Realizing that Public Law 485, 84th Congress, states that no dam nor reservoir in the upper Colorado River storage project is to lie within any national park or monument, and specifically precludes Rainbow Bridge National Monument from impairment by the construction of Glen Canyon Dam; and

If a diversion dam is not built to protect the Monument, backed up waters from Glen Canyon Dam will flood into the monument and at high water, under the arch itself, killing all plant cover, staining the rocks and natural geological formations with an unsightly "white zone," and depositing large quantities of silt and debris—thus ruining the aesthetic and wild qualities of Rainbow Bridge National Monument; and

Congressional law requires that adequate protection for Rainbow Bridge National Monument be assured:

The Intercollegiate Outing Club Association respectfully urges that adequate funds to build a diversion dam and tunnel at site B be appropriated by the 86th Congress, and that construction of Glen Canyon Dam be postponed until protection of the monument is completed; and

The Intercollegiate Outing Club Association condemns violation of the natural condition of any park or monument, realizing that a violation of one will be a threat to all.

RESOLUTION ON KINZUA DAM

Realizing that the city of Pittsburgh and environs needs protection from flood conditions on the Allegheny River; and

The Kinzua damsite proposed by the Corps of Engineers would devastate a recreation area vital to New York and Pennsylvania populations, and would lawlessly abrogate a Federal treaty signed by George Washington with the Seneca Indians; and

The Corps of Engineers has not given a full examination to the alternative Conewango site for a flood-control dam:

The Intercollegiate Outing Club Association requests that the historical treaty with the Seneca Indians be regarded, and that no appropriations be permitted for construction of Kinzua Dam until the Conewango damsite has been justly, fully, and impartially studied.

RESOLUTION ON THE NORTH CASCADES

Realizing that the North Cascades area of the State of Washington, with its tumbling glaciers and towering forests, contains the most spectacular mountain scenery in the United States; and

The 1959 Forest Service Glacier Peak wilderness area proposal for this region is entirely inadequate for the preservation of the ecological and scenic unit of the wilderness area because it eliminates the forested valleys of the Seattle and Agnes Rivers, and the whole scenic area north of Cascade Pass; and

The wilderness values of this region are far greater and more permanent than temporary monetary gain from the sale of valley timber:

Since the present administration of the U.S. Forest Service is unwilling to preserve the scenic and ecological unity of this area, the Intercollegiate Outing Club Association, believing that preservation of this rare wilderness for the future is of far greater import than a question of which Federal administrative agency will have jurisdiction over it, urges that the National Park Service make a survey of the potentialities of the North Cascades area for inclusion in the National Park system, and report its findings to Congress and to the people.

RESOLUTION ON NATIONAL SEASHORE AREAS

Realizing that natural seashores, where man can leave his footprints in the sand and gaze over the infinite surface of sea, are quickly disappearing as industry and population expand:

The Intercollegiate Outing Club Association endorses the Federal proposal to establish the Cape Cod, Padres Island, and Oregon Dunes National Seashores, and recommends that further national seashores including: Huron Mountain, Sleeping Bear Dunes, Picture Rocks, Cape Flattery, Channel Island, Point Reyes, Cumberland Island, and Fire Island, be legislatively preserved as soon as surveys and public hearings have been adequately held.

PAYMENTS IN LIEU OF TAXES—LEAGUE OF WISCONSIN MUNICIPALITIES ENDORSES S. 910

Mr. WILEY. Mr. President, the problem of nontaxpaying federally owned properties in communities throughout the country—many of which today are hard pressed to find sources of revenue to provide the necessary services—continues to be a serious one.

Currently, the bill, S. 910, pending before the Senate, proposes to deal with this situation by providing Federal payments in lieu of taxes to the local communities.

We recognize, of course, that Uncle Sam is already saddled with tremendous costs for a wide variety of programs, and also has difficulty in finding adequate sources of revenue.

However, a serious question arises as to whether areas in which federally owned properties are located should bear the special burden resulting from the existence of such property—often occupying choice sites in the city or community.

Recognizing this serious problem, I joined in cosponsoring the original bill,

S. 910, proposing to offset losses by providing Federal payments in lieu of taxes.

I believe that Congress should now act expeditiously to provide an equitable solution to this situation.

Today, I was pleased to receive from Ed Johnson, executive director of the League of Wisconsin Municipalities, a letter expressing this fine organization's support for enactment of S. 910.

Reflecting the views of this splendid association of Wisconsin cities and villages, I request unanimous consent to have the letter printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LEAGUE OF
WISCONSIN MUNICIPALITIES,
Madison, Wis., May 9, 1960.

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: It is my understanding that there is a good possibility that S. 910 will be on the agenda of the Senate sometime in the near future. As I am sure you are aware, this bill is a result of many years study and represents a compromise between the positions taken by the Federal agencies and by representatives of local governmental units. It would establish certain in lieu of tax payments and special assessment liability for some types of federally owned properties.

I will not belabor you with the arguments as to why I think such legislation should be passed. The impact of federally owned property on individual communities can sometimes be tremendous. It seems only just that such communities should not be made to bear the burden for Federal operations which benefit millions of people living outside of those communities.

Your support of S. 910 will be greatly appreciated.

Very truly yours,

ED JOHNSON,
Executive Director.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. STENNIS, from the Committee on Armed Services, with an amendment:

H.R. 10777. An act to authorize certain construction at military installations, and for other purposes (Rept. No. 1338).

By Mr. HAYDEN, from the Committee on Rules and Administration, without amendment:

S. 3036. A bill to authorize the distribution of copies of the CONGRESSIONAL RECORD to former Members of Congress requesting such copies (Rept. No. 1339);

H.J. Res. 502. Joint resolution authorizing the erection in the District of Columbia of a memorial to Mary McLeod Bethune (Rept. No. 1340);

H.J. Res. 546. Joint resolution authorizing the Architect of the Capitol to present to the Senators and Representative in the Congress from the State of Hawaii the official flag of the United States bearing fifty stars which is first flown over the west front of the United States Capitol (Rept. No. 1341);

S. Con. Res. 91. Concurrent resolution authorizing the reprinting of additional copies of hearings before the Subcommittee on Agreements for Cooperation of the Joint Committee on Atomic Energy on Amending the Atomic Energy Act of 1954 with respect to exchange of military information and material with allies during the 2d session of the 85th Congress;

S. Con. Res. 94. Concurrent resolution authorizing the printing of additional copies of a committee print containing the reports of the States to the Senate Select Committee on National Water Resources on their water resources and problems;

S. Con. Res. 96. Concurrent resolution authorizing the printing of a revised edition of the Internal Security Manual as a Senate document; and providing for additional copies;

S. Con. Res. 97. Concurrent resolution authorizing the reprinting of additional copies of the Joint Committee print entitled "Summary-Analysis of Hearings, June 22–26, 1959, on Biological and Environmental Effects of Nuclear War," printed for the use of the Joint Committee on Atomic Energy during the 86th Congress, 1st session;

S. Con. Res. 99. Concurrent resolution to print as a Senate document a compilation of studies on United States-Latin American relations;

S. Con. Res. 100. Concurrent resolution to print as a Senate document a compilation of studies on United States foreign policy;

H. Con. Res. 558. Concurrent resolution providing for printing additional copies of the panel discussions entitled "Income Tax Revision";

H. Con. Res. 579. Concurrent resolution authorizing the printing of additional copies of a "Veterans' Benefits Calculator";

H. Con. Res. 586. Concurrent resolution authorizing the printing of additional copies of the hearings on civil rights;

H. Con. Res. 607. Concurrent resolution authorizing the printing as a House document of the pamphlet entitled "Our American Government. What Is It? How Does It Function?";

S. Res. 277. Resolution to print for the use of the Select Committee on Small Business additional copies of its 10th annual report;

S. Res. 278. Resolution to print additional copies of the report on the problem of the aged and aging;

S. Res. 279. Resolution authorizing additional expenditures by the Committee on Government Operations;

S. Res. 281. Resolution authorizing the printing of additional copies of Senate Report No 807, 86th Congress, entitled "Federal Disaster Relief Manual";

S. Res. 299. Resolution authorizing the printing of additional copies of the question-and-answer review of the St. Lawrence Seaway;

S. Res. 303. Resolution to print for the use of the Special Committee on Unemployment Problems additional copies of its final report;

S. Res. 306. Resolution to print additional copies of hearings on "Organizing for National Security";

S. Res. 307. Resolution to print, with illustrations, a study entitled "Exports, Imports, and the United States Balance of International Payments," prepared by Dr. Howard S. Piquet; and

S. Res. 310. Resolution increasing the limit of expenditures for hearings before the Committee on Armed Services.

By Mr. HAYDEN, from the Committee on Rules and Administration, with an amendment:

S. Res. 302. Resolution to print for the Committee on Labor and Public Welfare a staff report on labor-management relations on certain Federal projects;

S. Con. Res. 90. Concurrent resolution authorizing the printing of additional copies of the final report and indexes to hearings and reports of the Select Committee on Improper Activities in the Labor or Management Field; and

S. Res. 305. Resolution providing for a study of the uses of Government licensed media for the dissemination of political opinions, news, and so forth (Rept. No. 1342).

ELIZABETH M. HICKEY, EDWARD D. MURPHY, AND WALTER D. MURPHY

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 312) to pay a gratuity to Elizabeth M. Hickey, Edward D. Murphy, and Walter D. Murphy, which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Elizabeth M. Hickey, daughter of James W. Murphy, and Edward D. Murphy and Walter D. Murphy, sons of James W. Murphy, an Official Reporter of Debates and Proceedings of the United States Senate at the time of his death, a sum to each equal to four months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

ILLYENE MARDEN, VERA DAVIS, RAY McGUIGAN, AND ART McGUIGAN

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 313) to pay a gratuity to Illyene Marden, Vera Davis, Ray McGuigan, and Art McGuigan, which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Illyene Marden and Vera Davis, nieces of John J. Kenney, and Ray McGuigan and Art McGuigan, nephews of John J. Kenney, an employee of the Senate at the time of his death, a sum to each equal to two months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

MARY A. RUESCH

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 314) to pay a gratuity to Mary A. Ruesch, which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Mary A. Ruesch, sister of Belva M. Ratchford, an employee of the Senate at the time of her death, a sum equal to seven months' compensation at the rate she was receiving by law at the time of her death, said sum to be considered inclusive of funeral expenses and all other allowances.

ELLA JOHNSON

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 315) to pay a gratuity to Ella Johnson, which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay,

from the contingent fund of the Senate, to Ella Johnson, widow of Robert Johnson, an employee of the Architect of the Capitol assigned to duty in the Senate Office Buildings at the time of his death, a sum equal to six months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

CONNIE YOUNG

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 316) to pay a gratuity to Connie Young, which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Connie Young, widow of Charlie A. Young, an employee of the Architect of the Capitol assigned to duty in the Senate Office Buildings at the time of his death, a sum equal to six months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

MARY NELL SISSON

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 317) to pay a gratuity to Mary Nell Sisson, which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Mary Nell Sisson, widow of W. D. Sisson, an employee of the Senate at the time of his death, a sum equal to three months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

PRINTING OF 61ST ANNUAL REPORT OF NATIONAL SOCIETY OF THE DAUGHTERS OF THE AMERICAN REVOLUTION AS A SENATE DOCUMENT

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 318) to print the 61st annual report of the National Society of the Daughters of the American Revolution for the year ended April 1, 1958, as a Senate document, which was placed on the calendar, as follows:

Resolved, That the sixty-first annual report of the National Society of the Daughters of the American Revolution for the year ended April 1, 1958, be printed, with an illustration, as a Senate document.

PRINTING OF 62D ANNUAL REPORT OF NATIONAL SOCIETY OF THE DAUGHTERS OF THE AMERICAN REVOLUTION AS A SENATE DOCUMENT

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 319) to print the 62d Annual Report of the National Society of the Daughters of the American Revolution for the year ended April 1, 1959, as a Senate document, which was placed on the calendar, as follows:

Resolved, That the Sixty-second Annual Report of the National Society of the Daughters of the American Revolution for the year ended April 1, 1959, be printed, with an illustration, as a Senate document.

AUTHORIZATION TO PRINT A REVISED EDITION OF THE "ELECTION LAW GUIDEBOOK"

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 320) to authorize the printing of a revised edition of the "Election Law Guidebook," which was placed on the calendar, as follows:

Resolved, That a revised edition of Senate Document Numbered 97 of the Eighty-fifth Congress, entitled "Election Law Guidebook," be printed as a Senate document.

REPORT OF JOINT COMMITTEE ON REDUCTION OF NONESSENTIAL FEDERAL EXPENDITURES—FEDERAL STOCKPILE INVENTORIES

Mr. BYRD of Virginia. Mr. President, as chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures, I submit a report on Federal stockpile inventories as of March 1960. I ask unanimous consent to have the report printed in the RECORD, together with a statement by me.

There being no objection, the report and statement were ordered to be printed in the RECORD, as follows:

FEDERAL STOCKPILE INVENTORIES, MARCH 1960

INTRODUCTION

This is the fourth in a series of monthly reports on Federal stockpile inventories under the Department of Agriculture, General Services Administration, and the Office of Civil and Defense Mobilization. It is for the month of March 1960.

The report is compiled from official data on quantities and cost value of commodities in these stockpiles submitted to the Joint Committee on Reduction of Nonessential Federal Expenditures by the agencies involved.

The three agencies reported that as of March 1, 1960, the cost value of materials in their stockpile inventories totaled $15,638,231,000 and as of March 31, 1960, they totaled $15,603,074,000, a net decrease of $35,157,000 reflecting acquisitions, disposals, adjustments, etc., during the month.

Different units of measure make it impossible to summarize the quantities of commodities and materials which are shown in tables 1, 2, and 3, but the cost value figures are summarized by agency and program as follows:

Summary of cost value of stockpile inventories

[In thousands]

Agency and program	Beginning of month, Mar. 1, 1960	End of month, Mar. 31, 1960	Net change, reflecting acquisitions, disposals, adjustments, etc.
Department of Agriculture:			
Price support program:			
Agricultural commodities	$6,980,146	$6,933,542	−$46,604
Exchange commodities—strategic and critical materials	79,544	95,349	+15,805
Total, price support program	7,059,690	7,028,891	−30,799
Defense Production Act program	3	3	
Total, Department of Agriculture	7,059,693	7,028,894	−30,799
General Services Administration:			
Strategic and critical materials:			
National stockpile	6,193,619	6,188,123	−5,496
Federal Facilities Corporation, tin inventory	9,519	9,519	
Defense Production Act program	1,449,587	1,450,833	+1,246
Supplemental stockpile	693,767	693,546	−221
Supplemental stockpile inventory in transit	60,196	60,196	
Total, General Services Administration	8,406,688	8,402,218	−4,470
Office of Civil and Defense Mobilization: Civil defense stockpile	171,850	171,962	+112
Grand total	15,638,231	15,603,074	−35,157

Detailed tables in this report show opening inventories at the beginning of the month in quantity and cost, transactions during the month, and the closing inventories at the end of the month. Each inventory is shown by commodity except the national stockpile, for which commodity detailed is classified.

Pertinent information and explanation are set forth in notes accompanying the respective tables. Statutory authority and program descriptions are shown in the appendix to the report.

The inventories covered by the report are tabulated in detail as follows:

Table 1: Agricultural price support program inventories under Commodity Credit Corporation, Department of Agriculture, March 1960: Including agricultural commodities, strategic and critical materials acquired by exchange or barter, and special acquisitions under the Defense Production Act.

Table 2: Strategic and critical materials inventories under General Services Administration, March 1960: Including materials in the national stockpile, Federal Facilities Corporation tin inventory, Defense Production Act purchase program, the supplemental stockpile of materials acquired by exchange or barter of agricultural commodities, etc., and inventory in transit from Commodity Credit Corporation to the supplemental stockpile.

Table 3: Civil defense stockpile inventory under the Office of Civil and Defense Mobilization, March 1960.

TABLE 1.—*Agricultural price support program inventories under Commodity Credit Corporation, Department of Agriculture, March 1960: Including agricultural commodities, strategic and critical materials acquired by exchange or barter, and special acquisitions under the Defense Production Act*

EXPLANATORY NOTES

The Department of Agriculture defines the content of the columns as follows:

Program and commodity: Lists each commodity in the form in which it exists when extended support, and in some instances in a form to which the supported commodity is processed or converted to increase marketability. The commodities are grouped under the appropriate statutory subclassifications as "Basic," "Designated nonbasic," "Other nonbasic," and "Exchange."

Unit of measure: The applicable unit used in the accounting records and reports of the Corporation.

Inventory, beginning of month: Quantity: In number of units. Cost value: All inventories are recorded in the accounts at cost. "Cost value" is comprised of the initial cost of the commodity plus storage, handling, transportation, and accessorial expenses paid or accrued up to the date of reporting. The initial cost of inventories acquired by delivery of collateral securing loans is the unpaid balance of the notes plus storage and other charges advanced, any equities due or paid to producers on warehouse-stored collateral (by Public Law 85-835, and beginning with 1959 crop production, the Corporation will not make equity payments to borrowers on unredeemed price support loan collateral, title to which it acquires on or after maturity of the loans), and the net value of any quantity or quality differences determined upon delivery of farm-stored collateral. Amounts paid to lending agencies participating in the loan program for crop years prior to 1958 were recorded as a part of inventory cost.

Adjustments: Warehouse settlements, exchanges and transfers (net): Warehouse settlements include the net differences in quantity and/or value represented by the net of overdeliveries, premiums, underdeliveries, and discounts arising from movement of commodities. Exchanges represent the net change in quantity and/or value for inventories exchanged or in process of exchange. On completed exchanges, the change in value represents differentials due to location, quality, and quantity. Unprocessed commodities removed from inventory for conversion or processing (on a contractual or fee basis and excluding conditional sales) are included as a reduction of inventory. Processed commodities acquired as a result of this conversion or processing are included as an addition to inventory.

Acquisitions: As reflected in accounting records and reports; and includes commodities acquired by delivery of collateral securing loans, commodities purchased under terms of purchase agreements, commodities purchased directly from producers or processors as a part of the support operation but not under purchase agreements; and processed commodities acquired by purchases which offset conditional sales of unprocessed commodities from inventory. The cost value of acquisitions is described under the explanation of the cost value of inventory.

Carrying charges added to investment after acquisition: Total costs of storage, handling, transportation, and other accessorial expenses incurred during the month.

Disposals: As reflected in accounting records and reports. Inventory transactions generally are recorded on the basis of transfer of title. Disposition commitments are not reflected in the accounts. Cost value: Represents acquisition value plus applicable amount of carrying charges. The amount of cost allocated to commodities removed from inventory is determined with the view of retaining in the inventory accounts the cost of commodities remaining on hand. The cost allocated to commodities removed from price support inventory is generally computed on the basis of average unit cost of the commodity reflected in the inventory accounts for the applicable crop year and general storage location. In the case of commodities generally stored commingled (e.g., bulk grains and bulk oils) the crop year is determined on the first-in, first-out basis. In the case of commodities stored in identified lots, the crop year is determined by lot identification.

Inventory, end of month: Closing inventory after transactions for the month have been applied to the inventory at the beginning of the month.

[In thousands]

[2] See appendix, p. 14, for notes relating to reporting of strategic and critical materials acquired by exchange or barter of agricultural commodities.

NOTE.—Figures are rounded and may not add to totals.

TABLE 2.—*Strategic and critical materials inventories under General Services Administration, March 1960: Including materials in the national stockpile, Federal Facilities Corporation tin inventory, Defense Production Act purchase program, the supplemental stockpile of materials acquired by exchange or barter of agricultural commodities, etc., and inventory in transit from Commodity Credit Corporation to the supplemental stockpile*

EXPLANATORY NOTES

The General Services Administration defines the content of the columns as follows:

Program and commodity: Identifies the program and the minerals, metals, fibers, and oils acquired under the program.

Unit of measure: The standard weight or measure of minerals, metals, fibers, and oils determined to be the stockpile unit of measure.

Inventory, beginning of month: Opening inventory represents quantity and cost of material in storage at the beginning of the accounting period.

Adjustments: Represents increases (+) or decreases (−) of material in inventory other than increases from acquisitions or decreases from disposals. Decreases occur from theft, loss incurred while in transit to stockpile location, repacking from one type of container to another, beneficiation of a low-grade material to a higher grade, and the removal of material for sampling and testing purposes. Increases occur from return of material previously removed for sampling and testing purposes and from quantities received at storage locations in excess of quantities billed by the contractor. A new chemical analysis of the materials may cause an increase or decrease where the weights are based on chemical and moisture content. Increases or decreases are also made from findings of audits of inventory and accounting records.

Acquisitions: For the National Stockpile and Defense Production Act acquisitions include open market purchases at contract prices; intradepartmental transfers at market or appraised value at time of transfer; transportation to first permanent storage location; and, beneficiating and processing cost in upgrading materials. For the supplemental stockpile acquisitions include the market value or CCC's acquisition cost whichever is the lower at time of transfer from CCC.

Disposals: Cost of disposals are calculated at the average unit price of inventory at time of removal from inventory. For the national stockpile inventory disposals consist of sale of materials that by their nature would deteriorate if held in storage for lengths of time; and, sale of materials that have been determined to be obsolete or excess to the needs of Government. For the Defense Production Act inventory disposals consist of sale of materials that have been determined to be obsolete or excess to the needs of Government.

Inventory, end of month: Closing inventory represents quantity and cost of material in storage at the end of the accounting period.

NOTE.—Figures are rounded and may not add to totals.

TABLE 3.—*Civil defense stockpile inventory under the Office of Civil and Defense Mobilization, March 1960*

EXPLANATORY NOTES

The Office of Civil and Defense Mobilization defines the content of the columns as follows:

Commodity: Composite groups of many different items.

Unit of measure: Shown only for engineering supply units and hospital functional units; not feasible by other composite groups.

Inventory-quantity: Shown only for two items, namely, engineering supply units and civil defense emergency hospital functional units. It is not feasible to furnish quantity figures on the other commodity groups because they are composite groups of many different items. To report quantities, it would be necessary to list several hundred different items.

Inventory-cost value: The dollar value figures on commodities in the civil defense stockpile inventory reflect essentially the actual costs of the commodities. No transportation, delivery, or storage costs are included. However, these statements should be qualified by the fact that the total inventory includes Government excess property items valued at over $2 million (a little more than 1 percent of the total), which were acquired by Office of Civil and Defense Mobilization at little or no cost. These materials are received into the inventory on one of three value bases: Items similar or identical to items purchased in the open market for stockpile purposes are accepted at the average unit cost for similar items purchased; the remaining items are accepted at a current fair value, if such has been determined, or at the original acquisition cost to the Federal Government, if a current fair value has not been determined.

Adjustments: Represents inventory pricing adjustments resulting from recalculation of fixed average unit prices, transfers of commodities from one composite group to another, etc., during the month.

Acquisitions: Materials placed in inventory during the month, including return to inventory of items previously released from inventory for reworking, etc. Value stated in terms of actual costs of the commodities.

Disposals: Materials removed from inventory during the month, including items released from inventory for reworking, etc. Value stated in terms of average unit costs.

Inventory at end of month: Closing inventory after transactions for the month have been applied to the inventory at the beginning of the month.

[In thousands]

APPENDIX

U.S. DEPARTMENT OF AGRICULTURE—COMMODITY CREDIT CORPORATION

The price support program

Price-support operations are carried out under the Corporation's charter powers (15 U.S.C. 714), in conformity with the Agricultural Act of 1949 (7 U.S.C. 1421), the Agricultural Act of 1954 (7 U.S.C. 1741), which includes the National Wool Act of 1954, the Agricultural Act of 1956 (7 U.S.C. 1442), the Agricultural Act of 1958 and with respect to certain types of tobacco, in conformity with the act of July 28, 1945, as amended (7 U.S.C. 1312). Under the Agricultural Act of 1949, price support is mandatory for the basic commodities—corn, cotton, wheat, rice, peanuts, and tobacco—and specific nonbasic commodities; namely, tung nuts, honey, milk, butterfat, and the products of milk and butterfat. Under the Agricultural Act of 1958, as producers of corn voted in favor of the new price-support program for corn authorized by that act, price support is mandatory for barley, oats, rye, and grain sorghums. Price support for wool and mohair is mandatory under the National Wool Act of 1954, through the marketing year ending March 31, 1962. Price support for other nonbasic agricultural commodities is discretionary except that whenever the price of either cottonseed or soybeans is supported, the price of the other must be supported at such level as the Secretary determines will cause them to compete on equal terms on the market. This program may also include operations to remove and dispose of or aid in the removal or disposition of surplus agricultural commodities for the purpose of stabilizing prices at levels not in excess of permissible price-support levels.

Price support is made available through loans, purchase agreements, purchases, and other operations, and, in the case of wool and mohair, through incentive payments based on marketings. The producer's commodities serve as collateral for price-support loans. With limited exceptions, price-support loans are nonrecourse and the Corporation looks only to the pledged or mortgaged collateral for satisfaction of the loan. Purchase agreements generally are available during the same period that loans are available. By signing a purchase agreement, a producer receives an option to sell to the Corporation any quantity of the commodity which he may elect within the maximum specified in the agreement.

The major effect on budgetary expenditures is represented by the disbursements for price-support loans. The largest part of the commodity acquisitions under the program result from the forfeiting of commodities pledged as loan collateral for which the expenditures occurred at the time of making the loan, rather than at the time of acquiring the commodities.

Dispositions of commodities acquired by the Corporation in its price-support operations are made in compliance with sections 202, 407, and 416 of the Agricultural Act of 1949, and other applicable legislation, particularly the Agricultural Trade Development and Assistance Act of 1954 (7 U.S.C. 1691), title I of the Agricultural Act of 1954, title II of the Agricultural Act of 1956, the Agricultural Act of 1958, the act of August 19, 1958, in the case of cornmeal and wheat flour, and the act of September 21, 1959, with regard to sales of livestock feed in emergency areas.

Defense Production Act program

The programs authorized by and certified to the Secretary of Agriculture under the provisions of the Defense Production Act are administered and operated through the Commodity Credit Corporation.

All present and past programs involve the acquisition and disposition of agricultural commodities or products thereof. Commodities acquired are entered in and maintained through the inventory accounts of the Corporation. As the commodities are disposed of, the realized gains or losses are recorded by CCC as a receivable against the Secretary of Agriculture. Administrative expenses of the Corporation are recorded in this receivable; and interest is computed monthly on the total amount of CCC's investment at the same rate per annum as that paid by the Corporation on its borrowings from the Treasury.

The net total of realized gains and losses, CCC's administrative expenses, and CCC's interest expense represented a payable item under the revolving fund.

The recording of realized gains or losses represents a cash basis, inasmuch as the amounts recorded represent the net results of actual dispositions. Values of inventories on hand at reporting date are not included in these fund accounts and therefore allowances for losses are not included. Administrative and interest expenses are accounted for on an accrual basis. All values are at cost.

When a program is completed, the Secretary of Agriculture secures funds by issuing interest-bearing notes to the Treasury and reimburses CCC. Interest on the notes issued by the Secretary is accrued monthly, compounded semi-annually, as an accrued liability of the revolving fund.

GENERAL SERVICES ADMINISTRATION—STRATEGIC AND CRITICAL MATERIALS STOCKPILING AND RELATED PROGRAMS

1. National stockpile

The Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98–98h) provides for the establishment and maintenance of a national stockpile of strategic and critical materials. GSA is responsible for making purchases of strategic and critical materials and providing for their storage, security, and maintenance. These functions are performed in accordance with directives issued by the Director of the Office of Civil and Defense Mobilization. The act also provides for the transfer from other Government agencies of strategic and critical materials which are excess to the needs of such other agencies and are required to meet the stockpile objectives established by OCDM. In addition, GSA, is responsible for disposing of those

strategic and critical materials which OCDM determines to be no longer needed for stockpile purposes.

General policies for strategic and critical materials stockpiling are contained in DMO V–7, issued by the Director of the Office of Civil and Defense Mobilization and published in the Federal Register of December 19, 1959 (24 F.R. 10309). Portions of this order relate also to Defense Production Act inventories.

2. Tin received from Federal Facilities Corporation

Public Law 608, 84th Congress (50 U.S.C. 98 note), provided, among other things, for the continuation of operation of the Government-owned tin smelter at Texas City, Tex., from June 30, 1956, until January 31, 1957. It provided also that all tin acquired by the Federal Facilities Corporation by reason of such extension should be transferred to GSA.

3. Defense Production Act

Under section 303 of the Defense Production Act of 1950 (50 U.S.C. App. 2093) and Executive Order 10480, as amended, GSA is authorized to make purchases of or commitments to purchase metals, minerals, and other materials, for Government use or resale, in order to expand productive capacity and supply, and also to store the materials acquired as a result of such purchases or commitments. Such functions are carried out in accordance with programs certified by the Director of the Office of Civil and Defense Mobilization.

4. Supplemental stockpile

As a result of a delegation of authority from OCDM (32A C.F.R., ch. I, DMO V–4) GSA is responsible for the maintenance and storage of materials placed in the supplemental stockpile. Section 206 of the Agricultural Act of 1956 (7 U.S.C. 1856) provides that strategic and other materials acquired by the Commodity Credit Corporation as a result of barter or exchange of agricultural products, unless acquired for the national stockpile or for other purposes, shall be transferred to the supplemental stockpile established by section 104(b) of the Agricultural Trade Development and Assistance Act of 1954 (7 U.S.C. 1704(b)). In addition to the materials which have been or may be so acquired, the materials obtained under the programs established pursuant to the Domestic Tungsten, Asbestos, Fluorspar, and Columbium-Tantalum Production and Purchase Act of 1956 (50 U.S.C. App. 2191–2195), which terminated December 31, 1958, have been transferred to the supplemental stockpile, as authorized by the provisions of said Production and Purchase Act.

OFFICE OF CIVIL AND DEFENSE MOBILIZATION—CIVIL DEFENSE STOCKPILE PROGRAM

This stockpiling program, under authorization of Public Law 920, 81st Congress, section 201(h), is designed to provide some of the most essential medical and engineering supplies for emergency use in event of enemy attack. Materials and equipment not normally available or not present in the quantities needed to cope with such conditions are stockpiled at strategic locations. The Office of Civil and Defense Mobilization stockpile procured to date including medical supplies, emergency engineering equipment, and radiological instruments is stored and maintained in a nationwide warehouse system consisting of medical and general storage facilities.

EXPLANATORY NOTES RELATING TO THE REPORTING OF STRATEGIC AND CRITICAL MATERIALS ACQUIRED BY EXCHANGE OR BARTER OF AGRICULTURAL COMMODITIES

Surplus agricultural commodities in the Commodity Credit Corporation's price-support inventory may be exchanged or bartered for strategic and critical materials under the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480), and other basic legislation including the CCC Charter Act, as amended, the Agricultural Act of 1954, and the Agricultural Act of 1956.

Except for small amounts which may go to the national stockpile, the strategic and critical materials acquired by Commodity Credit Corporation under the barter program are transferred to the supplemental stockpile.

Direct appropriations reimburse Commodity Credit Corporation for materials so transferred from the price-support inventory.

The General Services Administration is charged with the custody and management of strategic and critical materials, and becomes the responsible reporting agency when title to these bartered materials is placed in the supplemental stockpile.

For purposes of this report, strategic and critical materials acquired by barter may appear in three inventories, reflecting the stages of the transfer of title.

1. The Department of Agriculture reports those to which the Commodity Credit Corporation still has title, prior to transfer to the supplemental stockpile.

2. The General Services Administration reports those which have been transferred from the Commodity Credit Corporation exchange inventory in two parts:

A. Materials for which title is "in transit" from Commodity Credit Corporation to the supplemental stockpile.

B. Materials for which title has passed to the supplemental stockpile.

STATEMENT BY SENATOR BYRD OF VIRGINIA

The cost value of materials in nine Federal stockpile inventories as reported by the Department of Agriculture, General Services Administration and the Office of Civil and Defense Mobilization, on March 31, 1960, totaled $15,603,074,000. March activity in these stockpiles resulted in a net reduction of $35,157,000.

The net change in these stockpile inventories reflects acquisitions, disposals and adjustments. The March activity and the end-of-the-month totals are summarized as follows:

[In thousands]

Inventories by agency and program	Cost value, March 1960	
	Net change during month	Total, end of month
Department of Agriculture:		
Price support program:		
1. Agricultural commodities	−$46,604	$6,933,542
2. Exchange, strategic, and critical materials	+15,805	95,349
Total, price support program	−30,799	7,028,891
3. Defense Production Act program		3
Total, Department of Agriculture	−30,799	7,028,894
General Services Administration—		
Strategic and critical materials:		
4. National stockpile	−5,496	6,188,123
5. Federal Facilities Corporation, tin inventory		9,519
6. Defense Production Act program	+1,246	1,450,833
7. Supplemental stockpile	−221	693,546
8. Supplemental stockpile inventory in transit		60,196
Total, General Services Administration	−4,470	8,402,218
Office of Civil and Defense Mobilization:		
9. Civil defense stockpile	+112	171,962
Grand total	−35,157	15,603,074

These figures are from reports certified by the agencies involved as compiled by the Joint Committee on Reduction of Nonessential Federal Expenditures.

INCREASES AND DECREASES

Major net decreases in cost value during the month were reported as follows: $44 million in cotton, $22 million in wheat, and $16.5 million in corn.

These decreases were partially offset by major net increases including: $20 million in milk and butterfat, $12 million in aluminum and aluminum ores, and $10 million in rice.

AGRICULTURAL COMMODITIES

Of 23 agricultural commodities in Commodity Credit's $6.9 billion price support inventory on March 31, 1960, those leading in cost value include:

Wheat, with 1.1 billion bushels at a cost of $2.8 billion;

Corn, with 1.2 billion bushels at a cost of $2.1 billion; and

Cotton, with more than 5.6 million bales at a cost of $988 million.

STRATEGIC AND CRITICAL MATERIALS

Strategic and critical materials are shown in 6 inventories totaling $8.5 billion, including the $6.2 billion national stockpile for which itemized detail is classified. Combined figures from the other five inventories show materials (in all grades and forms) leading in cost value as follows:

Aluminum, bauxite, etc., with 5.8 million tons at a cost of $454 million; tungsten, with 84 million pounds at a cost of $341 million, and manganese and manganese ores, with 4.4 million tons at a cost of $292 million.

CIVIL DEFENSE SUPPLIES AND EQUIPMENT

The civil defense stockpile is shown in seven composite groups totaling $172 million. Nearly 63 percent is in medical bulk stocks valued at $108 million.

EXECUTIVE REPORTS OF COMMITTEE ON ARMED SERVICES

Mr. BEALL. Mr. President, from the Committee on Armed Services, I report favorably the nominations of 94 officers for temporary and permanent appointment to brigadier and major general in the Air Force. I ask that these names be placed on the Executive Calendar.

The VICE PRESIDENT. Without objection, it is so ordered.

The nominations placed on the Executive Calendar are as follows:

Maj. Gen. Robert B. Landry, and sundry other officers, for temporary and permanent appointment in the Regular Air Force.

Mr. BEALL. Mr. President, in addition, I report favorably a total of 2,301 nominations in the Army and Air Force in the grade of major and below. All of these names have already appeared in the CONGRESSIONAL RECORD. In order to save the expense of printing on the Executive Calendar, I ask unanimous consent that they be ordered to lie on the Vice President's desk, for the information of any Senator.

The VICE PRESIDENT. Without objection, it is so ordered.

The nominations ordered to lie on the desk are as follows:

Arthur C. Aho, Jr., and sundry other officers, for promotion in the Regular Air Force.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by

unanimous consent, the second time, and referred as follows:

By Mr. CASE of South Dakota (for himself, Mr. CHAVEZ, and Mr. HRUSKA):

S. 3524. A bill to provide for a Commission on Presidential Office Space; to the Committee on Public Works.

(See the remarks of Mr. CASE of South Dakota when he introduced the above bill, which appear under a separate heading.)

By Mr. HOLLAND:

S. 3525. A bill to amend title II of the Social Security Act so as to permit the exclusion, in computing the average monthly wage of certain veterans, of certain periods during which they were on active duty with the Armed Forces of the United States; to the Committee on Finance.

By Mr. KEFAUVER:

S. 3526. A bill for the relief of Rene Tibi and Emile Jarmon Tibi; to the Committee on the Judiciary.

By Mr. MAGNUSON (by request):

S. 3527. A bill to amend section 1114 of title 18 of the United States Code for the protection of members, officers, and employees of the Interstate Commerce Commission;

S. 3528. A bill to amend the Communications Act of 1934 in order to provide the Federal Communications Commission with certain additional authority in enforcing the provisions of such act; and

S. 3529. A bill to amend Sec. 302(e) of the Federal Aviation Act of 1958 (72 Stat. 747), to establish the wartime relationships between the Federal Aviation Agency and the Department of Defense; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bills, which appear under separate headings.)

By Mr. KEATING (for himself and Mr. JAVITS):

S. 3530. A bill to authorize the Attorney General to maintain records of fraudulent and other unethical business practices; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the above bill, which appear under a separate heading.)

By Mr. FONG:

S. 3531. A bill for the relief of Ok Soon Choi; to the Committee on the Judiciary.

By Mr. MAGNUSON (for himself and Mr. JACKSON):

S. 3532. A bill to provide for the striking of medal in commemoration of Century 21 Exposition to be held in Seattle, Wash.; to the Committee on Banking and Currency.

By Mr. YOUNG of North Dakota:

S. 3533. A bill to protect farm and ranch operators making certain land use changes under the Great Plains conservation program against loss of acreage allotments; to the Committee on Agriculture and Forestry.

By Mr. MOSS:

S. 3534. A bill to revise the boundaries of Dinosaur National Monument and provide an entrance road or roads thereto, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. JAVITS (for himself and Mr. KEATING):

S.J. Res. 191. Joint resolution providing for the establishing of the former dwelling house of Alexander Hamilton as a national monument; to the Committee on Rules and Administration.

(See the remarks of Mr. JAVITS when he introduced the above joint resolution, which appear under a separate heading.)

RESOLUTIONS

ELIZABETH M. HICKEY, EDWARD D. MURPHY, AND WALTER D. MURPHY

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 312) to pay a gratuity to Elizabeth M. Hickey, Edward D. Murphy, and Walter D. Murphy, which was placed on the calendar.

(See the above resolution printed in full, which appears under the heading "Reports of Committees.")

ILLYENE MARDEN, VERA DAVIS, RAY McGUIGAN, AND ART McGUIGAN

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 313) to pay a gratuity to Illyene Marden, Vera Davis, Ray McGuigan, and Art McGuigan, which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. HAYDEN, which appears under the heading "Reports of Committees.")

MARY A. RUESCH

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 314) to pay a gratuity to Mary A. Ruesch, which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. HAYDEN, under the heading "Reports of Committees.")

ELLA JOHNSON

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 315) to pay a gratuity to Ella Johnson, which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. HAYDEN, which appears under the heading "Reports of Committees.")

CONNIE YOUNG

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 316) to pay a gratuity to Connie Young, which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. HAYDEN, which appears under the heading "Reports of Committees.")

MARY NELL SISSON

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 317) to pay a gratuity to Mary Nell Sisson, which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. HAYDEN, which appears under the heading "Reports of Committees.")

PRINTING OF 61ST ANNUAL REPORT OF NATIONAL SOCIETY OF THE DAUGHTERS OF THE AMERICAN REVOLUTION AS A SENATE DOCUMENT

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 318) to print the 61st Annual Report of the National Society of the Daughters of the American Revolution for the year ended April 1, 1958, as a Senate document, which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. HAYDEN, which appears under the heading "Reports of Committees.")

PRINTING OF 62D ANNUAL REPORT OF NATIONAL SOCIETY OF DAUGHTERS OF THE AMERICAN REVOLUTION AS A SENATE DOCUMENT

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 319) to print the 62d Annual Report of the National Society of the Daughters of the American Revolution for the year ended April 1, 1959, as a Senate document, which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. HAYDEN, which appears under the heading "Reports of Committees.")

AUTHORIZATION TO PRINT A REVISED EDITION OF THE "ELECTION LAW GUIDEBOOK"

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 320) to authorize the printing of a revised edition of the "Election Law Guidebook," which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. HAYDEN, which appears under the heading "Reports of Committees.")

COMMISSION ON PRESIDENTIAL OFFICE SPACE

Mr. CASE of South Dakota. Mr. President, I introduce, for appropriate reference, a bill to provide for a Commission on Presidential Office Space. The bill is cosponsored by the Senator from New Mexico [Mr. CHAVEZ], and the Senator from Nebraska [Mr. HRUSKA], who were members of the Advisory Commission which studied this problem in 1957. The bill would authorize a Commission to initiate and carry out features of the program recommended by the Advisory Commission.

Attention has again been called to the matter in the President's message of May 3, which said:

> I add two proposals of special importance to future Presidents of the United States. First is provision of presidential office space. The Congress has met its own space requirements and those of the Supreme Court. Requirements for modern office facilities for the President, his staff, and the news media assigned to the White House are no less necessary and urgent.

Mr. President, I am introducing the bill at this time and urging prompt consideration in the belief that this is the session of Congress which should take action.

President Eisenhower, obviously, will not be in the Chief Executive's Office to enjoy any space improvement. He has made this recommendation for more

usable office space as a result of his own experience of the need—and he wants his successors to have the benefit. More properly, perhaps, I should say that it is the Nation that will have the benefits, as the Study Commission found, which can flow from adequate and well-arranged office space for the executive staff.

It is also appropriate that action be taken now, so that any incoming President, whoever he may be, will not be subject to any cheap criticism of seeking space for his own convenience.

I hope the bill will receive early attention by the Committee on Public Works so that action can be completed in this session of the Congress.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 3524) to provide for a Commission on Presidential Office Space, introduced by Mr. CASE of South Dakota (for himself, Mr. CHAVEZ, and Mr. HRUSKA), was received, read twice by its title, and referred to the Committee on Public Works.

AMENDMENT OF UNITED STATES CODE, RELATING TO PROTECTION OF MEMBERS, OFFICERS, AND EMPLOYEES OF INTERSTATE COMMERCE COMMISSION

Mr. MAGNUSON. Mr. President, by request, I introduce, for appropriate reference, a bill to amend section 1114 of title 18 of the United States Code for the protection of members, officers, and employees of the Interstate Commerce Commission. I ask unanimous consent that a letter from the Chairman of the Interstate Commerce Commission, requesting the proposed legislation, be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 3527) to amend section 1114 of title 18 of the United States Code for the protection of members, officers, and employees of the Interstate Commerce Commission, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

INTERSTATE COMMERCE COMMISSION,
Washington, D.C., April 27, 1960.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce, U.S. Senate, Washington, D.C.

DEAR CHAIRMAN MAGNUSON: I am submitting herewith for your consideration 20 copies of a draft bill, together with a statement of justification therefor, which would amend section 1114 of title 18, United States Code, to protect members, officers, and employees of the Commission against assault while engaged in the performance of their official duties.

Your assistance in having this bill introduced would be greatly appreciated.

Sincerely yours,

JOHN H. WINCHELL,
Chairman.

Enclosures.

JUSTIFICATION

The purpose of the attached draft bill is to protect the members, officers, and employees of the Interstate Commerce Commission against assaults while engaged in or on account of the performance of their official duties.

The present provisions of section 111 of title 18 of the United States Code make it a Federal crime to attack any person designated in section 1114 of the same title while engaged in or on account of the performance of his duties. Those designated are Federal judges, U.S. attorneys, post office inspectors, officers and employees of the Federal Bureau of Investigation, the Bureau of Narcotics, the Secret Service, and certain other Federal officers and employees. The general intent of these sections is to create a strong deterrent against physical attacks on persons exposed to them because of the nature of their official duties and activities. Members, officers, and employees of the Interstate Commerce Commission, however, are not covered therein.

The proposed bill goes somewhat beyond the general tenor of section 1114 insofar as it would be made to apply to Commission personnel. It would embrace all persons in the Commission and not just those whose activities are most likely to result in their being attacked. To restrict coverage in the bill by enumerating specific classes would be difficult and impractical. For example, the Bureau of Safety and Service has safety and service agents, safety supervisors, locomotive inspectors, and hours-of-service inspectors; the Bureau of Motor Carriers has district supervisors, safety inspectors, and rate agents; the Bureau of Inquiry and Compliance has special agents; the Bureau of Water Carriers and Freight Forwarders has district supervisors; and the Bureau of Accounts, Cost Finding, and Valuation has accountants—all of whom regularly conduct inspections and investigations in the field. These job titles or classifications are of course subject to change. If changed, the individuals affected might well be excluded from protection by any detailed and exclusive statutory designation of persons covered.

The above-mentioned employees do not constitute an exhaustive list of the categories of Commission personnel requiring Federal protection, for it is not only the "field employees" who are authorized to conduct inspections and investigations. Sections 12(1), 20(5), 220(d), 313(f), and 412(d) of the Interstate Commerce Act authorize the Commission or any duly authorized special agent, accountant, or examiner thereof to enter upon, to inspect and examine any and all lands, buildings, and equipment of carriers and other persons subject to the Interstate Commerce Act and related acts, and to inspect and copy any and all accounts, books, records, memorandums, correspondence, and other documents of carriers, and other persons subject to the act. By an order of the Commission dated March 24, 1959, the duties of the following officers included those of special agent, accountant, or examiner with the corresponding authority to conduct inspection as described above:

Directors and Assistant Directors of the Bureau of Accounts, Cost Finding, and Valuation, Bureau of Inquiry and Compliance, Bureau of Motor Carriers, Bureau of Safety and Service, and Bureau of Water Carriers and Freight Forwarders.

Moreover, at times, the members of the Commission as well as its permanent staff of hearing examiners conduct hearings in the field. These are generally not held in a courthouse, so that court officers are not present to maintain order and respect. It is conceivable that an assault might occur at such a hearing.

The Commission's need for protection is aptly illustrated by a recent occurrence in Fort Worth, Tex. On March 8, 1960, one of the Commission's district supervisors was investigating alleged illegal transportation from Houston to Fort Worth. In the process he called upon a consignee to obtain his shipping records for inspection. On returning the records the following day, he was assaulted by the irate consignee who objected to this lawful inspection. A similar assault was made on a Commission supervisor investigating alleged illegal transportation, again in Fort Worth, in March of 1948.

While these are the only instances of consummated assaults, the activities of many of the Commission's employees are performed under conditions where physical violence could occur. The following incident exemplifies the explosive atmosphere which may surround Commission inspections and investigations. In February of 1958 a special agent of the Commission was investigating alleged false claims by a consignee against a railroad for damage to his interstate shipment. The consignee had a local reputation for employing "goon tactics" to achieve his ends. Furthermore, the claims adjuster for the railroad had reported to the special agent that the consignee had made considerable threats of physical violence in soliciting payment of the claims. With this as a background it was not unreasonable for the agent to believe that he, too, might be threatened or attacked by the consignee and his "goons." He wasn't—but he could have been.

Enactment of this proposed amendment would remedy the existing situation under which the members, officers, and employees of the Interstate Commerce Commission are performing their duties without the benefit of the deterrent protection against assaults afforded by Federal statute to certain other Federal officers and employees.

ADDITIONAL AUTHORITY FOR FEDERAL COMMUNICATIONS COMMISSION

Mr. MAGNUSON. Mr. President, at the request of the Chairman of the Federal Communications Commission, I introduce, for appropriate reference, a bill to amend the Communications Act of 1934 in order to provide the Federal Communications Commission with certain additional authority in enforcing the provisions of such Act. I ask unanimous consent that a letter from the Chairman of the Federal Communications Commission, requesting the proposed legislation, be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 3528) to amend the Communications Act of 1934 in order to provide the Federal Communications Commission with certain additional authority in enforcing the provisions of such Act, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D.C., April 18, 1960.

The VICE PRESIDENT,
U.S. Senate,
Washington, D.C.

DEAR MR. VICE PRESIDENT: The Federal Communications Commission has adopted as a part of its legislative program proposed

amendments which would amend the Communications Act to authorize the Commission:

(a) To suspend licenses or impose forfeitures in appropriate cases (47 U.S.C. 312, new 313, and renumber present 313–329); and

(b) To issue temporary restraining orders in appropriate cases (proposed new section to Title 5 of the Communications Act, 47 U.S.C. ——).

Attached are copies of our justification and proposed language to which we hope the Congress will give favorable attention. The Bureau of the Budget has advised that it has no objection to the submission of this material to the Congress.

Sincerely yours,

FREDERICK W. FORD,
Chairman.

JUSTIFICATION FOR AMENDMENT TO THE COMMUNICATIONS ACT TO AUTHORIZE THE COMMISSION TO SUSPEND LICENSES OR IMPOSE FORFEITURES IN APPROPRIATE CASES

The only sanctions presently available to the Commission, except in certain cases involving common carrier matters and licenses of ships radio stations, is revocation of the station license. This sanction is drastic. The revocation of a license to operate a broadcast station can have a far-reaching effect on the community it serves as well as upon the licensee of the station.

The current problems which have recently come to light in broadcasting make it apparent that some less drastic but effectively deterring sanctions should be available to the Commission. Accordingly, it is recommended that the Communications Act be amended to authorize suspension of station licenses and construction permits.

We would accomplish this by modifying section 312 of the Communications Act to read as follows:

"SEC. 312. (a) Any station license or construction permit may be revoked or suspended for a period not to exceed ninety days, and any such license or construction permit may be revoked or suspended:

"(1) for false statements knowingly made either in the application or in any statement of fact whch may be required pursuant to section 308;

"(2) because of conditions coming to the attention of the Commission which would warrant it in refusing to grant a license or permit on an original application;

"(3) for willful or repeated failure to operate substantially as set forth in the license;

"(4) for willful or repeated violation of, or willful or repeated failure to observe, any provision of this Act or any rule or regulation of the Commission authorized by this Act or by a treaty ratified by the United States;

"(5) for violation of or failure to observe any cease-and-desist order issued by the Commission under this section.

"(b) Where any person (1) has failed to operate substantially as set forth in a license, or (2) has violated or has failed to observe any of the provisions of this Act, or (3) has violated or failed to observe any rule or regulation of the Commission authorized by this Act or by a treaty ratified by the United States, the Commission may order such person to cease and desist from such action.

"(c) Before revoking or suspending a license or a permit pursuant to subsection (a), or issuing a cease-and-desist order pursuant to subsection (b), the Commission shall serve upon the licensee, permittee, or person involved, an order to show cause why an order of revocation or suspension or a cease-and-desist order should not be issued. Any such order to show cause shall contain a statement of the matters with respect to which the Commission is inquiring and shall call upon said licensee, permittee, or person to appear before the Commission at a time and place stated in the order, but in no event less than thirty days after the receipt of such order, and give evidence upon the matter specified therein; except that where safety of life or property is involved, the Commission may provide in the order for a shorter period. If after hearing, or a waiver thereof, the Commission determines that an order of revocation or suspension or a cease-and-desist order should issue, it shall issue such order, which shall include a statement of the findings of the Commission and the grounds and reasons therefor and specify the effective date of the order, and shall cause the same to be served on said licensee, permittee, or person.

"(d) In any case where a hearing is conducted pursuant to the provisions of this section, both the burden of proceeding with the introduction of evidence and burdens of proof shall be upon the Commission.

"(e) The provisions of section 9(b) of the Administrative Procedure Act which apply with respect to the institution of any proceeding for the revocation of a license or permit shall apply also with respect to the institution, under this section, of any proceeding for the issuance of a cease-and-desist order."

The Commission is of the view that authority to impose a monetary forfeiture on broacast licensees would provide it with an effective tool in dealing with violations in situations where either revocation or suspension does not appear to be appropriate. The Commission has already submitted legislation to the Congress, designed to provide it with authority to impose forfeitures for violations in services other than broadcasting (S. 1737 approved by the Senate August 21, 1959), so the proposal here submitted is limited only to permittees and licensees of broadcast stations. It is suggested that a new section 313 be added to the Communications Act to read as follows:

"In any case where the licensee or permittee of a broadcast station has willfully or repeatedly failed to operate his station substantially as set forth in his license; or has willfully or repeatedly violated or failed to observe any of the provisions of this Act or of any rule or regulation of this Commission authorized by this Act or by any treaty ratified by the United States; or has willfully or repeatedly violated or failed to observe any cease-and-desist orders issued by this Commission; the Commission may order such licensee or permittee to forfeit to the United State a sum not to exceed $1,000 for each day during which the Commissions finds that such violation or offense has occurred."

In order that the Commission might take advantage of the procedures already established in the Communications Act for the collection of forfeitures, subsection 504(b) should be amended by deleting the words (parts II and III of) from the first line of that subsection. The addition of the new section would necessitate the renumbering of existing sections 313 through 329 as sections 314 through 330.

These modifications would give the Commission authority to suspend a license or a construction permit for a period of not more than 90 days or, in lieu thereof in appropriate cases, to impose a forfeiture, payable to the Treasury of the United States, upon any licensee or permittee who deviates from the requirements of the Communications Act or any rule or regulation of the Commission. The proposal permits the Commission to vary the severity of the forfeiture to suit the nature of the offense, except that the proposal does not permit a forfeiture to exceed $1,000 for a particular offense. The proposal affords any person against whom a forfeiture is levied an opportunity to request remission or mitigation of such forfeiture. If, after consideration of any applications for remission or mitigation, the forfeiture is not paid, it would be recoverable by civil suit in an appropriate U.S. district court as provided in subsection 504(a) of the Communications Act.

JUSTIFICATION FOR AMENDMENT TO THE COMMUNICATIONS ACT TO AUTHORIZE THE ISSUANCE OF TEMPORARY RESTRAINING ORDERS IN APPROPRIATE CASES

Section 312 of the Communications Act of 1934, as amended, provides for the revocation of a station license upon making certain findings after notice and opportunity for hearing. That section also provides that the Commission may, after notice and opportunity for hearing, enter a cease-and-desist order against any person who (1) has failed to operate substantially as set forth in a license, or (2) has violated or failed to observe any of the provisions of this act, or (3) has violated or failed to observe any rule or regulation of the Commission authorized by this act or by a treaty ratified by the United States.

These sanctions are severe and the rights of the licensee are well protected by the hearing requirements of the act. In most cases this is as it should be; however, in some situations a more expeditious means of dealing with an undesirable situation appears to us to be in the public interest. The Federal Trade Commission is authorized in some situations to request the courts to enjoin or restrain an offending practice pending a final determination of the matter in an appropriate agency proceeding. In our view, comparable legislation for the Federal Communications Commission would be in the public interest. Accordingly, we recommend that a new section be added to title V of the Communications Act to read as follows:

"Whenever the Commission has reason to believe—

"(a) that any person or station licensee is engaged in, or is about to engage in, any willful violation of this Act or failure to observe any of the provisions of this Act or any rule or regulation of the Commission authorized by this Act or by a treaty ratified by the United States, or for repeated failure to operate substantially as set forth in the licensee's instrument of authorization, and

"(b) that the enjoining thereof pending the invoking of the provisions of section 312 of this Act and until a show cause order shall have been dismissed by the Commission or set aside by the court on review, or the order of the Commission to cease and desist made thereon has become final, would be in the public interest, convenience, or necessity, the Commission may, by any of the attorneys designated by it for such purpose, bring suit in a district court of the United States or in the United States court of any territory to enjoin such offense or violation. Upon proper showing a temporary restraining order and preliminary injunction shall be granted without bond. Any such suit shall be brought in the district in which such person or licensee resides or transacts business."

This new section would enable the Commission to move more expeditiously in critical cases without depriving our licensees of due process.

ESTABLISHMENT OF WARTIME RELATIONSHIPS BETWEEN FEDERAL AVIATION AGENCY AND DEPARTMENT OF DEFENSE

Mr. MAGNUSON. Mr. President, by request, I introduce, for appropriate reference, a bill to amend section 302(e) of the Federal Aviation Act of 1958 (72 Stat. 747), to establish the wartime relationships between the Federal Aviation Agency and the Department of Defense. I ask unanimous consent that a letter from

the Administrator of the Federal Aviation Agency, requesting the proposed legislation, be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 3529) to amend section 302(e) of the Federal Aviation Act of 1958 (72 Stat. 747), to establish the wartime relationships between the Federal Aviation Agency and the Department of Defense, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

FEDERAL AVIATION AGENCY,
Washington, D.C., May 3, 1960.

HON. RICHARD M. NIXON,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: In compliance with section 302(e) of the Federal Aviation Act of 1958, I transmit herewith for the consideration of the Congress a draft bill, "to amend section 302(e) of the Federal Aviation Act of 1958 (72 Stat. 747), to establish the wartime relationships between the Federal Aviation Agency and the Department of Defense."

The primary purpose of this legislation is to establish the wartime relationships between the Federal Aviation Agency and the Department of Defense. In addition to continuing the authority of the Administrator to develop plans for the effective discharge of Agency responsibilities in the event of war, this legislation specifically authorizes the President in time of war or national emergency to designate the Federal Aviation Agency organizationally intact as an adjunct of the Department of Defense, or to place selected elements of the Federal Aviation Agency under the operational control of the Secretary of Defense to the extent deemed necessary by the Secretary in the discharge of his responsibilities. The proposal also provides for the retransfer of the Agency and its elements out of the Department of Defense whenever the President so directs.

In the event of general war or a surprise attack on the United States, the continued operation of all air traffic control and air navigation facilities in the Federal Aviation Agency system would be essential to the accomplishment of military missions. Defense and retaliatory aircraft would rely on these facilities for guidance. The identification of friendly and unfriendly airborne vehicles would rest in large part on this Federal Aviation Agency system. The Federal Aviation Agency would supply the Air Defense Command with complete information concerning all aircraft movement over the United States, and would further provide weather and communication services to military air traffic.

Since these systems and services would be essential to the war effort, it is apparent that the Secretary of Defense, who has direct responsibility for all military operations, must have primary call upon them when the need arises. This legislation supplies the necessary authority for the President to designate the Federal Aviation Agency organizationally intact as an adjunct of the Department of Defense or to place selected elements of the Federal Aviation Agency under the operational control of the Secretary of Defense, and provides a vehicle for the retransfer out of the Department of Defense whenever the President so directs.

In addition, the legislation establishes the Administrator's responsibility when the Federal Aviation Agency functions as an adjunct of the Department of Defense. He will be responsible directly to the Secretary of Defense and subject to the Secretary's authority, direction and control, to the extent the Secretary deems necessary in the discharge of his wartime responsibilities.

It should be noted that the above provision limits the authority, direction and control of the Federal Aviation Agency by the Secretary of Defense to functional areas in which there is a legitimate Department of Defense interest. Other Federal Aviation Agency functions, such as safety regulation of air carriers, certification of aircraft and air crews, and management of the airport assistance program, will remain the independent responsibility of the Administrator of the Federal Aviation Agency. It is felt that this limitation is in accordance with the intent of Congress expressed in the Federal Aviation Act—that a civilian agency should be responsible for such functions.

The legislation further authorizes the Secretary of Defense, when the Agency is functioning as an adjunct of the Department of Defense, to direct the Administrator to place operational elements of the Agency under the direct operational control of appropriate military commanders. It defines operational control as "the assignment of tasks, the designation of objectives, and such authoritative direction as is necessary for the effective coordination of the Administrator's function with military actions."

It is apparent that in the event of war the Federal Aviation Agency personnel performing essential services must be placed in strategic positions. This will necessitate the assignment of certain Federal Aviation Agency operational units, particularly those concerned with air traffic control, in the field with operating military units. Since the military commanders of such units will have direct responsibility from the Secretary of Defense to carry out the strategy and tactics of waging the war effectively, they must have authority over all segments of the forces assigned to them. This legislative proposal will supply necessary authority for military commanders to exercise appropriate control over Federal Aviation Agency units operating under their control.

It is requested that the attached draft bill be introduced in the Senate as soon as possible. This Agency stands ready to supply any additional information or facts that may be required for use in hearings in order to expedite passage of this legislation.

We have been advised by the Bureau of the Budget that passage of this legislation would be in accordance with the program of the President.

Sincerely,

JAMES T. PYLE,
Acting Administrator
(For E. R. Quesada, Administrator).

PROPOSED ANTIBUSINESS FRAUDS LEGISLATION

Mr. KEATING. Mr. President, on behalf of my colleague the distinguished senior Senator from New York [Mr. JAVITS] and myself, I introduce for appropriate reference, a bill to authorize the Attorney General to maintain records of fraudulent and other unethical business practices. An identical bill is being introduced in the other body by Representative LINDSAY, of New York.

This proposed legislation is based on recommendations of the attorney general of New York, the Honorable Louis J. Lefkowitz, who has done pioneering work in alerting the American public to the problems raised by unscrupulous business firms.

Crooked business schemes promoted by only a minute percentage of the business community, mulct consumers of hundreds of millions of dollars each year. These operations are as vigorously opposed by legitimate businessmen as by any segment of the population.

One of the chief difficulties in combating these economic parasites is the absence of any national clearing house of information on their activities. This means that by moving from State to State, the culprits behind these schemes can stay in operation indefinitely. This is another of many examples of the way in which unscrupulous elements take advantage of the geographical jurisdictional limits on law enforcement in this country. Our bill would go a long way toward overcoming this obstacle to law enforcement by establishing a national repository of information about such operations.

The Department of Justice is presently authorized to employ personnel "for the acquisition, collection, classification, and preservation of identification and other records." The proposed bill would broaden this authority to include records of injunctions, dissolutions, and other civil or administrative actions involving unethical or fraudulent business practices. This information would be classified in a manner similar to the Federal Bureau of Investigation's documentation of criminals and criminal activities. All such information would be made available to Federal and State law-enforcement and other agencies attempting to curb unlawful business practices.

The objective of the bill is to make it easier for the authorities to keep tab on business rackets and to make it as difficult as possible for the promoters of these ventures to set up fly-by-night operations in locality after locality throughout the country. With the help of a central file of information, local officials will have immediate access to past records of cheating the public and will be able to crack down on these business thieves before it is too late.

This is a very moderate measure, but one which would be very effective in combating these phony business schemes. I know it will be welcomed by the overwhelming majority of the business community, since the few unprincipled operators against whom the measure is directed are a menace to legitimate businessmen, as well as to consumers and the public generally.

I hope that the bill will be given early committee consideration and that it will be enacted before this Congress adjourns.

Mr. President, I ask unanimous consent that the text of the bill be printed at this point in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill may be printed in the RECORD, as requested.

The bill (S. 3530) to authorize the Attorney General to maintain records of fraudulent and other unethical business practices, introduced by Mr. KEATING (for himself and Mr. JAVITS), was received, read twice by its title, referred to the

Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Attorney General is authorized to provide, within the Department of Justice, for the acquisition, collection, classification and preservation of records of injunctions, dissolutions and other civil or administrative actions involving unethical or fraudulent business practices.

SEC. 2. Any records acquired, collected, classified and preserved pursuant to the provisions of this Act may be made available by the Attorney General for exchange with, and for the official use of, any duly authorized official of the Federal Government, of States, cities, and other institutions.

Mr. KEATING. Mr. President, recently Governor Rockefeller of New York, and Attorney General Lefkowitz, participated in a statewide telecast in New York on the problems of protecting consumers.

This program, one of a series of broadcasts to the people of New York by Governor Rockefeller and leading State officials, is particularly pertinent to the subject matter of the bill introduced today. It is apparent from the transcript of the program that the Governor and Attorney General Lefkowitz are deeply concerned with problems in this field and are taking dynamic and effective steps to safeguard consumers against fraud and other illegal and unfair practices. The leadership taken by Governor Rockefeller and his team on this issue is typical of the progressive and vigorous administration which now guides the Empire State.

Mr. President, I ask unanimous consent that a copy of the transcript of their broadcast be printed at this point in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

TRANSCRIPT OF STATEWIDE TELECAST ON CONSUMER PROTECTION IN NEW YORK STATE BY GOVERNOR ROCKEFELLER, ATTORNEY GENERAL LOUIS J. LEFKOWITZ, WEDNESDAY, MARCH 23, 1960.

Governor ROCKEFELLER. Hello friends. With us here this evening is Louis Lefkowitz, the attorney general of the State of New York, your lawyer to protect your interests.

Now, this evening I would like to discuss with Louis a matter that's very close to his heart, that is, protection of the consumers of this State. I don't think anyone in the country has done more in this field than Louis, and perhaps the reason is because he has tremendous warmth and great human understanding.

Now, Louis, I'd like to talk a little bit with you about this for the benefit of the group who are with us on the TV tonight. First, let's take up the need for consumer protection. Then, let's cover how the State protects the consumer, and then, third and last, let's have a word on legislation for additional protection.

Louis, let's take up, first, need for consumer protection. What really is the problem as you see it?

Attorney General LEFKOWITZ. Today, more than ever, the consumer needs protection. These new changing times, with people now being asked to buy gadgets and devices, and scientific implements. Years ago they would buy, Governor, say a horse or a table or a simple carriage, or a washboard. Today, with the changing times, people are being asked to buy devices about which they have no peculiar knowledge. They have to rely more and more on the persons who are selling it.

Governor ROCKEFELLER. You mean these things are so complicated that they really can't see as they could go and look into the horse's mouth in the old days?

Attorney General LEFKOWITZ. Exactly, they can't take it apart and they refuse to buy it at the same time.

Governor ROCKEFELLER. And if they did, they couldn't get it together again?

Attorney General LEFKOWITZ. That is correct, and people are taking advantage of them and using these deceptive practices and misrepresentation to induce them to buy these articles. That is the reason today, more than ever, Governor, for need to protect the consumer.

Governor ROCKEFELLER. Now, Louis, let's go over here and take a look at this list of different areas in which this protection is so important. Perhaps we can kind of get all of us focused on this thing by looking at this list.

Attorney General LEFKOWITZ. Well, you take bait advertising. That's a common form of deceptive practice. Advertising appears in the newspapers, and it has a price to attract people to come around and buy it. When they come to the store, they can't get it. Either they are told it is not available, or they are shown it in such a defective form. That is a come-on to buy something else of higher value. The first thing you know someone is buying an article for which they have no financial means to buy, and that is one of the very common forms of deceptive practices.

Fraudulent labeling, Governor. Oh, we have had many cases where there will be a label 100-percent pure wool, and it turns out to be cotton. The person on the scene has no way of telling and we have had that type of case.

You take on these misrepresentations and guarantees, so many people have been induced to sign contracts in blank, later on, after they sign their name, the amount of the purchase is put in, as well as the payments. In most cases they can't begin to comply, not only with the total price, but even with the weekly payments.

Governor ROCKEFELLER. And so often people who get caught on this are the ones who can least afford to pay.

Attorney General LEFKOWITZ. Exactly. Very often people call on them at home and say look, you are only taking this on approval. In fact, they are not getting it on approval, they have actually signed a binding contract. Now, in stock frauds, it breaks my heart, Governor, with the cases we get, to see so many people on a mere telephone call from a stranger, or from literature through the mail, parting with hard-earned money, life savings, a thousand, two thousand, five thousand dollars when people attempt to sell them stocks behind which no assets, no existing company, and yet people are doing it.

Governor ROCKEFELLER. And more and more people are coming into the stock market to buy securities?

Attorney General LEFKOWITZ. Everybody is in the market.

Governor ROCKEFELLER. Which is a good thing in the sense that they are putting their savings into investments. But they have to be sound investments.

Attorney General LEFKOWITZ. Right, everybody is in the market today whether it is the individual, banks, and insurance companies use your money and my money, within limitations of lawful investment, and union funds today are being invested as well in the stock market. There is a great need for as much protection as possible, and that's what we are trying to do.

Governor ROCKEFELLER. What about charity funds, Louis?

Attorney General LEFKOWITZ. Here is another thing, so often people will give money to what looks like good charities. What is done, the people who get this money use about 90 to 95 percent in their own pockets for what they call administration expenses, and a very small percentage goes for the intended recipients of the charity.

We had a case here recently where people called home people and said, "Will you let us have your clothing, we will give it to the blind."

What happened, Governor, after getting the clothing, they went out and sold the clothing, kept about 95 cents of each dollar received, and turned over 5 cents to the intended people to be benefited, the blind people.

Governor ROCKEFELLER. It is tragic, and just breaks your heart, these situations.

Attorney General LEFKOWITZ. It is tragic because so many people are working hard for their money. They want to do what is right. They don't even get what I call an even break.

Governor ROCKEFELLER. Louis, let's talk a little bit about how the State actually protects the consumer against this. This is what I'd like to know, and I think the public would like to know just what we do in the State. You and I have worked on this a great deal, and I think the public would like to know.

Attorney General LEFKOWITZ. Well, in 1957 we organized in my office a consumer frauds protection office. We have a staff there. The person on the street can come in and register a complaint wherever fraud has been practiced. The men and women in my office receive these complaints, we analyze them, and if we find fraud present, we take proceedings to rectify or cure the fraud.

Governor ROCKEFELLER. And you have these offices in different parts of the State?

Attorney General LEFKOWITZ. That is correct, Governor.

Governor ROCKEFELLER. Louis, let's take a case in point. Let me take a specific ad here that I know you are acting on right now, and perhaps you could tell the public just a little bit about this particular one.

Attorney General LEFKOWITZ. Well, in this case, people were told we have an antenna for you that will cost about $3.98, but for a special model, $4.98, and if you buy this antenna, you will get the best type of vision.

Governor ROCKEFELLER. In your television set?

Attorney General LEFKOWITZ. In your television set, and you will have no more headaches about vision and clearness. So a lot of people bought it, and it turned out they were getting worse reception than they had before.

Governor ROCKEFELLER. You mean there was nothing to it?

Attorney General LEFKOWITZ. Nothing to it. It was just a fake and poorer reception than they had when they didn't have an antenna.

Governor ROCKEFELLER. With a full page ad?

Attorney General LEFKOWITZ. Full page ad. They are slick. Oh, they do a good job. The language is there and pictures are there to induce people to buy it.

Governor ROCKEFELLER. You have this case before you right now?

Attorney General LEFKOWITZ. This is before us right now in the courts where we immediately moved in to get a receiver appointed to restrain the people from further advertising and from the further sale of these devices and gadgets which are out-and-out frauds.

Governor ROCKEFELLER. Well, Louis, we have seen a couple of examples, let's take here the enforcement program, this list of items as to how you just actually go about this.

Attorney General LEFKOWITZ. Governor, I would like to say, too, that part of the good work being done in the office is thanks to you. On your recommendation we received additional funds which has enabled my office to add some extra help, investigators, interpreters, and lawyers. Because of the implementation of your recommendations of extra money, I think our office has been made much more effective in this human work which we must do for the householders.

Governor ROCKEFELLER. You are nice to give me some credit, but this is your program and you started it, and I am backing a good man.

Attorney General LEFKOWITZ. You backed me with it and I am very grateful and I know the people of the State are grateful to you as well.

Now, on the legal proceedings, Governor, we can do any one of several things. We can bring injunction proceedings to restrain the people. This is a swift proceeding to restrain them from perpetrating the frauds. We also ask as part of that relief to completely put them out of business. We can dissolve the corporation.

Now, that too, dissolving them completely puts them out. We have a receiver appointed to marshal the assets. If any assets are left, we try and see that those assets go back to the people who were victimized.

Now, there is one thing we recently did in connection with violations of tenement houses. Here again, while it doesn't involve the purchase of goods or services, Governor, wherever these buildings have had these long violations on them, and the landlords refuse to remove the violations and cure them, we have started some proceedings and we have been successful. We have obtained our first decision where we have a receiver put in and the receiver is now going to use the money collected from the tenants for rents to clear up the violations which the landlord, the slum landlord refused to do.

Governor ROCKEFELLER. Well, Louis, how do you organize the question of getting to the people so that they know about this?

Let's talk just briefly, because our time is short here, about your Advisory Committee on Consumer Protection, and this committee of a hundred housewives which you have.

Attorney General LEFKOWITZ. Well, I organized this committee of a hundred housewives in each county throughout the State. We have ladies who have volunteered to serve, and they are the so-called eyes and ears of my office. They alert us to any frauds that take place in the county. They go around making speeches to various civic groups.

Governor ROCKEFELLER. So people know what they can do and how to look out for these situations.

Attorney General LEFKOWITZ. Exactly the point. We find if you educate people this is the best deterrent against these frauds.

Governor ROCKEFELLER. So that the education really is your strongest factor?

Attorney General LEFKOWITZ. Exactly, and we have this advisory committee with business, labor, newspaper people, radio, that is always sitting down with me to think of new legislation, and new ways of educating the public.

Governor ROCKEFELLER. Louis, let's just, to wrap this up, let's just have a word on additional protection that you have come up with for this session of the legislature.

Attorney General LEFKOWITZ. Well, additional protection. We have found a series of people who are compelled or induced to sign lifetime contracts for dancing instruction, or reducing treatments, or physical educational training courses.

Governor ROCKEFELLER. You go into every area.

Attorney General LEFKOWITZ. Anything that affects the person throughout the State. The people of the State are entitled to as much protection as you and I can give and in any area where they are affected.

Governor ROCKEFELLER. Or getting gypped or taken.

Attorney General LEFKOWITZ. Exactly, and we have a bill pending to outlaw lifetime contracts. We had some cases where people put down deposits to purchase homes, and somewhere in the middle, the person building the home ran out of money, and they are out their deposits with no home completed. We have a bill in to require this money to be kept in trust, and also to give them a lien for any deposits they make for the construction of a new home.

We have another bill to require people who sell appliances, sets at home, anything, to have on there whether it is new or whether it's been used, because too often we have these cases where people think they are buying something new, which in fact is a used article.

Governor ROCKEFELLER. Well, Louis, I hate not to go into more detail with you on this, but our time is running out. I just want to say how much I appreciate the opportunity of working with you so closely on this program which is protecting the people of our State from being taken, from being gypped, from being sold these articles. I know the legislature is going to go along with a wonderful program that will give you the teeth in the work that you are doing.

Attorney General LEFKOWITZ. I appreciate your cooperation, Governor.

Governor ROCKEFELLER. Well, Louis, thanks very much for coming.

I would just like to say in closing, friends, that the work that Louis Lefkowitz is doing isn't confined to the great State of New York. I'd like to read you a letter of the leadership that he is giving in this field on a national basis. He was in a conference last week in Washington, and here's a letter from the president of the National Association of Attorneys General. Louis was, of course, there with this group and, as a matter of fact, was the leader of the conference.

This is from the president of the Attorneys General Association.

"Your outstanding contribution to the Conference on Consumer Investment Protection, in Washington, D.C., last week, represents a great landmark in public service. In this field you have made the greatest individual contribution of any public official. In the annals of the Nation's history your work will be recalled for many years to come."

Signed by Dick Ervin, the Attorney General in Florida.

Ladies and gentlemen, let me just say that high on the priority of New York State's efforts, the efforts of this administration, is your protection in the goods, the services, the stocks and bonds which you buy. Here's a little pamphlet that Louis put out—over a million copies have been distributed. "Progress in Consumer Protection—Your Guide to Careful Buying."

And let me just say, any time you find anything that you are suspicious about, or that you think you are being gypped in the purchase of something, or some friend of yours is being taken advantage of, or they are working on them because they have an illness in selling them something which is falsely labeled as going to cure that ill when you know it's not, take it up with one of the attorney general's offices and let them know. The offices are in Albany, Auburn, Buffalo, New York City, Plattsburgh, Rochester, and Syracuse. And let's all work together to protect the consumers of New York State.

ESTABLISHMENT OF HOME OF ALEXANDER HAMILTON AS A NATIONAL MONUMENT

Mr. JAVITS. Mr. President, on behalf of myself, and my colleague, the junior Senator from New York [Mr. KEATING], I introduce, for appropriate reference, a joint resolution to declare the Hamilton Grange, once the private home of Alexander Hamilton built in 1801 in Manhattan, a national monument and authorize the Secretary of the Interior to take whatever steps may be necessary for its preservation.

New York City, my home city, is famous as the business and financial capital of the world, a role to which it aspired from our earliest days as a Nation, when Alexander Hamilton accepted appointment by President George Washington to serve as the first Secretary of the Treasury. All of us who make our home there today feel an especially keen duty to see to it that the Hamilton Grange, the only home that Hamilton ever built and owned, should be saved and restored to the architectural masterpiece that it once was.

This house was built by Hamilton following his retirement from public service. As one of our most famous Founding Fathers, Hamilton's contributions began with his service as a delegate from New York to the Annapolis Convention in 1786, where he drafted the report which led to the convening of the Constitutional Convention in the following year. He worked tirelessly for the ratification of the Constitution. He wrote more than half of the "Federalist Papers," and won, almost singlehanded, the support of the New York convention, despite heavy opposition. From 1789 to 1795, when he served as Secretary of the Treasury, he established the U.S. fiscal system; and he is well remembered for his strong emphasis on Federal fiscal responsibility. When he resigned from the Cabinet, he resumed law practice in New York; and he was living at the Hamilton Grange in 1804, the year when he was fatally shot in a duel with Aaron Burr.

The Grange is one of seven buildings still standing in New York City which represents the architecture of the Federal period. It was, in fact, designed by the same architect who was responsible for the city hall. Today it is wedged between a church and an apartment house on Convent Avenue near 141st Street, in upper Manhattan, in the 21st Congressional District which I represented for many years. It has been moved once from its original location, and it has been necesary to remove all the interior pieces to museums for safekeeping. The American Scenic & Historic Preservation Society, which owns the house, has been unable to raise enough funds to undertake the restoration necessary; but the city authorities have agreed to provide a suitable site for the Grange on the grounds of City College, if a way is found to move it.

Therefore, the time has come when assistance from the Federal Government is clearly needed. In this connection, it is very important to note that the Advisory Board on the National Parks, His-

toric Sites, Buildings, and Monuments to the Secretary of the Interior some years ago declared "the Hamilton Grange worthy of preservation." It approved it as having "exceptional value in commemorating or illustrating the history of the United States." It also recommended that the home be given further consideration from the standpoint of suitability for addition to the National Park System.

Under the terms of the joint resolution I am introducing, Hamilton's home would be designated as "The Hamilton Grange National Monument and shall be set aside as a public national memorial to commemorate this historic role played by Alexander Hamilton in the establishment of this Nation." This measure would authorize the Secretary of the Interior to take such action as may be necessary to establish this national monument, and would authorize the appropriation of such sums as may be required to preserve this historic American site.

The new skyscrapers which seem to leap into the New York City skyline and the sounds of modern construction have not made New Yorkers forget our great historical heritage. Federal aid to help New York City preserve the historic home of this truly great American is very much desired in New York. The name of Alexander Hamilton will never be missing from our history books, and the landmark which once was his home should not disappear from the sidewalks of New York City.

The VICE PRESIDENT. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 191) providing for the establishing of the former dwelling house of Alexander Hamilton as a national monument, introduced by Mr. JAVITS (for himself and Mr. KEATING), was received, read twice by its title, and referred to the Committee on Rules and Administration.

Mr. KEATING subsequently said: Mr. President, I am pleased to join my senior colleague from New York [Mr. JAVITS] as a cosponsor of proposed legislation to preserve the former home of Alexander Hamilton in New York City as a national monument. Favorable action on this proposal will enable the Nation to save the dwelling house of one of its most distinguished leaders.

Alexander Hamilton will go down in history as the founder of America's fiscal system, champion of integrity in the field of public finance, and a leading light among our Founding Fathers. As our first Secretary of the Treasury he set precedents and an example which are marked indelibly on our Nation's heritage.

Regrettably, the only home Hamilton ever owned, which he purchased in 1801, 3 years before his duel with Aaron Burr, has fallen upon dark days. It is one of the few surviving houses of the Federal period in New York City, as well.

The house, which is known as The Grange, is located on Convent Avenue, near 141st Street. It is squeezed between a church and an apartment building, and is in need of repair.

By means of the proposal introduced today we can contribute to the saving and preservation of this lasting memorial to a man who played such a large role in the founding of our Nation.

AMENDMENT OF ACT RELATING TO COMMISSION OF FINE ARTS

Mr. HAYDEN. Mr. President, I have been authorized by the Committee on Rules and Administration to ask that the amendment of the House to Senate bill 2778 be laid before the Senate; and when that is done, I have been authorized to move that the Senate concur in the amendment of the House of Representatives.

Therefore, Mr. President, I ask that the House amendment to Senate bill 2778 be laid before the Senate.

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 2778) to amend the act relating to the Commission of Fine Arts, which was, to strike out lines 6, 7, and 8, inclusive, and insert:

SEC. 2. There are hereby authorized to be appropriated such amounts as may be necessary to carry out the provisions of this Act.

Mr. HAYDEN. Mr. President, I move that the Senate concur in the amendment of the House.

The motion was agreed to.

AMENDMENT OF NATIONAL DEFENSE EDUCATION ACT OF 1958—ADDITIONAL COSPONSOR OF BILL

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the name of the Senator from Utah [Mr. Moss] may be added as a cosponsor of the bill (S. 3481) to amend the National Defense Education Act of 1958 in order to make student loans under title II of such act available to teachers attending summer sessions in institutions of higher education, which I introduced on May 5, 1960.

The VICE PRESIDENT. Without objection, it is so ordered.

MEDICAL CARE FOR THE AGED—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of May 6, 1960, the names of Senators HENNINGS, JACKSON, and PASTORE were added as additional cosponsors of the bill (S. 3503) to provide for the payment of hospital and other health services furnished to aged retired individuals, and to provide for a continuing study of the health needs of such individuals, introduced by Mr. MCNAMARA (for himself and other Senators) on May 6, 1960.

GRANT OF FURTHER TARIFF REDUCTIONS IN FORTHCOMING NEGOTIATIONS—ADDITIONAL COSPONSORS OF CONCURRENT RESOLUTION

Under authority of the orders of the Senate of May 4, and May 9, 1960, the names of Senators CURTIS, DWORSHAK, ALLOTT, and JOHNSTON of South Carolina were added as additional cosponsors of the concurrent resolution (S. Con. Res. 104) expressing the sense of Congress that the United States should not grant further tariff reductions in the forthcoming tariff negotiations under the provisions of the Trade Agreements Extension Act of 1958, and for other purposes, submitted by Mr. KERR (for himself and Mr. THURMOND) on May 4, 1960.

NOTICE OF HEARING ON INTERNATIONAL CONVENTION FOR THE PREVENTION OF POLLUTION OF THE SEA BY OIL (EX. C, 86TH CONG., 2D SESS.)

Mr. GREEN. Mr. President, I desire to give notice that the Committee on Foreign Relations will hold a public hearing Tuesday, May 17, 1960, at 10:30 a.m., in room 4221, New Senate Office Building, on the International Convention for the Prevention of Pollution of the Sea by Oil (Ex. C, 86th Cong., 2d sess.).

Persons desiring to be heard should communicate at their earliest convenience with the clerk of the committee, room F-53 in the Capitol.

TWENTY-FIFTH ANNIVERSARY OF THE RURAL ELECTRIFICATION ADMINISTRATION

Mr. JOHNSON of Texas. Mr. President, today we are observing one of the most significant anniversaries in our history—the 25th year of the Rural Electrification Administration.

Throughout history, there have been events that changed the shape of the world. But very few have had such a profound effect upon a nation as the Executive order Franklin D. Roosevelt signed on May 11, 1935, which brought electricity to the rural areas of America.

The changes that took place in the short span of 25 years are so tremendous that few people today can even recall what life was like in the days before electricity was brought to the farms.

Before REA, farming was a hard and exacting way of life. It meant long hours of toil; inadequate facilities for living; a manner of existence which was the subject of jokes by comedians on every stage in America. The universally recognized symbols of agriculture were the kerosene lamp, the zinc washtub, and the outdoor toilet. These were considered inseparable from the people who raised the food and the fiber that fed and clothed America.

That was a way of life that people insisted was perpetual. Whenever anyone proposed bringing electricity to the farmers, there was a loud chant: "It cannot be done." People insisted that it was too expensive to run power lines to the farms. A few farmers—of extreme wealth—could afford the high cost of a power line. A few farmers close to big cities were able to get electricity out of the urban systems.

But aside from those, agriculture was supposedly doomed to eternal darkness.

There were men, however, who thought that it could be done; and there was a President who had the courage to try.

Congress passed the Rural Electrification Act, and it was signed into law. I am proud that the distinguished Speaker of the other body was one of the authors of that law.

Overnight, rural cooperatives were formed. The power was purchased. And the people who bought that power were able to repay it many times.

Not only did they repay the loans which they had received, but through increased income and larger opportunities they became taxpaying citizens who added to the wealth of America.

Mr. President, in all history, few events have been so significant as that which we celebrate today. And the Nation will be forever grateful to the wise and farseeing men who did so much to raise the standards of agriculture and thereby the standards of all America.

ADDRESS BY SENATOR AIKEN IN COMMEMORATION OF 25TH ANNIVERSARY OF THE ELECTRIFICATION LOAN PROGRAM

Mr. JOHNSON of Texas. Mr. President, the very able, influential, and beloved senior Senator from Vermont [Mr. AIKEN] is to speak this afternoon in connection with the 25th anniversary of the rural electrification loan program. No Member of either body has done more for the farmers of America or for the rural electrification program or for the comprehensive development programs on the rivers throughout the Nation than has the able senior Senator from Vermont.

Therefore, I should like all my colleagues to have an opportunity to read his very succinct, pointed, and well-considered statement; and I ask unanimous consent that it be printed in the RECORD immediately following my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR AIKEN ON RURAL ELECTRIFICATION ADMINISTRATION OFFICIAL OBSERVANCE IN COMMEMORATION OF 25TH ANNIVERSARY OF THE ELECTRIFICATION LOAN PROGRAM

I work in an atmosphere of moderated frustration.

As a Member of the U.S. Senate, I find it difficult at times not to be a cynic.

Washington is a beautiful city. It is a city of powerful influence and wonderment, of sweet dreams and blasted hopes. To this beautiful Capital City come men of all countries and creeds and characters. They come from every State in our Union. Too many of them come with thoughts of selfish gain. They seek to secure for themselves that which belongs to other people. Some of them hope to build economic empires on the rubble of the blasted efforts of others. They justify their attitude in the name of competition.

We, who are Members of the Congress, see them day after day. Some days it seems that their name is Legion and whenever we are approached by one of them we instinctively ask ourselves—"What is he after now?"

The United States is the richest country on earth. It is envied by all nations—respected by most—and feared and hated by some. Yet, under the umbrella of natural and accumulated wealth, there are many difficult problems and festering needs.

Your Member of Congress sees these things. He wants to correct the ills of the present and lay foundations for greater futures.

The path of progress seems insurmountably rough and new obstacles are constantly being added to those already in the way. The distance to our objectives seems interminable and progress develops at a snail's pace. That is when frustration sets in.

I have a remedy for such cases of frustration. It is almost a sure-fire cure. I just stop looking at the rocky road ahead and look back over my shoulder to the places from which we have come.

And, when I do this, I see that not all the people who come to Washington are motivated by greed. I see good people—farsighted people—people with courage and a desire to build in order that others may taste more generously of the better things of life. Their accomplishments are so numerous that the frustrations which plagued us in the past seem lost in the maze of victories.

Today we look back 25 years to May 11, 1935, when President Franklin D. Roosevelt signed the Executive order which brought the Rural Electrification Administration into being. It was one of the most momentous documents ever signed by a President of the United States. It predestined a new era of development for our country.

Just as Abraham Lincoln's signature to the Emancipation Proclamation brought freedom to a host of bondsmen, so did President Roosevelt's signature to the order creating the REA bring hope, and light and freedom from economic servitude to millions of rural Americans who were even then living in darkness, poverty, and despair.

Just over 1 year later, on May 20, 1936, the Norris-Rayburn Act was signed into law giving legislative sanction to this great program which has now become a permanent part of our economic system.

Franklin D. Roosevelt and our old friend George Norris have long since gone to their reward—and may that reward be great—but SAM RAYBURN is here today. I can think of no more satisfying honor than being permitted to share this program with this great man. All his life SAM RAYBURN has known people, loved people, and worked for people. The Nation's debt to him cannot be fully repaid.

The days of the midthirties were rather desolute ones—10 million people were unemployed—dust storms were bringing noonday darkness to the States of the Central West—decent markets for farm commodities were nonexistent—most farmers were heavily in debt and hand labor or draft animals were still the principal sources of power on farm.

America had to have a miracle and the REA was born to meet that need. The infant prodigy was a little wobbly on its feet at first. The $75,000 which President Roosevelt appropriated to start the program would hardly buy a nursing bottle for the lusty $3½ billion baby which Dave Hamil is guardian for today.

The REA grew so rapidly that it was able in 25 years to bring light and power either directly or through competitive example to 97 percent of our rural homes and farms. This achievement is due largely to the fact that it has constantly had conscientious, efficient, and crusading administrators.

From Morris Cooke's term through the terms of his successors—John Carmody, Harvey Slattery, Claude Wickard, Ancher Nelsen, and Dave Hamil—the REA has been administered by men whose heart was in their work and who have been supported by able staffs and loyal employees.

And every one of them has had to fight against odds to keep the work going forward.

By the end of World War II over a million farms were receiving central power service from REA cooperatives. This was an important, an almost vital factor in the winning of the war. Technology had moved to the farm.

Milking machines and milk coolers, stable cleaners and chick brooders, water pumps, and feed mixers—all electrically operated—took the place of millions of farm laborers who could not be hired anyway at any price.

Even more miraculous than the labor saving equipment on the farm has been the electrical revolution which has taken place in the rural home. Electrically controlled heating plants, quick freezers, kitchen equipment, and television have served to make the farm home the most attractive place to live.

It is now estimated that the average farm use of electricity which 25 years ago was about 600 kilowatt-hours per year and which has now increased to nearly 4,000 kilowatt-hours will in 15 years reach the challenging total of over 10,000 kilowatt-hours per year. I say it is a challenging figure, because it shows how far from completion is the work of the REA.

Where will we get the necessary amount of power? How can we hold the cost within reason? How can we be assured that REA cooperatives will have equitable access to the giant power pools of the future?

No, our work is nowhere near done. It never will be done for the inexorable technological changes that take place—beneficial as they are—simply challenge us to keep pace or else let agriculture, which George Washington called the "noblest occupation of man" lapse into the position of a third-rate industry.

Nor is it agriculture alone that looks to the REA to assure its future. A great spreading out of our population is imperative if our high level of prosperity is to be maintained and our national security is to be asssured.

I am glad that the REA has made it possible for millions of nonfarmers to make their homes in rural areas. I am glad that many small industries now find it possible to locate along rural electric lines where results are both profitable and pleasant.

Too many people are satisfied with the status quo today. Too many people fail to realize that it is possible to expand their own businesses without taking it away from others. America is still a growing country and the limits to our growth are still indiscernible in the haze of far distant horizons.

Let us on this day take a deep satisfaction in the part that the Rural Electrification Administration has played in the unprecedented development of our country over the last 25 years. Let us congratulate ourselves on a work that has been well done albeit a work that is only well begun.

Mr. KUCHEL. Mr. President, will the Senator from Texas yield?

Mr. JOHNSON of Texas. I yield to the acting minority leader.

Mr. KUCHEL. I wish to join the able majority leader, not only in paying tribute to the great national program of rural electrification on its anniversary, but also in the tribute he has just now paid to the distinguished senior Senator from Vermont [Mr. AIKEN], whose activity in this field has continued over the years, and has been crowned with success. I would not want the RECORD, on this matter, to close without indicating the unanimity of thought here with respect to the comments made by the majority leader.

THE REA IN VERMONT

Mr. PROUTY. Mr. President, today, as the Rural Electrification Administration celebrates its silver anniversary, I should like to recall some of the changes that have been brought into my State of Vermont through the electrification of farms and rural communities during the past 25 years.

These changes have been brought about through the combined efforts of the REA and the privately owned public utilities. The REA has had a catalyzing effect. It has also served as a yardstick for both service and rates.

At the time when the REA was created on May 11, 1935, only 7,945 farms in Vermont, or 29.4 percent, were receiving central station electric service. Current REA estimates show that 15,700 farms in the State, or 98.2 percent, were being served, according to figures compiled about a year ago. Of these farms, about 18.9 percent are being served by REA borrowers.

The REA program in my State is small, but effective. The three REA electric cooperatives have proved that they can offer good, reliable service at reasonable rates; and they are excellent examples of local enterprise. Only 2 days ago the Washington Electric Cooperative, at East Montpelier, was approved for a $100,000 section 5 loan. This means that the co-op, which serves members in the four counties of Washington, Orange, Caledonia, and Orleans, will use the money to reloan to consumers, to help them wire their farms, and purchase electrical appliances from privately owned firms.

Up to the beginning of this year the Rural Electrification Administration had approved a total of $6,152,918 in loans to the three electric cooperatives of Vermont, to enable the borrowers to construct 1,939 miles of line and other electric facilities to serve 7,158 consumers.

Funds actually advanced to these borrowers by the start of the year amounted to $4,548,669. With the help of this financing, the locally owned and managed systems had placed in operation 1,393 miles of line and were serving 6,229 farm and other rural consumer outlets. The average monthly consumption of electricity by these consumers increased from 197 kilowatt-hours in 1950 to 443 kilowatt-hours only 8 years later.

These REA borrowers in Vermont have repaid $1,227,336 on the principal and $754,109 in interest, of which more than $2,000 was ahead of schedule. As of January 1, 1960, no borrower in the State was overdue in its loan payments.

The electrification of rural areas is serving to attract new people and new enterprises to my State and to all of rural America. Factories, stores, and processing plants cannot operate without modern, reliable electric and telephone service. These private enterprises provide more payrolls and much needed off-the-farm employment. The coming of the kilowatt to the country has also given an important boost to the summer and winter recreation and vacation business, so important to a State like Vermont, which has so much natural beauty.

The first REA electrification loan in Vermont was approved in July 1938; and the first REA-financed line was placed in operation on May 13, 1959, by the Vermont Electric Cooperative of Johnson. At that time my colleague, the senior Senator from Vermont [Mr. AIKEN], was Governor of the State; and his interest, enthusiasm, and cooperation served as an inspiration, not only then, but ever since, to the electric cooperatives of the State.

On this occasion of the REA's 25th anniversary, I should like to congratulate all the rural people in Vermont and in 45 other States who have worked so tirelessly to build the fine local service organizations which, together with the privately owned power companies, bring them the light, heat, and power they need for their progress and prosperity.

Mr. CASE of South Dakota. Mr. President, I should like to join in what has been said today on this the 25th anniversary of rural electrification and the REA in general. In my personal opinion, no other piece of legislation passed by the Congress has done as much to improve rural life in America as the order creating and the act establishing the Rural Electrification Administration.

I know what REA service means in my own home. Our house is both lighted and heated by the REA. The homes of the workmen are lighted, their food is protected, the barn and yards are lighted by REA.

I know what it has done in my own State generally. It has changed South Dakota from an agricultural area where chores were done by lantern light to one where a farmer can work not only by good light in the early morning but also in the dusk of the evening. The daily burdens of the farmer's wife, as well as the work of the farmer himself, have been lightened.

REA has been a great contribution to the making of America and I join in the salute to the senior Senator from Vermont [GEORGE AIKEN] and to all the others who have been in the forefront of the REA movement.

Mr. DIRKSEN. Mr. President, the mark of a real friend to any cause I think can be detected in the courage and the fortitude which he displays when that cause or that function or that program sometimes goes slightly adrift or develops weaknesses which ought to be cured, or mistakes which ought to be criticized.

I think it can be said of the distinguished senior Senator from Vermont [Mr. AIKEN] that my recollection goes back to days when he could see some weaknesses in the REA program, and was ready, publicly and privately, to criticize it when that criticism was merited and justified. And that kind of person, in my judgment, constitutes a real advocate of a cause. That I remember out of my own experience and my interchanges with the Senator long ago.

So it can be said that the Senator from Vermont is one of those truly redoubtable public servants deeply interested in lighting rural America, watching this function grow and extend into every area of the country, taking it by the hand when necessary, gently and yet firmly, whenever it has been required, in order to make sure this function will grow strong and great and be established on a solid foundation.

So I salute the Senator from Vermont as a truly great friend of REA, whose friendship has been of the really durable kind.

Mr. AIKEN. Mr. President, I had intended to make a few brief extemporaneous remarks regarding the REA program, whose birthday we celebrate today. However, after listening to the majority leader, the minority leader, and other Senators, I hardly know just what to say. I certainly appreciate the references which have been made to me. The REA program has been one of the programs that has done more to promote the development of rural America, and our national economy as a whole, than has almost any other program which has been devised within my memory.

I have seen the REA come into my own State. I was Lieutenant Governor at the time legislation was enacted which authorized the REA to operate in the State of Vermont, and I saw the lines of the REA come into the State. I saw cooperatives formed by far-sighted, courageous people who realized that something had to be done in our rural communities if they were even to continue their existence. The lines did come into those areas. On farm after farm, where the owner had been ready to give up, he received renewed hope, faith, and income after he obtained electricity.

At the time the REA was established, only a small percentage of the farms in my State had electricity. Today something over 98 percent of the rural residents of Vermont have electricity. I saw the REA set an example for the utility companies, which had previously thought and believed they could not profitably serve some of our rural areas. With the example set by the REA, they found they could cut the cost of providing a line from $2,200 down to $800 or $1,000 a mile. It costs a little more now, but they saw they could cut the cost in half. As a result of the example set by the REA, the utility companies did go into areas they previously thought they could not serve.

I have been honored by being privileged to speak today at the official celebration of the 25th anniversary of the REA. The majority leader, the senior Senator from Texas [Mr. JOHNSON], has very graciously inserted in the RECORD the remarks which I shall make this afternoon. In those remarks I shall pay tribute to the Speaker of the House, the great Representative from Texas, who was so instrumental in making the REA a permanent and going organization. For that reason I was glad that a fellow Texan of his inserted my remarks in the RECORD this morning.

Again I express my thanks to the minority leader, the Senator from Illinois [Mr. DIRKSEN] for what he has said. I have always wanted the REA to succeed and to do the work it was intended it should do. I have not hesitated to give the agency advice, either by word or by vote, when I thought it had an inclination to "get off the reservation" a little. It is because the agency has had good management, good cooperation from Congress, and good cooperation from the executive, that it has been able to perform the function it has handled up to this time.

It is estimated that the REA program alone has added over $14 billion of new business to the economy of this country. If anything, I would say that is an underestimate.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. AIKEN. I yield, if I have any time remaining.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senator may have an extra minute.

The VICE PRESIDENT. Is there objection to the request of the Senator from Montana? The Chair hears none, and it is so ordered.

Mr. MANSFIELD. Mr. President, I join my distinguished friend the senior Senator from Vermont in what he has said about the REA. The Senator has pointed out that 98 percent of his State is now electrified because of the REA. The figure is not quite that high for the State of Montana, but it is above 90 percent, with the difficult areas still to be covered.

I think the Senator is correct when he states that the application of the REA facilities to the farms of America has been a boon in a certain sense for private industry, because as we electrify the farms we make it possible for electrical machinery to be brought in.

In my opinion, this is probably the best legislation which has ever been passed by the Congress in behalf of the farmers. I am delighted to join with the Senator from Vermont on this occasion, celebrating the anniversary of the REA.

Mr. YOUNG of Ohio. Mr. President, I wish to associate myself with the majority leader, the Senator from Texas [Mr. JOHNSON]; the assistant majority leader, the Senator from Montana [Mr. MANSFIELD]; the minority leader, the Senator from Illinois [Mr. DIRKSEN]; the assistant minority leader, the Senator from California [Mr. KUCHEL]; the Senator from Vermont [Mr. AIKEN]; the Senator from South Dakota [Mr. CASE]; and other Senators who are in the Senate Chamber, on this day, which marks the 25th anniversary of the day President Franklin D. Roosevelt signed the Executive order which created the Rural Electrification Administration.

This enlightened program is only one of the many indelible imprints Franklin D. Roosevelt left on the pages of history and in the hearts of his countrymen.

To millions of Americans living on farms and in rural areas, the Rural Electrification Administration has brought the untold blessings of electricity. To these people it means light where before there was darkness. For the farmer it has made possible the mechanization of his farm, and it has saved him hours of backbreaking labor. The rural housewife has been freed from the drudgery of pumping water by hand, washing on the old scrubboard, and a multitude of other tasks now accomplished by electricity. For their children the REA has provided better health, with electric lights to study and play by instead of dim kerosene lamps.

It would take considerable searching to find a single program which has meant as much to rural America as the rural electrification program.

In this program farmers have worked with and through their Government to help each other and themselves. It is one of the finest examples of cooperation between a citizen and his government and the wonderful benefits which can result to the advantage of both.

Largely as a result of REA, our farms were prepared for the maximum output during the emergency of World War II. The food produced by our agricultural plant helped to feed the entire free world. The laborsaving devices made possible by REA helped to free hundreds of thousands of young farmers for service in our Armed Forces, without impairing our ability to produce the food needed for the war effort.

Today our REA program has almost 4,600,000 consumers on REA-financed lines. This means that 14 million Americans in farm families have the benefit of electricity where there was none before. Over 95 percent of the farms, ranches, and rural areas of the Nation have the benefit of central station electric power, and about one-half of these installations are financed by REA.

We in Ohio are proud of the fact that a group of farmers in Miami County, Ohio, were the first in the Nation to organize an electric cooperative, and that the first REA loan was made to this group.

Today there are 29 electric cooperatives in Ohio. They have borrowed $80 million, and have repaid over $20 million, plus about $10 million in interest. None are now delinquent in payments. To my knowledge none has ever been delinquent on interest or principal payments.

In Ohio the cooperatives are now serving 130,000 rural consumers and their families. In 1958 alone, they paid State and local taxes in excess of $1,200,000.

It is difficult to estimate how many millions of dollars worth of increased business rural consumers have given to businessmen in the last 25 years because of increased farm productivity. This, in itself, has meant a great deal to the economy of the Nation.

Mr. President, I have a happy personal recollection that 25 years ago, as a Representative at Large from the State of Ohio, I voted in favor of the enactment of the rural electrification law. There were those in the other body at that time who expressed the belief that the kerosene lamp and wood stove were good enough for the farmers of this country. We have come a long way since that time. During my succeeding terms in the House of Representatives, on every rollcall in respect to rural electrification my vote was recorded in favor of that great Administration and that great piece of legislation which, Mr. President, has done more for the family farmers of this Nation than any other legislative enactment.

In behalf of the family farmers of Ohio, whom I am trying to the utmost of my ability and energy to represent in the Senate, I express their thanks and my thanks for the Rural Electrification Administration.

Throughout these 25 years many, many millions of dollars, it is safe to say, have been brought into the Treasury of the United States in income taxes because of the fact that the farmers of America have had the help of rural electrification. The farmers and the farmers' wives have been contented and have gone on to greater service to our Nation.

I join with all other Senators in expressing my best wishes to the Rural Electrification Administration. REA has meant a better life not only for the farm families of America, but also for all Americans. It is with great pride that I salute this remarkable achievement on its 25th birthday and pay tribute to the millions of Americans who have made its success possible.

Mr. YOUNG of North Dakota. Mr. President, I am indeed pleased to join with my colleagues in saluting the Rural Electrification Administration today on its 25th anniversary. I also wish to extend my congratulations and appreciation to the many farseeing farmers who, since 1935, have very vigorously supported and effectively operated this outstanding program.

Just 25 years ago today, the late President Franklin D. Roosevelt, by Executive order, created the Rural Electrification Administration. While much groundwork was done during the first year of this program, it was authorized in its present form by act of Congress in 1936. Since that time the REA has done much to lighten the workload, not only of farmers but of the farmers' wives. It has made for much greater efficiency in farming operations. It is a thrilling sight to drive at night through rural areas of our country and see the many farmsteads all lighted by electricity made available through this fine program. In 1935 when this program was instituted, Mr. President, only 10.9 percent of all our farms had electricity. At the present time estimates are that 4.5 million farms, or 96 percent of the farms recorded in the 1954 census, were electrified.

The Rural Electrification Administration does not generate or distribute electrical energy. It is a lending agency providing money in the form of loans, largely to farmers through their own organizations, to build and operate power generation and distribution facilities. Mr. President, in the years that the REA has been in operation, it has approved more than $4 billion in loans to electrification borrowers. These borrowers have an unusually good repayment record. Of the 1,085 borrowers at the present time, only 1 is overdue in its payments to the Government.

Mr. President, the first REA electrification loan in North Dakota was made in December 1936, to the Baker Electric Cooperative at Cando. At that time only 2.3 percent of the farms in North Dakota were electrified through distribution systems. I am proud to say that at the present time virtually every farm-

er in my State who desires electrical service has it available to him. In the years since 1935 the Rural Electrification Administration has approved a total of $119,118,527 in loans to borrowers in North Dakota, all but one of which are local independent REA cooperatives. Mr. President, it is indeed gratifying to be able to call to the attention of the U.S. Senate the fact that not a single borrower in North Dakota is overdue in its loan payments to the Federal Government. In fact, they are almost $4.5 million ahead of schedule in their repayments.

In these days when everyone is criticizing Federal expenditures, it is especially gratifying, Mr. President, to point out again that the appropriations to the Department of Agriculture for the Rural Electrification Administration are for loans that must be repaid and which are being repaid at an excellent rate.

In conclusion, Mr. President, I should like to again express my congratulations to the Rural Electrification Administration the REA cooperatives, and the many stanch supporters of REA throughout the country.

Mr. MUNDT. Mr. President, it is good to see so many of the Senators rising in their places to extend a happy birthday to REA on the occasion of its 25th birthday, and to point out the great service it has rendered to rural America.

Mr. President, dependable communications and available electricity are as important to farm families today as warm homes and a rifle for protection against predators were essential to our pioneer families. The Rural Electrification Administration which has done so much to bring the necessities to our farm families today marks its 25th year of existence and reflects with pride on its past accomplishments.

Except for the first 3 years of REA, I have been a Member of Congress throughout its existence and I am proud of the fact that I have voted for every dollar spent or loaned to develop rural electric and telephone service for South Dakota farmers. Since serving in the Senate, I have been a member of the appropriations subcommittee approving all these funds.

Until creation of REA in 1935, farm electrification had advanced very slowly during the 53-year period from 1882, when the first central generating system went into service. Only 10.9 percent of all farms in the United States had electric service in 1935. The past 25 years witnessed this 10.9-percent figure leap to a striking 97 percent mark as of January 1, 1960, leaving 3 percent of the farms in America without electricity.

In South Dakota, when REA was created in 1935, only 2,939 farms, or 3.5 percent, received central station electric service. REA estimates that approximately 88 percent of all farms recorded in the 1954 census are being served today; 91 percent of all electrified farms in our State are served by REA-financed facilities—one of the highest percentages in the country. South Dakota's first REA loan was approved in May 1936 and the first REA-financed line was placed in operation on October 3, 1937, by the Clay-Union Electric Cooperative, of Vermillion. Since that time, as of April 1, 1960, REA has approved $103,977,856 in electric loans in South Dakota to 34 borrowers, all of which are cooperatives. The loans were made to enable borrowers to build 50,962 miles of line and other rural electric facilities to serve 78,566 rural customers.

Farmers enjoy and appreciate the use of power and modern telephones, which have done much to help hold the young generation on our farms. In 1952, the year of the first REA telephone loan in South Dakota, only 55.5 percent of the farms in South Dakota had telephones. By the end of 1958, it was estimated that 41,000 farms or 66 percent of all farms in the State had telephone service and the number is constantly increasing.

Mr. President, the REA and the RTA are manifestations of private enterprise through cooperative organizations and associations at its best. Sometimes critics of the program of REA and RTA, especially in the earlier years, tried to condemn it and defeat it as being socialistic or as being an exemplification of public power. I think we cannot repeat too often, Mr. President, the fact that REA is not public power and it is not socialistic. It is private power, financed by loans which the Government makes in a banker's capacity to private cooperative associations who, upon payment of their loans, own and operate the enterprise the same as they would a cooperative creamery, a cooperative oil station, a cooperative elevator, or any other cooperative enterprise.

Public power denotes that the Government owns and operates the generating plants and the distribution lines, as well as the agencies selling the power to ultimate consumers.

That is not the case of REA. Sometimes REA has its own generating plant; sometimes it buys its power from private utilities; and sometimes it gets it from our great hydroelectric reservoirs. But just as REA purchases power from publicly financed hydroelectric reservoirs, so on frequent occasions do private utilities buy power from the same sources and in the same way. It is just as illogical and unjust to call REA socialistic or to describe it as public power because on occasion it buys some of its power from the publicly financed hydroelectric dam as it would be to call a private utility company socialistic or public power because it also buys some of its power from a publicly financed hydroelectric dam.

South Dakota's cooperatives, in making payments ahead of schedule to the Government on their loans, exemplify the trend evident through the Nation. By January 1, 1960, South Dakota electric borrowers had made payments on their loans of $28,270,509. This included $14,840,729 repaid on principal and $9,617,056 paid in interest, and $4,812,723 of that was paid in advance. Nationally, payments of REA borrowers on principal, in interest, and ahead of schedule have surpassed the $1.2 billion mark.

REA has been a boon for South Dakota in the past 25 years and will underscore spectacular achievement in the next quarter century. America's hats are off to rural America today as it commemorates its grandest hour in rededication of a program that has truly "turned on the lights" for our farm people.

Mr. YARBOROUGH. Mr. President, of all the great, good and progressive steps this Nation made under President Franklin D. Roosevelt's dynamic New Deal for the American people none had more impact in the daily lives of rural Texans than his rural electrification program.

Today, May 11, the 25th anniversary of the REA program is a fitting time to consider how President Roosevelt's superb plan to allay drudgery and bring light to farm families has produced a miracle in our time.

It may seem to some that perhaps we speak too much about REA on this 25th anniversary, but if we look at the advertising campaigns which have been carried on by the large illustrated magazines in America in the last 6 months showing the REA to be a socialistic scheme to rob the taxpayer and to socialize America, we know that these tributes are timely. There are not too many of them, and the record is not encumbered because there is a great campaign being carried on in America today, with highly paid ads and slick advertising, to try to make the American people think they are being bilked out of billions of dollars in the building of REA plants. That is the fact.

Because of Texas' size and proportionately large rural population, the REA has meant more to Texans in terms of better living—comfort and prosperity—than it has to residents of most other States, although there is not a single State where people have not been benefited.

President Roosevelt signed the Executive order creating the REA on May 11, 1935, and the Honorable SAM RAYBURN, who has served America and Texas so long and well, led in passage of the REA Act in 1936. Texas' first REA co-op, the Bartlett Electric Co-op, received its loan approval in September of 1935. At that time, only 11,466 Texas farm families—just 2.3 percent of our farm families—had electricity for lights and power.

Mr. President, this strikes very close at home to me, if I may be permitted this personal reference, because the late beloved Judge James B. Allred was at that time Governor of Texas. We had passed an act in the Legislature of Texas to create the Lower Colorado River Authority patterned on the TVA, but a State agency. It was created. Governor Allred appointed me in February 1935 one of the original directors of that public authority. We started building then, and that authority has built six great dams on the Colorado River of Texas. That is where these rural co-ops started in Texas in 1935. We let our contract for the first dam even before President Roosevelt signed the Executive order, and

as we started those dams, we were watching closely the creation of REA on a national scale because we were dependent upon REA for an outlet for the power of those public dams.

What the distinguished Senator from South Dakota [Mr. MUNDT] just said reminded me of my talks in central Texas for the Lower Colorado River Authority. I pointed out that in Holland over 90 percent of the citizens had electricity; in Denmark 95 percent; in Sweden, 95 percent.

People came to me and debated the issue with me. They stood up in the crowd and said, "RALPH, this is socialism. This will not work on the plains. People will go broke. We have counties in Texas which are bigger than all of Holland. This will not work." They said, "This will bankrupt the Government." That was what the people actually said.

I am happy that in the course of time, now 25 years later, the plan has proven workable. It is workable and economically sound, and it has not cost the Government any money.

By contrast, on this 25th anniversary of the REA program, 277,800 Texas farm families now have electricity and nearly 70 percent of this power was furnished through the REA plan. Texas REA co-ops, of which there are now 97, have invested over $274 million, have built 148,048 miles of line, and are serving 352,318 customers. All in all, Texas REA co-ops serve more people over a greater area of distribution than such systems in any other State in America. There are more REA service connections in Texas than any other State in the Union.

Mr. President, these REA co-ops are local owned and operated independent business organizations founded under the REA plan to bring light and strength to the farms of America. Despite bitter and powerful opposition at its inception, and continuing opposition to the REA by special interests even up to today, the REA has become one of the great landmarks of human achievement in our Nation's history. Few things, even in this fabulous era of technological advancement, have meant so much to so many people in the last quarter century as has President Roosevelt's plan to bring light to rural America.

Mr. ROBERTSON. Mr. President, as a Member of the House, I voted for the bill creating the Rural Electrification Administration, and have ever since supported that program. The silver anniversary of the Rural Electrification Administration offers an appropriate occasion for all of us to pause and reflect on its accomplishments in the past quarter century.

The economic implications, alone, are impressive enough to warrant considerable attention. Electricity, for its users, is simply energy in its most usable form. Once a farm is supplied with this silent, flexible, versatile means of energy, it automatically becomes a potential market for all the products that have been devised to harness it for useful work.

No amount of persuasive salesmanship on the part of any electrical appliance dealer could transform a farm family into a customer for his products without an available form of electric energy.

Once a farm is electrified, however, it becomes a potential customer for electric stoves and heaters, for lamps and washing machines, for ironers, radios, television sets, milking machines, and modern plumbing operated by electric pumps. The list of products that an electrified farm is in a position to buy is almost endless. The impact on our economy of this still-developing market is directly beneficial to thousands of stockholders and millions of our industrial workers, some of whom may never have been on a farm at all.

But rural electrification, for all its direct aid to our expanding industrial economy, is best measured in human terms—in what it means to the comfort and well-being of men and women and boys and girls who are freed from the cheerless drudgery of hand labor.

Prior to the advent of rural electrification, virtually all the work on a farm was done by musclepower alone. Only the farm wife, who formerly washed clothes by hand on a scrubboard, can truly appreciate the value of a modern, automatic electric washing machine. Only the girl who formerly carried water from the well or the spring, a bucketful at a time, can realize fully what a piping system, powered by an electric pump, means to her comfort and convenience. Only the boy who laboriously chopped the wood for the old cookstove can fully appreciate the value of a modern electric range.

Most of the tools of better production, enabling the farmer to raise more crops and feed more people with greater efficiency—while still insuring some measure of relaxation and comfort for himself—depend directly or indirectly on the power transmission lines that bring the versatile servant of electric energy onto his farm.

The use of this electric energy to replace musclepower and to operate new appliances that musclepower alone could never operate has freed more and more of our farm people for productive enterprises that lead directly to a richer, fuller life for all of us.

I am proud to join my colleagues in the Senate in marking the 25th anniversary of the Rural Electrification Administration for the better life it has made possible for all our citizens.

Mr. HUMPHREY. Mr. President, I rise to join in commemorating the signing of the Executive order establishing the Rural Electrification Administration 25 years ago today. At the time that order was signed by President Roosevelt, only one-tenth of America's farms had central station electricity. The reason was quite simple. Rural electrification was not an economical business. Farmers could not pay the high charge for the lines and equipment needed to bring expensive power from the highline to the farmstead.

The Executive order and the Rural Electrification Act which followed a year later, made it possible for farmers to create nearly 1,000 rural electric cooperatives which now serve more than 4½ million farms, homes, and other rural establishments. They helped rural people help themselves obtain electric service, and thereby, many of the conveniences of the city which they could not afford in the pre-REA era.

Had the cooperatives which were formed in the early days had to depend on the private power companies for all of their wholesale power, the remarkable progress this program has made would not have been possible. Fortunately for the rural electric program, and for that matter for the country as a whole, rural electrification was developing at the same time our forward-looking national administration, and an equally forward-looking Congress were making provisions for the Tennessee Valley Authority, and later the Bonneville hydroelectric projects, the Missouri River basin dams, and other developments. From these projects flowed electricity at reasonable wholesale costs. Also, there appeared a powerful competitive influence known as the Federal power yardstick by which the American people were able to measure the fair and possible costs of electricity, even outside the areas of public power development.

Five years ago on this day I stood here and enumerated a list of benefits rural electrification had brought to American farm men and women and their families. As time goes on we tend more and more to take these benefits for granted; therefore, I feel today as I did 5 years ago when we were commemorating the 20th year of rural electrification progress, that we should from time to time, stop and consider the improvements in rural life and agricultural production that have resulted directly from this great program. Rural electrification progress has come so rapidly that there are few among us who cannot think back to their boyhood days, to life on the farm or life on farms we visited; and I daresay there are many among us who can well remember having to help pump water by hand, carry feed to livestock, milk cows, clean out barns, and do the thousand and one other chores about the farms that we knew. If we visited those farms today we would find that the farmers and their families have been freed from this drudgery. Life is better.

The benefits of rural electrification, however, have spread far beyond the farm and rural home. To date, about $3½ million have been spent in building rural electric lines. That has meant work for thousands of people in the construction industries and a significant order for such items as poles, transformers, conductors, and other materials.

REA appraised the relationship between the cost of supplying electricity to rural consumers and the use of electricity by those consumers, and they found that for every dollar spent in construction of facilities, about $4 were spent by the consumers for apparatus that utilized electrical energy. That has meant that a big new market for appli-

ances and farm equipment was created by this program. It is estimated that the annual market for this equipment is running at about the rate of $1 billion per year. With new appliances being put on the line as new uses of electricity are discovered, this expenditure for consumer goods will increase even more. I am told that in maintaining these rural electric systems, well over a million power poles are purchased annually and over a million and a half miles of conductor have been strung to serve the 16-million-plus people who are receiving electricity as a result of this program. The boost to the industries involved in making electrical apparatus and equipment that has resulted from this program has been significant. Obviously, all industries and people in all occupations benefit by the boost this gives to our economy.

My own State of Minnesota has been a true pioneer in the rural electric cooperative movement. Many years before REA, as we know it today, came into the State, a cooperative known as the Stoney Run Electric Cooperative was in operation near Granite Falls, Minn. The first Minnesota rural electric cooperative under the REA Act was the Meeker Cooperative Light & Power Association organized in 1935 at Litchfield. In 1936, a statewide association, the Minnesota Rural Electric Association, was formed and Irving J. Clinton, of Litchfield, was elected as its first president. When the present statewide association, the Minnesota Electric Cooperative, was formed at a reorganization in 1940, Mr. Clinton was also elected president of this newer group.

Minnesota is the home of the first nuclear power reactor for rural electric cooperatives. This reactor will go into production in November of this year. It is owned by the Atomic Energy Commission and will be operated by the Rural Cooperative Power Association of Elk River, Minn. The electricity produced from the reactor steam will eventually reach the 40,000 consumers of the 6-member cooperatives who own the Rural Cooperative Power Asosciation.

Another Minnesota first in the rural electric cooperative movement was the organization in 1949 of the cooperative power association for the purpose of obtaining and maintaining an adequate wholesale power supply for its co-op members at the lowest possible cost. Incorporated in 1956, the association started active operation in December of 1957. To date the association has succeeded in organizing and operating a power purchasing pool for its members which provides them the lowest cost wholesale power available to Minnesota cooperatives. The association has succeeded in this by delivering Missouri basin hydroelectric power to cooperative load centers in a very wide area over extended Federal transmission lines and also over lines of commercial utility companies under contractual arrangements.

Virtually all rural electrification in Minnesota has been carried out by nonprofit cooperatives operating under the REA program—83 percent of all electrified farms are served by such cooperatives.

Today, the first phase of rural electrification on a national scale is being completed. More than 96 percent of all formerly unserved rural residents now have power. The next, and equally important step in rural electrification is to meet the rapidly growing demand for electricity on these farms with abundant and reliable sources of electric power at reasonable rates. With the use of electricity on rural electric lines doubling every 5 years or so, the problem of meeting these needs becomes extremely important. New steam generation plants will be needed to supplement existing hydroelectric generating systems. Distribution systems will have to be changed over to handle heavier loads than any carried before. Thus, as the use of power increases it is necessary for all of us to put our support behind the development of new power sources; we must find ways of keeping costs down to insure low retail power rates and continue our support of adequate loan funds for REA at reasonable rates of interest.

The American farmer through his rural electric systems has been a foremost advocate of developing all of the feasible hydroelectric power possible. He has been in the lead because more than any other group, he learned the hard way that the key to obtaining the greatest benefit from electricity is keeping the costs down.

In the 5 years since we spoke in commemoration of rural electrification's 20th birthday, a number of attacks have been made on this great program and a number of bills have been introduced and proposals made which would do it great harm.

In recent years we have seen a shadow fall across this great program. The REA Administrator no longer can judge an important loan application on its merits or make the loan himself. Under administrative orders sent down from the Secretary of Agriculture, the Administrator must submit all large loan applications and all new applications to the Director of Agricultural Credit Services in the Secretary's office for review and approval. The bill, S. 144, which I introduced and which was approved by the Congress would have corrected that weakness in the program, but for the President's veto. Here in the Senate, by more than a two-thirds majority, we overrode the President's veto but in the other body, the veto was sustained by just four votes. We made a gallant stand and not wholly a losing one, for by our strong showing, we served notice on this administration that the Congress will not stand for any tampering with this program.

Last year the Senate unanimously adopted a resolution, Senate Resolution 21, which reaffirmed the sense of the Senate with respect to REA operations. In effect, the Comptroller General who, by decision attempted to restrict the operational scope of the program, was told that we wanted the rural electrification program carried on in the future as it had been in the past, serving all unserved residents of rural areas wherever they might live.

With such support based on an understanding of both the social and economic values embodied in the program, Congress has contributed greatly to the success this program has enjoyed during its first 25 years. If rural electrification is to survive and prosper the vigilance of Congress is necessary now and in the future. With our support rural America can make the golden anniversary, in 1985, an even more memorable occasion than this, the 25th.

Mr. KEFAUVER. Mr. President, I should like to add my tribute to the many being paid rural electrification on this the 25th anniversary of the Rural Electrification Administration.

My feeling in this matter is highly personal. I remember my own State of Tennessee before the Tennessee Valley Authority and before REA's.

I remember the picturesque but weak and flickering coal-oil lamps.

I remember the nostalgic but clumsy cook stoves.

I remember the back-wrenching chores forced upon the womenfolk of the farm families—as well as of the men—because there was only musclepower to operate machines, do the jobs, light the lamps.

These rural scenes were in sharp contrast to the electrified towns and cities. It was a factor stagnating rural society in comparison with the progress of the cities.

Statistics show that 3½ percent of Tennessee's farms had electricity at the advent of REA. More than 95 percent of my State's farms are now electrified. This statistic is interesting. It is pertinent. But it does not tell the human story of what electric power has meant to Tennessee farmers, or to the Nation's farmers, for the experience of Tennessee has been the experience of all of rural America.

Figures simply do not tell the whole story of the lessened labor and the increased income and leisure.

Figures do not tell of the increased well-being of a thousand small communities whose businesses are wholly or partially farm based.

These things the rural areas of the Nation know and do not have to be told—at least, not those residents who are of my generation. The lessened labor and fuller life created by rural electric power are the basis for REA's unqualified support throughout the areas of its service.

As a Tennessean, I am naturally proud of the fundamental part my State played in the birth of this program. From TVA sprang the idea of rural electrification. From the cooperative user-owned electric systems set up in conjunction with TVA sprang the system of REA's which electrified the whole Nation at no cost to the Government and minimum cost to the users.

President Franklin D. Roosevelt's decision to launch a rural electrification program was in many ways a social decision. It was designed to bring the economic—and social—benefits of power to

areas of our Nation which private power companies had ignored because of the supposed high cost of service. One private power company's president was quoted as placidly saying that all Tennessee farmers who could afford electricity already had electricity.

President Roosevelt saw the program in another light. Cheap, abundant power was vital to agriculture as an economic tool to help it get out of its depression. Further, it was vital to farm people as a social tool, if this country was to continue its progress toward an abundant and enlightened life for all its people.

The rural electrification system was first visualized by the New Deal as an assist to private capital—a method by which private companies could give electric service to areas which private capital claimed was economically unserviceable. The private companies, however, failed to take advantage of the offer. President Roosevelt then turned to a plan of user-owned electric cooperatives which was already being developed in the Tennessee Valley as a means of distributing to local people the abundant power being generated there. In this plan Mr. Roosevelt found a model for the nationwide system of cooperatives which allowed rural people to help themselves to the cheapest possible power at no cost to the Federal Government.

It meant power to operate farm equipment. It meant power to draw water, to cook, and to lighten every household chore. It meant precious light by which to read, play cards, visit—or to finish farmyard chores. It meant increased study opportunities for the young people in the household, and for the adults, too, for that matter.

It meant, basically, the raising of rural-life opportunity to par with city living.

The REA was nothing short of a social and economic revolution in rural and isolated America.

It was cement to bind our Nation more closely together.

The establishment of REA just 25 years ago was one of the most significant social and economic steps in American history and was one of the New Deal's signal contributions to our people. It seems so to me now, and I am confident that historians will agree in the future.

The Reverend Francis B. Sayre, dean of Washington Cathedral, summed up the achievement almost poetically last year when he said:

> Mankind must thrill to the achievement of electricity carried to the humblest cabin, conferring there not merely respite from toil, but the self-respect of jointly owning the instrument which can so bless a whole community.

To that I can only add amen—25 times, once for each year of REA.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a timely address delivered by Mr. Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association, at the association's 25th anniversary celebration of the rural electrification program, in Warm Springs, Ga., on May 11, 1960.

Mr. Ellis has done outstanding work on behalf of rural electrification and deserves our thanks for his direction of the REA association and for his continued defense of the REA from assaults upon it.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROMISE OF ABUNDANCE

(Address of Clyde T. Ellis, general manager, National Rural Electric Cooperative Association)

This is a notable day for rural America.

Across the land, through newspapers and magazines, radio and television, people are reliving the story of these past 25 years. At this moment, in Washington, the Congress of the United States is assembled to honor the rural electrification program and pay tribute to the coauthors of the REA Act—Speaker SAM RAYBURN and the late Senator George Norris. Many State and local observances are in progress, too.

Here at Warm Springs, we gather to celebrate the birthday of an undertaking which, for many of us, has been a lifework. Here we honor former Congressman Steve Pace, who, as subcommittee chairman, sponsored and fought for the amendment which made area coverage rural electrification possible.

By his featured role in these ceremonies, we honor, too, the former able, longtime Administrator of REA, Claude Wickard. Without his determined leadership in the crucial postwar years, we probably would not be here today.

It is also significant that we meet at this place where President Franklin Roosevelt said the rural electrification program was born, when he first came face to face with the rural rate policies of the power companies.

So, in a way, we come home today—in the spirit of a family reunion.

For a few moments, I want to speak as a member of the family. For some 17 years I have been privileged to serve you as general manager of NRECA—the farflung rural electric service organization—which also has deep roots in the soil of Georgia, and to which this State has contributed the leadership of many great men, including our illustrious president, Walter Harrison.

During these years, and earlier, as a member of the Arkansas Legislature and the U.S. Congress, I have lived with the problems of this program. In that time, we have had three national administrations, four REA Administrators, and a passing parade of Congressmen. I've seen men like Senator DICK RUSSELL of Georgia provide the spark of leadership needed to save the program. I've seen other men try to destroy everything you have built up.

With these remarks as a sort of preface, I want to give you some of my personal observations and convictions as we pass this important milestone.

My frame of reference is the promise of abundance—the abundance of low cost electric power in our economy, particularly the rural economy. Since the earliest days of NRECA, this has been our objective.

No man of vision, I think, can consider the initial extension of electricity to a rural home as an end result.

A rural family may have electricity available, but that fact alone does not satisfy our concept of rural electrification. The electricity must be present in great abundance, and at a cost so low its use will be almost unlimited.

We say that rural electrification has performed miracles, and so it has. But we have yet to scratch the surface. For most people, electricity is still relatively high priced. This is especially true in rural areas far removed from the great public wholesale power systems like TVA and Bonneville.

Except in a few areas, we have not been able to realize our long-range goal of 1-cent electricity for every consumer. We have progressively brought the cost of electricity down, largely through greater use, but we have no reason to be complacent.

One-cent electricity is available now in Alabama, Tennessee, and Washington. This proves it can be done. We need public policies which will make it feasible everywhere. At present, the average cost on rural electric systems is about 2½ cents per kilowatt-hour. We will never have full rural electrification until we succeed in cutting that average at least in half. When we do that, the promise of abundance can be realized—the family farms of America and the areas in which they are located will begin to bloom again.

So long as electricity remains high priced, its use will be restricted. The poor will go on without refrigeration, without indoor plumbing, without hot and cold running water, even without proper lighting.

Those who are better off will continue to neglect electricity as a production tool, and as an instrument for a fuller, richer life.

Even at existing prices, our rural electric consumers—some 16 million rural people—are doubling their use of electricity about every 5 to 7 years. At low prices they would perhaps double this speed. Incidentally, since electricity can be used only through appliances, our rural electric consumers are paying out over $1 billion a year for new appliances.

We must also use low-cost, abundant power as stimulus to industry in the always depressed rural areas. Our family farm people must have further and supplementary places to work. One of the tragic blights I see throughout the country are the vacant farmhouses, and they exist right now by the hundreds of thousands on the lines of rural electric systems.

Where are the people? The people are in the cities, swelling the ranks of the unemployed, living, all too often, in squalid areas sneeringly referred to as hillbilly heights. When they are able to find work, they often displace natives of the city who also have families to feed.

Surely this is no solution to either the farm problem or the labor problem. With half the world hungry, the harsh philosophy that the family farmer should give up and move to town is cruel and cowardly. It seeks to shuffle human beings like a deck of cards, in defiance of all reason—and when the shuffling is done, the same people remain, fighting to live while others starve.

Ahead of us in this country is enormous growth. By 1975, our country will have about 230 million people. This means new agricultural processing plants, new industries, new concepts of production, and distribution.

We can make no greater contribution to the consumers who own our systems, or to the Nation, than to do everything in our power to attract these new activities to our service areas—where they will employ and serve our people.

One thing our rural electric leaders can do, if necessary, is to use their 25-year experience with successful cooperatives as a pattern for some of this future development. In many of our service areas, the prospect of a decent profit is too thin to attract businesses and activities which must operate for profit. But there is no reason many of these future activities could not be operated cooperatively, to the benefit of the entire community—particularly plants for the processing of products of the soil and products for rural use.

We have proved that rural people can organize themselves and successfully oper-

ate complex and technical businesses. We will make an invaluable contribution to the future development of rural America—yes, to the free enterprise system itself—if our leaders will use this know-how to help themselves and our members generally in other areas of activity.

There are many challenges which must be met before we can hope to realize the promise of abundance in underdeveloped rural America.

For one thing, we must preserve the integrity of our rural electric service areas. Some other electrical suppliers have announced publicly that they intend to take from us every industry, even those which locate on our lines. Some are already doing it, without any fanfare. This must be stopped.

One power company official has noted happily that the law restricts the area we can serve, but that his company can serve anywhere. In other words, he can pick off our good users without fear of reprisal.

We can never have dependable low-cost power on any such basis. When laws are inadequate, they can be changed, as you demonstrated in Georgia this year. Many other States need to follow your example.

There are other laws which we must protect. We must protect the Pace amendment. The administration in Washington has propagandized for various proposals which would destroy the Pace Act and double or triple the interest rate on our rural electric loans. It has propagandized for sending us to the money market for our capital. These proposals would add substantially to the operating costs of all systems; they would kill the generation and transmission program; they would force untold numbers of systems to increase their already high rates; they would destroy area-coverage; they would put many rural electric systems out of business entirely.

This is not the road to low-cost power. The 2 percent REA rate, in light of all the facts and circumstances, is fair to both the borrowers and the Government. During the debate on the Pace amendment, Congressman BOB POAGE, who handled much of the technical discussion for the House committee, pointed out that interest costs might go up or down over the life of a loan, but the fixed 2 percent rate would be about the average. History bears him out. During the 25-year life of our program, the average annual interest cost of carrying the marketable public debt has averaged just about 2 percent per year.

Moreover, let us never forget that Congress permitted us to serve only in the marginal rural area and at the same time required us to serve everyone, whether they could pay their own way or not. And perhaps half of those served don't pay their own way. The others have to pay a little more.

We must also take the necessary action to assure ourselves of an adequate supply of low-cost wholesale power. Throughout the country our private suppliers are increasing our wholesale costs and adding limitations on our use of the power as new contracts are negotiated. In some instances they are in effect blackmailing our systems into accepting steep increases by threatening to insert contract clauses which would restrict our right to serve desirable loads in our areas. Many such restrictions have already been forced upon us.

We must continue to work for giant generation and transmission systems, public and private, which can achieve the efficiencies necessary for low-cost power. The Russians are doing it. Those of us who made up the Senate inspection team last fall saw with our own eyes their enormous plants and power grids, their crash construction program, including some efficiencies not yet achieved in our own country.

Thus far, we have been unable even to get public and private interests to join together in such undertakings—like, for instance, is being done in Western Europe. For the consumer's sake, these things must be done.

We must overhaul our regulatory agencies and make them responsive to the public need. I think it is disgraceful that William Connole, the only member of the Federal Power Commission who seemed to give a hoot about the consumer, was dropped so blandly by President Eisenhower recently. The giant utilities which the FPC is supposed to help regulate did not like Connole. They managed to get rid of him. The people of the country can't afford to tolerate such a shabby thing.

We can no longer neglect the development of our natural resources. There is no greater waste than the waters of a river flowing unharnessed to the sea. Our rivers must be developed on a comprehensive, multiple-purpose basis. We have the great example of TVA. We need other TVA's or their equivalents with transmission grids tied together for maximum efficiency.

Finally, we must develop atomic energy as a natural resource which belongs to the people just as, under the Constitution, the rivers belong to all the people. The day will come when the technical problems will be solved, and the incredible power of hydrogen fusion will be used to generate electricity. Then we shall surely have electric power in undreamed-of abundance—at a price which a former Atomic Energy Commission Chairman once described as too cheap to meter.

We must be very sure that monopoly interests are not allowed to capture atomic energy and turn the staggering atomic energy investment of the American people into a tool for private monopoly exploitation.

In summary, we must diligently pursue all the avenues which merge finally in the goal of low-cost electricity. We humbly ask the commercial power companies and all other power suppliers to join us in this pursuit. Experience proves that, if they will do so, the resulting high usage of electricity will insure their prosperity.

The promise of abundance, I believe, is as great a challenge to rural electrification leaders of the future as the promise of availability was 25 years ago. It can further transform rural America and help build an economy which will be a Godsend to our own people and an asset to all Americans.

Surely there could be no more appropriate occasion than this to rededicate ourselves to this goal.

PRESENTATION OF DISTINGUISHED SERVICE AWARD

Mr. C. F. Palmer, chairman of the Franklin D. Roosevelt Warm Springs Memorial Commission, is here on the platform. Mr. Palmer, will you come to the podium, please?

The board of directors of the National Rural Electric Cooperative Association decided to on this occasion present the association's Distinguished Service Award to Franklin D. Roosevelt.

The award is inscribed with this quotation by Mr. Roosevelt himself: "It can be said that a little cottage at Warm Springs, Ga., was the birthplace of the Rural Electrification Administration."

We stand now on the front porch of that cottage.

The rest of the award reads as follows:

"The National Rural Electric Cooperative Association and the 16 million rural people it represents pay tribute to Franklin D. Roosevelt who created the Rural Electrification Administration and thus brought about the vast program of electrifying rural America."

It was felt that the award might appropriately be placed here at Warm Springs. Mrs. Roosevelt was invited to accept it, but regretfully could not come. It is with great honor and humility that through you, Mr. Palmer, I present, posthumously, to that great American, Franklin D. Roosevelt, this best token we have within our power to give.

Mr. LAUSCHE. Mr. President, today, May 11, 1960, Congress is commemorating 25 years of progress made by the Rural Electrification Administration in electrifying rural America.

This has been a significant achievement resulting in the bringing to millions of rural residents the many comforts and conveniences afforded only a quarter of a century ago to those residing in cities and more densely populated areas.

Mr. President, Ohio, and in particular Miami County, has a keen awareness of the significance of this date, for it was in this Ohio county where a group of farmers were the first in the Nation to organize an electric cooperative, and the first Rural Electrification Administration loan in the Nation was made to this group.

This loan was known as Pioneer I, and just outside the city limits of Piqua, Ohio, on U.S. Route 25, there is a plaque designating the spot where the first pole was set that was to carry lines delivering power to farmers in that area. This cooperative is now the largest in the State of Ohio, having 6,717 members.

Since this program started, the 29 electric cooperatives in Ohio have borrowed $79,884,370, and on this total loan, have paid $9,607,484 in interest, and have repaid $20,162,445 on the principal. Ohio cooperatives have an outstanding record, as none is delinquent in payments of either interest or principal. With this borrowed capital, these cooperatives have built 30,026 miles of distribution lines, and have approximately 600 miles of transmission lines. With this system, they are serving 129,422 rural customers. In 1958, these cooperatives paid State and local taxes amounting to $1,205,411.

Mr. President, it is difficult to estimate how many millions of dollars worth of business these rural consumers have given to the businessmen of Ohio in the last 25 years. It is conservatively estimated, however, that each rural consumer spent for electric appliances, wiring, pumps, farm chore equipment, and so forth, $10 for every $1 invested in the rural electrification system. This would mean that the rural people served by these cooperatives have spent nearly $1 billion for equipment that uses electricity. This in itself has meant a great deal to the economy of this State, and of course, we cannot overlook the fact that health standards, too, have been raised.

AMERICAN SUCCESS STORY

Mr. ALLOTT. Mr. President, the success story is a part of our American tradition. It has enriched our folklore and woven itself into our frontier heritage.

I wish to pay tribute to an American success story which has special significance today. I wish to comment on a Government-sponsored program and some of the people behind it.

Twenty-five years ago, rural America was still a dark land, with only 1 farm in

10 receiving electric service. Today the rural electrification program has brought light and power to 97 percent of the farms in this Nation, and to thousands of rural communities.

May 11, 1960, marks the silver anniversary of the Rural Electrification Administration. REA has become a household symbol to millions of rural people as the electric lights have been turned on at one farm after another. REA has become synonymous with rural electrification, although the Federal agency which made the program possible has never owned a mile of line or operated a single transformer station.

The Rural Electrification Administration makes long-term loans under provisions of the Rural Electrification Act of 1936, as amended by the Congress from time to time. This legislation and this agency of the executive branch, true to our American way of doing things, enables our citizens to use the resources of their Federal Government to accomplish something as groups of neighbors which they could not achieve individually.

The men who created REA knew that American farm families and other rural people wanted the benefits of electricity that city people had enjoyed for many years. The Senators and Representatives who drafted the Rural Electrification Act realized that America's farmers were willing to pay for their electricity, that they did not expect it as a gift or a handout.

Through the years since May 11, 1935, REA has lent the money to build the lines, to set the poles, and to buy the transformers. In most cases, the farmers themselves formed nonprofit cooperatives to build and to operate the electric facilities.

Of course, we know that REA has been more than a lending agency. From its reports to Congress and from the messages we get from our constituents back home, we know that REA is made up of people, and that these people have a mission. I wish to tell Senators something about that mission, and then to say a few words of commendation for the people who are REA.

The mission, spelled out by the Congress, was to see to it that isolated ranchers as well as people in rural areas close to the towns and highways obtained electricity if they wanted it. This broad goal of REA and its borrowers has been summed up in the term "area coverage." Area coverage is a big idea, as ideas must be in this big country of ours. Area coverage became the heart of the rural electrification program. It became a basis for designing consumers' rate schedules and for promoting greater use of power. Isolated consumers were not denied power or assigned a penalty rate for it, and thinly settled areas as well as the thickly populated ones enjoyed electric service at fair rates. This was possible because the people responsible for REA realized that the test for building an electric system was not the cost of any single line, but rather the amount of power that would be consumed and paid for. An isolated rancher who uses a thousand kilowatt-hours of electricity a month to satisfy his many needs can be just as desirable a consumer as the fellow who lives right alongside the powerline and uses only a modest amount of power. REA and its borrowers maintain a vigorous power use program to encourage full exploitation of their "wired hands." This has been a vital contribution to our agricultural economy in the years when hired labor was becoming scarce and costly.

Rural electric systems pay their own way. In 25 years of REA's lending program, 1,086 borrowers have actually drawn down a little over $3½ billion from total loans amounting to $4 billion. On this $3½ billion in REA financing that has gone into the construction of rural electric systems, the borrowers have made payments to the Federal Government of principal and interest amounting to almost $1¼ billion. About $155 million of this represents a current balance of payments in advance of due date. Only one electrification borrower is in arrears on its debt service. This is truly an amazing repayment record, and one that might be the envy of private lending institutions the world over. What is even more remarkable is the nature of these loans. REA loans for rural electrification are 100 percent loans, with no other equity and security than a mortgage on the system to be built. Trust in the farmers themselves has provided the real security for these REA loans. And the farmers and other rural citizens have kept that trust.

Farmers and other rural people own these electric systems. Because consumers often refer to their local rural system as the REA—a tribute to the source of the financing—the local ownership is sometimes overlooked. It should be a source of deep and abiding pride to us that 985 of the 1,086 borrowers are cooperatives. The others are public power districts, municipals, and power companies. The cooperatives are organized, owned, and operated by individual citizens. The rural electric cooperative is an independent, local business enterprise, incorporated under the laws of the State in which it operates. Each member exercises a single vote in electing a board of directors from among the membership. The board hires a manager to run the electric system. A portion of each member's payments on his electric bill is used to pay off the indebtedness to REA.

In my own State of Colorado there are 25 of these home-owned rural electric cooperatives. Up to January 1, 1960, the beginning of REA's 25th year, they had borrowed a total of $121,167,157 to construct 34,495 miles of line and other electric facilities to serve 86,677 consumers.

Back in 1935, at the time REA was created, only 7,145 farms in Colorado, or 11.2 percent, were receiving central station electric service. Today's total is up around 36,000, or about 90 percent of all farms recorded in the last census. One of the figures we are proud of is the consumption of electricity. The average monthly use of power by each consumer on the lines of Colorado's rural electric cooperatives was 180 kilowatt-hours in 1950. By 1958 that had jumped to 334 kilowatt-hours, and it is still growing as farmers and other rural consumers find more and more ways to step up production and improve their living standards with reasonably priced electricity.

In Colorado, as in our other States, an increasing proportion of each year's REA loans goes into heavying up existing rural powerlines to accommodate the increased powerloads. And a larger share also goes toward construction of generating plants and transmission lines to assure ample power for rural areas that cannot purchase enough dependable electricity at a reasonable price from existing sources.

Another figure I am proud of in Colorado is the repayment record of our rural electric cooperatives there. It is even above the very fine national record. In my State, on $97½ million actually advanced by REA, the borrowers have repaid $12½ million on the principal. In addition they have paid $8¼ million in interest and more than $5½ million in advance of due date.

When we get to talking about statistics in the REA loan program itself, we must not lose sight of what it has done to boost other segments of our economy. It is estimated that for every dollar that REA has advanced in loan funds for the construction of rural electric systems, the consumers on those lines spend $4.50 for electric wiring, equipment, and appliances. This runs close to the fantastic sum of $16 billion, and more billions are going to be spent each year by consumers eager to keep their electric power at work. REA borrowers have created local payrolls, they pay local taxes, and in many places they have built the most modern building in the county seat.

All of this is American enterprise in the pioneering tradition. As a Republican and a strong supporter of the REA program, I take pride in the role my party has played in this frontier of service to the American public. It was a Republican, Senator George W. Norris, of Nebraska, who authored the Senate bill which became the Rural Electrification Act of 1936.

The record of REA and its borrowers since 1953 has been outstanding. Let me point to several significant figures that are typical of this administration's backing of rural electrification. Since January 1, 1953, REA electric loans approved total $1.4 billion. That record, achieved in 7 years, represents one-third of the total loaned in 25 years. REA has approved loans providing more generating capacity during the last 7 years than was provided for in loans during all the preceding years.

Of particular significance is the improvement in the financial position of the REA-financed rural electric systems under the present administration. Since January 1, 1953, the number of electrification borrowers behind in their loan payments dropped from 45 to 1. In the same period, the balance of payments in

advance tripled. Total net worth of the electric borrowers in these 7 years more than doubled, from 7.7 percent of assets at the beginning of 1953 to 18.2 at the start of 1960. At the same time, the cost of electricity to consumers on the lines of REA borrowers went down. The average price is now 2.65 cents per kilowatt-hour, lowest in REA history.

I have been describing the progress of rural electrification in terms of statistics. This has to be done to give us some measurement of the success of this undertaking. But the real measurement of REA's success is in the people. In observing the first 25 years of progress in rural electrification, our admiration and our gratitude go out to the thousands of rural leaders who set up the rural electric cooperatives. Millions of people can share the feeling of accomplishment that we now survey.

Prominent among those who are responsible for this excellent program are the engineers, the accountants, the technicians, and the clerks and typists in the Rural Electrification Administration. They are dedicated people, and they have worked long and hard and well under their several Administrators.

As a Republican I want to call particular attention to two Administrators who have been responsible for the remarkable record of REA in these last 7 years. The first of these was ANCHER NELSEN, of Minnesota, now a Member of the House of Representatives. The present Administrator is David A. Hamil from my own State of Colorado.

Dave Hamil, as he is known to everyone, became Administrator of REA on June 26, 1956. He came to Washington with practical business experience. For many years he has been a rancher in the cattle feeding business in Logan County, Colo., where he was born.

He came to Washington with administrative know-how. At the time of his appointment, he was speaker of the Colorado House of Representatives, a position he had held since 1951. He was first elected to the Colorado General Assembly in 1938, and with exception of a 2-year term in 1948–49 had served in it continuously.

He came to Washington with experience in rural electrification. Mr. Hamil became active in the REA program back in 1939 when he helped sign up members and organize a section of the Highline Electric Association of Holyoke, Colo. He served as a director of the cooperative for 5 years. He has seen its membership grow from 180 consumer-owners to more than 4,200.

Let me quote what this practical businessman, what this Administrator with know-how, what this experienced leader in rural electrification—and above all, what this warm, friendly, understanding man—says about the program he runs:

The end product of REA's rural electrification program is a human one, and it cannot be measured in statistics.

In human terms, rural electrification means a light to read by on a dark winter night in North Dakota.

It means a radio and a television set, broadcasting a frost warning in Georgia or a late market report in Iowa.

On an Arkansas farm, it means ironing a Sunday shirt in July without first stoking a range red hot to heat the flatiron.

It means that a youngster in Colorado changes his mind about seeking his fortune in the city, and plans to stay on the ranch after he graduates from ag school.

It means better food on the table year-round, for both city and country people.

It means that a farmer can intensify and diversify his operations.

It means a cooperative annual meeting, where thousands of rural families have turned out to elect directors to run the electric system they own.

It means more pride, greater self-respect for millions of rural people.

This is the real meaning of rural electrification, and it is for these things that we give thanks as we observe the silver anniversary of REA on May 11, 1960.

I am very happy to pay tribute, on this 25th anniversary of REA, to all who have contributed so much to actually changing the face of farm life in America.

Mr. COOPER. Mr. President, today the Rural Electrification Administration, over 4 million rural families, more than 1,000 electric and telephone cooperatives which serve them, and the people of our country, celebrate the 25th anniversary of the birth of the REA and the rural electrification program.

The accomplishments of the rural electric and telephone programs are well known. I will not take time to repeat the figures which document this tremendous record of accomplishment—numbers of members served, miles of line, the consumption of electricity, record of repayment—for the growth and success of this program has made REA a household word and an example to the world. I can give one example by saying that in Kentucky, 3 percent of our farms were reached by power lines in 1935, while today only 3 percent remain to be electrified.

Kentucky was one of the first States to join the program when, in October 1935, the loan to the Henderson-Union REC was approved. Kentucky exceeds its neighboring States in the percentage of farms served by REA cooperatives, and is matched by only four other States in the Nation in this respect. The East Kentucky Rural Electric Cooperative, at Winchester, is the second largest REA generating and transmission facility in the Nation, with one plant operating at Ford, on the Kentucky River. And a few weeks ago it announced plans for an additional plant at Burnside, Ky., on the Cumberland Lake. Kentuckians, and the Nation, have every reason to be proud of the Kentucky Rural Electric Cooperative Corp. and the 26 rural electric cooperatives which serve 235,000 members over 51,000 miles of line.

The program was conceived and initiated during the administration of President Franklin D. Roosevelt. It was continued during the administration of President Truman, and it can be pointed out that much of this growth has taken place in recent years. I think it is proper to point out that approximately one-third of all rural electric loans and nearly all of the rural telephone loans have been approved in the last 7 years, under the administration of President Eisenhower.

But much yet remains to be done, for the increasing use of electric energy calls for heavier equipment and enlarged facilities to provide and carry the power which modern rural life demands today.

With respect to proposals to increase the 2 percent interest rate on REA loans, I would like to point out that many cooperatives have extended services to wide areas, at high cost, to fulfill the purposes of this act. Others must extend their service to remote farms and areas if the full purposes of the act are to be realized. Cooperatives now are engaged in the construction of generating and transmission facilities, authorized by the act. These activities have been based on the 2 percent rate fixed by section 4 of the REA Act. If interest rates were raised it would limit, and in some cases prevent, these advances by local cooperatives. I am opposed to an increase at this time in the 2 percent interest rate for these reasons.

The REA cooperatives in Kentucky understand this problem and in a resolution adopted at their annual meeting have indicated their willingness to make adjustments in the interest rate when they are able to meet the needs of the program. I will support them in this course of action.

I have strongly supported the rural electric and telephone programs in each of the three terms I have served in the Senate. I am especially glad to be serving now as a member of the Rural Electrification Subcommittee of the Senate Committee on Agriculture, for it gives me the opportunity to continue this interest and to consider all legislative proposals for the future of the program.

It has been my great pleasure to work closely with leaders and members of the Kentucky rural electric cooperatives for many years. They have been constructive, forward looking and realistic in their appraisal of programs which will serve their members and which are also in the best interests of the country as a whole. The tribute of this day belongs to them, to the farmer directors of the electric cooperatives and to the rural telephone companies and cooperatives and their members. They have built this great instrument for bringing a better life to the people of rural America.

The production of food and fiber during World War II was a testimonial to the contribution of rural electrification to the Nation's security.

And beyond agriculture, it has made it possible for thousands of people to live in the country and enjoy a better life. It has encouraged small industry along rural powerlines.

Rural electrification has brought light into the lives of millions—literally. It goes to the most basic essentials of family life—better food and shelter—and to the ordinary conveniences which now join nearly all our people in a way of life unique in the history of the world.

Mr. President, I ask unanimous consent to have printed in the body of the RECORD at this point a statement by my colleague from Kentucky [Mr. MORTON], on the 25th anniversary of the rural electrification program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MORTON

The success of the Rural Electrification Administration program in making electric power available to the rural areas of our Nation constitutes a remarkable accomplishment in the history of rural America, and it is appropriate on this the silver anniversary of REA to recognize the splendid record of progress of the REA program and its hundreds of member-owned and member-operated cooperatives throughout the country.

When REA originated 25 years ago, only 10 percent of all American farms received central station electric service. Now, in 1960, nearly 97 percent of our farms have such service, with REA cooperatives serving more than half the total number of electrified farms. The REA goal is 100 percent electrification, an objective which appears to be close at hand.

I would like to direct special commendation to the outstanding performance of the REA program in Kentucky—to the leadership and members of the 26 power distributing cooperatives and to the Kentucky Rural Electric Cooperative Corp. More than 235,000 customers in 112 of the State's 120 counties now receive RECC-distributed power over 51,000 miles of lines. The achievements of the Kentucky program are especially noteworthy because many of the cooperatives serve areas where access is extremely difficult.

At REA's inception, some 8,900 Kentucky farms, or 3 percent, were receiving central station service. Present estimates show that 189,000 farms, or more than 97 percent, are electrified. Of this total, REA borrowers serve about 80 percent.

Loans totaling $153.6 million have been advanced to Kentucky co-ops since 1935. Every cooperative is current in its obligations to the Federal Government, and most of them are well ahead of their repayment schedules to REA. To date, some $43 million in principal, interest, and advance repayment has been returned to the Federal Government.

Kentucky also is benefiting from the rural telephone program, and 18 borrowers, including 10 commercial companies and 8 cooperatives, have received about $25 million to extend telephone service to rural areas. Since 1950, Kentucky's farm telephone coverage has increased from 21 percent to approximately 45 percent. REA loans will finance service to 43,000 new customers and improve service to 23,000 subscribers over 13,000 miles of lines.

REA has not reached its present stature without criticism. The most sensitive area, as my colleagues know, is the disparity of interest rates—the difference between the 2-percent interest rate paid by borrowers and the high interest rate the Government must pay in order to fund the REA program.

I believe that, by and large, the American people have accepted REA as a necessary function in improving our rural areas, and I feel that the attitude and position of the cooperatives and their State and national associations toward interest rates will largely determine whether this public acceptance will continue.

The Kentucky RECC is to be highly commended for responding to the interest rate challenge in a responsible and forthright manner. During its 13th annual meeting last September in Louisville, the Kentucky RECC adopted a resolution endorsing payment of the fair cost of money to the Treasury.

I would like to quote the resolution for the information of my colleagues:

"INTEREST RATES

"We realize that one of the most difficult points of criticism of the entire rural electric program derives from the interest rate on REA loans. We, therefore, feel duty bound to state our position on this controversial point. Our position is that we think we should pay the fair cost of money to the U.S. Government on REA loans.

"We urge that NRECA (National Rural Electric Cooperative Association) institute a study to ascertain this cost. As soon as the study is complete, we urge NRECA to submit proposed legislation for approval by the cooperatives, requiring payment of the fair cost of money on REA loans. We further indicate our approval of this legislation to be presented to the Congress in its session beginning January 1960."

Considerable credit for the great progress of recent years should be accorded to the REA itself and to the very capable leadership of Administrator David A. Hamil. The encouragement extended to the cooperatives, the constructive and cooperative attitude within REA, and a determination to fulfill the intent and purpose of the program have enabled the co-ops to meet their service obligations during a period of great demand.

I congratulate the REA and the member cooperatives for their part in bringing a better way of life to rural Americans.

Mr. HARTKE. Mr. President, this is an historic day. It marks the 25th anniversary of the founding of the Rural Electrification Administration—one of the monuments to a great President, Franklin Roosevelt, and itself a great program to bring electricity to rural America.

In Indiana we are extremely proud of the rural electrification membership cooperatives and the businesslike manner in which they have functioned while bringing current to the farms of our State. We are also proud of the fact that our own Claude Wickard was a pioneer in the REA.

Recently an Indianapolis newspaper published an editorial entitled "Look to Boone County." It was a favorable comment on the annual report of the Boone County REMC, a system owned by the members it serves.

This electric system was constructed and put into operation with funds loaned to a group of rural cooperative leaders by the Rural Electrification Administration. In 1955, these borrowed funds were completely repaid with interest. The editorial states:

The record of the Boone County REMC for service and financial stability is excellent.

Other REA REMC's in Indiana and the Nation would do well to follow the outstanding example of the electric cooperative in Boone County.

The Boone County Rural Electric System like the other REA borrowers in Indiana that have repaid their loans to the Federal Government in full, with interest, are to be congratulated. They have achieved the goal that every one of the almost 1,000 borrowers of funds from REA across the Nation hopes eventually to reach.

It is all very well and good to encourage all REMC's to follow the example of the Boone County co-op. However, there is more involved in repaying in full an REA loan than merely having the desire to do so.

Every rural electric system is dedicated to the objective of providing its members abundant and reliable electric service at the lowest possible cost. Also, they all have a desire to repay their loans as rapidly as possible, consistent with the first objective and with prudent business practice. But at this point similarity often ceases. No two REMC's have the same income, expenses, advantages, or problems. Some have a large number of consumers in total and per mile of line; others have a small number. Some systems serve a high percentage of residential and farm consumers, others may serve several commercial and industrial users. These and many other factors determine income and expenses, and an early or a late date of full debt repayment.

The REA Annual Statistical Report for 1954, the last full year of operation before the Boone County REMC repaid its loan in full, shows that only one electric cooperative in Indiana had higher revenue per mile of line than Boone County REMC. This was a factor favoring early repayment of the loan. Was this a result of good management or of other circumstances? Probably both.

We are proud of the Boone County REMC for being one of the first electric co-ops in the State to repay its loan. Not all of our systems can be first, but they are all giving good service while repaying their debt, on schedule, or sooner.

The most recent Annual Statistical Report of the Rural Electrification Administration, published in July 1959, shows that the 39 rural electric membership cooperatives in Indiana are making excellent progress in this direction. Every one of these cooperatives has not only paid the principal and interest due but has also made payments ahead of its due date.

On this 25th anniversary of the founding of the REA, we may ask why it is that the members' owned and operated rural electric systems have succeeded so well in spite of low consumer density, the high cost of wholesale power, and other handicaps.

I am convinced they are succeeding because of three factors:

First, management has been good; their democratic form of organization has called some of the best community leaders into service as members of their boards of directors; second, the cooperative form of organization has assured service-at-cost, nonprofit operation; and third, REA credit has been available on reasonable terms.

Change any one of these factors, and success can turn to failure. Unchanged, our REMC's will follow in the footsteps of Boone, Hendricks, Henry, and Noble County REMC's, all of which have repaid their loans to the Federal Treasury, in full, and with interest.

Mr. President, to illustrate the financial progress of rural electrification in my State, I ask unanimous consent that the table entitled "Repayment Record of Indiana REMC's" be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Repayment record of Indiana REMC's

Location and name	Total funds advanced, all purposes	Interest due and paid	Principal due and paid	Advance payments
Albion, Ind., Noble County	$525,000			
Danville, Ind., Hendricks County	990,095

[1] Loans repaid in full.

[2] Never became operational.

Mr. BYRD of Virginia. Mr. President, it was my privilege to have been a Member of the U.S. Senate 25 years ago when the Rural Electrification Administration was brought into existence under Federal law.

I am pleased to join those who today are congratulating the REA on the occasion of its 25th anniversary. It has been a quarter of a century of good work.

As a farmer, as a man who has great admiration for those who follow the rural life, and as one who has sympathy for the problems which confront them, I know the great blessing of rural electrification.

The REA has made tremendous contributions to our national economy and welfare, especially in bringing electricity to areas where services by the private power companies was not feasible.

Mr. GORE. Mr. President, as we on the floor pay our tributes to the accomplishments of the REA in the last quarter century, at least one of our colleagues is speaking at his own State's silver anniversary celebration back home, and I ask unanimous consent to insert in the RECORD at this point the speech of the junior Senator from Oklahoma [Mr. MONRONEY] made this afternoon at a statewide celebration in Oklahoma City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR A. S. MIKE MONRONEY AT THE 25TH ANNIVERSARY, OKLAHOMA STATEWIDE RURAL ELECTRIFICATION ASSOCIATION, OKLAHOMA CITY, OKLA., MAY 11, 1960

What a happy occasion it is to be here to mark the silver anniversary of REA. Here in this big statewide meeting, the friends of this great farmer-owned and farmer-operated movement have the supreme right to claim an achievement that ranks with the miracles of the 20th century.

Certainly we have astonished ourselves and the world with the pace of our achievements in many lines: electronics, science, outer space, aviation, atomic energy exploration, and automation. These breakthroughs into new fields are amazing and at times awesome. But none of them has had as much impact upon the lives of Americans as has rural electrification, the 25th anniversary of which we celebrate here today.

Throughout America and in Washington, too, the same recognition of this silver milestone is taking place. In nearly 5 million farm homes in 46 States and the Virgin Islands and Puerto Rico, expressions of gratitude will be given in almost prayerlike manner, because a great program was born that declared that there shall be light for rural America.

In 1879 Thomas A. Edison invented the incandescent lamp. The first central station generating plant in the world was established in 1882 to serve a few score customers within a 12-city-block area. It generated a capacity of only 1,200 horsepower and was used mostly for lighting. The first commercial use of electricity for motors on record was to grind coffee in a nearby grocery store.

By the early 1920's this great innovation in American life—electricity—had reached almost all the towns and cities of the Nation with central station service. Few were the homes within city limits that did not have ready access to all the electric service they wished to buy.

But this great innovation, in its progress, had passed by one of America's most important groups. Our farm population was forgotten in this march of progress. Within 40 years after the first electric service had begun, there was almost complete electrical service for the city family. Yet only 2 out of every 100 farm families in the United States were served by central station power.

In Oklahoma this period of the kerosene lamp extended to 55 years after the establishment of the first New York electrical plant. Then in 1935, the year that REA was born, only 2.6 percent of the Oklahoma farms had central station electricity. This meant that fewer than 3 out of every 100 farm homes had been brought into the electrical age of the 20th century.

Nationally the figures were somewhat better, but a gaping chasm of darkness was still the way of life for 89 out of every 100 American farmers.

The miracle of REA is that in 25 years—a quarter of a century—this expanse of darkness in the 97 percent of Oklahoma's farm homes is now transformed to an electrically lighted brightness in 93 percent of those same homes. Nationally the figure stands at 96 percent electrified.

How did it happen that it took more than 50 years to electrify only 3 out of each 100 Oklahoma farms, and that under REA in 25 years 93 out of each 100 have electricity?

Here was a job that was so challenging that only the interest of Government could meet the need. Twenty-five years ago REA Administrator Morris Cooke called on power officials to survey the extent of rural electric development and its capability. The answer was "There are very few farms requiring electricity for major farm operations that are not now served."

Since private industry saw no need for this service, so vital to the welfare of some 32 million Americans who lived then on the farms, it was necessary for Government to act. Two great Americans, whose achievements for our Nation's welfare are legion, fathered the REA. President Roosevelt signed the bill 25 years ago today. Its author was the great Speaker SAM RAYBURN—then the chairman of the House Committee on Interstate and Foreign Commerce. It was Mr. SAM who designed the program and guided it successfully to its passage. And, I might add, who has acted as its guardian ever since.

Even as late as 1938 when I entered the Congress as a freshman, it was regarded by the private power companies as a boondoggle—certain to be a big failure and a fantastic drain upon the U.S. Treasury. How little these experts realized that the job that big business said couldn't be done—would turn out to be the most successful business expansion of the last quarter of a century.

America is richer, not only in the great service of bringing more than 30 million of our people into the electrical age, with all the benefits and convenience that its service

brings to home and family life, but it is richer in dollars because of its courage in expanding this service to our farm population.

Let me emphasize again and again and again that this has been a spectacular example of wise Government cooperation with private industry.

Here was a market of more than 30 million people desiring electrical service, who after 50 years saw only 11 percent of their people served. It was not Government competition with free enterprise—but Government effort to fill a long neglected need. The market is now proven as a result of REA's 25 years of successful operation. It has not only helped the REA cooperatives, these farm-owned and farm-managed business organizations, but it has helped the private utilities themselves.

As a result of REA's proving the need for and the value of the farmer as a customer, more than 2 million farm homes are now wired and served by private utilities. In addition, the REA cooperatives in most sections have become the biggest users of private power supplied at wholesale. Thirty-nine percent of all power sold by all REA co-ops was so purchased from private power companies. And I might add at an 8 mill rate that must mean added profits for these power companies.

The total of REA loans already made throughout the United States is $3.4 billion. All of this money has found its way into thousands of private industries. The posts, the wire, the insulators, the transformers, the switching systems, the service trucks—everything that the REA buys has gone into channels of private industry.

In Oklahoma this has meant enough line to stretch 65,439 miles. All the materials as well as labor for its construction were placed through private contractors and Oklahoma businessmen. The REA loans have brought $140 million of new construction to our State.

But private contractors and electrical equipment manufacturers are not the only ones who have profited from these Government loans for REA investment. For every dollar spent in construction of the lines, it is conservatively estimated that the farmer has spent from $4 up on additional business for the merchants for appliances, home wiring, water systems, washing machines, TV sets, heating, and a thousand and one other uses to make farm home life equal in comfort to city living.

A recent national survey showed that rural electric consumers will buy over a billion dollars worth of appliances in 1960. There are more than 400 known uses for farm appliances and equipment and every day the list expands as Willie Wired Hand takes on new chores for his boss.

In 1930 one farm worker produced enough food and fiber for less than 10 people. Today, with the help of electricity, he produces enough for 25. Agricultural experts forecast that by the end of the century he will be producing enough to supply the needs of 50 people. Yes, REA has brought about a revolution in the record of farm production, and one farm worker today has the output of three men in 1935.

Not only does the REA dollar, both the one invested and the one spent by the farmer to pay his service bill, find its way into stimulating new industry and sales, but the national REA systems add another $200 million to $300 million to the annual payrolls of the country for maintenance of lines and facilities.

Surely an enterprise such as this, that has helped not only the farmer but so many businesses of diverse nature, cannot be the ugly image or threat of socialism that its enemies claim that it is.

We need and I am sure you will have the understanding support of all the people when the true facts of this great and successful operation are known.

And with all the fine results that have been obtained, the best final answer to its worth has been that it has not cost the Public Treasury a single cent. Rather, it has returned to the Treasury in interest and principal more than one-third of the total money loaned the REA borrowers during the past 25 years.

Of the $3.4 billion loaned, $1.2 billion have been repaid, including $669 million on principal and $397 million in interest.

The amazing result of the job being done by the farmer-managed cooperatives is that they have already paid $154 million ahead of schedule. Out of all the thousand REA borrowers, only one is overdue in its payments—a total overdue of $97,600. This is the most amazing record of Government lending I have seen in my 22 years in Congress.

And they continue to do well in their efficiently managed services to the American farmer. The net worth of all the REA systems—that is assets above all debt—totaled $602 million in December 1959, an increase of 1.6 percent over 1958. Operating revenues increased by almost 10 percent to a total of $618 million in 1959.

Oklahoma's repayment picture is equally good. Not a single payment from an Oklahoma co-op is as much as 30 days overdue and they have paid ahead $5,915,482. Of the total of $139,981,277 loaned to Oklahoma in the past 25 years, a total of over one-fourth, or $35,819,480, has been repaid. Of this amount, $21,022,689 was paid on principal to retire their debt and $14,796,791 was paid in interest.

With a record of repayment like this, you would think that even our critics would express their approval for the capable management these organizations have rendered. But instead, we see them attack our interest rate as subsidized. You see, if it isn't one thing, then it is another.

Let's look at the record again and examine the interest picture.

Again it has been the Government which has profited from association with REA. During 16 of the 24 years the REA rates have been at a level that paid the Treasury of the United States a profit on their loans.

Only during the last 8 years of this Administration have the rates of interest failed to yield a profit to the Government on the cost of borrowing its money. During this 16-year period the rates to the Government were often far below that charged REA as a flat rate of 3 percent until 1944. From 1944 the flat rate of 2 percent was charged but during that period the Government interest rate was at an alltime low.

Now the drive is being made on two fronts against the REA systems. One is that their interest rates must be greatly increased. Some proposals put it at the highest rate for the most recently sold bonds. This would double the interest charge and would result in rates so high that the expanding uses of electricity on the farms would be curtailed. Some of the REA's would undoubtedly be forced out of business and some would have to sell the most profitable parts of their systems to the private power companies. Thus the great principle of providing service to all farmers, whether the line extension was profitable or not, would have to be abandoned.

The other threat to the existence of the operation of these co-ops is the pressure for constantly increasing the cost of wholesale power. The national rate from private utilities is 8 mills and from Government power sources averages 5.4 mills. Thus it has been the 46.5 percent of the wholesale power furnished by public power suppliers at this lower cost that has kept the rates within reason.

Now efforts are constantly being made to pack the cost of power from Federal dams with added but fictitious costs to push up these rates. Various formulas are used, such as "taxes foregone," "overloaded costs of the project charged to power generation," maintenance and overhead packing, and a variety of others. It is to the end of preventing these charges from being levied that your fine statewide organization has supported the Trimble bill to provide for a fair and equitable system of cost accounting on the amount of project charges allocated to power generation. This bill needs to be passed, but I doubt if under this administration it will be permitted to become law.

Power that you sell must be bought at wholesale at a reasonable rate if additional uses may be found on America's farms. The estimate is that the rural systems will require a doubling of the wholesale power supply every 5 years. In Oklahoma alone our power use has doubled since 1958. Nationally it has grown 2½ times.

Therefore the two greatest costs on your electric bill must be held to a reasonable figure. The cost of your interest and the cost of your wholesale power. Unless the upward pressure on both of these vital costs is held within reason, the great success of REA during its first 25 years may be reversed. Then failure—instead of success—will be the result, and the Nation, as well as the farmer, will suffer.

Mr. WILEY. Mr. President, today the Rural Electrification Administration celebrates its 25th anniversary.

During its quarter-century lifetime, the program has made a splendid contribution not only to rural, but also to small community life. In effect, it has "lighted the way" to better living for farmers and people in small communities by providing electricity for light as well as power for tools, household appliances, telephone service, and equipment—to make work easier and more efficient, and promote better living.

We recognize, of course, that through the years private industry has done a splendid job in meeting the needs of the American people.

As a supplementary program, however, the REA has succeeded in bringing electricity to a great many areas—particularly the so-called fringe regions—where it has not been profitable for private enterprise.

In extending electrical services in my home State of Wisconsin, for example, our cooperatives have done a splendid job. Today, we have more than 30 rural power cooperatives. As a result of private power, as well as REA services, more than 97 percent of the farms in the State now benefit from access to electricity.

Nationally, too, the REA is having a tremendous impact on the lives of our rural people. More than 95 percent of the farms are electrified, with REA serving slightly more than half of these. Residences, industry, commerce, and other nonfarm developments and activities are also benefiting from the program. Currently, consumers are being added to the system at the rate of about 100,000 a year.

On this 25th anniversary of REA, the administrators, cooperatives, leaders, and workers who have helped to extend and make the program a success deserve real commendation for an outstanding job of helping to provide a better life for millions of people in our country.

Mr. LONG of Louisiana. Mr. President, today marks the silver jubilee or

the 25th anniversary of the Rural Electrification Administration. Over this quarter of a century our country has derived tremendous benefits from spreading electrical power through our more sparsely populated areas.

It gives me special pleasure and satisfaction to rise today to recount the accomplishments of the rural electrification program in my State of Louisiana.

In 1937, only 2,826 of the 170,216 rural homes and farms in Louisiana had electricity. These represented only 1.7 percent while the national average was 10 percent. Today, in 1960, the 13 REA-financed co-ops in Louisiana provide electricity for 98 percent of the rural homes and farms. This figure is a national record in total percentage of members served. These co-ops in Louisiana serve more than one-half million rural people, their farms, businesses, and small industries.

Rural electrification in Louisiana is greatly benefiting not only the farmers, but also the dairying and fishing industries, who are so dependent on modern refrigeration, and a host of small rural industries, all created by the new markets, methods, production, and so forth, of rural electricity. Rural electrification in Louisiana has created new jobs, increased productivity, and a stronger economy in Louisiana.

Mr. JOHNSTON of South Carolina. Mr. President, it was my pleasure on February 23 of this year to address the National Rural Electric Cooperative Association in St. Louis, Mo., marking the 25th anniversary of the founding of that organization. Today marks the 25th anniversary of the signing into law by the late President Franklin D. Roosevelt of the National Rural Electrification Administration Act.

The success and growth of rural electric cooperatives in South Carolina, as well as in the United States generally, has been a matter of personal interest to me.

I grew up as a boy on a farm and studied and read by the light of candles, lamps, and the fireplace. It was with a jealous eye that we country boys viewed electric lights in the big cities and dreamed of the day when we would get electric lights in our homes. Even when I was elected Governor of South Carolina in 1934, approximately 97 percent of the farms in my State had no electricity.

During all the years until I became a candidate for Governor, roughly only 3 percent of the rural people of my State had been able to obtain electricity for their homes. Even before the Rural Electrification Act became a legislative reality in the Halls of Congress—yes, even before I took office as Governor—I came to Washington, D.C., to see President Roosevelt, seeking funds to help make a study looking to the possible creation of a State-wide rural electrification program in South Carolina.

I argued that the money used in this direction would be much better spent than in any other way then devised for promoting economic recovery in those depression days. South Carolina received $100,000 under that program, and early in 1935, before the Nation as a whole had acted, we had created our own State rural electrification machinery.

Today, 25 years later, it is with great pride that I look back over the never-ending progress which has resulted from those first efforts. No people in the history of this Nation ever undertook a cooperative movement, hand in hand with their Government, and succeeded so well as have the rural people of this Nation.

There has never been the slightest glimmer of corruption or waste connected with the rural electrification program. There is only the bright story of success to tell. In South Carolina, for example, where once darkness prevailed across the countryside, there is now light. Where once 97 percent of the farms in my State had no electricity, today 97 percent have electricity.

The picture is the same for the rest of our Nation. The bright cities today are even brighter, but, most importantly, they are linked with shimmering chains of lighted farms.

Mr. President, so it is with deep sincerity that I extend my warmest congratulations to the rural electric cooperatives of America and to the loyal employees of the Rural Electrification Administration who have worked hand in hand over the past quarter of a century to lighten the darkness across our rural countryside.

It behooves Members of Congress to remember that this progress of the past 25 years is not the complete picture, for we must continue to support the programs which will keep the rural electric cooperatives alive and capable of meeting the growing needs of our growing Nation.

I, for one, pledge myself to continue my wholehearted support of the rural electrification programs which have benefited our entire Nation to such a great extent.

Mr. SYMINGTON. Mr. President, just 25 years ago today, May 11, 1935, President Roosevelt signed the Executive order creating the Rural Electrification Administration.

This was the beginning of a series of events and developments which have brought the benefits of electricity to more than 96 percent of all farms, homes, churches, schools, and businesses throughout rural America.

From this Executive order there followed the passage by Congress of the Rural Electrification Act, the formation of more than 1,000 locally owned electric systems, and the rural electrification program as we know it today.

As much as any other program, the rural electrification program has contributed to a better way of life for farmers and others, all over rural America.

In my own State, at the time the REA was created only 6 percent of the farm families were receiving electric service. Now, more than 95 percent of Missouri's farms are being served by this great institution.

These accomplishments of the rural electrification program show what can be done when individual farmers, working in cooperation with their neighbors, with the assistance of their Government, set out to do a job.

On this 25th anniversary of the beginning of this great program, I wish to pay tribute to President Roosevelt, Members of Congress, farm leaders, and especially to the farmers themselves, whose leadership and effort have brought the blessings of electric power to rural America.

As we applaud the accomplishment of the past 25 years, we must not overlook the challenges that lie ahead. Instead of resting, we must build on the achievements of the rural electrification program. To this end I pledge my continued support.

Mr. KERR. Mr. President, I rise to pay tribute to the rural electrification program on its 25th birthday. This is the year of its silver jubilee. The story of its success is one of the most thrilling and inspiring ever written by our Government and the Nation's host of patriotic, devoted farm population.

The program of REA has been especially successful in Oklahoma—when it was born 25 years ago only 5,600 Oklahoma farms had electricity. Today more than 110,000 farms or over 93 percent of our total number are served with electricity.

This has been brought about by the cooperative efforts of our farmers and their Government—the rural electric cooperatives in Oklahoma as elsewhere are privately built, owned and privately operated by our own farm people. Farm life in Oklahoma has thus been improved, enriched and reinforced. Commitments to the Federal Government are being met on schedule or ahead of schedule.

Mr. President, I am proud of the great record made and now being made by Oklahoma farmers in building rural electrification, and, Mr. President, I am grateful to Oklahoma farmers who have helped keep me as a Member of this body for these past years where I have been permitted to serve my State and its farm people in contributing to maintaining and expanding our country's program of rural electrification.

Mr. CARROLL. Mr. President, I rise to salute the rural electrification program on its silver anniversary, May 11, 1960.

The achievements of REA can be told both in cold figures and in human, family terms in my own State of Colorado.

At the time the Rural Electrification Administration was created on May 11, 1935, only 11.2 percent of all the farms in Colorado—only 7,145 farms in all—were receiving central station electric service. Current estimates by REA now show that 89.7 percent of all the farms and ranches recorded in the 1954 census are being served—a total of 36,550 farms and ranches. Of the total, REA co-ops serve more than 60 percent.

Up to January 1, 1960, the beginning of REA's 25th year, the Agency had approved a total of $121,167,157 in loans to 25 electric co-ops in the State. These loans permitted the co-ops to construct 34,495 miles of line and other electric facilities to serve 86,677 consumers.

How are these loans being repaid? As of January 1, 1960, not one REA electric

co-op in the State was overdue in its loan payments. The REA electric borrowers had repaid $12,405,643 on the principal of their Government loans; $8,244,778 in interest; and $4,749,698 ahead of schedule.

In only 8 years—1950 through 1958—eight REA telephone loans were advanced in Colorado. In 1950, the year the first REA telephone loan was approved, 59.3 percent of the farms in Colorado had telephones; by the end of June 1958, this had risen to 73 percent of all the farms in the State. The REA loans are enabling the borrowers—4 co-ops and 4 commercial companies—to serve 2,813 new subscribers, and to provide improved service for 5,819 existing subscribers over 4,091 miles of line.

So much for the cold statistics. On the strength of them alone, REA would stand as a monument and testimonial to the Franklin D. Roosevelt administration and the Democratic Congress that created REA in 1935. But in terms of people and the way they live their lives, the story is infinitely more important. I know of nothing that has made rural life more attractive than REA.

A fellow citizen of my State is David A. Hamil, present Administrator of the Rural Electrification Administration. Mr. Hamil recently put the facts in human terms so well that I would like to paraphrase what he said.

He said rural electrification means a light to read by on a dark winter night; a radio and a television set broadcasting a frost warning or a late market report; a chance to iron a Sunday shirt in July without first stoking a range red hot to heat the flatiron; a youngster changing his mind about seeking his fortune in the city, and planning to stay on the ranch after he graduates from agricultural school; better food on the table the year around, for both city and country people; an opportunity for the farmer to intensify and diversify his operations; a cooperative annual meeting, where thousands of rural families turn out to elect directors to run the electric system they own.

"It means," he concluded, "more pride, greater self-respect, for millions of people. This is the real meaning of rural electrification and it is for these things that we give thanks as we observe the silver anniversary of REA on May 11, 1960."

To those words, Mr. President, I add a hearty, "Amen."

Mr. PROXMIRE. Mr. President, the day of May 11 has a very special significance this year to millions of rural Americans. This day is the 25th anniversary of the creation of the rural electrification program. Today, more than 4¾ million homes, farms, and other rural establishments are served by electrical systems financed by the Rural Electrification Administration.

It was May 11, 1935, that President Franklin D. Roosevelt signed the Executive order that created the Rural Electrification Administration. This act set up a long-term program which made it possible for groups of rural people to work together to bring the modern miracle of electric service to their homes and farms.

Only 3 percent of American farms were electrified by 1925, and barely 11 percent at the time REA came to life in 1935. Today 96 percent of all farms in the United States are electrified.

The real meaning of these statistics is dramatically clear to those who knew rural life before electricity changed the entire outlook of rural people. Electricity has been a tremendous national unifying force by making the good life of urban America available to the farm. As the ways of living of all Americans have thus become more truly similar and equal, our personal interests have converged and our understanding of each other has grown.

America's rural electric systems will continue to face great problems of growth and integration into the national economic organization in the future. The program will be attacked for varying reasons from varying sources. In order that America's rural electric systems do not remain victims to misunderstanding on the part of the general public, it is especially appropriate on this anniversary that the Nation take notice of the contributions to our entire national welfare and to our national growth and prosperity which are to the credit of the rural electric systems. It is likewise appropriate that we recognize and salute the strength and high caliber of the leadership and organization which the REA program has enjoyed over the years.

Mr. President, I therefore ask unanimous consent that portions of a booklet prepared and released by the National Rural Electric Cooperative Association be published in the RECORD at this point.

There being no objection, the booklet was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM RURAL ELECTRIC FACT BOOK

(By Jerry L. Anderson and Dr. Paul Nelson)

RURAL ELECTRIFICATION PROGRAM

The rural electrification program is the term commonly used to embrace the many segments of the nonprofit industry supplying electricity to rural areas.

Sometimes it is simply called "the REA program"—after the Government agency which lends funds for rural electrification.

Used in this sense, however, "REA" is an oversimplification. The Rural Electrification Administration is a vital part of the overall program, but it is only a part.

Parts of the whole

Here is a brief summary of the organizations which together make up the "program." Detailed information on each will be found in other sections of this book.

Rural electric systems. These are the local organizations that build power lines and maintain electric service to their members. Most of them are cooperatives. The word "systems" is used because in some areas (Nebraska and the Northwest) public power districts borrow from REA and carry out rural electrification.

The co-ops are locally owned by the people they serve, and each is an independent business organization. They borrow money from the Rural Electrification Administration and repay it on regular schedules, with interest. They use the loans to build lines and other necessary facilities. A portion of each consumer's bill is used to pay off the loan. There are about 1,000 of these systems in the country, serving 4,700,000 consumers.

Rural Electrification Administration: This is the real REA. It is a Government agency, created in 1935 to lend money to local organizations for the construction of rural power lines. Most of its borrowers are rural electric systems.

REA loans must be repaid over a 35-year period, with interest at 2 percent. The relationship between a rural electric system and REA is about the same as that between any business and its banker. REA is interested only in making loans and collecting them. It does not hire the manager of local systems, set rates, or dictate policy. All of these things are done locally.

Statewide associations: In most States the rural electric systems have joined together in statewide associations. Some of these organizations are small, with only three or four employees who publish a consumer newspaper or magazine and work for the interests of the systems in the legislature. Others have large staffs that provide a variety of services, including central purchasing of supplies and equipment, central billing, public relations, etc. In all cases membership in these associations is voluntary, and local systems join if they choose to do so.

NRECA: The National Rural Electric Cooperative Association is the national service organization of the rural electric systems. It functions on the national level much as the statewides do on the State level.

NRECA has its own modern building in Washington and provides a variety of services for its member systems. These include insurance programs for employees and directors, management institutes and consulting service, group purchasing, public relations and publications assistance, and congressional representation.

NRECA representatives testify before committees of Congress on matters of interest to rural electrification, and in general, maintain close relationships with Congressmen and administrative agencies.

Membership in NRECA is completely voluntary, but the services are such that more than 90 percent of the rural systems have joined.

Generation and transmission co-ops: The securing of adequate amounts of wholesale power at reasonable rates has always been a difficult problem for rural electric systems. They have helped to solve it in many areas by joining together in State or regional cooperatives to generate and transmit their own power.

The G & T's, then, are federations of local rural electric systems, and are owned and controlled by them. Like the local systems, the G. & T.'s borrow from REA.

Other organizations and agencies have played important roles in rural electrification. These include the many Federal power projects which sell wholesale power to rural electric systems.

The Tennessee Valley Authority, for example, is the sole power supplier for more than 50 rural electrics in that area. Cooperatives in the upper Missouri River Basin are to a great extent dependent on Bureau of Reclamation dams. In other areas, the flood control dams of the Department of Interior provide invaluable power sources.

Along with the G. & T.'s, these Federal projects provide the only competitive element in the wholesale power field. Without them, rural electric systems would be at the mercy of noncompetitive commercial suppliers.

This is why the rural electrics, in the interests of their members, vigorously support both generation and transmission loans, and the Federal power program.

RURAL ELECTRIC SYSTEMS

America's nonprofit rural electric systems now distribute electricity to almost 5 million families, churches, schools, and other establishments. They provide service to just about half of the Nation's farms.

Most of the other farms have electricity now, too. Nationwide, 96 percent of the

farms are electrified. Those not served by rural electrics receive power from commercial power companies, city-owned systems or other suppliers.

All of this has come about in a relatively short time.

In 1935, only 10 percent of America's farms were electrified. The remainder had little prospect of getting service at a price they could afford.

Power company practices

In those days, it was common practice for commercial companies to ignore rural residents. The power companies could see no profit in building long extensions through sparsely-settled countryside.

When the companies did offer service, it was common for them to require the farmer to pay the cost of the line, and turn title over to the power company.

In other cases the farmer was asked to contribute several hundred dollars, or even a thousand or more, to the company before the line was built.

Even when they could get a line built, many farmers were asked to guarantee that they would use a large amount of power each month.

The REA Act

When farmers became more and more indignant about such practices, Congress finally acted. Responding to the leadership of Senator George Norris, of Nebraska, and Representative SAM RAYBURN, of Texas, Congress passed the Rural Electrification Act in 1936.

This act established the fledgling Rural Electrification Administration as a full-scale agency of the Government (see chapter on Rural Electrification Administration). REA had been created the year before by President Franklin Roosevelt, partly as a make-work project.

When the commercial power companies refused to take advantage of REA loans to build rural lines, the Agency turned to the promotion of local electric cooperatives.

REA fieldmen worked with county agents, farm organization officials and prominent rural citizens to set up the non-profit, consumer-owned organizations.

The country abounded with "prophets of doom." Established commercial companies sneered at the idea that farmers could run their own electric businesses.

But while the cynics laughed, the rural electric co-ops kept working, building, planning.

By 1938, there were 248 of them, providing service to 104,000 rural families who had never had electricity before. By 1940 the number of co-ops had more than doubled, providing service for half a million families.

"Spite" lines

By now, the laughter had died. The power companies began to realize that the upstart co-ops had a chance of succeeding. Even spite lines had failed to stop the forward surge of rural electrification.

The "spitelining" tactics of the power companies are a matter of record in virtually every part of the country. It went like this: After a co-op was organized and mapped, the power company would quickly build lines to the most thickly settled areas of the co-op territory. By taking the villages, they hoped to destroy the feasibility of the rest of the co-op.

These practices caused bitterness and distrust between the new co-ops and the established companies. In many areas of the country it set a pattern of relations between the two types of suppliers that has not completely disappeared to this day.

The rural electric systems, however, were having problems of their own. Because of their nature, they were restricted to marginal, outlying areas. Even today, they serve an average of fewer than four consumers per mile of line.

Among other things, they discovered that powerlines are of no use unless wholesale power is available in adequate quantities at reasonable rates. In the early 1940's, they were forced to pay the commercial companies an average of approximately 1¼ cents per kilowatt-hour, wholesale.

Then came World War II, and line materials became almost impossible to get. The rural electrics got precious little of the supply that was available.

The co-ops began to realize that individually they were small and carried little weight in congressional and administrative circles. But together they had a potential strength that was enormous.

In 1943 a group of early rural electric leaders organized the National Rural Electric Cooperative Association (see chapter on NRECA).

With the formation of their own national organization, the young co-ops were able to speak with a unified voice.

The Pace Act

One of their first joint ventures was a tremendous success. In 1944, through NRECA, they were able to persuade Congress to pass the Pace Act.

This action has a special significance in the history of the rural electrics. The Pace Act extended the repayment period for REA loans from 25 to 35 years. It established REA as a permanent agency. It set the interest rate at a flat 2 percent.

In return, Congress made it clear that it expected the co-ops to provide "area coverage."

Area coverage

This concept, revolutionary in the utility industry, held that everyone in an area served by a rural electric system should receive electrical service if he wanted it, no matter where he lived.

The liberalized provisions of the Pace Act and the end of World War II combined to unleash the drive to electrify rural America.

Throughout the Nation the cooperatives raced to build lines and connect new consumers. Aided by a sympathetic and aggressive REA, they built over 500,000 miles of line between 1946 and 1950, bringing service to 1,700,000 families that had never had electricity before.

By mid-1952, 3,769,000 rural consumers were being served by REA borrowers. The bulk of the initial construction work had been completed.

In the years since then, the rural electric systems have been occupied with the difficult task of extending service to the more remote areas. They take seriously their obligation to provide true area coverage.

A measure of their success is the fact that today more than 96 percent of the Nation's farms are electrified. Rural electric systems serve more than half of these, averaging nationwide just over three consumers per mile of line.

Internal growth

As their systems have grown physically, the rural electrics have had to cope with the parallel problems of internal growth. In many respects, these new problems are more difficult to solve than the earlier ones.

The problem of finding adequate sources of wholesale power, for example, has continued to plague the systems, and becomes more acute as consumer demand for electricity grows (see wholesale power section below).

In recent years, the systems have also had to be concerned about the source and cost of capital. The present administration has campaigned openly for higher REA interest rates. Specifically, the administration has advocated a new interest formula which would more than double the statutory 2-percent rate (see section on interest rates).

The rural electrics have opposed such an increase, pointing to studies which indicate that even a slight interest rise would endanger many struggling systems, the generation and transmission program, and the rural telephone program. Few, if any, systems could survive if the interest rate should be drastically increased.

Private financing

The systems have also opposed a companion administration proposal that they seek their loan funds in the open money market. They point out that both private and Government economists agree that if such funds could be found at all, the interest rate would be about 6 percent or higher. Few rural electrics could pay such a rate and survive.

Other problems have included territorial integrity, campaigns to impose punitive taxes on electric co-ops, and the perpetual necessity of keeping the electric plant up to date.

The systems are managing to meet and solve these problems, partly through improved modern management techniques, and partly through joint action carried out by their State and National associations.

Financial position

So far as national statistics are concerned, rural electric systems are in stable financial condition. Some systems, of course, are in much better shape than others.

In some areas, low consumption, high cost wholesale power, idle services, and other contributing factors keep systems at, or just over, the break-even point.

In 1958, 47 borrowers reported deficits in their net margins, an important index to the financial health of a rural electric system.

In other areas, more favorable conditions result in a more successful operation.

In general systematic growth is typical of most borrowers. Starting with nothing but debt, they are slowly achieving sound financial status.

One reason is that rural people are using power in great quantities, for a wide variety of uses (table 7). Total consumption has been doubling every 5 to 7 years. Scientific surveys of the rural electric market indicate that consumers served by the systems will buy $1 billion worth of appliances and equipment in 1960. Electric sales totaled 25.3 billion kilowatt-hours in 1959.

As sales rise, operating revenues go up, too. During 1959, operating revenues of the systems reached $618.3 million, according to REA estimates.

In 1959, the average residential consumer paid a bill of $8.64. A part of the bill of all rural electric members goes to make payments on the REA loans.

Net worth

Thus member equity slowly replaces borrowed funds, and the net worth of the system rises.

Net worth is defined as the equity owned by the members, and it is obtained by subtracting total liabilities from total assets.

The net worth of all rural electric systems now averages 18.2 percent (see chart).

Averages tell only part of the story. A few systems have repaid all their loans from REA. Some now have net worths in excess of 50 percent.

On the other hand, 130 systems had negative net worths in 1958. They owe more than they own.

This is typical of the vivid contrasts in the condition of the systems. In this field, averages usually tell only part of the story.

For example, REA has an index to the health of its borrowers called "Debt Service to Earned Ratio." This measures the borrower's ability to meet its repayment obligations out of current revenues.

In 1959, 148 systems failed to make debt service under the DSER formula.

Repayment record

By standards of any financial institution, however, the repayment record of the rural electric systems is excellent.

They made payments to the Government totaling $145 million during 1959. This figure includes payments of principal and interest due, plus an additional $15.2 million in payments made in advance of due dates. The systems have now paid REA $154.1 million in advance.

Including advance payments, the systems have repaid more than $823 million on the principal of their loan obligations. They have also paid $397 million in interest.

At the end of 1959, only one REA electric borrower was delinquent in payments, amounting to only $97,579.

COMPULSORY RETIREMENT OF AIRLINE PILOTS

Mr. HUMPHREY. Mr. President, I continue to be distressed at what I feel to be arbitrary action by the Federal Aviation Administration in the matter of compulsory retirement of airline pilots at age 60, regardless of medical examinations.

I have had many provocative and interesting letters opposing this new proposal. None have been more thoughtful and informative than two letters, one from the Reverend John O'Toole, editor of Our Northland Diocese, official publication of the diocese of Crookston, Crookston, Minn., and Capt. L. E. Wagner, a pilot of Northwest Airlines, with whom I have talked a number of times.

Mr. President, I ask unanimous consent that these two letters be printed at this point in the RECORD. I also ask unanimous consent to have printed immediately following the letters a copy of my letter addressed to Lieutenant General Quesada, the Administrator of the FAA, on August 31, 1959.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

OUR NORTHLAND DIOCESE,
Crookston, Minn., April 11, 1960.

The Honorable Senator HUBERT HUMPHREY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR HUMPHREY: Since I am a fairly active pilot I do try to keep informed as much as possible about the aviation industry, particularly from the standpoint of the nonprofessional flier.

I have nothing but praise for the flight service of the Federal Aeronautics Administration, but I feel they are far too arbitrary in their policymaking activities.

The example of this arbitrariness to which I refer was a hearing held February 11, 1960, concerning the medical examinations for private pilots.

In recent years, a nonprofessional pilot could obtain his medical certificate for flying from his family doctor. Now, however, the FAA has declared its intention of requiring all flight examinations to be given by special medical examiners officially designated by the FAA.

Though the Aircraft Owners and Pilots Association attended the February 11 hearing, no apparent consideration was given their testimony by the FAA.

Though the FAA has the official backing of the American Medical Association, I do not believe that they have the backing of the rank and file doctor and certainly not of thoughtful people in the aviation industry.

During the past year the medical officers connected with the FAA have shown themselves to be bureaucratic if not coldblooded in their approach to aviation medicine. Their banning of commercial flight activity to airline pilots past 60 is a case in point.

It seems to me just as foolish to say that a person loses his physical fitness at 60 as to say that he acquires it at 21.

Not only a great deal of inconvenience will be caused private pilots if they are required to seek out designated examiners, but judging from past experience, they are going to run into considerable arbitrary treatment on the part of such examiners.

In talking to two doctors from this area I discovered that they do not approve of the regulation either.

Both seem to resent the proposal as somehow being a questioning of the medical competence.

Both also felt, as I do, that the family doctor can actually do a better job of giving aviation medicals since he not only has the applicant's case history available but also most likely knows his character and personality. This type of knowledge would be applicable in deciding whether or not a diabetic or a coronary could fly. The family doctor might also know of some personality quirk which would not show up in the routine exam of the designated medical person.

In this matter of the medical exams and in its general attitude the FAA seems to me and to many others interested in flying to be more concerned with the machinery of their own organization than they are with the future of aviation.

If given a chance there is no reason why aviation cannot eventually become equal in importance to the automotive industry. As our highways become more and more overcrowded there is no place to go but up—unless we want to dig tunnels.

If you would like further information about the FAA situation you could contact Mr. J. B. Hartranft Jr., president of the Owner's & Pilots Association, Box 5960, Washington, D.C.

Sincerely,

JOHN T. O'TOOLE.

P.S.—I received your note re the news items. Thanks.

MINNEAPOLIS, MINN., *April 25, 1960.*

Senator HUBERT HUMPHREY,
Washington, D.C.

DEAR SENATOR HUMPHREY: Several thousand airline pilots flying the airlines of the United States are desperately in need of your help. On December 1, 1959 Mr. Quesada, Administrator of the Federal Aeronautics Administration (FAA) issued an order to all airline companies that after March 15, 1960 they could not employ pilots in scheduled airline operation after they pass their 60th birthday.

Since March 15 about 60 pilots who have passed their 60th birthday have been grounded and out of a job.

The Airline Pilots Association immediately filed for an injunction to stop the implementing of this order but on March 14 the injunction was denied by U.S. District Court Judge Alexander Bicks. Then the case was taken to the U.S. Court of Appeals which upheld the FAA order on April 22, 1960. The airline pilots feel that it is illegal, unconstitutional, dictatorial and not within the power of any Government agency to chop off a man's career at 60 and take away his means of livelihood 5 years before he is eligible for social security. There is absolutely no evidence to indicate that a pilot is not as healthy and competent to fly after 60 than he was before reaching that age. All airline pilots are required to pass the same physical examinations twice a year and demonstrate their flying ability six times a year to FAA approved check pilots and FAA inspectors.

I think that the reason that Mr. Quesada issued this order was to appease the public because since he was appointed Administrator of the FAA by President Eisenhower late in 1958, there have been more major airline accidents, killing more people than ever before in the history of aviation. In all these accidents the pilots were of all ages but not one was over 60 and none of the accidents could be blamed on the pilot. It was necessary for Mr. Quesada to make some kind of move to placate the public so he decided to prove that he was on the job by pointing his finger at the older pilots. These pilots have been condemned without a hearing and it certainly isn't in accordance with our way of American justice. Mr. Quesada is assuming the power of a dictator in the agency of the U.S. Government.

The Airline Pilots Association will carry this case to the Supreme Court but I am quite sure that unless we can enlist the aid of men like you, who aren't afraid to speak their mind we will lose the case.

I think this would be a very good opportunity to tell the people of this country that President Eisenhower and the Republican Party have let dictatorship take over a Government agency. If this case could be publicized and brought before the American public I am sure they would get behind us and write thousands of letters in our support.

If we do not win this case, it will establish a precedent so that at some later time he could lower the pilots age limit to 50 or even 40. Also, this case could be used by other Government agencies to set the age limit for other groups of people who in any way are controlled by the Government, such as railroad men, etc.

The people of this country do not like dictators and do not want to be told when they have to retire.

The Airline Pilots Association have plenty of proof that the veteran pilots of our airlines are as healthy and as competent as any other group of pilots and in addition have had the benefit of more years of experience.

I am 57 years old and have been a pilot on Northwest Airlines for 25 years and also have met you many times when you were on my flights. The retirement age in our company is set at 65 and all my planning for retirement has been set at that age.

We need help and we cannot wait for the Supreme Court to make a decision. Please help us.

Very sincerely yours,

L. E. WAGNER.

AUGUST 31, 1959.

Lt. Gen. ELWOOD R. QUESADA,
Administrator, Federal Aviation Agency,
Washington, D.C.

DEAR GENERAL QUESADA: I wish to forward on to you one letter among many which I have received from airline pilots pointing out that the proposed FAA regulation providing for compulsory retirement at the age of 60 of all airline pilots, and preventing airline pilots over 55 from being checked out in jet-type aircraft, is an unnecessary limitation to place on pilots.

I surely feel that providing that the mental and physical health standards are maintained at a very high level, compulsory retirement should not be set at any arbitrary age level.

I would appreciate your serious consideration of these protests against the proposed regulation.

Sincerely yours,

HUBERT H. HUMPHREY.

AMERICA'S PURSUIT OF EXCELLENCE

Mr. HUMPHREY. Mr. President, the able Mr. Elmo Roper, in an address at

the University of North Dakota on April 19, 1960, most vividly and with great clarity pointed out the need to measure our national strength not in the number of our bombs but in the number of our learned men and women.

Mr. President, I ask unanimous consent that Mr. Roper's excellent address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY ELMO ROPER AT THE UNIVERSITY OF NORTH DAKOTA, APRIL 19, 1960

It is an honor to be invited by a great American university to speak on the relationships between the pursuit of excellence and the problems we face in the world today. I am happy to have this chance to talk about the learned man, because it seems to me that he is the most important—and despite the shocks of the last few years, perhaps the most neglected—person in America today. By the learned man I don't mean the scientist, at least I don't mean to emphasize the scientist, who has come in for perhaps more than his share of attention recently. I mean the man of wide and profound learning, the man who is at home with the culture of the past, and who is able to reflect thoughtfully and intelligently on both the universal and immediate problems of life on this perilous planet. I suppose I am actually talking about the truly civilized man—certainly I am talking about the liberal arts product, rather than any one of the specialties. I don't think I would dare to name any living man who was illustrative of just what I mean when I talk about the learned man because that would involve us in all kinds of controversy. I can, however, illustrate from the past. Certainly Francis Bacon would qualify, and so would our own Thomas Jefferson and Benjamin Franklin.

Since these words were written—yesterday, in fact—our Nation has suffered the loss of one of the most ingenious and imaginative minds of the 20th century—Beardsley Ruml. Now—but with great personal sorrow—I can update that short list with a truly learned man of more recent vintage—Beardsley Ruml—an intellectual giant during a period in our history when America sorely needed intellectual giants.

I want to talk about the learned man because I am afraid that not enough people realize that this country's future lies in his hands. I am afraid that too many people think the scientists can save us, that expert and technical knowledge is the answer to the problems of our time. But specialized technical knowledge can only tell us how to do whatever we decide to do; it cannot tell us how to make our basic decisions. I am not terribly worried about how we stand in regard to the development of science, for we have already perfected the means to blow up most of the world in a few minutes, and that seems to me sufficiently all-inclusive and sufficiently fast. I am worried about the status of learning and men of learning, for it seems to me that whether or not we will in fact blow up the world is greatly dependent on that status.

It is easy to find evidence of the low status that learning presently enjoys in the United States; for example, it comes out very clearly when we examine the status of books. In 1957, a national cross section of people were asked about their reading, and only 17 percent reported that they were currently reading a book. The comparable figure for Canada was 31 percent, for Australia 33 percent, for West Germany 34 percent, and for England 55 percent. So the vast indifference to books in this country is not normal, is not universal, is not a function of recalcitrant human nature: it is a distinctly American phenomenon. It is an attitude which has deep roots in our pioneer past, which was in part a successive peeling off of the layers of European culture as we pressed ever deeper into the western wilderness. Seeking to find and develop this country's own character, generations of Americans found it necessary to throw off the intellectual yoke of their European past and to glorify a kind of down-to-earth practicality and common sense. This approach has, in fact, worked technical wonders in this country's physical development, but it has often left something to be desired as a way of tackling the more profound problems of life and society.

In seeking an understanding of the low estate to which learning has fallen—and it has fallen, because our Founding Fathers were intellectuals and proud of it—I think it will help to turn to quite another subject—baseball. If you will permit me to make an apparent digression, I think I can make my point. I suppose that many of you have marveled, as I have, at the superlative skill of big league baseball players. I'm going to risk getting into slightly purple prose in order to say what I want to about these young men. As you watch them, fantastic feats of speed and coordination blend into the graceful sort of motion that combines the ruggedness of sports with the beauty of the arts. Fierce competitiveness blends with observance of a complex code of rules in a way that releases aggressiveness within the boundaries of discipline. Creative ingenuity blends with custom and deeply ingrained habit in a way that allows intuition to rise from a platform of habits. The end performance is without parallel in its field. It excites the population at large, it is admired without envy, it is spurred on by true connoisseurs, and it becomes a national rallying point. Sharecroppers, factory workers, housewives, merchants, politicians, schoolteachers, financiers, Presidents, everybody gets into the act regarding baseball.

Now, how does this sort of thing come about? I suspect that an important part of the answer is what has been referred to as the folk status of baseball in our society. Through the length and breadth of the land, and up and down the social and economic brackets, it is considered a good thing for a father to play catch with his son. It is a good thing for a boy to get outside and play ball with the other kids. Churches, volunteer firemen, trade unions, and country clubs all sponsor little leagues. A home run is a thing of value whether it is hit with a broomstick and soars over the barn or is hit with a regulation bat and clears the bleachers. There is a folk tradition that touches our whole population, that seeks out talent, that nurtures it toward its potential, that prods and praises and disciplines exceptional ability, that recognizes achievement at various levels between the sandlot and the world series, and that selects and honors and rewards according to the outcome of uncompromising competition. A few hundred big league players are at the apex of a seething social pyramid with a base composed literally of millions of hopefuls who do their best, progress according to their ability, and then move on to continue their interest as the fans who pay the freight for the pros.

Baseball has folk status in our society. So does show business, and so also does business management. But what about intellectual achievement? Does it have a comparable folk status in our society? I think you will agree with me that it does not. It is true that nearly all parents want their children to be able to read and write and do a bit of arithmetic. It is thought desirable, throughout our society, to get enough education to get a good job. There is a growing segment of the population that recognizes college as required training for the good jobs, or that sees college as a useful device for gaining social status or business connections or an appropriate spouse. But intellectual achievement, beyond the point where it yields an immediate practical return, is rather generally viewed with reserve and sometimes with a bit of alarm.

There is no widespread folk tradition that seeks out and trains and sponsors and takes pride in exceptional intellectual talent. There are no little leagues at the mind. It is good if a child gets high grades on his report card—but beyond that, a love of abstract ideas, a thirst for knowledge, a gnawing intellectual curiosity—these are more likely to be regarded as worrisome symptoms than as promising abilities. We cling to the old wives' tale that the highly intelligent are especially prone to neurosis or insanity We delight in calling our most intelligent people eggheads and we honor our psychiatrists with the title of headshrinker. We chuckle at Shaw's observation that "He who can, does. He who cannot, teaches." Students can hardly be blamed if they sometimes conclude that if they can just get that sheepskin, their education will be complete—done. They pick up that illusion from adults. And adults, at least intelligent adults, should know better.

Where does a potentially great chemist or mathematician or artist or historian or composer get the kind of stimulation, nourishment, motivation, and deference from his community that the bush league pitcher or the high school quarterback gets? The question itself seems ludicrous. Our grassroots society simply does not recognize or promote or value or respond to intellectual achievement as it properly does to athletic achievement. Let's face it: Intellectual achievement and the intellectual elite are alien to the main stream of American society. They are off to the side in a subsection of esoteric isolation labeled odd ball, highbrow, doubledome.

Our ribbing of intellectual preoccupation is a well-established American tradition. It has been considered deplorable or good clean fun, depending on your point of view—up until a couple of years ago. But there has been a change. Let me repeat a question that I characterized as ludicrous a moment ago: Where does a potentially great chemist or mathematician or artist or historian or composer get the kind of stimulation, nourishment, motivation, and deference from his community that the bush league pitcher or the high school quarterback gets? You know the answer, and that answer is stark and practical and dangerous and, I think, more than a little humiliating. The intellectually talented are nurtured and recognized in this way in the Soviet Union—in, of all places, a police state And I hardly need to add that it is paying off—for them.

The dissemination of the facts about Russian education has created in this country a shamed determination to "show the Russians" that "whatever they can do, we can do better." We have therefore become concerned about toughening up our own educational system and expanding the teaching of science and mathematics. There is no question that our educational system needs this intensified public interest; but it is evident at the same time that in too many minds, the only reason for making any educational changes is to keep pace with Russian achievement. We are in danger of falling into the pitfall, so often in evidence in our approach to foreign policy, of taking all our cues from the Russians, and simply stumbling along behind. As Robert Hutchins remarked in a recent speech, "The stresses and strains in our society are obscured for us partly by our preoccupation with Russia, which plays a curious double role as the devil in our world and the standard by which we measure our progress. If we weren't getting ahead of Russia, or falling behind her, how could we tell where we were?"

The plain fact is that if Russia sank into the sea tomorrow, most of our—and most of the world's—problems would remain. America would still need to find its way to a more mature attitude toward education and learning, through expanded and improved schools and colleges, and through the development of a different climate of opinion in the society at large.

To give just one example of the way the development of our national character and the realization of our national ideals depends on education, here is a typical opinion research finding, on what is probably the most crucial internal problem this country is now facing—and one wholly non-Russian in origin—the implementation of the Supreme Court decision on school integration. Among those people with 8 years or less of schooling, 40 percent think the Supreme Court decision was a mistake and that white and Negro students should never be forced to go to the same schools. Among people with some high school education, that figure fell to 24 percent. Among people who had some college, only 20 percent were flatly against school integration, and among college graduates, the number thinking the Supreme Court decision was a mistake was only 15 percent.

On a scale of tolerance developed by Dr. Samuel Stouffer of Harvard, for a study sponsored by the Fund for the Republic, 66 percent of college graduates ended up on the more tolerant end of the scale, while only 42 percent of high school graduates and only 16 percent of people with only grade school could be classed as "more tolerant." This is not surprising, for ignorance and fear are intimately connected, and those people who, knowing little, suspect and distrust anything unfamiliar, are ill equipped to adjust to a world in motion.

We have reached the turning point in our attitude toward the mind and its uses. We won our political independence in 1776 and in the nearly 200 years that have followed we have—or ought to have—won our spiritual and intellectual independence. Yet we are still rebelling against the civilizing force of intellect as if afraid of succumbing to an alien influence. We have shouted down its penetrating voice like rebellious adolescents tired of parental lectures. But we are our own people now and in possession of our own minds. It is simply a matter of putting them to use, to formulate our own unique view of life and history, and at the same time to draw nourishment from the rich stream of human wisdom expressed in the thought and writing of the ages.

I think that if we stop seeing the mind as the product of a strange or an alien culture, an artificial layer to be pasted on for a few years in school and later to be peeled off with a sigh of relief, a medicine whose therapeutic value is enhanced by its bitter taste, we might go some distance toward dispelling our current apathy toward its fruits. If we begin to understand that intellectual curiosity, the desire for understanding, is a natural impulse common to all children and potentially to most adults, and that learning is not just cramming a mind full of facts but a lifelong deepening of understanding, the life of the mind will begin to take its rightful place in American society.

And high time it begins to do so. The United States must experience an intellectual renaissance or it will assume a fatal rigidity that will bring about its downfall. The nurturing of intellectual excellence is no longer optional. The search for wisdom and the love of knowledge for its own sake can no longer be left to a gifted and stubborn few of our own people together with the great intellects that foreign dictators have hounded out of their own countries and to our shores. It is not enough to pluck a few bright adolescents out of their home communities and plunge them into a few frantic years of intellectual forced feeding in a restricted area of specialization. The intellectual renaissance must begin in the homes of our country. It must become part and parcel of our whole way of life if our full potential is to be realized.

For we have been robbing ourselves of a part of that most precious of all our natural resources, our own minds. Meanwhile, we have accomplished much, we have produced much, we have amazed the world. But it is time for us to amaze the world in a new way, by showing that we know how to use our mighty powers with wisdom and humility. This wisdom and this humility can only come through learning the lessons of the past, reflecting on our present historical predicament, and grappling with the problems the future is thrusting upon us at jet speed.

The first fact we must face and reflect upon is that war has become absurd. War was once an instrument of national policy—an instrument that might be used for national defense or to achieve national goals. The development of modern weapons—and the weapons arriving so swiftly in the future that is now upon us—compels us to realize that President Eisenhower was right when he said there could be no alternative to peace. The weapons we now have—and the weapons our competitors also have—already have erased the line between national defense and national suicide. The weapons we are creating—and the weapons our competitors are creating—will make any war truly the thing Shakespeare called an idiot's delight.

Once we have fully realized this fact—and the realization seems to be dawning both here and abroad—we will seriously concentrate on the problem of eliminating war—before it eliminates us. We must close in on this problem from several angles. I notice that all declared presidential candidates are for continuing the ban on atomic testing. That is a beginning. We must also begin whole-heartedly to work toward reaching agreements with Russia to end or control the arms race. Because, leaving aside the question of evil intention, the world could become overnight victim to an accidental nuclear explosion. As Representative CHARLES O. PORTER, of Oregon, put it: "Given the prevalence of such human errors and weaknesses as drunkenness, mental breakdown, misinterpretation, misguided idealism, venality or treason, an accidental nuclear explosion is probable."

We must also attack the problem at a much deeper level—at the basic structure of international relations. We must begin to move beyond the claims of conflicting nationalisms to establish a genuine rule of law in the world. Facing Communist implacability, we cannot hope now for anything as utopian as world government. We can work toward closer ties between the world's democracies, which could form an expanding framework for the rule of democracy and law. We can consider such proposals as the strengthening of the World Court so that it could become of real use in settling international disputes. We can put our new-found thoughtfulness to work in finding other new ways to replace the caprices of national policy with the greater consistencies of legal procedure—historically the only guarantee of peaceful relations.

Simple survival dictates our concern with these problems. Beyond this primary and primitive consideration, we face the problem of defining our country's goals—the purposes of our Nation in the 20th century. In fact, the effort to survive and the effort to say what we are surviving for are deeply intermingled. A nation with a stale or deficient vision of its national destiny stands little chance among the catapulting aspirations of the peoples of today's world.

One of the most important things we must decide in our platform of national purpose is just the thing I have been talking about today—the place of learning and education in our life. We must thereupon make some hard practical decisions about the kind of educational system we want and how we are going to get it. In this connection I can report that the public as a whole is concerned enough about getting the country's schools into shape for its swelling child population that 73 percent think some form of Federal financing is in order. But much deeper is the question of what kind of education our schools and colleges should provide: How much science, how much humanities, how much theoretical, how much practical training, how much general education, how much specialization?

Another question we must decide is how much of our economy should be devoted to private and how much to public purposes. Professor Galbraith, of Harvard University, has charged in his book "The Affluent Society" that in present-day affluent America our preoccupation with high and increasing production is outdated and has resulted in a serious social imbalance whereby the production of public services such as adequate schools, parks, sanitation, public safety, etc., stays much too low. In Galbraith's opinion, the real reason we are so concerned with high production is no longer our need for goods but our concern that everyone is kept employed, and he thinks a better solution is needed for the very real problem of full employment. In his opinion, also, we are rich enough to devote a good deal more of our national wealth to services that benefit us all, so that we aren't in effect forced to drive shiny private cars through dirty public streets. Galbraith's proposals have stirred up a heated debate in Washington, one that will continue, I am sure, for some years to come. And all to the good. For it concerns one of the essential problems with which we have to come to terms if we are to continue to develop as a nation.

And something we must always keep at the front of our minds as we shape our sense of national purpose is that we are part of a world community, that our own development will be meaningful only if we participate in the healthy development of that community. Dribbles of economic aid to underdeveloped nations are not enough. We must respond wholeheartedly to the desire of long-deprived peoples for political independence and economic growth. Without forcing our ways on others, we must make our wealth, our technical skill and our political experience available to help developing nations realize their potentialities. If instead, we clutch our wealth and wisdom to ourselves, fearful of losing what we now possess, we will end up isolated and spiritually bankrupt, an island of sterile prosperity in a hungry world. And one day that island may be taken from us.

These are some of the things we must think about. In doing so we must avoid two pitfalls. The first is surrendering to the oversimplifications of a passionate leader with a program for action. That pitfall, however, seems remote. No passionate leader appears upon the American scene today. We have many good, energetic, intelligent Senators and Governors. We have an amiable President, who likes to travel and tries to speak everybody's language. We have a sober, serious, careful Vice President who works long hours and wants very much to be President. But there does not seem to be much danger that Americans will be swept off their feet by any of the leaders now in sight.

The other danger is falling prey to a feeling of helplessness and despair as we confront our difficulties. Our problems have become so complex, so large in scale, and so subject to sudden change that we may be excused for wondering whether the power of human intelligence is adequate to cope with them. It may not be; but it is all we have. Relinquishing the pursuit of insight

and intellectual excellence means giving way to historical currents which will sweep us onto the dustpile of history.

And so we must think. We must as a nation make a thoroughgoing reevaluation of the intellectual life, so that our best people will be drawn to it and so that Americans as a whole will be receptive to its contributions.

And in the long run, more people will begin using their minds only as the general climate of opinion becomes more favorable to doing so. Intellectually difficult tasks, like many other hard jobs, become more rewarding when doing them wins social approval. Most people do not like to be thought queer, and as long as cerebral activity is socially suspect, its intrinsic rewards will not be enough to command much of a following. But once the stigma is lifted, and the intellectual stirrings of the young are actively encouraged by those around them, the door will be opened to an enrichment of private and public life.

This does not mean that genius will spring up around us overnight. Intellectual excellence will never be a "quick and easy" process; wisdom will never be mass produced. Intellectual skill will always be an achievement, and that combination of intellectual mastery, creative imagination, and humane understanding which is characteristic of the truly learned man will remain a relatively rare accomplishment. We cannot guarantee that accomplishment, but we can create conditions favorable to it.

You are members of a new generation, one that will, I believe, develop a new current in the American way of life, a new strain of reflectiveness. There are signs that this change is already taking place. Among those I have noted are these: The successful introduction by the Saturday Evening Post of a series of thoughtful articles under the general heading of "Adventures of the Mind." The views expressed by young executives of corporations in a recent survey indicated a shift in emphasis in the qualities sought by young men in their wives. The participants in this survey said they wanted their wives to be able to discuss books and ideas, and they valued such intellectual ability above home economics, party-planning, self-beautification and the social arts. The steady rise in the sales of high-quality paperbound books—reprints of works written by philosophers, professors, literary critics, sociologists, economists grappling with hard problems—has shown that there are millions of Americans who want to face the realities of our times. On a more frivolous level, I cite the use of the phrase "a thinking man's filter" by one of our large cigarette companies in its advertising as another indication that many of us want to be treated as thoughtful citizens, whether we are or not.

I am told by several college president friends of mine that learning is more highly regarded in our colleges and universities than it has been within their memory. I have even heard that football heroes no longer have their pick of the more desirable females on campus. Apparently today's generation of college students are initiating an exciting intellectual renaissance. What you are doing here today bears that out; you are honoring people who have learned to think; you are honoring learned men and women.

I am willing to accept at face value this evidence of a very considerable revival of respect for intellectualism in our colleges and universities. And I am sure that this, like most ideas, will spread from the centers of education outward. But I'd like to see our Federal Government do something to hasten that spreading. Perhaps a means could be found whereby 50 people would be selected who would represent this breadth of knowledge and intellectual interest I am talking about, would be truly an intellectual elite, and perhaps they could be called permanent advisers to the President, and perhaps they could be paid $15,000 a year by our Government for as long as they live, and perhaps the President, whoever he may be, should see them in small groups from time to time. Perhaps there should be another 50 each year until there's 500 or so. The fact that they were advisers to the President and called to Washington would give them one kind of prestige, and I don't think I need to argue the case with you that a guaranteed salary of $15,000 a year on top of whatever else they might be earning would give them another kind of prestige—or at least prestige in another quarter. I'm not contending this is the only way or even the best way to hasten the spread of respect for the truly learned people of our Nation. I'd welcome a better plan. I simply mention this to show how far and how fast I think we need to go in this direction.

For there is an urgent need—in fact a national survival need—for invigorating intellectual life, for upgrading the general regard for intellectual excellence, for broadening the base of intellectual interests—for a renaissance that establishes a genuine folk status for things of the mind—a respect for the learned man. We will be saved—if we are that lucky—by men and women who are able to use all that is in them—their hearts, their senses, and their minds—as fully developed, mature human beings.

The time cannot be far off—if indeed it is not already here—when the strength of a nation, measured in terms of any kind of world competition, will depend less on the number of its bombs than on the number of its learned men and women.

TRIBUTE TO SENATOR HUMPHREY

Mr. KEFAUVER. Mr. President, the distinguished senior Senator from Minnesota [Mr. HUMPHREY], who preceded me in speaking about the value of the rural electrification program, has returned to the Senate today.

Throughout yesterday and until late last night, the Senator from Minnesota was interested in a primary election being held in West Virginia. He lost the primary election, but he has shown himself to be a man who can take defeat with grace and with a smile, and who can continue with his work in the Senate.

Being one who, in 1956, had a similar experience, I say to the Senator from Minnesota that he has a great following throughout the United States. He has made many friends, and has not lost any of them by reason of having engaged in the recent primary contests, the last of which has just been concluded.

I think that by entering the primaries the Senator from Minnesota rendered a great public service. He illuminated public opinion by discussing the issues and bringing to the attention of the public the problems which our Government faces today. All of that is important in the formulation of public opinion.

While the Senator from Minnesota lost the primary of yesterday, he can be proud of the great contribution he has made to the public thinking on political, economic, and international issues, and of his performance of a great public service, for which many people throughout the Nation are grateful.

Also, Mr. President, all of us have observed that his wife, Muriel, has been by his side during his various efforts. She has interested the women voters in greater participation in politics. For her contributions and her efforts in helping her husband, I know all of us pay her our highest respect.

I am sorry that a greater number of Senators are not now in the Chamber, because I know that many of my colleagues, on both sides of the aisle, would join me in paying our highest respects to the Senator from Minnesota, and in saying that his job has been well done, and that his great host of friends are still with him and are appreciative of the fine showing he has made in the primaries in which he has been engaged.

Mr. HUMPHREY. Mr. President, I wish to thank my good friend, the Senator from Tennessee, for his kind words of friendship and understanding. I can think of no one from whom I would rather receive words of praise and words of friendship and consolation.

The Senator from Tennessee is one of the truly courageous men of our country. He has repeatedly demonstrated that by his votes and by his personal performance in public life. It is my fond hope that his own career will be filled with the utmost of success, and that the people of Tennessee will remember that in him they have a stalwart champion of all that is good for this Republic and for this world.

I thank the Senator from Tennessee for his very much appreciated words of friendship, today. They touch my heart, and I am extremely grateful.

Mr. KEFAUVER. I thank the Senator from Minnesota.

Mr. CHURCH subsequently said: Mr. President, inasmuch as the distinguished Senator from Tennessee [Mr. KEFAUVER] is now presiding, I think it would be appropriate for me to say at this time that I should like to join in the tribute he has just paid to the distinguished Senator from Minnesota [Mr. HUMPHREY]. Senator HUMPHREY has been a fearless, forthright, articulate spokesman for the liberal cause. Certainly he is one of the outstanding public servants in our political life today. The Democratic Party is fortunate indeed to have him as a member, even as the country is fortunate to have the benefit of his services in the U.S. Senate.

Mr. MANSFIELD subsequently said: Mr. President, I rise to join with the distinguished senior Senator from Tennessee [Mr. KEFAUVER], who is now presiding over the Senate, and the distinguished junior Senator from Idaho [Mr. CHURCH] in saying a few words about our colleague, Senator HUBERT HUMPHREY.

Senator HUMPHREY has announced his withdrawal from the presidential race. I wish to say that, in my opinion, Senator HUMPHREY has performed a real service for the country and for the Democratic Party, because in the primary campaigns in which he engaged he tried to bring to the attention of the people of this country, and more particularly to the people of the States involved, the issues which will confront them next November.

Senator HUMPHREY has waged a gallant, determined, and dogged fight, and

I honor him for the honesty he has shown, for persistence he has evidenced, and for the ability and intelligence he has indicated in his discussion of the problems which confront us all.

Senator HUMPHREY is a man who has made his mark in his own right. While I can appreciate the results which have caused him to announce his withdrawal, because I have a high personal admiration for Senator HUMPHREY, nevertheless, I feel the Senate will be better off because we shall have the value of his continued advice, his continued counsel, and his continued ability to participate in all matters which will come before this body.

So in announcing his retirement from the race for the Democratic presidential nomination, I wish to commend and congratulate the distinguished senior Senator from Minnesota for the efforts he has put forth and for the gallantry he has shown toward the man who defeated him in West Virginia. I salute him also for his graciousness and understanding when the results of the West Virginia primary were made final.

I am quite certain these two distinguished colleagues of ours will work well together, and I know Senator HUMPHREY will give the Democratic candidate, whoever he may be, his full support and his untiring devotion in the months ahead.

Mr. PROXMIRE subsequently said: Mr. President, the hour is late, and I shall take only a moment to say what I wish to say on this subject. I feel the attention of the Senate should be called to what I think was a remarkable display of courage, devotion, and fortitude on the part of the distinguished senior Senator from Minnesota [Mr. HUMPHREY]. It is well known that the Senator from Minnesota has just finished an excellent but heartbreaking campaign in West Virginia. He was up all night, and it must have been one of the saddest nights of his life, and yet he came to the floor today, and not only was he in attendance, which in itself would have been remarkable, but he led the fight for his bill. He was the floor manager of the bill, and he did a magnificent job. This kind of action is so remarkable and unusual that it deserves attention and a tribute.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. CARROLL. I would like to associate myself with the remarks of the able Senator from Wisconsin. The Senator's action demonstrates the character, the intelligence, and the leadership of HUBERT HUMPHREY. His display on the floor this afternoon shows the character and leadership of one who, in my opinion, is one of the great Senators.

Mr. BARTLETT. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. BARTLETT. I should like to associate myself with everything the Senator from Wisconsin [Mr. PROXMIRE] and the Senator from Colorado [Mr. CARROLL] have said. There was a remarkable demonstration today on the part of the senior Senator from Minnesota, who seemed to possess—and who did indeed possess—boundless physical energy, as well as a mental acuteness which was remarkable.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. CLARK. I, too, wish to associate myself with the remarks of my colleagues about our dear friend the senior Senator from Minnesota; and, if he has occasion to read these words in the RECORD, I hope he will appreciate that he comes back to the Senate to practically 100 friends, to many who have deep and abiding affection for him, and who are disappointed that his task has not carried through to victory because we love him so much. We are happy to have him back here where I know he will add so much to the deliberations of this body until the day of adjournment.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. CARROLL. Does not the Senator from Wisconsin agree, inasmuch as he and I have had some experience in being knocked down?

Mr. PROXMIRE. I heartily agree. The Senator from Colorado and the Senator from Wisconsin have both been knocked down repeatedly in action.

What impressed me so deeply about the Senator from Minnesota is that I know how it must feel to stay up all night and lose an election, when all one wishes to do is to sleep, get a little vacation, and recuperate. The Senator from Minnesota had the courage, dedication, conscientiousness, and devotion to come to the floor of the Senate and fight his heart out for a bill. He gave a very remarkable display of senatorial conscientiousness.

Mr. CARROLL. In a very brilliant fashion.

Mr. PROXMIRE. In brilliant fashion, indeed.

Mr. CARROLL. In accordance with the best Senate traditions.

Mr. PROXMIRE. Indeed.

PROGRESS IN RECONCILIATION OF EUROPEAN COMMON MARKET AND EUROPEAN FREE TRADE ASSOCIATION

Mr. JAVITS. Mr. President, newspaper reports from Luxembourg state that the Foreign Ministers of the European Economic Community agreed late last night to accelerate the integration of the Common Market by beginning the establishment of a common external tariff as of December 31, 1960. This is 12 months ahead of the original tentative schedule; but it should be noted that it is a 6-month delay from the July 1 acceleration proposal which caused such great fear of a trade split between the European Common Market countries and the nations of the newly formed European Free Trade Association.

This 6-month delay, referred to as a trade truce, should provide time for the kind of reconciliation between the two groups which I envisaged in my report to the Senate on May 5, following my return from Strasbourg, France, where I addressed the Council of Europe on the Western Community's trade-aid problems. At that time I reported to my Senate colleagues that I believed these two groups would, in time make a suitable arrangement to avoid a trade split in free Europe. I also expressed the hope that the proposed Organization for Economic Cooperation and Development, which I believe the United States should join as a full member, would serve as a meeting ground where the trade problems of free Europe could also be considered.

This hope is now strengthened by the report that a letter, signed by the ministers of the European Common Market countries, has been sent to the Outer Seven countries, and that the letter suggests that these problems be discussed on the occasion of a forthcoming organizational meeting to be held by the prospective members of the new economic organization for Europe and the United States and Canada to which I have been referring.

Mr. President, we are seeing some of the most historic actions ever taken in respect of the foreign economic policy of the United States, and I bespeak for these actions the continued beneficent attitude of the United States and the willingness of the United States to participate, through membership in this new economic organization and otherwise, in any European solution of these problems, just as we did in making possible the Marshall plan. I believe we may say with pardonable pride that this may go down in history as the fruition of the Dillon plan, just as Europe was saved from the real Communist menace immediately after World War II by means of the Marshall plan. The Dillon plan is named after Douglas Dillon, our Under Secretary of State, who first proposed these ideas to the European countries.

Mr. President, I wish to congratulate the European officials for their efforts to make the maximum progress in cooperative action for aid and trade.

I ask unanimous consent to have printed at this point in the RECORD two newspaper reports on this situation which is so vital to U.S. trade and foreign economic policy interests.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, May 11, 1960]

COMMON MARKET DELAYS ON TARIFF—MINISTERS AGREE TO POSTPONE MOVE TOWARD UNIFORMITY FROM JULY 1 TO JANUARY 1

(By Harry Gilroy)

LUXEMBOURG, May 10.—The six European Common Market nations agreed today to start building a uniform tariff wall by January 1, 1961. That is a year ahead of the time planned for this action in the treaty that forced the bloc.

Cabinet ministers of the six states—Belgium, France, The Netherlands, Italy, West Germany, and Luxembourg—took the decision unanimously at a meeting here today.

In general the ministers approved a speed-up plan proposed 3 months ago by the Common Market. The commission suggested July 1 as the time to take the first tariff action but the Council of Ministers held that date was too soon.

Spokesmen for all six countries agreed in talks outside the meeting that the action demonstrated an intent to go ahead quickly with the construction of their planned customs and economic union.

However, there was a difference of opinion about the effect on the trade discussions that are shaping up in Europe. Britain and her partners in the European Free Trade Association, known as the Outer Seven, have warned that acceleration of the Common Market might split European trade. The other members of the Outer Seven are Norway, Sweden, Denmark, Portugal, Austria, and Switzerland.

A French spokesman said the display of unity by the six nations would show Britain that there was no hope of disrupting the Common Market and that this should improve the chances of achieving trade harmony through negotiations.

A German took the point of view that now it would be easier for the six states to negotiate with Britain because the time for the speedup program had been put off until the beginning of next year.

The ministers made plain that they all wanted to avoid a trade war with the rest of Europe and with the United States. They said they felt their economic union was compatible with this purpose.

The delay in the first move toward the common external tariff appeared to have been dictated as much by necessity as by any desire to negotiate with Britain. Both the Italian and German representatives said in the meeting that it would take 6 months for their parliaments to approve necessary changes in tariff laws.

The ministers expressed their approval for the following measures:

By January 1, 1961, the six states will adjust their present tariffs on goods from outside the Common Market. Those with low tariffs will lift them and those with high tariffs will cut them, both moving toward a uniform set of rates.

This first step will take all the states, with the exception of West Germany, 30 percent of the way toward the uniform tariff.

West Germany lowered some tariffs by 25 percent in 1957 and now will have to lift them again.

[From the Washington Post, May 11, 1960]

SIX MARKET NATIONS ASK BRITISH PACT

LUXEMBOURG, May 11.—Foreign ministers of the six Common Market nations early today called for a trade truce with the rival British-led European Free Trade Association (EFTA).

After a ministerial council meeting lasting late into the night, a spokesman said the ministers signed a "declaration of intent" for talks with EFTA members.

They also approved the text of a letter to the EFTA president suggesting the talks be held within the framework of the 18-nation organization for European Economic Cooperation with the United States and Canada included.

The 20-nation group meets next month in Paris and the letter suggests the truce talks be held then, too.

The council spokesman said the ministers failed to reach complete agreement on the status of agricultural products under the tariff proposals of Executive Commission President Walter Hallstein.

He denied an earlier statement by a colleague that a compromise solution had been reached. He said the ministers will meet again in Brussels Thursday to continue agricultural talks.

Until an agreement is reached, he said, the declaration of intent to negotiate with EFTA and the letter of invitation will not be published.

The spokesman also said that whatever the result of the talks between the Common Market and EFTA, the Hallstein plan for speeding up integration within the Common Market will be implemented with deadline of December 31, 1960.

The ministers yesterday gave up the idea of putting the plan into operation on July 1—18 months before schedule—by taking the first steps in "walling up" the Common Market with a common external tariff.

Official reasons for the delay were that West Germany and Italy need time for having the tariff changes involved ratified by parliament and customs authorities will need from 5 to 6 months to bring in line with the new tariff levels some 3,900 customs headings.

Conference sources last night said the soft-pedaling of the Hallstein plan will bring a "tacit trade truce" which could be used to seek a rapprochement with Britain and her free-trade partners.

All decisions concerning the Hallstein speedup proposals were hampered by a controversy between the Netherlands and West Germany on whether or not to include agricultural products in the speedup scheme.

The Netherlands wanted them in while West Germany opposed their inclusion. The Ministers sat throughout yesterday and after a brief interruption went into an all-night session discussing details of the acceleration plan.

At the same time a special drafting committee in another room was trying to work a compromise agreement for the Dutch-German dispute.

In the small hours of today, as weary ministers came out of the conference room from time to time to speak to reporters, no agreement was in sight.

One delegation source talked openly about a "grave crisis" which threatened the unification of the six. Others said the Dutch and the Germans were "actually filibustering" and "not unintentionally obstructing the acceleration plan."

Both the Netherlands and West Germany are outspoken in their alarm that the Common Market's speedup plan carries a serious threat of economic and political division in Europe.

FORTY-SECOND ANNIVERSARY OF ARMENIAN INDEPENDENCE

Mr. JAVITS. Mr. President, I am happy to join in the celebration of the 42d anniversary of the independence of Armenia, which occurs on May 28. Armenia's brief existence as an independent nation in modern times came to an end on December 2, 1920, after 2 years of self-government, when she fell victim to Communist aggression. The brave people of Armenia have steadfastly maintained their hope for independence; and no conqueror has ever been able to crush their determination to be free.

Armenia's ties with the people of America are based on much more than sympathy and understanding. Many of our citizens trace their ancestry to this ancient land, and have always kept firm these ties of blood. For all these reasons, Americans everywhere strongly support the national aspirations for liberty of the Armenian people and their unquenchable desire for freedom from tyranny.

I deem it a privilege to be able to contribute my voice in some small measure to this heroic struggle.

Many people in this country value most highly the brief period of Armenian independence. In view of the real necessity to affirm our belief in self-determination for the small nations whose independence has been snuffed out by Communist forms of imperialism and aggression, I desire to call the attention of my colleagues to this event.

RETIREMENT OF SENATOR O'MAHONEY

Mr. CHURCH. Mr. President, the announcement by the distinguished senior Senator from Wyoming [Mr. O'MAHONEY] that he will retire at the end of his present term, January 3, 1961, must be accepted reluctantly by his colleagues. We have suffered with him in his illness and that of his beloved wife. We have been aware of their close devotion through the years. More recently, we have watched this iron-willed man pull himeslf back to full duty in the Senate, after a stroke which would have felled lesser men.

Senator O'MAHONEY has earned retirement. His 25 years of service on the national stage have been highlighted by his unfaltering opposition to monopoly, his effective leadership in furthering the cause of independent business, the development of the rivers and the reclaiming of the deserts of the West, the wise management of our vast public domain, and—most of all—by his dedication to the Constitution.

It was this last attribute which I observed firsthand when his penetrating arguments persuaded the Senate to adopt the jury-trial amendment to the civil rights bill of 1957. In the high privilege I then had of working at his side, I saw how richly deserved was his reputation as a great lawyer and constitutionalist.

It was his sensitive appreciation of the separation of powers spelled out in our Constitution, coupled with his independence of spirit, which caused Senator O'MAHONEY, while still in his first term, to rise to national eminence as a leader in defeating the effort of a strong-willed Executive to change the makeup of the Supreme Court.

The monumental work of the Temporary National Economic Committee under Senator O'MAHONEY's leadership will be remembered and applauded through many years to come.

I am grateful that my service in the Senate has occurred at a time when it has been possible for me to know Senator O'MAHONEY. The spirit of the Senate is continuity; and as each of us comes newly into this Chamber, we partake of the wisdom and experience of our seniors.

The whole Senate is the richer in the wisdom and experience Senator O'MAHONEY has imparted and in the generosity and the gentleness with which he has shared them with all of us.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. CHURCH. I yield.

Mr. MANSFIELD. I wish to associate myself with the remarks made by the distinguished junior Senator from Idaho. I too am deeply sorry that the great constitutionalist, as he has been aptly termed by the Senator from Idaho, has decided to retire voluntarily from this body.

Senator O'MAHONEY has long been known as Mr. Wyoming, but Senator O'MAHONEY is a man of national and international stature. I know the decision was not an easy one for him to make, but I agree with the Senator from Idaho that his retirement from the Senate will leave a void which will be hard to fill. We shall miss him, but we have learned much from him during the course of our service together in the U.S. Senate. To Senator and Mrs. O'Mahoney, a devoted and lovable team, we all wish the best of everything in the years ahead. They have earned, many times over, their well-deserved and merited voluntary retirement.

Mr. CHURCH. I thank the Senator very much.

Mr. SYMINGTON subsequently said: Mr. President, it is difficult for me to visualize the U.S. Senate without the personality and ability of the great senior Senator from Wyoming.

His decision to terminate his illustrious career in this body is one that cannot help but sadden his many friends and admirers.

JOE O'MAHONEY is an outstanding example of a man who lives what he believes.

He believes in fair play; he believes in fair competition; and he believes in fair treatment for the unfortunate no less than for the fortunate.

The vigor, the honesty, and the outstanding ability with which he has opposed monopolistic concentrations of economic power have long stood, and should always stand, as a model for all to strive to equal. It would be presumptuous for anyone to think he could surpass that record.

I have come to respect my friend from Wyoming as a learned lawyer, an able debater, a dedicated liberal and, above all, a constructive patriot.

NUCLEAR TESTING

Mr. CHURCH. Mr. President, the humiliating disclosures of the past few days are a spectacular demonstration of the administration's penchant for not letting its right hand know what the left hand is doing. The disturbing developments on the cloak-and-dagger front, unfortunately, have diverted public attention from the problem of nuclear testing, where once again the administration's ineptitude is prejudicing our national interests.

The terrible dangers of uncontrolled nuclear weapons constitute the gravest peril which the human race has ever faced. The awesome power of these inventions must be regulated if civilization, as we know it, is to endure. Recognition of this fact on both sides of the Iron Curtain has led the three nations which presently possess this weapon to try to work out a system for detecting nuclear explosions—the first step toward a comprehensive plan for controlling the use of these weapons. For 18 months, representatives of the United States, Great Britain, and the Soviet Union have been meeting at Geneva in long, difficult negotiating sessions. A great deal of progress has been made at Geneva; many observers feel that concessions made by the Soviet negotiators have brought us close to a workable plan for detecting nuclear explosions.

But this progress has been achieved in spite of a bureaucratic guerrilla warfare campaign conducted against these negotiations by those elements in the administration who oppose any sort of agreement. We now read in the newspapers that the recent announcement that we would resume underground nuclear testing came as a surprise to our representatives at Geneva and embarrassed them greatly. Once again the appalling failure of coordination within the administration makes the American Government look like one of those South Seas idols, with 10 arms going off in 10 different directions.

This confusion has been described in an excellent column by Marquis Childs which appeared in the Washington Post for May 11, 1960, and I ask unanimous consent that the text of the article be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES ON THE SPOT IN GENEVA TALKS

(By Marquis Childs)

GENEVA.—The incidents of the past few days are readymade for those who want to continue the cold war and who have persistently by every means sought to prevent any meaningful negotiation with the Soviet Union. Here in Geneva, where a negotiation has been going on for 18 months, this is seen in the sharpest and most dramatic fashion.

The announcement from Gettysburg by President Eisenhower that the United States intends to resume nuclear explosions for research purposes fits the pattern. It was made without any notice to the American delegation. More important, it came as the three powers—Great Britain, the United States and the Soviet Union—were trying to get agreement on a joint program of research into improved methods for detecting nuclear explosions.

What is little understood is the way in which the Soviets have made one concession after another, coming around time after time to the Western view. They began by saying they would not discuss any control system until after a treaty on general principles had been signed. After 4 months they agreed to talk about how a control system would function in the Soviet Union and the United States.

They came around to agreeing to a discussion by scientists from each country on the problem of underground identification. Having said they would never agree to a threshold and a moratorium outside a nuclear test treaty on explosions below that threshold, they finally accepted this position. They would never accept our criteria for detection which they called "absurd," but they accepted them.

With literally dozens of concessions by the Soviets, the outline of a treaty has evolved. Major issues—the number of inspections in each country, the makeup of a control commission, the length of the moratorium—remain to be determined presumably by the heads of government when they meet in Paris.

The American negotiator through all these long, trying months has been James J. Wadsworth, who is deputy head of the American delegation to the United Nations. Wadsworth's Western colleagues say he has shown more skill, patience and persistence in dealing with the Russians than any other American since the end of World War II.

What has made Wadsworth's position doubly difficult is that, while inching the Russians up little by little to the Western view, he has constantly been fighting a rearguard action with those in Washington who have been determined to block any treaty. In this context the Gettysburg announcement is seen as the latest attempt to sabotage the negotiation. While no one will say this officially, it is the view of observers close to the conference for many months.

No one would accuse President Eisenhower of such an intention. But since he has not followed at close range the complex negotiations he must take his lead from one faction or another. And while the committee of principals dealing with this matter at the top level of Government in Washington is reportedly in favor of a test treaty with proper inspection and control by a majority of 4 to 1, the minority in the Pentagon and the Atomic Energy Commission has shown great resourcefulness in blocking tactics.

There should be no illusions back home about the situation the United States confronts. If a treaty fails to be agreed to because of what seem to be obstructionist tactics from the American side or if a treaty is rejected by the Senate, the Western alliance will be split apart and the United States put in the position of standing almost alone in the world. Here are the reasons why:

The Conservative government in London has never wavered in the determination to get a treaty that would mean the beginning of inspection behind the Iron Curtain and perhaps the beginning of a pattern of disarmament. They concede the risk of some cheating under any control system, but they believe this is minimal and is heavily outweighed by the gain of a beginning at inspection and control.

Opinion in Britain is virtually unanimous on this score, as it is in the Scandinavian countries, West Germany, and most of Asia and Africa. Furthermore, the British here believe that it would have been possible to get a treaty with adequate guarantees any time during the past 9 months if it had not been for America's delaying tactics.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. KEFAUVER in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that further proceedings under the quorum call be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

COLORADO MEDICAL PLAN POINTS THE WAY

Mr. ALLOTT. Mr. President, discussion regarding the course this Congress should take respecting medical assistance for the aged has mounted daily. We are confronted with a variety of plans involving great sums of money and offering many different benefits for old age people.

We in Colorado are proud of the fact that we have a workable, functioning old age pension plan which brings help and comfort to thousands of people. Within the framework of this program are coordinated such medical organiza-

tions as Blue Cross, Blue Shield, and others. The Colorado old-age pension plan serves as an example of what can be done by the State.

Nevertheless, Mr. President, we in the Congress must still face the problem of what to do, if anything, on a national scale. Without suggesting my support for all it has to say, I recommend as food for thought a very scholarly article on this subject written by Bob Tonsing in the May 8, 1960, edition of the Denver Post. Mr. Tonsing describes the various suggested Federal assistance programs against the background of the one now operating in my own State of Colorado.

So that my colleagues may have the benefit of this study, I ask unanimous consent that the article be printed in the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Denver Post, May 8, 1960]

COLORADO MEDICAL PLAN POINTS THE WAY—STATE EXPERIENCE IN HEALTH CARE FOR AGED MAY PROVE USEFUL IN NATIONAL PROGRAM

(By Bob Tonsing)

A national medical care program for the aged? Colorado's plan for pensioners might be just what the doctor ordered.

Now in its third year, the plan has been widely praised as a gem of efficiency and effectiveness in a field often characterized by administrative waste and tragic futility.

The program, a daring experiment in State-financed medical care for pensioners, is unique in the Nation.

But it may not be unique for long. State welfare officials have been barraged with requests for details on how the Colorado program works.

Welfare officials from as far away as British Columbia have dropped in for personal inspections.

And 3 weeks ago Guy R. Justis, Colorado welfare director, was called before the House Subcommittee on Problems of the Aged and Aging in Washington to explain the State's pension program—particularly the medical part of it.

The program has been so successful that many Coloradans are unaware of it. Since the program was made possible by a constitutional amendment 3 years ago, it has been conspicuous by the lack of controversy.

Today the plan enjoys the simultaneous approval of the Colorado Labor Council (AFL–CIO), the Denver Chamber of Commerce, the Colorado League of Women Voters, the National Annuity League (the State's largest association of pensioners) and the Colorado State Medical Society.

The Colorado Welfare Department has a fund of $10 million earmarked for annual expenditure in the medical program for pensioners.

About $3 million of this is handled by the Welfare Department for pensioners' care in nursing homes, drugs for patients in nursing homes and several miscellaneous programs amounting to less than $100,000 each.

The rest—about $6.5 million—is spent for a medical care program with benefits similar to those of good medical insurance plans of the kind many younger people are enrolled in.

As a matter of fact the program is even administered by the people who run the Blue Cross-Blue Shield plans in Colorado.

But it is not insurance. It is a sort of cost-plus plan under which Blue Cross-Blue Shield picks up the medical bills as they come in. The State, in turn, reimburses Blue Cross-Blue Shield and gives it a little something extra for its trouble.

The extra amounts only to actual expenses incurred in dealing with the pensioners, the doctors and the hospitals, since Blue Cross and Blue Shield are nonprofit organizations.

Incidentally, in 1959 these administration costs ran only 2 percent of the entire bill. If the State were to handle the paperwork of the program itself, some experts say these costs might run from 10 to 15 percent.

Thomas M. Tierney, executive vice president of the Colorado Hospital Service (Blue Cross) believes the taxpayers may be paying little or nothing for this administration.

"We handle the pensioner program with the same administrative machinery perfected for our own benefit plans," Tierney said. "Certain savings are possible under the hospital contracts we hold—savings which the State itself probably wouldn't realize without us.

"We feel that our bill for administration is more than absorbed by the efficiency we are able to offer."

Here's how Colorado's unique medical care program works:

All 52,000 Colorado pensioners are issued identification cards. Any pensioner is eligible, whether he's getting the maximum $106 cash payment a month or a mere $1 a month.

The card tells hospitals and doctors that the bearer is entitled to benefits comparable to Blue Cross' comprehensive plan and Blue Shield's standard A plan.

Translated, this means a pensioner gets fully paid care in a semiprivate room (not a ward), with all hospital, surgical and medical costs covered.

He can stay 30 days normally, but if the trouble warrants the welfare department can authorize periods of full hospital coverage.

The card also entitles a pensioner to doctors' visits outside the hospital. He may summon a docotor to his home, or go to the doctor's office, two times every 3 months; the State, through Blue Cross-Blue Shield, will pick up the tab.

In addition, the Blue Cross-Blue Shield office handles administration of doctors' calls to pensioners put up in nursing homes.

The State will pay for as many as 6 routine doctors' calls at nursing homes every 3 months, or 12 calls during that period if the patient's health demands it.

The program is liberal. It treats the pensioner like an insurance beneficiary, not a ward of the State.

This fact aroused some fears in the early months of the program that malingering might become a problem.

But it has not. On the contrary, Colorado's senior citizens have been staying in the hospital only an average of 11.72 days per admission. This is 2 days less than the national average for persons of 65 and older.

What about the doctor's office privileges? Do the pensioners use up their excess visits for socializing?

Blue Cross says they don't. Theoretically Colorado's 52,000 eligible pensioners could use up a total of more than 400,000 visits a year. They've been seeing the doctor only about 90,000 times a year, the records show.

How much is all this costing the Colorado taxpayer?

In 1959, the services managed for the State by Blue Cross-Blue Shield came to $6,562,188.69, plus $131,194 for administration costs.

This meant that the administration costs ran about 2 percent of the program's overall expense.

For the item of Blue Cross-type hospital care, the State was charged just $42,818—a mere 0.8 percent—for the processing of 21,409 hospital admissions.

It has been estimated that in New York, where the State handles all of the administration details for pensioner medical services, Colorado's $6,526,188.69 outlay would have run up a paperwork bill of more than $700,000—a far cry from the $131,194 that Colorado actually had to put out.

The difference? Apparently it's professional management.

Dr. Paul Hartendorp, director of medical services for the State welfare department, might be running a complicated bureaucracy if he and the other founders of Colorado's plan hadn't decided to keep the State mostly out of the paperwork.

But he has no ambitions to run a bureaucracy.

"There are only four people in my office, and that's the way I like it," Hartendorp said. "Every dollar lost in a bureaucracy would be a dollar taken away from the pensioners, and goodness knows they need everything they're getting.

"No, after 2 full years of trial I'm convinced that our program is the best—and most efficient—in the Nation."

Hartendorp, a longtime Denver physician, said he fears neither socialized medicine nor bad practices in Colorado's plan.

"Blue Cross-Blue Shield does most of the paperwork," he said, "but the welfare department still makes the decisions. And we're just as sure about the disbursement of funds as if we were doing it ourselves. We have complete access to the books at all times, and the books are in excellent order."

Hartendorp said the welfare department would like to expand the program to provide services such as dental care and more doctors' visitations for pensioners who need more than the two-per-quarter allowance. But the $10 million budget won't allow it.

One dividend of the program has been a jump in pensioner morale.

Being assured of medical insurance-type protection has meant peace of mind to many a Colorado pensioner.

But there's another morale builder at work. It's the privilege of being able to choose any hospital for medical care.

When Colorado cared for its pensioners on a routine welfare basis, illness usually meant admission to Denver General Hospital or Colorado General Hospital.

The care was good enough, but often—especially in the case of Colorado General—the patient had to travel from another section of the State. Being hospitalized was unpleasant enough, but being separated from familiar surroundings and families was almost more than the pensioner could bear.

Denver General and Colorado General statistics best show what has happened.

According to Richard N. Christy, administrative assistant at Denver General Hospital, the number of pensioners admitted to DGH has dropped in half since the present State program started.

Colorado General's drop, according to Peter Samac, assistant to the administrator, has been about 10 percent—and this during a period when total admissions to the hospital were steadily rising.

The drops at the two hospitals indicate that, across the State, hundreds, perhaps thousands, of pensioners are entering hospitals of their choice—places where loneliness can be combated by friends and relatives.

Morale is hard to measure by cold statistics, but it is one of the factors which make Colorado's program exciting to an amazing variety of people and organizations.

Here are some opinions of the program by Coloradans who would split sharply on some of the national medical care proposals:

Charles E. Bloedorn, director of the National Annuity League:

"Colorado has by far the finest old-age pension program in the country, and the medical plan is an excellent companion.

"The league heartily endorses the plan; the principles used in it are perhaps the most workable of any in the Nation.

"But if the league finds shortcomings, it is in the scope of the program and not in the administration. We think it ought to provide a more flexible system for doctors' visitations, free drugs and pharmaceuticals and items like dental care, hearing aids and the services of chiropractors."

R. C. Anderson, executive vice president of the Colorado Labor Council (AFL–CIO):

"We view the Colorado program as a great step forward in the care of the aged. We think it has turned out to be both practical and workable. The council was for the plan at the outset. We still endorse it."

Harvey T. Sethman, executive secretary of the Colorado State Medical Society:

"We consider the Colorado program excellent. No plan is perfect, and this one is no exception, but by and large an overwhelming majority of old age pensioners are getting excellent care, and an overwhelming majority of the physicians are satisfied. We believe the State welfare administration has done a very good job; they are to be applauded for having handled the program in a calm, efficient, public-spirited manner."

Would Colorado's program be applicable on a national scope?

Justis thinks it would.

"We have a plan unlike any other," he said, "and in my opinion it is working better than any other State medical care program for the pensioner.

"It is not a perfect plan, but we think it has worked out remarkably well. It might work out just as well if it were modified for the needs of the Nation. There's a lot to be said for any plan where you get groups like the chamber of commerce, the League of Women Voters, the AFL–CIO, the doctors and the pensioners themselves to approve it."

The broadening of the Colorado plan to cover a national need would require considerable reworking.

The main problems would be choosing the avenue of financing—social security or direct congressional appropriations—and determining who, outside of State pension rolls, should be eligible for free medical coverage and who should pay.

But the two key features of Colorado's remarkable plan—establishment of an adequate earmarked fund and relegation of management to an organization like Blue Cross-Blue Shield—would be retained.

What would happen if Congress enacted a bill far afield from Colorado's plan?

There would be a danger that Colorado would have to upset its own program to qualify for the Federal matching funds. Or there might be the alternative of turning down the Federal program altogether.

Colorado welfare officials are watching Washington developments closely to see if the outcome is detrimental to Colorado's pensioners.

The fight in Washington has been bitter.

Most of the battle noises have come from the Forand bill arena. The bill, drafted by Representative AIME J. FORAND, Democrat, of Rhode Island, would set up hospitalization and medical care benefits for most of the Nation's 16 million citizens in the 65-and-over age group.

It would be financed and administered entirely under the social security program.

"Socialized medicine," cried the American Medical Association when it scanned the Forand bill. Most Republican leaders, medical insurance organizations, and businessmen's associations tended to agree, and they wanted no part of it.

The AFL–CIO, which liked the bill, saw Machiavellian schemes in the anti-Forand outcry. So it asked its 13 million members to pressure Washington for enactment of the bill.

Meanwhile, the United Auto Workers, in a burst of carefully timed indignation at Forand opponents, sent out thousands of postcards with the Biblical quotation:

"Cast me not off in the time of old age; forsake me not when my strength faileth."

The AMA counterattacked. Several weeks ago Dr. Louis M. Orr, president of the medical group, fired an angry letter at AFL–CIO President George Meany accusing organized labor of deliberate distortion of the truth, perversions of the truth and outright untruths in its attacks on the Forand bill opposition.

Anti-Forand bill people also didn't take kindly to the UAW postcard.

"Blasphemy," cried Representative THOMAS B. CURTIS, Republican, of Missouri.

Last Wednesday the Eisenhower administration entered the dispute with a plan of its own. Secretary of Health, Education, and Welfare Arthur Flemming announced a proposed $1.2 billion medical care program to be paid for by Federal-State matching funds—and sizable contributions by beneficiaries of the plan.

Cold shoulders immediately popped up all over the land—and they didn't belong entirely to the Forand bill partisans, either. The administration bill, though it offered sop to the foes of socialized medicine, was judged weak on many counts.

Gov. Nelson Rockefeller, of New York, for one, didn't like it. He suggested changes which would make the plan look suspiciously like the Forand bill.

Other Republican Governors have been equally dubious—some of them on the grounds their States couldn't afford the privilege of splitting the costs with the Federal Government.

Others have said the plan is faulty because it would bequire payment of a fairly heavy portion of hospitalization costs by the hard-pressed patient himself in all but the most serious cases.

All in all, it looks as if the administration proposal is in for even more static than the Forand bill.

Some Colorado observers believe that a combination of programs might work best.

Take the administrative cleanliness of the Colorado program, they say, and build from there with the best features of the Forand and administration proposals, and something workable might emerge.

Who would administer such a program?

At the present time no one organization is in a position to run the program on a nationwide basis.

Colorado probably would give its vote to Blue Cross-Blue Shield, although there are a number of other medical and hospitalization organizations in the country which might qualify.

Blue Cross-Blue Shield would be hampered by the fact it is made up of many State organizations, each with its own variations on benefit plans and its own rates.

But the Blue Cross-Blue Shield organizations are rumored to be studying closer alliances and standard rates and plans for the entire Nation.

If so perhaps they would be in a good position to serve a national medical plan for the aged as Colorado Blue Cross-Blue Shield administers the State's fine program.

PROLONGATION OF MONITORSHIP OF TEAMSTERS INTERNATIONAL UNION

Mr. FONG. Mr. President, I rise to express my deep concern that the membership of the Teamsters International Union has been unable to conduct an open, free election because of the prolongation of the monitorship. I have been receiving telephone calls and letters on this matter, and only the other day a petition signed by several hundred rank-and-file members, many of whom are friends of mine, of the Teamsters Union, Local 996, with headquarters in Honolulu, which reads as follows:

> The undersigned rank-and-file members of the Teamsters Union, Local 996, in good standing, hereby petition Congress for redress of grievances as guaranteed under the first amendment. The undue prolongation of the monitorship over the Teamsters International Union has cost approximately $1 million and the operation of such monitorship under the supervision and direction of Judge Letts is a clear denial of our rights under the first amendment.
>
> Our basic right to a convention to elect officers of our own choosing is guaranteed by the Landrum-Griffin law. We urge you to use your good office to bring this matter to the attention of Congress and secure hearings before an appropriate committee to investigate the misconduct of the monitorship and start remedial legislation.

I do not take sides as to any personalities involved in this matter, but I feel very strongly that the rank and file of the union have a right to express themselves in democratic fashion and to hold an election.

The Landrum-Griffin bill, which was passed last year, was intended to give to rank-and-file members the right to be heard and the right to elect their officials in free and open elections. I sincerely hope that the Teamsters will be given the right to hold an election at the earliest possible date, and that the monitorship will be discontinued as soon as possible.

I hope and I urge that the matter be given immediate study by the Committee on Labor and Public Welfare.

PRESENTATION OF KOREN KOLLIGIAN, JR., AWARD TO NEW YORK AVIATOR

Mr. KEATING. Mr. President, at the Pentagon this morning a young Air Force officer from Cattaraugus, N.Y., 1st Lt. Ronald L. Warner, received the Koren Kolligian, Jr., Trophy. This trophy is presented annually by the Air Force for flying safety accomplishments.

Lieutenant Warner was pilot of an Air Force transport plane which was carrying passengers from Okinawa to Guam last September 4. With one engine suddenly disabled, he was faced with the decision of ditching in the open sea or gambling on nursing his crippled aircraft to Iwo Jima. Lieutenant Warner decided on the latter course and with great flying skill succeeded in reaching his destination with only minutes of fuel left.

The people of New York State are extremely proud of this courageous young officer and I personally am delighted at the recognition which his gallant feat received.

Mr. President, I ask unanimous consent that the official Air Force citation which accompanied Lieutenant Warner's award be inserted at this point in the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

CITATION FOR THE AWARD OF THE KOREN KOLLIGIAN, JR., TROPHY

The Koren Kolligian, Jr., Trophy is awarded to 1st Lt. Ronald L. Warner, U.S. Air Force, in recognition of his accomplishment of an outstanding feat of airmanship.

On September 4, 1959, Lieutenant Warner was flying as pilot of a C–119 aircraft transporting passengers from Okinawa to Guam. At a point midway to Guam, while cruising at 9,000 feet, the aircraft suddenly experienced a runaway propeller on the right engine. Severe vibration of the aircraft and an uncontrollable loss of altitude posed the immediate threat of abandoning the aircraft over the perilous open sea.

Unable to feather the defective propeller, Lieutenant Warner alerted the passengers and dispatched emergency distress signals. By slowing the aircraft to an airspeed slightly above a stall, Lieutenant Warner was able to regain sufficient control to remain airborne. A critical appraisal of the situation revealed that, under these conditions, the aircraft had insufficient fuel to reach the nearest landing facility. A nearby atoll offered the prospect of bailing out the passengers, to reduce the weight of the aircraft, and thereby assure sufficient endurance to reach safety. However, rather than risk the lives of his passengers to the uncertainties of a bailout over the small treacherous atoll and surrounding shark-infested waters, Lieutenant Warner decided, in the face of overwhelming odds, to attempt the hazardous 4-hour flight to Iwo Jima. Having made his decision, he ordered all possible equipment jettisoned. Thereafter, with the success of the flight dependent on the continued operation of one engine, a runaway propeller causing severe aircraft vibration on the other, and a serious shortage of fuel, Lieutenant Warner skillfully piloted his aircraft to a safe landing at Iwo Jima with only minutes of fuel remaining.

Lieutenant Warner's outstanding feat of airmanship in coping with an airborne emergency situation conforms to the high standards established for the Koren Kolligian, Jr., Trophy and reflects great credit upon himself, the Pacific Air Forces, and the U.S. Air Force.

RECOVERY BY U.S. GOVERNMENT OF COST OF HOSPITAL AND MEDICAL SERVICES IN NEGLIGENT THIRD-PARTY CASES

Mr. BYRD of Virginia. Mr. President, I am in receipt of a report by the Comptroller General of the United States entitled "Review of the Government's Rights and Practices Concerning Recovery of the Cost of Hospital and Medical Services in Negligent Third-Party Cases."

It was forwarded to me as chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures by Comptroller General Joseph Campbell, under a letter dated May 6, 1960.

I ask unanimous consent that my analysis and comment on this review be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HARRY F. BYRD, OF VIRGINIA

The Comptroller General of the United States has found at least several million dollars a year slipping through legal loopholes which prevent the Government from recovering costs in accident cases involving thousands of persons receiving Federal hospitalization, medical treatment, etc.

This finding was made in a review of the Government's rights and practices concerning recovery of the cost of hospital and medical services in negligent third-party cases, which Comptroller General Joseph Campbell today forwarded to me as chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures.

The review developed that while provision is made for recovery of these costs in other areas, the law without apparent reason is silent or insufficient with respect to accident cases involving injury to members of the Armed Forces and their dependents, the Coast Guard, merchant seamen, veterans and others for whom Government medical care is furnished.

The magnitude of these errors of omission is shown by the Comptroller General's examination of Department of Defense records which reveal that in the 30-month period ending June 30, 1959, there were 13,500 accidents involving privately owned automobiles in which military personnel were injured.

The Comptroller General estimated that costs of Federal medical and related services in these cases averaged $10.5 million a year, or some $26 million for the 30-month period; but lacking specific authority, and under a 1947 Supreme Court decision, the Defense Department made no effort to recover any of these costs.

The Comptroller General found so-called third-party negligence reasonable to assume in 5,400 of the 13,500 accident cases because the injured military personnel were passengers or pedestrians. The unrecovered costs of medical and hospital services in these cases were estimated at an average of $4.2 million a year.

The military personnel injured in the other 8,100 accident cases were drivers of vehicles involved, and the Comptroller General said while incidence of "third-party liability in these cases is not known, it is reasonable to assume that it was present in a significant number of instances."

In the same review the Comptroller General found that the U.S. Public Health Service does not recover from negligent third parties the costs incurred by the Government in the treatment of injured Coast Guard personnel, merchant seamen, and others who are entitled to care in PHS hospitals at Government expense.

He found further that the Veterans' Administration, while successful in some degree in proceedings under general provisions of the Veterans Benefits Act, also lacks specific authority to recover medical costs from negligent third parties for accident cases treated through VA facilities.

The review found in some cases injured personnel may recover from negligent parties, but the Government can not recover from either party in the absence of specific legal authority. In other cases injured parties, having received medical care at Government expense, do not include such costs in their claims.

I concur in the Comptroller General's conclusions that Government medical care in these cases is not intended to relieve any one of any accident liability, and that the right of recovery should be uniform throughout the Government, with no exceptions. I shall introduce appropriate legislation as soon as it can be drafted.

Such legislation should be enacted promptly. The right of recovery in accident cases is already provided under the Federal Employees Compensation Act, and under Federal law relating to railroad employees, longshoremen, and harbor workers. The Defense Department and other agencies involved have concurred in the Comptroller General's recommendation for further legal remedy.

NATIONAL BROTHERHOOD AWARD TO SENATOR FONG FROM NATIONAL CONFERENCE OF CHRISTIANS AND JEWS

Mr. KEATING. Mr. President, last Thursday evening in Providence, R.I., the senior Senator from Hawaii [Mr. FONG] was presented the National Brotherhood Award by the National Conference of Christians and Jews for outstanding and devoted leadership. This is a very fitting and well-deserved tribute to one whose entire life has been devoted to promoting true understanding to the end that all men may live in harmony.

In his native Hawaii, our newest State of the Union, the aloha spirit pervades. Brotherhood is a living reality. Hawaii is a showcase of fine race relations and religious tolerance on display to peoples of both the Eastern and Western Hemispheres, who can learn from Hawaii that brotherhood is not only desirable but attainable.

In accepting the award the Senator from Hawaii delivered a notable address, in which he analyzed the factors contributing to racial harmony and cooperation in Hawaii and to the efforts of the people of Hawaii to hasten the brotherhood of man elsewhere. I commend this fine address to my colleagues and I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY U.S. SENATOR HIRAM L. FONG, BEFORE NATIONAL CONFERENCE OF CHRISTIANS AND JEWS, PROVIDENCE, R.I., MAY 5, 1960

It is indeed a great honor and a great privilege for my wife Ellyn and me to be with you this evening—to sit down with you and to break bread with you and to make your friendship.

To receive from you, friends I have just come to know, through your national president, Dr. Louis Webster Jones, this bronze award signifying service to the cause of brotherhood, moves me very, very deeply. I am doubly thankful for your kindness and for selecting me for this honor which I know I do not deserve.

My father and mother were Taoists. Were they living and here tonight amidst your warmth and friendliness, witnessing the receipt by their son of this very coveted service award from the National Conference of Christians and Jews, they would undoubtedly have remarked, "This is truly in accord with what Confucius has said, 'Under heaven all men are brothers.' "

That we should be meeting here in historic Providence, one of the queen cities of New England, pleases me greatly. I feel very much at home, for you see New England is a part of me. Three long, hard, but rewarding years of my formative life between 1932 and 1935 were spent not far from here, at Cambridge, Mass., as a Harvard Law School student. But even before Harvard, I was acquainted with New England. Its influence has been felt in my native Hawaii for 140 years—since the arrival in 1820 of the first group of 12 communities of Christian Congregational missionaries from New England.

It is amazing how tremendous was their and their children's contribution to the development and stability of Hawaii and how their Puritan philosophy has influenced Hawaii's outlook and life.

Through their influence, the Hawaiian language was reduced to writing, the Bible was translated, and schools were established. Through their influence, the first written constitution was approved in 1840, creating a supreme court and a representative body of legislators elected by the people.

Through their influence, prohibition was placed on immorality, gambling, drunkenness, theft, and violation of the Sabbath, much to the resistance of foreign sailors who, on several occasions, demonstrated by armed riots, not against the natives, but against the missionaries. Into the home of one of them several cannon shots were fired.

Architecturally, too, New England has left its visible mark on Hawaii. Even today, it is not unusual to see a Cape Cod cottage on any one of the seven inhabited islands.

New England's influence on me has been quite personal. Besides being a graduate of Harvard Law School, I am a graduate of the public school system which the Congregational missionaries inaugurated. My name of Hiram is taken from the Reverend Hiram Bingham, leader of the first group of missionaries. My religion is Congregational.

So, it is indeed a distinct honor and a great privilege for me to be speaking here tonight in New England, for to me it is in a sense in more ways than one, like returning home.

Your regional director, Mrs. Rozella Switzer, has asked me to discuss Hawaii's role in human relationships and I am happy to accede to her wishes.

Hawaii, it is claimed by historians, was discovered by Capt. James Cook, an Englishman. This claim, however, is disputed by the Chinese who relate this very plausible story. Ten years prior to Captain Cook's visit, a Chinese junk left the harbor of Hong Kong and sailed eastward across the vast Pacific. Dropping anchor at Waikiki, the captain pulled out his spyglass and scanned the shore. This is what he saw—beautiful Hawaiian maidens, dressed in grass skirts, dancing to the tune of ukuleles. Putting his spyglass down, he turned to his men and said, "Men, we must sail on, there is no laundry to be done here." And this is the reason there are so many Chinese laundries in New England.

The cook on the ship, however, was not convinced. He, too, picked up the spyglass and scanned the shore. What he saw, he liked. Putting down his spyglass, he jumped overboard and swam to shore. As he was a good cook, the captain would not sail without him.

After a whole week of search, he was found in the loving arms of a very amorous Hawaiian maiden. Yanking him from her charms, the crew took him down to the beach where, to make an example of him before all the men, the captain made him put on heavy boots and marched him up and down. With every step he took, the captain gave him a kick. After many kicks, the cook turned around and said, "Why kickee me?" And that is how Waikiki got its name.

Essential to a deeper understanding of Hawaii is a knowledge of its history, its geographical location, and of the peoples who settled there. Situated in the vast Pacific Ocean which covers one-third of our globe, the Hawaiian Islands number just eight out of the thousands of islands comprising Malaysia, Melanesia, Micronesia, and Polynesia. Archaeologists, anthropologists, and historians of these oceanic people and their culture virtually agree that stone-age Caucasian people in successive waves of migration from the Indochina Peninsula pushed eastward into Malaysia, then from there to Melanesia, then to the islands off and surrounding Tahiti, the heart of Polynesia. From Tahiti in great single and double canoes, they dispersed 2,500 miles north to Hawaii, southwest to New Zealand, and southeast to Mangareva, Pitcairn, and Easter Island.

Charcoals recently discovered in fireplaces used by the early settlers of Hawaii have been determined by the radio carbon method to date back a thousand years.

It is generally conceded that the first Polynesians landed on Hawaii some 1,200 years ago.

Little is known of the history of Hawaii until Capt. James Cook, of Great Britain, discovered the islands in 1778, and brought to a close the period of Hawaiian isolation which had existed for 10 centuries. Thereafter, fur traders of the Northwest and California, on their way to sell their furs in China, together with the demand for Hawaiian sandlewood and the outfitting of whaling fleets, made Hawaii an important port of commerce.

The strategic significance of Hawaii as a Pacific outpost became apparent in the middle of the 19th century, when a power struggle for dominance of the islands took place between England, France, and the United States.

Hawaii today could easily have been an English colony by right of discovery or by cession, or a French colony by force of arms.

A British naval force seized Hawaii and for 5 months the British flag flew over the islands in 1843. However, by that time, the influence of Americans in the islands and the gaining strength of the United States in the Pacific, assured the Hawaiian kingdom of its independence.

From 1795 when Kamehameha, a Hawaiian chieftain, took control of Hawaii, Maui, and Oahu, to 1893, a period of almost 100 years, the Hawaiian Islands were under the rule of seven kings and one queen. In 1893, Queen Liliuokalani was dethroned and a provisional government was formed. The Republic of Hawaii was established the following year.

Hawaii was annexed by the United States in 1898 and from 1900 to 9 months ago, it was an incorporated Territory of the United States with a representative legislature elected by the people but with an appointed Governor.

Ethnically, Hawaii is composed of many nationalities. The early settlers were the Polynesians. Caucasian sailors, adventurers, whalers, traders, and missionaries were second comers. Then followed Chinese contract laborers recruited to work the sugar plantations as the Hawaiians were not inclined to hard labor.

With the annexation of the islands to the United States in 1898, Chinese labor immigration was completely prohibited as the laws, which were then in force excluding Chinese laborers to the United States, were made applicable to Hawaii.

Japanese contract laborers in great numbers were also imported from 1885 until their exclusion in 1924.

Portuguese, Swedes, Germans, Koreans, South Sea Islanders, Puerto Ricans, and Filipinos also comprised immigrant groups brought in for the cultivation and the processing of sugar.

From these heterogeneous and diverse ethnic groups has evolved a homogeneous community—a community which has been termed by students of sociology as a "21st century society" where racial harmony and cooperation are normal and accepted conditions of life. This spirit of working together pervades civic, business, political, and cultural endeavors. There is sincere respect for, rather than mere toleration of, each other's nationality, traits, characteristics, and cultures.

Living in an island paradise, tropical and balmy, with high standards of health and livelihood; with a good, free educational system; a stable, democratic government; where no group constitutes a racial majority; with peoples on one hand steeped in Christian Puritan outlook and justice, and on the other, imbued with Buddhist and Confucian philosophies stressing human and moral conduct; cemented together and mellowed by the generous open-heartedness and carefree aloha spirit of its native Hawaiian people, we in Hawaii would like to believe that we are giving life to a community approaching the ideal of a world at peace and in concord.

President Eisenhower said to the people of India during his recent trip, "Hawaii cries insistently to a divided world that all our differences of race and origin are less than the grand and indestructible unity of our common brotherhood. The world should take time to listen with attentive ear to Hawaii."

Hawaii is indeed a showcase for true brotherhood. Elsewhere, even as in ancient days, massive discrimination continues to blight human relationships. Our news media carry daily evidence of man's inhumanity to man, evidenced by oppression, fear, hatred, bias, and discrimination in all quarters of our globe.

Behind the Iron and Bamboo Curtains, religious and political persecution persist. In Tibet, the Red Chinese regime continues mass genocide of the civilian population. Large numbers of people still flee East Germany and Red China, at risk of life and limb, to seek sanctuary in more tolerant oases. Anti-Semitism and anti-Christianity erupt as atheistic communism seeks to wipe out religious worship.

Belligerent nationalism is more the rule than not in modern struggles to throw off the yoke of colonialism. Too often such nationalism provokes wholesale bloodletting, with guns replacing ballots as the means of attaining parity and settling disputes.

Unmindful of man's growing yearning for equal status, many cling to senseless caste systems of the discredited past. As in South Africa, the ruling race shocked the world with its brutal methods to enforce apartheid.

There is something barbaric in today's repression of man's natural passion for equity.

Here in the United States we are not yet purged of intolerance and prejudice. Denial of voting rights; desecration of churches, schools, and public buildings; discrimination in employment and in public accommodations point up the urgent need for further progress in learning to live peaceably together. In connection with recent sitdown demonstrations at lunch counters, it is significant to note that many whites who object to Negroes sitting as customers on one side of the counter do not object to Negroes on the other side of the counter cooking and serving the food they eat. Irrational from a standpoint of logic, this attitude is bewildering from a standpoint of emotion as well.

In our glasshouse that is America, our discrimination and bigotry are in full view of a critical world. We receive considerable adverse comment for our shortcomings—and perhaps not enough recognition for the undeniable progress we are making. Unlike some of our critics, we are not sweeping our problems of civil rights under the rug. We are facing up to them.

This year, in the Senate of the United States, 100 representatives of 179 million Americans aired our civil rights disagreements in public over a period of 8 weeks. If ever opinions were thoroughly ventilated, these were. And when all the smog had lifted, what was the outcome?

Of the 100 Senators, 82 supported passage of corrective and progressive civil rights legislation. Only 18 voted for the status quo.

In school, we usually consider 70 a "passing" grade. While 82 may not elevate us to honor roll, it certainly is a very respectable score.

In terms of public sentiment, the 82 percent of the Senate favoring this year's civil rights bill represents a sizable majority of American people. Without such widespread approval, this civil rights milestone would not have been achieved. Although the bill does not go far enough to suit some people and goes too far to suit others, it does denote real progress.

To those who are impatient with our speed in achieving true brotherhood, let me point out that, until 1957, more than 80 years elapsed without passage of a single significant civil rights law. Now, just 3 years later, we have enacted a second major civil rights statute. Unquestionably, this reflects significant transformation in American attitudes.

In many areas of the United States, of course, we still have not matched the tolerance found in Hawaii where acceptance, without regard to race, color, or creed, and based on individual merit and standing is the general rule—the unwritten rule. Acceptance comes from the heart. It is not superimposed by such means as legislation, judicial process, or promotional campaigns.

For example, discrimination does not exist in Government employment. The Department of Public Instruction, administered by seven commissioners, has for its chairman, an American of Japanese descent, a commissioner of Chinese descent, and one of part-Hawaiian descent and four of Caucasian descent.

The University of Hawaii, with more than 8,000 full-time students is under the control of a board of regents of nine members—four of whom are of Caucasian ancestry, two of Japanese, two of Chinese, and one of Hawaiian ancestry.

The nine Public Housing Authority commissioners are composed of five of Caucasian, two of Chinese, one of Korean, and one part-Hawaiian ancestry operating dwellings housing more than 4,000 families.

Intermarriage between members of different ethnic groups has been and is common and has produced fine, outstanding people, many of whom are leaders in the business, professional, political, and religious life of the Islands.

In the matter of voting, Dr. Andrew W. Lind, professor of sociology at the University of Hawaii, states that "racial bloc voting, in the mainland sense of the vigorous control over an entire bloc of voters of a common race, does not occur in Hawaii, and even in the more restricted sense of voting exclusively for members of one's own ethnic group, it is so slight as to be inconsequential." He observed that "any politician of the slightest sagacity soon learns, if he does not already know, that the surest route to political suicide is an appeal on a racial basis."

I must confess there is some racial discrimination practiced by some social groups in Hawaii but in recent years, more and more private groups are opening their memberships to persons of all races. It may not be too long before racial bars are lifted altogether.

In the field of public accommodations, all of our restaurants, theaters, hotels, public parks, public beaches, public swimming pools, golf courses, tennis courts, and transportation facilities are free of any discrimination based on race, color, religion or national origin.

Justice is dispensed with equity. There has been no reported case in which any question of discrimination in the administration of justice appears to have been raised.

Even though racial harmony prevails in Hawaii, there are groups dedicated to furthering inter-racial relations such as the Hawaii Chapter of World Brotherhood, the Honolulu Council of Churches, and the Pacific and Asian Affairs Council. While we do not have a chapter of the National Conference of Christians and Jews in Hawaii, efforts in behalf of racial and religious understanding are carried on by the Council of Churches and World Brotherhood.

In addition, business organizations such as the Chamber of Commerce, Board of Underwriters, Commercial Club, Employers Council, Home Builders Association, and the Retail Board are comprised of individuals of varying racial extractions.

This is also true of civic, political, educational, fraternal, health, medical, veterans, and welfare groups.

Again this is true of the more than one dozen service organizations for young people.

The Honolulu Symphony Orchestra and the Community Theater include in their membership individuals of many races. I recall Community Theater productions that have had a Filipino Anna in the musical verson of "Anna and the King of Siam," better known as "The King and I." Another time a young lady of Japanese extraction as Kate in "Kiss Me Kate."

To bridge the gap between the two hemispheres, Hawaii has done many things. For instance, Hawaii sponsored an Afro-Asian student leader seminar where three dozen talented young college men and women from nearly as many countries on three continents conferred for 4 weeks on the place of higher education in society today.

Hawaii held an International Conference on Race Relations to discuss the conflicts and tensions which exist throughout the world between imperialistic powers and peoples imbued with the spirit of self-determination, with emphasis on the effect of economic change and nationalism on race relations in Africa, Asia, and the Western Hemisphere.

Hawaii held three East-West philosopher's conferences where an Asian conferee remarked that these meetings were the only ones in which Asians had felt free to express themselves frankly and did so.

For six years, the University of Hawaii has conducted an Asian Orientation Center for Mundt-Smith and Fulbright grantees headed for graduate study at mainland U.S. universities.

Last month, three prominent citizens of Hawaii accompanied by their wives began a tour of southeast Asia and India. Their mission is to meet and mingle informally with the peoples of the Pacific area. Each of the group represents a different race of the Pacific. Each has prospered through his individual merit in Hawaii's climate of racial understanding and harmony. In turn, each has contributed to Hawaii's growth and stature.

Chairman of the group is a Chinese attorney and businessman who served as the president of the senate in the last legislature of Hawaii before statehood.

Another is a Polynesian—Duke P. Kahanamoku, world renowned sheriff of Honolulu County and former Olympic swimming champion. He is accompanied by his wife, a Caucasian.

The third is a State senator of Japanese extraction who had been a county judge.

As representatives of the State of Hawaii, they have vital information to impart on their tour. They can speak from personal experience of America's growing feeling of racial understanding so well in evidence in Hawaii. They can cite specific accomplishments in Hawaii resulting from this understanding.

A group of three University of Hawaii students, one a mother of three, last week launched a statewide fund-raising campaign to finance scholarships for Asian students. They hope to expand the program eventually to include an undergraduate student exchange program. By September, these students have scheduled to operate a cultural exchange with Asian universities, beginning with Keio University, one of the largest private schools in Japan.

Nearly 2,000 elementary schoolchildren are participating in a "neighbor" language program to promote understanding through better communication. They are learning languages of the Far East under a program sponsored and conducted by the Hawaii Department of Public Instruction.

To promote better relations and understanding among the United States and the Nations of Asia and the Pacific, the Senate of the United States last week authorized a 3-year expenditure of $30 million to establish in Hawaii a Center for Cultural and Technical Intercharge between the East and the West. I hope that the House of Representatives will concur and make it a reality.

The Center is to have two major divisions: an International College where students from overseas and the United States can study together and an international training facility to provide technical instruction through on-the-job and inservice training for participants from other nations. It is expected to start off with 125 scholarship students and is to be increased to 2,000 after 5 years. Three-fourths will be from overseas and one-fourth from the United States.

The reason cited for the establishment of the Center in Hawaii was the uniquely favorable atmosphere there; a physical and a cultural climate in which students from the Orient can be at their ease; a community eager to participate in the program by opening its offices and homes to these students; and a community which itself displays the best qualities of East and West.

It is therefore manifestly evident that Hawaii, with its rich multiracial human resource, long and amicable history of ethnic integration, happy cultural interchange and strategic geography, has not in self-contentment and with detachment withdrawn herself into her own island sanctuary, but has diligently pursued numerous ways to contribute her good fortune and know-how to bring closer cooperation among her neighbors.

Clothed with the dignity of a sovereign state, she is confident that her people, few as they are, can effectively help to hasten the millenium of the brotherhood of man.

This we have accepted as the ultimate unfolding of our destiny, our great contribution to America. This we know is our transcendent mission. We live brotherhood, we believe in it, and we know it has real prospect for success nationally and internationally, for it satisfies the soul and has the force of logic.

We in Hawaii do feel a sense of history—not just of a dramatic past, great as it may be, but of a dynamic future with its promise of richer achievement benefiting humanity and auguring peace.

What we have accomplished in Hawaii in so short a period can well be duplicated by all communities. Many and propitious may have been the factors for Hawaii to so quickly attain a happy homogeneous community. Yet the lack of some of these factors should not render that attainment impossible elsewhere. It may perhaps take longer.

All communities are endowed with the substantive factors for success in human

relationship. All they need is to catalyze and to synthesize them. In Hawaii we have found it. You, I know in a great measure, have also found it. Surprisingly so, it is everywhere in some measure. In the Old Testament, a Book so dear to Christians as well as to Jews, Third Chapter of First Kings, we are told that the Lord appeared to Solomon in a dream and asked him what he would want and Solomon replied, "O Lord, my God, give thy servant therefor an understanding heart to judge thy people, that I may discern between good and evil; for who is able to judge this thy so great a people?"

It pleased the Lord, that Solomon had asked this thing and God said unto him, "Because thou hast asked this thing and hast not asked for thyself long life or riches or the life of thine enemies; but hast asked for thyself understanding to discern what is right, behold, I have done according to thy words. Lo, I have given thee a wise and an understanding heart and I have also given thee that which thou hast not asked, both riches and honor."

I thank you.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

CONSTRUCTION OF MODERN NAVAL VESSELS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1329, H.R. 10474.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H.R. 10474) to authorize the construction of modern naval vessels.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate resumed the consideration of the bill (H.R. 10474) to authorize the construction of modern naval vessels.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that excerpts from the report, justifying the need for the proposed legislation, be printed in the RECORD at this point.

There being no objection, the excerpts were orderd to be printed in the RECORD, as follows:

This bill would authorize the construction of 8,000 tons of amphibious warfare vessels and landing craft, 4,000 tons of patrol vessels, and 20,000 tons of auxiliary vessels.

VESSELS TO BE CONSTRUCTED

Amphibious transport, dock	1
Escort vessels	2
Fast combat support ship	1

REASON FOR AUTHORIZATION

The Navy's shipbuilding and conversion program for fiscal year 1961 involves 35 ships and 22 craft.

From prior shipbuilding authorization acts the Navy has sufficient authority to construct all of the vessels included in the 1961 program except for the tonnage involved in this bill.

The shipbuilding and conversion program of the Navy for fiscal year 1961 is directed toward the continued improvement and modernization of the Navy to enable it to discharge its assigned missions in the national defense.

Most of the ships now in use by the Navy were laid down during World War II. Many of them have already passed the midpoint of their useful lives. The shipbuilding program of the Navy is intended to provide a proper balance between old and new facilities and to avoid block obsolescence of the fleet.

It is elementary that control of the seas is a major consideration in the national defense plans.

DESCRIPTION OF VESSELS

Amphibious transport, dock

The amphibious transport, dock, will carry transport helicopters and landing craft. It was designed to replace the attack transport (APA) and attack cargo ship (AKA). The big advantage is that the men and their equipment will both be carried in the same ship. It will combat load, transport, and land about 900 troops and their equipment via helicopters and landing craft. It can carry six of the large transport helicopters, one large utility landing craft, and three of the smaller personnel landing craft or other equivalent combinations. Both the landing craft and the helicopters may be launched when the ship is underway or stopped.

The first of the LPD type was included in the fiscal year 1959 program, and the second was in the fiscal year 1960 program. This is the third of this type. It is essentially a repeat of the one included in the fiscal year 1960 program. The first one will be in the fleet about June 1962.

The amphibious transport dock (LPD) is a new 20-knot ship which was developed by the Navy and Marine Corps, especially for use in assault by vertical envelopment.

Escort vessels

These escort vessels are specially designed for optimum performance in locating and destroying enemy submarines. They can operate as part of a hunter-killer group, screen amphibious forces, patrol coastal waters for missile-firing submarines (continental defense) or escort convoys.

These two ships are essentially repeats of the two in the fiscal year 1960 program, which have improved seaworthiness plus signficantly increased antisubmarine warfare capabilities over previous escort vessels. One, and possibly both, will be fitted with a newly developed pressure-fired boiler.

They will carry the integral bow-mounted long-range sonar and the drone antisubmarine helicopters (Dash). An antisubmarine rocket launcher and antisubmarine torpedo launchers are provided for destruction of submarines at medium ranges. The drone helicopters carrying ASW torpedoes will be used for long-range attacks.

The armament of one 3"/50 RF twin forward and one 3"/50 RF single aft will provide for limited self-defense.

The first two of this type DE were in the fiscal year 1960 program. Two of this type DE are in the fiscal year 1961 program. Thirteen Dealey class DE and four Claude Jones class (diesel) have been authorized since World War II. These will give the Navy a total of 21 new escort vessels.

Fast combat support ship

The fast combat support ship is of a new design. It will operate as an integral unit of a fast task force to provide continuous replenishment of black oil, aviation fuel, diesel oil, conventional ammunition, fleet missiles up to and including Talos, selected underwater ordnance, special weapons and provisions and fleet freight for selective issue. The AOE's replenishment capability is about equivalent of 1⅕ the capacity of the large fleet oiler and one-fourth the capacity of the new ammunition ship and in addition, it will carry 250 tons dry cargo and 250 tons frozen foods.

SUMMARY OF THE 1961 SHIPBUILDING AND CONVERSION PROGRAM

The following information relates to the current shipbuilding and conversion program of the Navy. Much of it is not directly related to the authorization proposed by this bill, but is set out here for informational purposes.

Construction and conversion in 1961 program

Category	Number of ships	Tonnage unit	Required total
NEW CONSTRUCTION			
Combatant:			
Warships:			
Attack aircraft carrier (CVA)	1	61,000	61,000
Guided-missile frigates (DLG)	3	5,200	15,600
Guided-missile destroyers (DDG)	2	3,360	6,720
Nuclear-powered submarines (SSN)	3	3,600	10,800
Fleet ballistic missile submarines (SSBN)	3	6,600	19,800
Total, warships	12		113,920
Amphibious warfare and landing craft:			
Amphibious transport, dock (LPD)[1]	1	7,800	7,800
Landing craft, mechanized (LCM (6))	20	23	460
Total, amphibious warfare and landing craft	21		8,260
Patrol vessels: Escort vessels (DE)[1]	2	1,850	3,700
Total, combatant	35		125,880
Auxiliary vessels:			
Escort research ship (AG)	1	1,550	1,550
Oceanographic research ship (AGOR)	1	1,020	1,020
Auxiliary submarine, deep diving (AG(SS))	1	550	550
Fast combat-support ship (ACE)[1]	1	19,200	19,200
Combat store ship (AFS)	1	9,450	9,450
Total, auxiliary vessels	5		31,770
Service craft: Harbor tug, large (YTB)	2	270	540
Total, new construction	42		158,190
CONVERSIONS			
Destroyer (DD)	14	2,500	35,000
Auxiliary submarine (AG(SS)) (*Albacore* conversion)	1	1,345	1,345
Total, conversions	15		36,345
Total, 1961 program	57		194,535

[1] Contained in this bill.

STATUS OF SHIPBUILDING AND CONVERSION PROGRAMS FROM PRIOR YEARS

On January 1, 1960, 88 naval vessels were being built, or were awarded or assigned but not yet under construction. In addition, 17 vessels authorized were not yet awarded or assigned. Among the 88 vessels being built or awarded 73 are classified as major combatant ships (aircraft carriers through escort vessels) in the following types:

	Number
Forrestal-type aircraft carriers (CVA)	2
Nuclear-powered aircraft carrier (CVAN)	1
Nuclear-powered guided missile cruiser (CGN)	1
Guided-missile frigates (DLG)	18
Nuclear-powered guided-missile frigate (DLGN)	1
Guided-missile destroyers (DDG)	18
Escort vessels (DE)	1
Submarines (SS)	2
Nuclear-powered attack submarines (SSN)	15
Nuclear-powered guided-missile submarine (SSGN)	1
Fleet ballistic missile submarines (SSBN)	8
Amphibious assault ship (LPH)	8
Amphibious transport, dock (LPD)	2
Total	73

AVERAGE VESSEL COSTS

The average estimated unit cost of the six *Forrestal*-type aircraft carriers authorized to date is $217,703,800. The other major combatant ships have averaged estimated unit costs as shown below:

	Millions
Nuclear-powered guided missile cruiser (CGN)	$261.5
Nuclear-powered aircraft carrier (CVAN)	444.0
Guided-missile destroyer (DDG)	36.4
Escort vessel (DE)	11.2
Guided-missile frigate (DLG)	58.8
Nuclear-powered guided-missile frigate (DLGN)	148.1
Submarine (SS)	22.1
Nuclear-powered attack submarine (SSN)	58.7
Fleet ballistic missile submarine (SSBN)	102.2
Nuclear-powered guided-missile submarine (SSGN)	70.0
Amphibious assault ship (LPH)	56.7
Amphibious transport, dock (LPD)	39.2

The *Forrestal*-type carriers take approximately 3 years to build; one will be completed in 1960 and one in 1961.

NUCLEAR SUBMARINES (INCLUDING POLARIS)

There have been 37 nuclear-power submarines authorized (and one conversion) in the past. Of these, nine are Polaris submarines. The non-Polaris submarines are in stages of development as follows:

Completed, including the *Seawolf* (conversion)	9
Under construction	15
Construction not started	4

The Polaris are in stages of development as follows:

Completed	1
Under construction	8

NUCLEAR-POWERED SURFACE SHIPS

There are three nuclear-powered surface ships in the current shipbuilding program, the *Long Beach* (CGN–9), the *Enterprise* (CVAN–65) and the *Bainbridge* (DLGN–25).

COST

The estimated cost of the authorization contained in this bill is $157,900,000.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the third reading of the bill.

The bill (H.R. 10474) was ordered to a third reading, read the third time, and passed.

MESSAGE FROM THE HOUSE—ENROLLED BILL SIGNED

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the Speaker had affixed his signature to the enrolled bill (H.R. 11713) to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes, and it was signed by the President pro tempore.

PAYMENTS IN LIEU OF TAXES

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 893, S. 910.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 910) to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill (S. 910) to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes, which had been reported from the Committee on Government Operations, with an amendment, to strike out all after the enacting clause and insert:

That this Act may be cited as the "Payments to Local Governments Act of 1959".

DECLARATION OF POLICY

SEC. 2. (a) Although the United States is under no constitutional obligation to pay taxes, or to make financial contributions in lieu of taxes, to any State or any political subdivision or instrumentality thereof with respect to any property of the Federal Government, the Congress hereby declares that it is national policy to avoid demonstrable financial hardship upon such local governments caused by the exemption of Federal real property from taxation by local governments.

(b) It is the purpose of this Act to provide for the conduct of a comprehensive study to ascertain (1) the nature and extent of any continuing need for Federal contributions to those governments to relieve such hardships, and (2) the ways and means whereby any such hardship may be alleviated most effectively and economically. It is further the purpose of this Act to make temporary provision for the relief of those governments from such hardship, pending the completion of that study, by authorizing the making of certain Federal contributions to local governments in lieu of the payment of—

(1) special assessments levied after the effective date of this Act upon real property situated in urban and suburban areas to defray the cost of local public improvements;

(2) taxes with respect to Federal real property in the custody or control of taxable persons under lease, contract, or permit arrangements, to the extent that taxes with respect to that property are not paid by such taxable persons; and

(3) taxes upon Federal real property acquired after June 30, 1950, which is in the custody or control of any Federal agency for industrial or commercial use.

(c) In consideration for the payments authorized by this Act, the Congress expects that the recipients thereof will make all public services normally provided by them available to and with respect to the Federal Government, its property, and its officers and employees and their families, upon the same terms and conditions as such services are made available to or with respect to other property and individuals.

DEFINITIONS

SEC. 3. As used in this Act—

(a) The term "Federal agency" means any department, agency officer, or independent establishment in the executive branch of the Government of the United States, and any corporation now or hereafter subject to the provisions of the Government Corporation Control Act (31 U.S.C. 846);

(b) The term "Federal property" means any real property the legal title to which is held by the United States or any Federal agency;

(c) The term "real property" means any interest in land, and any improvement thereon, if such interest or improvement constitutes real property under law in effect within the State in which such property is situated;

(d) The term "controlling agency", when used in relation to any Federal property, means the Federal agency which is charged with the duty of administering such property;

(e) The term "Board" means the Federal Board for Payments to Local Governments established by this Act;

(f) The term "State" means any State of the United States;

(g) The term "tax authority" means any county, city, municipality, tax district, or other political subdivision or public entity of any State having authority under the law of such State to levy within its territorial jurisdiction any tax or special assessment upon real property;

(h) The term "tax" (except as otherwise specified) means any tax of general application levied according to value by any tax authority upon real property situated within its territorial jurisdiction, but does not include any tax levied upon the manufacture, purchase, sale, transfer, or use of any property or upon any income derived from any property;

(i) The term "taxable person" means any individual, partnership, private association, private corporation, or other nongovernmental legal entity;

(j) The term "special assessment" means any levy, other than a tax, imposed after the date of enactment of this Act by any tax authority directly upon real property situated within its territorial jurisdiction to defray the cost of any public improvement;

(k) The term "public improvement" means any street, road, bridge, sewer, water distribution system, drainage project, or other public improvement undertaken by or on behalf of any tax authority for the benefit of

residents of the geographical area over which such tax authority has jurisdiction; and

(l) The term "industrial or commercial use", when used in relation to any Federal property, includes any use made of such property for (1) the mining, manufacturing, fabrication, or repair of any article or commodity, (2) the generation of electrical energy, (3) the transportation of individuals or property, (4) the sale or leasing of any property, commodity, or service, and (5) the storage of property incident to any of the uses heretofore enumerated, but does not include the use of any such property for (A) the housing of individuals for which rent is received, (B) the storage of any agricultural commodity, or (C) any purpose for which the property, if privately owned or used, would by person of its use be exempt from tax under laws applicable within the tax authority of its situs.

FEDERAL BOARD FOR PAYMENTS TO LOCAL GOVERNMENTS

SEC. 4. (a) There is hereby established the Federal Board for Payments to Local Governments (referred to hereinafter as the "Board"), which shall be composed of five members appointed by the President, by and with the advice and consent of the Senate, who shall serve at the pleasure of the President. Not more than three members of the Board may be members of the same political party. The President shall designate one member to serve as Chairman of the Board.

(b) A vacancy in the Board shall not impair the right of the remaining members to exercise all the powers of the Board, and three members shall at all times constitute a quorum. The Board shall have an official seal which shall be judicially noticed.

(c) Each member of the Board shall receive compensation at the rate prescribed by law for Commissioners of the United States Court of Claims, and no member of the Board may engaged in any other business, vocation, or employment while serving as such member.

(d) The Board shall cease to exist on December 31, 1966.

POWERS AND DUTIES OF THE BOARD

SEC. 5. (a) The Board shall exercise the powers conferred upon it, and perform the duties imposed upon it, by this Act.

(b) In the performance of its functions under section 6 of this Act, the Board in its discretion from time to time may consult with the Advisory Committee established under section 7 of this Act to receive its advice and recommendations with regard to problems encountered by the Board in the performance of those functions. The Board shall consult from time to time with representatives of tax authorities and State governments, and such other persons as it may deem appropriate, in carrying out the provisions of this Act. The Board is authorized to pay to such representatives and persons, while serving without compensation for purposes of consultation pursuant to this subsection, transportation, and per diem as authorized by section 5 of the Act of August 2, 1946, as amended (5 U.S.C. 73b–2).

(c) As soon as may be practicable after the end of each period of six calendar months, the Board shall submit to the President, for transmittal to the Congress, a report concerning its operations during such period. Each such report shall contain full and complete information concerning the applications received and the payments ordered by the Board during such period under section 8 of this Act, together with such other information as may be helpful to the Congress in evaluating the operation of this Act and all other provisions of law authorizing the payment of taxes, or the making of payments in lieu of taxes, to States and to tax authorities.

(d) The Board may make such rules and regulations, not inconsistent with the provisions of this Act, as may be necessary for the performance of its duties, including such uniform rules, regulations, and forms as it shall prescribe for (1) the filing by tax authorities of applications for payments authorized by this Act, (2) the examination of such applications and the conduct of hearings thereon, and (3) the determination of action to be taken upon such applications.

(e) Subject to the civil-service laws and the Classification Act of 1949, the Board may appoint and fix the compensation of such personnel as may be necessary for the performance of its functions.

(f) The Board is hereby authorized to procure services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55(a)), at rates not exceeding $50 per day for the personal services of individuals.

(g) Subject to provisions of law and regulations relating to the classification of information in the interest of national security, the Board is authorized to secure from any Federal agency any information necessary to carry out its functions under this Act, and each Federal agency is authorized to furnish such information to the Board upon request made by the Chairman thereof.

SURVEYS AND INVESTIGATIONS

SEC. 6. (a) The Board shall conduct a comprehensive comparative survey to determine the nature and effect of—

(1) provisions of law in effect within the several States relating to the taxation of real property by such States and by tax authorities thereof; and

(2) existing provisions of Federal law providing for—

(A) the payment to any State or to any tax authority thereof of any tax or special assessment with respect to any Federal property or any personal property of any Federal agency;

(B) the making of any payment to any such government or authority in lieu of the payment of any tax or special assessment with respect to any such property; or

(C) the rendition of assistance to any State or to any tax authority thereof through the making of grants-in-aid, the sharing of revenues derived from properties of the United States, or through the furnishing of services or facilities by any Federal agency.

(b) The Board shall conduct a comprehensive study and investigation of the extent to which States and tax authorities thereof derive benefits directly or indirectly through payments made to them (1) under the provisions of law described in section 6(a)(2); (2) by persons residing or employed upon Federal property; and (3) for or in connection with any property, trade, business, occupation, or transaction situated or occurring upon Federal property.

(c) The Board shall conduct a comprehensive investigation to determine the extent, if any, to which there is need for additional legislation by the Congress to provide continuing financial assistance for States or tax authorities thereof to relieve hardship incident to the tax-exempt status of Federal property. Such investigation shall include inquiry to determine—

(1) the classes of Federal property, if any, with respect to which any such additional continuing assistance should be granted;

(2) the nature and extent of any such additional continuing assistance;

(3) the conditions, if any, under which such additional continuing assistance should be granted;

(4) the annual cost to the United States for providing such additional continuing financial assistance with respect to each such class of Federal property and with respect to all such classes of Federal property; and

(5) ways and means whereby States and tax authorities thereof may be accorded effective right to apply personal property taxes in effect within their several jurisdictions to industrial plant equipment, materials, supplies, and inventories owned by taxable persons and used by them for commercial purposes within plant facilities owned or controlled by departments and agencies of the United States Government.

(d) Within two years after the date of enactment of this Act, the Board shall submit to the President, for transmittal to the Congress, a comprehensive report containing—

(1) the text of all provisions of law referred to in subsection (a), together with an analysis of the purpose and effect of each such provision;

(2) the findings of the Board as to the facts disclosed by its studies and investigations made under subsections (b) and (c) of this section;

(3) its recommendations as to any additional legislation the need for which has been disclosed by its investigation under subsection (c) of this section;

(4) a detailed analysis of the relationship between any recommendations so made and the provisions of existing law referred to in paragraph (2) of subsection (a); and

(5) specific recommendations with respect to the future treatment of properties for which payments are temporarily authorized by title VII of the Federal Property and Administrative Services Act of 1949.

ADVISORY COMMITTEE

SEC. 7. (a) The President shall establish an advisory committee on Federal payments to local governments composed of twelve members appointed by the President, of whom six shall be officers or employees of Federal agencies, three shall be representatives of State governments, and three shall be representatives of tax authorities. One member shall be designated by the President to serve as chairman of the committee.

(b) It shall be the duty of the committee to—

(1) study the administration of this Act and all other Federal legislation authorizing the payment of taxes, or the making of payments in lieu of taxes, by Federal agencies to tax authorities, and problems arising in connection therewith;

(2) consult with the Board, upon its request, in an advisory capacity in the solution of such problems; and

(3) transmit from time to time to the Board and to the President for transmittal to the Congress a report containing a summary of the results of its studies, together with its recommendations for administrative or legislative changes which it may consider necessary or desirable for the efficient, economical, and equitable administration of such provisions of law.

(c) Members of the committee who are officers or employees of any Federal agency shall receive no additional compensation for service rendered under this Act. Other members may receive such compensation, not in excess of $50 for each day of service, as the President shall prescribe. All members shall be reimbursed for travel and other expenses necessarily incurred in the performance of their duties under this section in conformity with the provisions of section 5 of the Act of August 2, 1946, as amended (5 U.S.C. 73b–2).

TEMPORARY AUTHORIZATION FOR PAYMENTS TO TAX AUTHORITIES

SEC. 8. (a) Subject to the provisions of sections 9 and 11 of this Act, there is hereby authorized to be paid to any tax authority, upon its application made in conformity with the provisions of section 9 of this Act, for any period such amount as the Board may determine to be equal to the sum of—

(1) the amount which would be payable to such tax authority, with respect to all Federal property situated in any urban or suburban area within the territorial jurisdiction of that tax authority, upon any special assessment levied after the date of

enactment of this Act to defray the cost of any public improvement, if such property were owned by a taxable person, except that no such sum shall be payable unless such special assessment in fact was levied upon real property owned by taxable persons;

(2) the amount of the real property tax which would be payable to such tax authority, with respect to all Federal property situated within the territorial jurisdiction of that tax authority which is in the custody or control of a taxable person pursuant to a lease, contract, or permit executed by a Federal agency, if such property were owned by a taxable person, diminished by the amount of any real property or other tax measured by the value of such property which is payable by the taxable person having custody or control thereof to such tax authority for such period with respect to that property, or for or on account of the possession or use thereof; and

(3) such amount, if any, as the Board may determine to be payable in conformity with subsection (b) as to all Federal property situated within the territorial jurisdiction of such tax authority which (A) has been first acquired by any Federal agency after June 30, 1950, (B) is in the custody or control of a Federal agency, and (C) is devoted to or held for predominantly industrial or commercial use.

(b) Subject to the provisions of subsection (c), the sum referred to in subsection (a)(3) shall be a sum equal to—

(1) the nominal Federal liability, which shall be the amount of the real property tax which such tax authority would have been entitled to receive for such period on account of such property if it had been owned by a taxable person; increased by

(2) the specific Federal liability, which shall be the aggregate amount of the expenditures necessarily incurred by such tax authority during such period in furnishing directly to or on behalf of such property any facilities or services of kinds not customarily furnished by such tax authority to or on behalf of other properties of like class; and diminished by

(3) the credit against Federal liability, which shall be the aggregate value of governmental services of kinds normally furnished by tax authorities which, during such period, were furnished within the territorial jurisdiction of such tax authority by Federal agencies controlling such property, computed upon the basis of the unit cost incurred by such tax authority in providing like services, or (in the absence of such data) the unit cost incurred therefor by comparable tax authorities in the same vicinity; and further diminished by

(4) any additional credit against Federal liability, which shall be such sum as the Board may determine to be required to assure equitable treatment of Federal property situated within the territorial jurisdiction of any tax authority which, under State or local law or public policy, grant any exemption or immunity from the payment of any tax of any kind, or any reduction in the rate or amount of any tax paid, with respect to real property of any taxable person as an inducement to such taxable person to engage in industrial or commercial activities within the territorial jurisdiction of such tax authority.

(c) No payment determined pursuant to subsection (b) to be payable with respect to any Federal property situated within the territorial jurisdiction of any tax authority shall exceed the amount which the Board finds to be equivalent to the tax which would be payable with respect to such property if it had been developed and used by a taxable person for a similar private industrial or commercial use within the territorial jurisdiction of such tax authority or in nearby comparable communities, as determined by the Board.

APPLICATIONS AND PROCEDURE FOR DETERMINATION AND PAYMENT

SEC. 9. (a) Each application made by one or more tax authorities for any payment under section 8 of this Act with respect to one or more parcels of Federal property situated within the territorial jurisdiction of such tax authorities shall specify (1) the Federal property or properties with respect to which claim is made for such payment, (2) the basis upon which such claim is made, and (3) the period of time for which such claim is made.

(b) Each application made by any tax authority for any payment under this Act shall be for a period not in excess of twelve months, beginning not earlier than January 1, 1960, and ending not later than December 31, 1964. No tax authority may file with the Board more than one application for any period with respect to the same Federal property. Each application for payment for any period must be filed within six months after the end of such period.

(c) Upon the filing of any application under this Act by one or more tax authorities for any such payment, the Board shall—

(1) examine such application to determine whether it states a probable basis for the making of any such payment;

(2) if such probable basis is found to exist, conduct a full and fair hearing upon such application;

(3) upon the basis of evidence received at such hearing, or obtained by such field investigation as the Board may determine to be appropriate, or both, prepare its report in which it shall set forth its findings of fact and its conclusions as to the merits of such application; and

(4) enter its order thereon, prescribing the amount, if any, awarded to each applicant who joined in such application, and the portion thereof to be paid under this Act by each controlling agency administering real property chargeable in whole or in part for such award.

(d) Upon the entry of the order of the Board upon any application for any payment under this Act, the Board shall give notice thereof to each tax authority which was a party to such application. Each such order shall become final upon the expiration of a period of sixty days after its entry, unless the Board during such period has granted a rehearing of such application upon request made by any applicant who joined therein. Not more than one rehearing shall be granted upon any application, and any order entered by the Board after a rehearing of any application shall become final upon its entry. A certified copy of each final order of the Board shall be transmitted (A) to such tax authority joining in the application upon which such order was entered, and (B) to each Federal agency charged thereby with the payment of any part of any award made thereby.

(e) Upon the certification by the Board to any Federal agency of any final order of the Board awarding to any tax authority any payment under this Act with respect to any Federal property controlled by such agency, such agency shall pay to such tax authority the amount specified in such order.

(f) Each final order made by the Board under this Act for the payment of any award shall be final and conclusive upon all tax authorities and upon all Federal agencies, unless such order is modified or reversed by a court of competent jurisdiction or is adjudged invalid in whole or in part by the General Accounting Office.

HEARINGS CONDUCTED BY THE BOARD

SEC. 10. (a) The Board (or any duly authorized member thereof or any examiner duly designated thereby) may conduct any hearing or investigation authorized by this Act; administer oaths and affirmations; examine witnesses and receive evidence at any place in the United States; and require by subpena the attendance and testimony of witnesses, and the production of documentary evidence, relevant to the matter under inquiry. Such attendance of witnesses and the production of such documentary evidence may be required from any place in the United States at any designated place of hearing. Witnesses summoned shall be paid the same fees and mileage paid to witnesses in the district courts of the United States.

(b) In the case of any disobedience by any person to a subpena issued under subsection (a), the Board may invoke the aid of a district court of the United States in requiring the attendance and testimony of such person, or the production of documentary evidence by such person, or both. The district court of the United States for any judicial district within which any such inquiry is conducted may, in the case of the contumacy or refusal of any person to obey a subpena issued under subsection (a), issue an order requiring such person to appear (and to produce documentary evidence if so ordered) and to give evidence relating to the matter in question; and any failure to obey such order of the court may be punished by such court as a contempt thereof. For the purposes of this subsection, the order or process of the district court for any judicial district may be served and shall be effective within any other judicial district of the United States.

(c) Hearings conducted under subsection (a) shall be open to the public. In any such hearing upon any application made under section 9, each applicant shall have the right to present its case with the assistance of counsel; to offer oral or documentary evidence; to submit rebuttal evidence; and to conduct such cross-examination as may be required for a full and true disclosure of the facts. An accurate stenographic record shall be taken of the testimony of each witness in each hearing conducted by the Board, and a transcript of such testimony shall be filed in the office of the Board.

LIMITATIONS AND SAVING PROVISIONS

SEC. 11. (a) No payment may be made under this Act to any tax authority with respect to any parcel of Federal property for any period for which such tax authority is eligible to receive from any Federal agency any payment with respect to such property under (1) any other provision of law which authorizes any payment of real property tax or any payment in lieu of the payment of real property tax, or (2) any revenue-sharing arrangement.

(b) No payment may be made under this Act to any tax authority with respect to (1) any power property owned or controlled by the Tennessee Valley Authority, or (2) any portion of any multipurpose property owned or controlled by such Authority which is allocated to power purposes. With respect to those properties and parts of properties, such Authority shall continue to make payments to States and to tax authorities, as a charge against its power operations, in accordance with section 13 of the Tennessee Valley Authority Act of 1933 (48 Stat. 66, as amended; 16 U.S.C. 831L). With respect to other properties and parts of properties owned or controlled by the Tennessee Valley Authority, such Authority shall make payments in accordance with the provisions of this Act in addition to the payments required to be made under section 13 of the Tennessee Valley Authority Act of 1933.

(c) Nothing contained in this Act shall bar the making of any payment under any provision of law or revenue-sharing arrangement referred to in subsection (a) or subsection (b).

(d) The failure of any Federal agency to make, or to make timely payment of, any payment authorized by this Act with respect to any Federal property shall not subject—

(1) any Federal agency, or any purchaser of such property from any Federal agency, to the payment of any tax, penalty, penalty interest, or other charge; or

2) such property to any lien, attachment, foreclosure, or other proceeding not specifically authorized by this Act.

(e) Nothing contained in this Act shall limit or impair any power which any tax authority may have under any other provision or principle of law to levy upon or collect from any taxable person any tax upon any interest in Federal property possessed by such person, or with respect to the possession or use by such person of any Federal property.

APPROPRIATIONS

SEC. 12. There are hereby authorized to be appropriated to the Board, and to each Federal agency controlling any Federal property, such sums as may be required for the discharge of its duties and obligations under this Act. Any sum determined by the Board to be payable under section 8 of this Act by any Federal agency shall be considered to be a necessary expense of such agency.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the order for a quorum call be rescinded.

The PRESIDING OFFICER (Mr. LAUSCHE in the chair). Without objection, it is so ordered.

Mr. HUMPHREY. Mr. President, I am happy to open the discussion and debate on S. 910, which was introduced on February 3, 1959, on behalf of a number of Senators. I ask unanimous consent that a list of the sponsors of S. 910, calendar 893, be printed at this point in the RECORD.

There being no objection, the list of sponsors was ordered to be printed in the RECORD, as follows:

Mr. HUMPHREY, Mr. KUCHEL, Mr. BUSH, Mr. DOUGLAS, Mr. ERVIN, Mr. GOLDWATER, Mr. JACKSON, Mr. MAGNUSON, Mr. SCOTT, Mrs. SMITH, Mr. WILEY, Mr. CANNON, Mr. MOSS, Mr. BARTLETT, Mr. KEATING, Mr. HRUSKA, Mr. CARLSON, Mr. CLARK, Mr. CURTIS, Mr. ENGLE, Mr. BENNETT, Mr. MANSFIELD, Mr. BIBLE, Mr. ALLOTT, Mr. MCCARTHY, Mr. RANDOLPH, Mr. ANDERSON, Mr. MURRAY, Mr. JORDAN, Mr. HART, Mr. MCNAMARA, Mr. YOUNG of North Dakota, Mr. SALTONSTALL, Mr. JAVITS, and Mr. GRUENING.

Mr. HUMPHREY. Mr. President, S. 910 would authorize, for a 5-year period, from January 1, 1960, through December 31, 1964, first, a very limited program of payments in lieu of taxes on industrial or commercial real property acquired by the Federal Government after June 30, 1950; second, payments in lieu of special assessments levied after the effective date of the act in urban or suburban areas, if such assessments were also levied on real property owned by other taxable persons; and, third, payments in lieu of taxes on the interest of the Federal Government in real property in the custody or control of taxable persons under a lease, contract, or permit to the extent that taxes on that property are not already paid by taxable persons.

The program would be administered by a five-member, bipartisan Federal Board for Payments to Local Governments, appointed by the President, subject to Senate confirmation. A taxing authority would be required to file an appropriate application, specifying the Federal property involved, the basis of its claim and the period for which the claim is made—not to exceed 12 months in any single application. The Board, after determining the existence of a probable basis for the claim, and conducting a hearing if a basis is found to exist, would be required to determine and certify to the controlling Federal agency the amount of payment to be made to the local taxing authority.

In the case of special assessments, the amounts payable would be the same as that payable if the property subject to such assessments were owned by a taxable person. The amounts payable on Federal property which is in the custody or control of taxable persons, pursuant to a lease, contract, or permit, would be the same as that payable if the property were owned by a taxable person, diminished by the amount of any tax measured by the value of the property which is payable by the taxable person having custody or control. The payment to be made, with respect to industrial or commercial property which was acquired by the Federal Government after June 30, 1950, and which remains in Federal custody or control, would be based upon the amount of local taxes which would have been payable had the property been privately owned, increased by additional expenditures incurred by the taxing authority in furnishing certain services to the Federal property, and diminished by the aggregate value of local-type governmental services furnished by the controlling Federal agency, further diminished by any additional credit against Federal liability resulting from any exemption, immunity, or reduction in the tax rate or amount, if such are available, under State or local law, to private persons as an inducement to engage in industrial or commercial activities within the territorial jurisdiction of the particular tax authority. The Board's decisions are made final and would be conclusive upon all tax authorities and Federal agencies, unless such order is modified or reversed by a court of competent jurisdiction, or is adjudged invalid in whole or in part by the General Accounting Office.

I should state here that provision is made for what is called judicial review or judicial appeal. I make that statement because I recall that in committee, in our deliberations on the bill, there was insistence that such a provision be included. I am not certain, but I believe it was the distinguished senior Senator from North Carolina [Mr. ERVIN] who asked that such a provision be included.

An important feature of this bill is a provision designed to aid the Congress in determining whether additional permanent legislation in this field is required. To accomplish this purpose, provision is made for the Board to conduct a comprehensive study and make a case-by-case analysis of virtually every phase of fiscal and related problems of local taxing authorities arising out of Federal immunity from local real and personal property taxes, including the operation of existing programs. Included in the study would be a complete compilation of all State tax law relative to real property taxation and all Federal law relative to Federal payments to State and local taxing authorities. The Congress would receive semiannual reports from the Board on the operation of the program and, within 2 years after the date of enactment, a comprehensive report, embodying the results of its very broad study, accompanied by appropriate proposed legislation, detailing its recommendations with respect to any future legislative program.

This broad and comprehensive study authority of the Board is designed to provide, for the first time, a forum to which local taxing authorities may present their cases, regardless of whether or not they may be entitled to any payments. It is the purpose of these study provisions to enable the Board to compile all of the factual information needed to enable the Congress to legislate effectively in this field and to evolve a uniform program on a national basis which will provide local taxing authorities with the relief to which they may be entitled without unduly burdening the Federal Treasury.

Mr. President, the bill represents the culmination of more than 10 years of continuous efforts by the Committee on Government Operations to develop a program which would afford some measure of relief to local communities which have suffered losses as the result of the presence of Federal tax-immune property in their jurisdictions, but which would not do violence to the principle of Federal tax immunity or constitute an undue burden on the Federal Treasury. Through the years, many hundreds of witnesses have been heard.

I might add that I have listened to all of them. I have been handling the proposed legislation for the past 10 years, having served as a member of the President's Commission on Intergovernmental Relations, being appointed by President Eisenhower after an act of Congress called for the establishment of the Commission. I was one of the senatorial members of the Commission and gave considerable time, and I hope constructive thought, to the problems of local governments and their relationships to the Federal Government, particularly in the field of financing, in Federal and State tax matters and other matters pertaining to the so-called tax immunity features of Federal properties. Many volumes of testimony have been compiled, and numerous reports have been made by interested groups, all of which have been carefully studied by the committee.

Based upon these many years of study and consideration, the committee has come to the following conclusions:

First. There is an urgent need for immediate legislative action to relieve local taxing authorities from unjustified and inequitable burdens and hardships which have been imposed upon them as the result of large-scale Federal acquisition of various types of property which

has operated to remove such property from the local tax rolls. This, of course, means a reduction in local tax revenues.

Second. Because of the extremely complex nature of the subject and the many variables which are involved, it is not possible to devise a comprehensive program which will operate in a fair and equitable manner, and which is not likely to involve huge expenditures of Federal funds and possible windfall payments to communities which have actually been benefited rather than harmed by the presence of Federal installations.

Third. The only equitable type of program which is possible is one in which payments are based upon individual cases and situations as they are presented individually and documented individually, and as information relative to each situation is compiled, evaluated, and assessed on its merits. That is the purpose of the Federal Board to which I referred earlier.

Mr. President, S. 910, as amended, would provide for the beginning of such a program, on a 5-year trial basis. It would permit modest payments—I might add, very modest—in limited areas, subject to several limitations which have been carefully worked out. It has the support of all of the major organizations representing taxing authorities, including the National Association of County Officials, the American Municipal Associations, the National Association of Tax Administrators, and 35 Members of the U.S. Senate, including Senators from the eastern public lands States.

In addition, this bill would implement, in principle, many of the major recommendations of the Commission on Intergovernmental Relations, to which I referred a moment ago, and upon which I serve as a member, relative to payments in lieu of taxes. Furthermore, nothing contained in this bill would have any effect upon existing payments or revenue-sharing arrangements authorized by law.

I desire to state very emphatically, Mr. President, that S. 910, as amended, is most definitely not a giveaway program; it will not open the gates to unlimited and unrestrained payments by the Federal Government to local communities; and it is not discriminatory.

Great care has been taken to incorporate in the bill adequate safeguards and various protective measures to insure that no community will receive payments to which they are not entitled. Some of these protective measures are, first, a provision denying payments to any community which is receiving a Federal payment for the same property under another Federal program; and with respect to commercial or industrial real property; second, a provision denying payment to any taxing authority on any Federal property in the custody or control of taxable persons pursuant to a lease, contract, or permit executed by a Federal agency, if the lessee, contractor, or permittee is taxed on that property; third, a provision insuring that no Federal payment will be required by the bill with respect to any TVA property allocated to power purposes; fourth, a provision that no payments in lieu of special assessments will be made unless such assessment was also levied on real property owned by other taxable persons; and, fifth, with respect to commercial or industrial property, (a) the 1950 cutoff date; (b) a rigid formula for determining the amounts of payments, in the event of a showing of eligibility and entitlement; (c) a provision that in no event can the Federal payment exceed an amount equivalent to the amount of the tax, had the property been privately owned by taxable persons; and (d) a provision that the Federal property will receive the same tax benefits offered by a taxing authority to private taxable persons.

It has been alleged that the bill is discriminatory. I have said it is not, and I believe the facts bear me out. Such an allegation is entirely without merit. It is true that the coverage of this bill is limited, and that numerous communities will not receive payments if the Federal industrial or commercial properties in their jurisdictions were acquired after June 30, 1950. However, without a cutoff date, the cost of this program would be exceedingly high—I should think even so high that it would not be acceptable; the 1950 date represents the beginning of a period of expanded Federal acquisition; and a large number of communities have been able to accommodate themselves to the effect of Federal acquisition prior to that date. Moreover, because this bill covers only a limited category of property, that does not make it any more discriminatory than the 55 existing laws which authorize some type of Federal payments to local communities, covering some and excluding others. Finally, it is stressed that this is not permanent legislation, although it is hoped that it will point the way to permanent legislation, in the event that the Congress deems it desirable, and if the facts necessitate it. If there are defects in the operation of this program, as applications and evidence which are presented to the Federal administrative Board are analyzed and developed, the Board will make reports and recommendations to the Congress for improvements, and the Congress will be in a position to make the final determination, in each area, based not upon abstract, theoretical studies, but upon concrete, documented evidence concerning the problems which face communities throughout the Nation.

Mr. President, I believe that every Member of this body is well aware of the dual nature of his responsibilities. As Members of the U.S. Senate, we owe a duty to the people of this great Nation to safeguard the Federal Treasury. At the same time, we owe an equally important duty to the people and governments of the States which we represent. Many of us in this body have been privileged to serve as State or local government officials. During that service, we have become very familiar with the serious fiscal problems of local governments. Their sources of revenue are extremely limited, but the demand for services goes on. The basic source of income to provide these services to the taxpayers of each community throughout the land is the tax on real property. From this source, communities must pay the cost of schools, police, fire and numerous other necessary services. However, the Federal Government has been continuously acquiring real property in numerous communities, taking it off the tax rolls, and depriving the local taxing authorities of vital income. In some instances, an overall benefit results to the community from the presence of the Federal installations. In other instances, however, the community is required to furnish additional services to such installations, thereby burdening the community further, while removing substantial portions of its revenue-producing property.

It is this situation, Mr. President, that this bill aims to correct. Bear in mind, however, that no community will be able simply to walk in and tell the Federal Board that the Federal Government has acquired real property and that the local taxing authority should be reimbursed. On the contrary, the local taxing authority will be required to establish the existence of a probable basis for a claim—in other words, the burden of proof will rest upon the local taxing authority; and only after a careful examination by the Board of all aspects of the situation will the local taxing authority be able to obtain a payment; and even that payment will be subject to a carefully designed formula, which will insure that the community will receive no more than the amount to which it can prove entitlement.

Another consideration is involved in this bill: As I have indicated previously, the real-property holdings of the Federal Government have reached enormous proportions, and entail tremendous expenditures. If Federal agencies are required, in proper cases, to make such payments, as are provided for in this bill, that should serve as an incentive to these agencies to dispose of numerous substantial holdings of commercial and industrial real property which should be in the hands of private industry and on the tax rolls of the communities in which they are located.

In other words, this bill would be an economy measure, by providing an incentive for the Federal Government to release some of its holdings and sell some of them to private groups and industries, thereby putting those holdings back on the local tax rolls, and at the same time relieving the Federal Government of the cost of the maintenance and care of the facilities. I believe that if this bill is passed, the agencies of the Federal Government will reexamine their real-estate holdings, for example, and their industrial and commercial properties, having in mind the objective of being able to divest themselves of as many of these properties as would be prudent and economically desirable.

Mr. President, Senate bill 910, as amended, represents the firm conviction of the Committee on Government Operations that no comprehensive program is possible—at least, at this time—and that the only feasible approach to a solution of this troublesome problem is by means of a limited program of payments in lieu of taxes, coupled with a case-by-case

consideration by an administrative board of the relative merits of individual cases and situations, within limitations established by law. It is also our firm conviction that any further studies of this problem which are unrelated to specific situations are simply futile and meaningless. Virtually all the existing statutes which provide either for payments of taxes, in lieu of taxes, or shared revenue arrangements have been tailored to meet specific needs which became apparent in connection with consideration of other legislation. It is quite apparent that any future legislation must be based upon the result of the case-by-case studies made by the Board which would be established by this bill.

Mr. President, I have studied this problem for many years, as mayor of a good-sized city; as a member of the Committee on Government Operations, and at one time chairman of its Subcommittee on Intergovernmental Relations; and as a member of the Commission on Intergovernmental Relations and its Study Committee on Payments in Lieu of Taxes and Shared Revenues. I am not exactly what one might call a "Johnny Come Lately" in this field. Based upon this experience, it is my sincere conviction that Senate bill 910, as amended, is a reasonable, sensible, and logical approach which will enable the systematic compilation, on a case-by-case basis, of information relative to the needs of each community in which Federal property is located. The Congress will have the benefit of a report from the administrative Board, detailing its activities, every 6 months; it will have a comprehensive report from the Board, based upon the cases adjudicated by it and the field studies conducted with respect to other types of cases, within 2 years after the effective date of this act; and the Congress will have a solid foundation upon which to base further policy determinations.

I should like to say a few words with respect to the probable cost of the program provided for by the pending bill. The numerous variables involved in determining cost make any accurate estimate extremely difficult. That can only be determined as each application comes in. In other words, the cost will be related directly to the ability of the local taxing authority to prove its case under the severe and direct limitations provided by the bill, in which there is provided a formula, a limitation by means of the cutoff date of June 30, 1950, and also several other limitations in regard to payments in lieu of taxes.

Concerning industrial or commercial real property acquired by the Government after June 30, 1950, although the properties falling into this category are generally identifiable, the potential cost of Federal payments on such properties cannot be determined without a prior determination of, first, their assessed value; second, applicable local tax rates for each specific piece of property; and, third, the adjustment which would be applicable under the formula provided in section 8 of the amendment. With respect to the assessed value of the properties involved, although the cost to the Federal Government of each property is known, assessment practices in the thousands of assessment districts throughout the United State vary widely; and even in a single assessment district, the ratio of assessed value to full value may differ for similar properties. Finally, even if the Federal Board finds that an applicant qualifies, the application of the formula contained in section 8 of the amendment makes it impossible to provide a cost estimate, since no forecast may be made as to which factors will be applicable in any given case, which cases will be entitled to payments following the application of the formula, or the amounts which finally will be payable.

With respect to the other two categories for which payments may be made under the program, it is impossible to forecast the special assessments which local taxing authorities are likely to levy on Federal property in the future. I qualify that by saying that special assessments for improvements on Federal property are no different from those for improvements on private property. There will be no discrimination in that connection. But no one can predict what assessments will be levied on private property in Minneapolis, Minn., for example, because of improvements by way of streets and sidewalks, as compared with assessments for improvements made on property owned by the Federal Government in particular communities.

It is difficult to estimate the cost of Federal payments on Federal real property in the custody or control of taxable persons under lease, contract or permit arrangements, since State and local law applicable to such property varies considerably, and the value of the Federal interest as well as the tax equivalent are difficult to estimate.

Bearing the foregoing limitations in mind, the Bureau of the Budget, in 1956, when a virtually identical measure, S. 4183, was under committee consideration, estimated that the payments for special assessments would probably range between $200,000 and $300,000 per year; payments for property in the custody of private persons under lease, contract or permit might amount to several million dollars per year; and payments on commercial or industrial property might run between $10 and $20 million annually. It was stressed, however, that the numerous individual differences and imponderables involved made these estimates more in the nature of a guess, rather than a reliable estimate.

It appears obvious that these questions can never be resolved either in the abstract or by a general study, but can only be determined by an administrative board, on the basis of its consideration of all the factors involved in each case which comes before it. In fact, I believe that anything less than a full-time study by a quasi-judicial body will be futile.

Mr. President, the time has come when we must face up to this problem in a forthright, realistic manner. We have studied this subject to death. What we need now is action. Certainly, a modest, experimental approach to this serious problem for a 5-year period, such as this bill would establish, is not too much for hard-pressed communities to expect from the Federal Government.

It is true that we need more information. But the committee is convinced, after 10 years of study, that the information we need can only be compiled in the manner provided for by S. 910, as amended. We do not contend that this bill is perfect. We are convinced, however, that it represents the only realistic approach. We are confident that if each Member of this body searches his conscience, he will come to the conclusion that it is incumbent upon us to take some action right now. We are also confident that the reasonableness and moderation which characterize this bill make it possible for a large majority of the membership of this body to support it.

Mr. PROUTY. Mr. President, authorities of the town of Jericho, Vt., contacted me a few years ago concerning the possibility of obtaining some compensation from the United States for the loss of tax revenue resulting from some 51 land condemnations in the creation of a military range which lies within the towns of Jericho, Underhill, and Bolton.

The original taking of the land goes back to the 1920's, and further condemnations were made in the decades following the twenties.

I have before me a table which shows that between 1929 and 1956, the town of Jericho, Vt., lost almost $85,000 because title to all of this farmland went to the Federal Government.

To give Senators an idea of what a serious tax loss Jericho has suffered, I point out that the town contains about 21,243 acres of land, and approximately 5,000 acres have been taken through 51 separate condemnation proceedings. This means that Jericho has suffered a loss of approximately one-fourth of its tax revenue through the years.

Jericho, Underhill, and Bolton, Vt., considered together, have lost tax revenues from 11,000 acres. I understand that the Jericho loss was greater than the others because much of this land was arable and under cultivation. From time to time the range land condemned by military authorities has been used by the General Electric Co. plant at Burlington in connection with defense production, but this use has in no way produced either direct or indirect income to the town of Jericho.

I do not have figures which would show what the tax loss at Jericho has been during the past 4 years, but, based on previous figures, it is safe to say that for these 4 years the tax loss would run in the neighborhood of about $32,000. This, coupled with a loss of about $85,000 between the years 1929 and 1956, means that Jericho has been deprived of about $116,000, which could be put to excellent use by this small community.

The lands which I have been talking about, which were condemned by the Federal Government, were acquired for an Army range, and were later transferred to the Air Force, and subsequent acquisitions for the Air Force range have all been acquired from private parties.

The Department of the Air Force has been operating units in the past at Ethan Allen Air Force Base, but these units are being withdrawn.

The problems which have existed in the past will continue to plague Jericho and neighboring communities, because title to the 11,000 acres of land I mentioned previously is still in the hands of the Federal Government.

I note from reading the provisions of S. 910, the bill now before the Senate, that the purpose of the bill is to make temporary provision for the relief of those local governments which have suffered hardship because of Federal land acquisitions.

I note further that the bill authorizes the making of certain Federal contributions to local governments in lieu of the payment of special assessments levied after the effective date of the bill upon real property situated in urban and suburban areas to defray the cost of local public improvements.

I have been in touch with staff members of the Committee on Government Operations and am advised that Jericho, Vt., and neighboring communities would undoubtedly benefit from the provisions in S. 910. The provisions to which I refer are in section 8 and would permit Federal contribution when a special assessment has been levied upon real property in a jurisdiction where there is located Federal property.

Just so there will be no misunderstanding about the situation, I should like to ask the distinguished senior Senator from Minnesota, the following question:

Since the Federal Government owns and makes some use of 11,000 acres of land located in Jericho, Vt., and surrounding communities, would not Jericho and these neighboring towns be entitled to a financial contribution from the Federal Government when assessments are levied for public improvements such as street, road, bridge, sewer, water system, and drainage?

Mr. HUMPHREY. The answer to the question is: Yes, provided all taxable property of the area were subject to the same assessment or levy—in other words, so long as it is not discriminatory.

Mr. PROUTY. I understand that.

Mr. HUMPHREY. The Senator's question is answered in the affirmative.

Mr. PROUTY. I thank the Senator.

I yield the floor.

Mr. HUMPHREY. I thank the Senator for his observations on the bill.

Mr. HRUSKA. Mr. President, 25 years ago, when the Rural Electrification Administration was born, some of its detractors were ready to bury it promptly as an impossible venture. They claimed that the rural cooperatives would never pay for themselves and would have to be liquidated in short order.

Today, REA is very much alive. It serves 2.5 million farms in the United States. More than 4 million rural consumers know what it means to have light and power as close as the nearest electric switch. This means not only more security and comfort for farm families; it means that farm production is more efficient, it costs less, and the end product is likely to meet or exceed modern-day quality and sanitation requirements.

These electric wonders have not been achieved on the public dole. Loans to rural electric cooperatives have been repaid faithfully and with interest. In my own State of Nebraska, REA borrowers are ahead of their repayment schedule, on the principle and with interest. The REA reports that, as of January 1 of this year, not one borrower in the State was overdue in its loan payments. This is the REA story everywhere.

Nebraska has been served by rural electrification throughout the full quarter-century of its existence since it was inspired by Senator George Norris, of Nebraska, in 1935. When REA began, Nebraska farmers were, quite literally, "in the dark." Only 7.1 percent of Nebraska's farms had electric service. Today, 95,750, or 94.9 percent of all the farms reported in the 1954 census, were being served. This is a record for which we can be proud and grateful.

The extension of REA service to farm homes on a sound economic basis in the past 25 years has far exceeded all predictions. The REA record reflects the competent management by farmers and rural area businessmen and their dedication to the program's constant objectives. In recent years, it also reflects the continued active support of the Eisenhower administration and the nonpartisan cooperation of Congress.

It is my confident belief that we can look for REA to maintain its tradition of responsible service to rural areas. It is my hope that its program can continue to depend on the encouragement of responsible public leadership in Congress and in the White House.

Mr. BENNETT. Mr. President, as one of the cosponsors of S. 910, I should like to urge that the Senate pass this legislation, which could be of tremendous benefit to States, counties, cities, and school districts throughout the Nation.

The problem arising from the fact that the Federal Government often takes large sections of real estate off the tax rolls of a county or city, often with little or no real benefit to the community, is one with which Congress has been wrestling for 10 years. The present bill is a modest approach to this problem, and provides only a limited program, but it is an important first step and one which should be taken immediately.

It is interesting to note that about half of the cosponsors of S. 910 are from Western States. This is simply because the Western States have suffered more from the problem of Federal withdrawal of real estate from the tax rolls than have the Eastern States. But the problem is not limited to any one region. School districts, tax districts, counties, and other political subdivisions in almost every State face this problem in varying degrees.

Admittedly, when a Federal installation is set up in or near a community, it often has many benefits, and in some cases these would outweigh the loss of revenue resulting from Federal ownership of the lands and buildings involved. However, there are many cases where the county whose property is seized is not the chief beneficiary of the Federal installation. Frequently, the resulting increase in employment and business activity is felt by a neighboring community. Furthermore, there are many cases where the increased services demanded of the municipality far outweigh the benefits accruing directly to it.

This problem is becoming intensified with the current trend toward suburban living, where a large percentage of the employees of a Federal installation may live in one community and commute to work in another.

Of course, efforts have been made on a piecemeal basis to correct the problem in some respects. The bill providing financial aid to federally affected school areas has helped to alleviate the tremendous impact on schools when a military installation is suddenly placed in a community. There are 54 other programs which provide payments in lieu of taxes for various Federal programs.

This uncoordinated and poorly planned patchwork of laws is unnecessarily complex and not comprehensive enough to do the job which needs to be done. On the other hand, there is no question that a broad bill providing Federal payment in lieu of taxes in all cases where a problem exists would be unwise. Circumstances vary tremendously from one case to another, and it is imperative that a program be set up which can make decisions on a case-by-case basis. That is what is provided in S. 910.

Another limitation of S. 910 is that payments will be made only on Federal real property acquired since June 30, 1950, the start of the Korean war. As I indicated in my testimony before the Government Operations Committee, I believe this limitation should be extended and that the outbreak of World War II should be accepted as the delimiting date.

Since the problem faced in Utah is typical of that in many States, I should like to examine the position of Utah in this connection. The Federal Government now owns 36,558,669 acres in Utah out of a total acreage of 52,701,440 in the entire State, or nearly three-fourths of the total acreage in the State. On this land, there are 160 Federal installations, with a total of 3,984 buildings. The Government carries this property on its books at the nominal acquisition cost of $371,480,000. Actually, the property is worth far more, because of appreciation of property values. The removal of this property from Utah's State, county, and municipal tax rolls has meant the loss of an incalculable amount of money in property taxes, and of course, property taxes are the most important source of revenue for counties and cities.

In a time when the Federal Government is steadily encroaching on State and local governments, assuming more and more of the responsibilities which rightfully belong to them, I think it is imperative that we do everything we can to help to keep our State and local governments strong. In the area of fiscal matters, this involves keeping the Federal Government, so far as possible,

from usurping revenue sources which rightfully belong to States and municipalities. And in cases where this does happen, the payment of funds in lieu of taxes, as provided in S. 910, seems the most equitable method of assuring that these important governmental units will not be unjustly deprived of needed revenue.

Mr. KUCHEL. Mr. President, it is a privilege to speak in behalf of S. 910, a modest bill, designed to authorize the payment to local governments in lieu of taxes and special assessments on a very limited category of real property which is not currently subject to local taxation because of Federal acquisition, ownership, and use. It is restrictive in its terms. It bears the stamp of approval by the Treasury Department. It is endorsed by local governments in America. It ought now, at long last, be enacted into law.

I am coauthor with the distinguished senior Senator from Minnesota [Mr. HUMPHREY] of this long-overdue legislation.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. KUCHEL. I yield to my able friend.

Mr. HUMPHREY. I hesitate to let the Senator make a statement which seems so modest. I know the Senator is a modest man, but the Senator is much more than a coauthor of the bill. The Senator from California has been one of the driving forces for getting the bill written, for getting subcommittee and committee action upon the bill, for offering his own testimony and advice and counsel upon the bill, even though not a member of the committee, and for getting action on the bill in the Senate. I believe when a man contributes his effort as the Senator from California has in behalf of this proposed legislation, his work should be acknowledged and should be praised. I do not do this simply to be gracious and kind to my good friend, but I do it because it is a matter of record, from my experience, my memory, and my service on the Committee on Government Operations, that the Senator from California [Mr. KUCHEL] has been a tower of strength for the proposed legislation.

Mr. KUCHEL. I am most honored to have the very fine and able Senator from Minnesota make that statement. I am not sure it is deserved.

Mr. President, the Senators who have coauthored this proposed legislation are Mr. HUMPHREY, Mr. BUSH, Mr. DOUGLAS, Mr. ERVIN, Mr. GOLDWATER, Mr. JACKSON, Mr. MAGNUSON, Mr. SCOTT, Mrs. SMITH, Mr. WILEY, Mr. CANNON, Mr. MOSS, Mr. BARTLETT, Mr. KEATING, Mr. HRUSKA, Mr. CARLSON, Mr. CLARK, Mr. CURTIS, Mr. ENGLE, Mr. BENNETT, Mr. MANSFIELD, Mr. BIBLE, Mr. ALLOTT, Mr. MCCARTHY, Mr. RANDOLPH, Mr. ANDERSON, Mr. MURRAY, Mr. JORDAN, Mr. HART, Mr. MCNAMARA, Mr. YOUNG of North Dakota, Mr. SALTONSTALL, Mr. JAVITS, and Mr. GRUENING.

Mr. President, S. 910 will provide for financial contributions in lieu of taxes on the part of Federal agencies in which the United States has acquired property. The proposed legislation has been before the Congress 4 times in the last 7 years. The need for it now is greater than ever. Legislation of this type is essential to stop the undermining of the revenue structures of the many local governments throughout the country—the Nation.

The problem, especially so far as local governments are concerned, stems from the fact that they are largely dependent on the property tax for their revenue, as we well know, Mr. President. Whenever a large tract of any kind or a small tract of especially valuable property goes off the tax rolls, the local governmental unit is endangered. School districts, counties, municipalities, and other assessment areas like water districts, are bound to feel the effects adversely. At the same time that tax revenue sources are withdrawn, a new Federal activity is bound to add to the burdens of the local governmental unit. And while a Federal payroll may bring many advantages to a community, it is not likely to produce enough revenue to overcome the real property loss. The problem may become particularly severe when a local government has reached the limits of its bonded debt, and then finds itself without authority to tax property formerly privately owned but now under the control of the Federal Government.

The Federal Government is the largest landowner in the United States. It now owns approximately one-fourth of the total land area of the Nation. In my own State of California, little more than half the area of the State is available for assessment by local governments. The rest of California is held by the United States. Of California's approximately 100 million acres, the Federal Government is the tax-exempt owner of 46,311,044 acres of land. Consider the effect of this situation on county boards of supervisors, city councils, and school district officers. In our State, confronted with staggering population increases, local school districts are especially hard hit by the withdrawal of taxable lands. It is becoming increasingly difficult to find the revenues needed to support the vast educational plant needed for California's school-age population.

Mr. President, from data compiled by the California State Board of Equalization, the estimated value of Federal land holdings is $294,108,268. The estimated value of improvements on only the portion of property acquired since 1938 is another $244,921,255. These are conservative estimates. But even on the basis of these incomplete statistics, the Federal Government is the owner of lands and buildings in California with a valuation of $539,029,524. At the average State tax rate of $5 per $100, the revenues from the Federal holdings would amount to $26,950,000.

California runs the gamut of diversity as far as Federal land holdings are concerned. There are extensive areas of nearly worthless land, and also extremely valuable small sections or sites. Some of the lands are arid, some are mountain tops, and some are very fertile. There are highly improved urban locations, strategically located industrial plants, and costly dams and power installations.

Some Federal properties are very valuable; others may be of little or no value. Federal property is used for a variety of purposes, such as the general administration of Government, services to the local public, care of wards of the Government, national defense, development and protection of commerce, land utilization and conservation, low rent and defense housing, Indian welfare, conservation and utilization of water resources, research and experimental work, and for many other purposes.

The impact of these property uses on the State of California has been most pronounced since the Second World War. Federal property acquired since 1938 is valued at approximately $73 million. Improvements on this real estate alone have valuations of $26,083,0836. In the case of Contra Costa County, the value is $56,250,500; in the case of Los Angeles County, $20,040,000; in the case of San Bernardino County, $18,004,133; in the case of San Francisco County, $39,275,000; and $50,050,000 in the case of Solano County. These figures are based on information now 4 years old.

Much of the vast Federal holdings are in rural areas. Even under S. 910, no payments in lieu of taxes would be made to the local governments where much of this property is located. For example, Federal rural holdings in California amounted to 46 million acres, the third greatest total in the Nation according to the 1950 census. A very substantial part of this land is public domain land that would not be covered by the proposed legislation which Congress ought to enact this session.

But this is all the more reason for the Federal Government to recognize its obligation to provide some form of compensation to local governments. Failure to provide some relief as quickly as possible for the affected governmental units may well produce the effects which a spokesman for the National Association of County Officials predicted a few years ago:

> If local governments become unable to finance their various programs, the inevitable result will be that the State and National Governments will take over these functions. The inability of a considerable number of local agencies to do a job because their tax base has been destroyed by Federal tax immunity may be urged as justification for transfer of functions to the State or Federal Government. When such transfers are made, local governments will lose another portion of their hard-won home rule. The strength of local government depends on the vitality of all its parts. The inordinate and unnatural growth of federally owned property at the expense of the normal tax base has weakened local control and contributed to a potentially dangerous centralization of our Government.

The impact of Federal holdings in an urban area is illustrated by the city of San Francisco. From testimony given at a prior hearing, it was stated that:

> The Federal Government owns approximately 6½ square miles of San Francisco's small area of only 44 square miles. Deducting State-owned property, it would own 6½ square miles out of 28. Federal real prop-

erty in San Francisco is valued at about $170 million with a minimum present tax loss to San Francisco of about $5 million, a severe burden to San Francisco and its other property owners who must pay higher taxes. In view of San Francisco's confined peninsula-type location and its built-up condition, there is a serious shortage of property and therefore any property released by the Federal Government could be immediately used by private industries or homeowners and would give rise to private payrolls and increased property-tax returns.

The bill is not an overall solution to the problems of raising revenue for local government. It is a modest, moderate approach to a complex problem. This bill would authorize for the 5-year period from January 1, 1960, through December 31, 1964, first, a very limited program of payments in lieu of taxes on industrial or commercial real properties acquired by the Federal Government after June 30, 1950; second, payments in lieu of special assessments levied after the effective date of the act in urban or suburban areas, if such assessments were also levied on real property owned by other taxable persons; and third, payments in lieu of taxes on the interest of the Federal Government in real property in the custody or control of taxable persons under a lease, contract or permit to the extent that taxes on that property are not paid by such taxable persons.

The program would be administered by a five-member bipartisan Federal Board for Payments to Local Governments, appointed by the President, subject to Senate confirmation. A taxing authority would be required to file an appropriate application, specifying the Federal property involved, the basis of its claim, and the period for which the claim is made—not to exceed 12 months in any single application. The Board, after determining the existence of a probable basis for the claim, and conducting a hearing, if a basis is found to exist, would be required to determine and certify to the controlling Federal agency the amount of payment to be made to the local taxing authority.

This bill would serve to demonstrate to the thousands of local governments concerned with this problem that the Federal Government has finally begun to recognize a moral obligation which has arisen in many widespread areas of our country.

The three specific hardship types of cases singled out by S. 910 are clearly ones where immediate relief is indicated.

Mr. President, representatives of local government organizations, such as the National Association of County Officials, have been appearing before committees of Congress for long years in behalf of legislation such as this. S. 910 makes a start on solving the troublesome problems arising from the tax exemption of Federal property. It should enable us to find an equitable solution to the problem so as to preserve financially healthy local governments. The Federal Government must contribute its just share if local government is to continue to function as an integral, essential segment of our unique system of self-government.

Mr. KEATING. Mr. President, as a cosponsor of S. 910, and as a longtime proponent of action to rectify the present unjust situation, I am delighted this measure has been called up for action. This bill would establish a temporary program for payments in lieu of taxes and special assessments on limited categories of Federal property now exempt from local property taxes. This measure would create a temporary board to administer the program and to conduct numerous important surveys and investigations.

S. 910 implements, in principle, many of the major recommendations on this subject which were made in 1955 by the Commission on Intergovernmental Relations. It also takes into account many of the later views of the Bureau of the Budget.

Although this measure is by no means perfect, it does represent a substantial step in the right direction. It represents progress toward correction of a real injustice in Federal-State tax relations.

Clearly, there are glaring inequities as a result of the tax status of much Federal property today. Most of the properties affected by this bill were acquired in recent years by the Federal Government. They are of particular importance because many are in valuable urban and suburban locations.

Thirteen years ago, as a Member of the House of Representatives, I sponsored a bill seeking the same objectives sought today. There is still the same need—aggravated by the passage of time—for providing relief to communities struggling to finance normal governmental services with revenues seriously impaired by the exemption of millions of dollars of Federal properties.

Mr. President, I note with interest that 32 other Senators are listed as cosponsors of S. 910. This is certainly an eloquent testimonial to the concern about this problem and to the determination of Senators from all over the country to work out a sound and equitable solution.

As reported by the Government Operations Committee, the bill is changed somewhat from the form in which it was originally introduced. I testified in support of that measure and I actively support it today in its amended form. I hope it will receive the overwhelming approval of the Senate.

Mr. President, one measure of a nation, even as a measure of a man, is the willingness to recognize moral responsibilities as well as those which are strictly legal. There is no constitutional obligation requiring the Federal Government to pay property taxes to any city or other local government. But when a city furnishes exactly the same services to a Federal installation as it would furnish to a taxpaying privately owned enterprise, the Federal Government is getting free services to which it has no moral claim. If the exemption of valuable Federal properties causes severe hardship to a particular city, I believe there is a moral obligation for the United States to alleviate that hardship.

When I say that this problem has been with us for a score of years, I do not seek to reproach our Government. The problem is indeed most difficult and complex. We do not yet have all the answers in spite of years of study. The difficulty has been to recognize cases with merit and reward them, while avoiding unwarranted raids on the Federal Treasury. While it must be recognized that Federal tax immunity often results in serious financial hardships to local governments, the presence of Federal installations also quite often result in benefits which more than offset the burdens imposed. Hence, as we see the answer now, there is a need for a case-by-case examination. Long years of investigation have taught us that no one overall approach is capable of providing a just and equitable solution.

Since we admittedly do not know all the answers at this time, S. 910 offers a rather modest program. We who have been concerned with this problem plan to proceed with caution. We do not propose a broad program encompassing all kinds of Federal property. Actually, from one point of view, our major recommendation is continuing study. But study should be blended with practical experience, and that we provide. The two together will, we hope, eventually result in a program of relief for all cases in which it is warranted.

I must not fail, however, to impress upon the Senate the seriousness of the difficulty for numerous communities. They have been subjected to very great hardships as a result of the Federal ownership of valuable urban and suburban properties. The old theory that exempting the holding of Federal property from local taxation would work out as a substantially equitable contribution by all local communities to the overriding national interest, no longer works. The concentration of Federal property within some cities produces an unequal distribution of the cost of services to the Federal Government. In some cases it has meant that properties once on the tax rolls have been removed. Instead of fewer local services being required, new important services without compensation must be rendered.

It has long been my feeling, as illustrated by the bill I first introduced in 1947, that when any Federal property—other than property used for strictly governmental purposes—enjoys the local services accorded to taxpaying private property holders, the National Government should contribute a fair share.

The bill before the Senate enunciates this same basic principle which I have espoused for years. It provides an effective means for coming to grips immediately with this very grave problem. At the same time, it provides sufficient flexibility to implement the changes which inevitably must be made in any payments-in-lieu-of-taxes program. We have carefully provided the machinery for learning what must subsequently be done.

The modesty of the proposals will appeal to Members. There are three types of situations under which the claim of a city or other local authority will be met. The first relates to special assessments hereafter levied. However, they will be paid only when similar assessments are paid by real property owned by taxable persons. The payment authorized is an

amount equal to the sum that would be due if the property were privately owned. I do not believe that one can reasonably object to this. The work leading to the special assessment results in an ultimate improvement adding to the value of the Federal property. There is no reason why Federal agencies should not pay for property improvements in the same manner as taxable persons.

The second category of payment relates to real property federally owned but leased to taxable persons. Here we have a case of property being used for private purposes and operated by private persons. The interest of the United States is only that of a landlord or titleholder. The tax to be paid by the owning Federal agency will be reduced by the amount of any real property tax payable by the lessee.

The third category affected—and this is quite important—is commercial and industrial property acquired by the United States after June 30, 1950. The guiding consideration here is the fact that Federal property is often being used for purposes identical to that of private industry. The June 30, 1950, cutoff date was chosen because this date roughly marks the beginning of increased Federal acquisition of real property for industrial and commercial purposes incident to the Korean war. I am convinced that where federally owned property is used to produce commodities or services that are normally provided by private enterprise, that property should be subject to local taxes comparable to those paid on similar privately owned property.

In drafting the authority to make payments on this third category of property, we were not content to establish an unlimited blanket authority to pay taxes assessed. We direct a little adding and subtracting first. We start with a payment equal to that which would have been made by a private person. This nominal liability is increased by the aggregate amount of expenditures necessarily incurred by the tax authority in furnishing unusual services to the Federal facility. We then reduce this sum by the value of local-type governmental services furnished by the Federal agency controlling the property.

Claims for payments under any one of the three categories will be permitted only for the 5-year period beginning January 1, 1960, and ending December 31, 1964. The measure thus is only a temporary one.

The mere filing of a claim by a local taxing authority does not mean that payment shall be made as demanded. Rather the proposed legislation establishes a Board which shall consider and judge each case on its own merits. After a hearing, the Board will determine the amount due, and this is the amount the Federal agency shall pay. The Board's decision is final unless reversed by a court of competent jurisdiction, or the Board's order is adjudged invalid by the General Accounting Office. Every 6 months, the Board shall file a report of its operations.

I want to emphasize the cautious way in which this bill has been drawn up. We are truly feeling our way. Many will conclude that we have been much too cautious, that we have overlooked many cases of hardship which will not be given relief. I fully concur. Our approach is, indeed, a narrow one. But the reason why relief of broader scope has not been provided is we have not yet been able to devise a formula free of inequity and not subject to major abuse. That is why this proposal also imposes on the Board the task of making studies which will enable us to come up with better answers in the future.

Although I am quite sure that many Members of the Senate will feel that we have been overconservative in our approach, there may be some who will feel that payments under this act will be just one more Federal subsidy. I ask those Members, particularly, to see the picture from the point of view of the local governments. At the present time, they furnish the same services to tax-free Federal property as they furnish taxpaying private persons. They, in effect, are subsidizing the Federal Government. I agree that all parts of our country must share in the cost of our defense program, but it is most unfair and unrealistic to expect selected local governments to assume a greatly disproportionate load solely by reason of the presence within their limits of a missile base, an aircraft plant, or a shipbuilding yard.

Let me say a few words more about the Board which would be created by this bill. It will be a five-member, bipartisan Federal Board for payments to local governments. Each member is to be appointed by the President and confirmed by the Senate. Each will serve at the pleasure of the President. The Board will cease to exist at the end of 1966. As I have aready mentioned, this Board will administer the temporary program for payments in lieu of taxes. In addition, it will have several survey and investigative functions of key importance.

A major function of the Board would be to continue to survey the field with an eye to future action. It is to compile much pertinent information on State laws affecting the taxation and exemption of Federal property. It will inquire into existing State tax laws, Federal in-lieu payments, and other grants-in-aid to the States. In fact, the Board is directed to look into virtually every phase of fiscal and related problems of local taxing authorities arising out of the immunity from local real and personal property taxes, including the operation of existing programs. It is especially directed to investigate the need for additional legislation to provide continuing financial assistance to the States and their local subdivisions to relieve hardship incident to the tax-exempt status of Federal property. These surveys and investigations must be completed within 2 years, when a report shall be made. I enthusiastically endorse this proposal for a comprehensive report within 2 years.

The Board is expected to solicit and receive advice from others. In fact, the Board is directed to consult, from time to time, with representatives of tax authorities and State governments and other appropriate persons. It is to secure necessary information from Federal agencies.

We also provide for a special advisory committee to assist the Board. This advisory committee shall consist of 12 appointees of the President, including 6 Federal officers, plus 3 from the States and 3 from local governments. In addition to advising the Board, it will also study the administration of this and all other acts providing for Federal payments of taxes, or in lieu of taxes, and transmit a report of its studies and recommendations for administrative and legislative changes to promote the efficient, economical, and efficient administration of the laws.

I am hopeful that with this battery of information and talent, we can finally come up with a comprehensive program which we can all support. I hope that it will be one which will do justice to the thousands of injured local governments throughout the Nation.

I am well aware that in this presentation, I have told only what will be done. I have said little or nothing about what will not be done. Some may fear what has been left unsaid. I wish at this point to allay fears which may logically come to mind. For example, nothing in this bill has any effect upon existing payments or revenue-sharing arrangements authorized by law. No Federal liability will be incurred in cases of federally owned leased property where the lessee is taxed on such property. This bill will not require any payments with respect to any TVA property allocated to power purposes. TVA procedures under existing law will not be disturbed.

As I interpret the provisions of S. 910 it will give little or no benefit to certain areas of the Nation which have been particularly affected by the presence of federally owned property. These include Arlington County, Va., the State of Alaska, and certain of the public-lands States. The Board in its studies should give close attention to the peculiar needs of these areas, and I would hope it will offer remedial legislation to alleviate the fiscal hardships imposed as a result of large Government holdings.

In closing, Mr. President, I wish to pay special tribute to the principal sponsor of this measure, the indefatigable senior Senator from Minnesota [Mr. HUMPHREY]. He has devoted much time and study to this problem, and clearly the enactment of this proposal will stand as a lasting monument to his perseverance and perspicacity, no matter what the future may hold in store for this distinguished colleague.

I also wish to salute the staff of the Committee on Government Operations, particularly my constituent, Eli E. Nobleman, who has worked on this measure for such a long time. The committee has also received invaluable aid from various outside experts.

The result of their labors is a sound and substantial answer to a very sticky problem. The proposed law is temporary and limited, as befits the complexity of the situation.

From the experience gained in the administration of this law, together with

the studies which are directed to be made, I am extremely hopeful that more satisfactory general answers can eventually be found. Careful application of this law, combined with future changes as our knowledge and experience with this problem increases, can go a long way toward removing a substantial inequity in present Federal-State-local relations.

In the long run, our Federal system will be strengthened and our Nation's progress will be speeded by means of this proposal. I hope it will gain the overwhelming support of the Senate without further delay.

Mr. MOSS. Mr. President, I support S. 910, the bill now before the Senate, and express the hope that it will be passed by an overwhelming vote.

This is a reasonable approach to a problem which has plagued local governments for many years. Before I became a Member of the Senate, I served as a county official and, at one time, as a city official. I am, therefore, aware of the fact that the problem of Federal encroachment upon the real estate holdings of local subdivisions or local tax divisions was yearly growing more acute. As the Federal Government increased its holdings in various areas, many inequities and imbalances arose.

The bill is a sound, reasonable effort to overcome the inequities and imbalances which occur. I think that anyone would concede, as a matter of equity, that the Federal Government should contribute its reasonable share to the cost of the local administration of government at the city and State levels. The bill would have that effect.

I pay tribute to the distinguished senior Senator from Minnesota [Mr. HUMPHREY] and other Senators who have worked so diligently on the matter over a long period of time. I appeared before the committee more than a year ago to discuss the matter, and I know it has been under constant revision and study since that time.

I believe the bill offers a very sound, reasonable program. It is temporary in nature, but it is simply a beginning. Certainly a start can now be made to remedy the inequities which have grown up over a long period of time.

I urge all Senators to support the passage of S. 910.

Mr. ENGLE. Mr. President, I rise in support of Senate bill 910. I wish to add my compliments to those already paid to the senior Senator from Minnesota [Mr. HUMPHREY], the author of the bill, who has assiduously pursued his efforts for the solution of this long-standing problem.

I wish to call attention to the fact that this bill, which was introduced by the Senator from Minnesota [Mr. HUMPHREY], is cosponsored by the following Senators: Mr. KUCHEL, Mr. BUSH, Mr. DOUGLAS, Mr. ERVIN, Mr. GOLDWATER, Mr. JACKSON, Mr. MAGNUSON, Mr. SCOTT, Mrs. SMITH, Mr. WILEY, Mr. CANNON, Mr. MOSS, Mr. BARTLETT, Mr. KEATING, Mr. HRUSKA, Mr. CARLSON, Mr. CLARK, Mr. CURTIS, Mr. ENGLE, Mr. BENNETT, Mr. MANSFIELD, Mr. BIBLE, Mr. ALLOTT, Mr. MCCARTHY, Mr. RANDOLPH, Mr. ANDERSON, Mr. MURRAY, Mr. JORDAN, Mr. HART, Mr. MCNAMARA, Mr. YOUNG of North Dakota, Mr. SALTONSTALL, Mr. JAVITS, and Mr. GRUENING.

The sponsorship of the bill indicates the wide knowledge of Members of the Senate of the problem which is sought to be dealt with and solved by means of this measure.

For a number of years, as chairman of the House Committee on Interior and Insular Affairs, I was either the cosponsor or the author, in the House of Representatives, of similar proposed legislation, although the bills which I introduced or cosponsored on those occasions were much broader than the bill now before us. Unhappily, we were unable then to resolve the problem of determining what Federal property will be subject to payments in lieu of taxes and what Federal property will not be subject to payments in lieu of taxes.

Those of us who represent the great natural resources of the Nation—the national parks, the national forests, and the public-domain lands—have always felt that if our areas were to be the stockpiling areas for the natural resources of the Nation, the beneficiaries of those stockpiles, namely, the people of the entire country, should help carry the tax burden caused by creating those reservoirs or those stockpiles of natural resources, whether they happen to be timber, minerals, scenic areas, or grazing lands.

However, we recognized some difficulty when we endeavored to determine whether Federal payments in lieu of taxes should be made on other types of Federal property.

It was always conceded that post office buildings, administration buildings, and other buildings used directly by the Federal Government in its operations as such should not be required to be the subject of payments in lieu of taxes.

In dealing with those two groups, in other words, the properties held by the Federal Government for the purpose of the functions of the Federal Government itself, and the properties held by the Federal Government in a proprietary sense, we got into the in-between cases which create the difficulty, for instance, military bases and other types of Federal landholdings. The complexities of that problem and the difficulty of solving it to the satisfaction of the Federal officials involved, the Bureau of the Budget, and the local tax agencies, made it impossible for us to move forward with the enactment of legislation of this type.

So, Mr. President, for more than 20 years Congress has engaged in a struggle to give some relief to local communities suffering serious losses of revenue because of the Federal tax-immune properties in their jurisdictions. It has been a struggle to find an answer to this complex problem without flying in the face of the principle of Federal tax immunity or causing an undue burden on the Federal Treasury. As I have said, I have personally been involved in the problem for 10 years and have seen too many sessions of Congress end in a complete impasse on this question.

But the 86th Congress has brought with it some hope for breaking the impasse. This hope lies in the enactment of Senate bill 910, which I have cosponsored. Senate bill 910 is admittedly modest in scope, but I am convinced that it is a sound beginning.

As I have stated, the bill has been piloted thus far by the distinguished senior Senator from Minnesota [Mr. HUMPHREY]. The bill provides for a 5-year program of payments in lieu of taxes and special assessments on a limited category of federally owned real property which has been removed from the local tax rolls. True, the major category of affected local governments will get relief only at the discretion and judgment of a Federal Board, and subject to specific safeguards. But the bill also gives the same Board the responsibility of making a thorough study and a case-by-case analysis of every phase of the problems of local taxing authorities arising out of Federal immunity from local real and personal property taxes. This is perhaps the bill's most significant provision.

In this respect, Mr. President, I may say that very recently in California we faced this problem in the case of the great aircraft industry there which is building aircraft for the Federal Government or is building such aircraft under defense contracts, when those engaged in that activity placed in the Federal Government title to the basic materials required for the construction of the aircraft, and thus exempted that property from local taxation. As a result, the local school districts, the counties, and the cities there were deprived of the taxes which otherwise would have been levied on property of that type.

This is only one illustration of how the Federal Government may hold title to such property in a proprietary capacity, more or less, or, in my opinion, through a fiction in this instance, where the title to the parts or to the basic materials which go into the construction of aircraft was placed in the Federal Government, and thus that property was rendered not subject to taxation by the local authorities. This is one of the problems and one of the types of problems the new Board will consider.

Mr. JAVITS. Mr. President, will the Senator from California yield?

Mr. ENGLE. I yield for a question.

Mr. JAVITS. First, I should like to suggest to the Senator from California that recently the Legislature of the State of New York enacted legislation generally to the same effect; and I thought that fact might be of interest to the Senator.

In addition, if he will consent to it, I wish to ask unanimous consent to have printed at this point in the RECORD, in connection with my remarks, a memorandum in regard to the bill passed by the New York Legislature, and signed by Governor Rockefeller, of New York, on April 20, 1960. That bill is generally to the same effect as the bill which now is before us.

Mr. ENGLE. Certainly.

Mr. JAVITS. Then, Mr. President, I ask unanimous consent that the memorandum filed with the New York State Legislature bill may be printed at this point in the RECORD, in connection with my remarks in favor of enactment of the pending bill.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM FILED WITH ASSEMBLY BILL 4667, "AN ACT TO AMEND THE REAL PROPERTY TAX LAW, IN RELATION TO PROVIDING STATE AID IN RESPECT TO REDUCTIONS IN TAXABLE ASSESSED VALUATIONS OF PROPERTY OWNED OR ACQUIRED BY THE STATE"

This measure, prepared by the State board of equalization and assessment, is of major importance to those communities in which State-owned land is located. It provides for State aid payments in lieu of real property taxes in situations where specified State actions result in a reduction of 2 percent or more in the total taxable assessed valuation within a tax district.

In some instances, the acquisition of land by the State or a reduction in the assessed valuation of taxable State lands results in a highly disruptive shifting of the impact of real property taxes to private lands. Under this measure, State aid payments will limit the effective reduction each year in assessed State land to 2 percent of the total taxable assessed valuation of a tax district.

These payments will result in a gradual tapering off of State taxes paid to a locality so that no more than 2 percent of the local taxable assessment roll would be in jeopardy in any one year. Enactment of this measure reflects the concern of State government with the problems of sound fiscal management in our localities.

The bill is approved.

NELSON A. ROCKEFELLER.

APRIL 25, 1960.

Mr. ENGLE. Mr. President, I do not believe the pending bill goes far enough, but I am satisfied that it constitutes a long step on the right road. In terms of immediate dollars and cents, a good many local governments are left out in the cold, under this bill. But in terms of the benefits that will come as a result of the studies and findings to be developed by the Federal Board, all units of local governments will gain substantially. In other words, the bill is only a small start, but it will cause a great deal of light to be thrown on this problem.

The State of California, with its great concentration of defense industries, has been a real victim in this situation. Because of the presence of tremendous Federal holdings, only half of the State of California is subject to assessments by local governments. At the average State tax rate of $5 per $100, the losses in revenue to the local governments because of the tax-immune Federal properties add up to more than $27 million. County and city governments which have been major victims of this enormous loss in revenue have been forced either to lower the quality and quantity of their community services or to penalize their private citizens unreasonably. Trapped between a growing demand for services and a dwindling intake of taxes, towns and cities have become second-class communities—with inferior schools, bad roads, inadequate services generally.

When we take a look at these federally hit communities, it is hard to understand the argument of the opposition that these communities, in asking for payments in lieu of taxes, are seeking to be "subsidized" by the Federal Government. Federal tax-immune facilities receive the same county and city services as those received by tax-assessed private properties; yet the Federal properties for the most part go scot free of their fair share of the burden. My answer to this specious argument of the opposition is that the argument should be turned around—that the Federal Government, not the local government, is being subsidized. Assuredly, all local governments must share in the defense program of the country; but it is unfair and unrealistic to expect a local governmental unit to assume the precipitous load brought on it by the impact of a missile base or an aircraft plant or a shipbuilding yard. Our national needs must be charged against the national tax base.

Mr. President, I repeat that our national needs must be charged against the national tax base.

Let me go further, and say that when major defense installations impose improper burdens on the local governments, in some instances we have already taken care of those problems—such as those which arise when Federal installations cause on local communities impacts which make it impossible for the local school districts to take care of the education of the children of the Federal workers who establish themselves there.

In those instances we have, by Federal law, provided for Federal assistance. I would say when one of those programs is put into effect, we need not imply in this legislation that the program will be permanent. That is, if the time ever comes when the tax assets resulting from the placing of the Federal installation equals the tax assets that are lost by reason of the Federal installation, then, it seems to me, it would be proper to withdraw Federal payment.

The problem has reached the crucial stage in many communities, and we cannot delay any longer in taking affirmative action. S. 910 is a sound answer to the urgent immediate situation—and the atmosphere in Congress is ready for it. The bill has bipartisan support. It has the support of local governing bodies. And it has the support of the National Association of County Officials, the American Municipal Association, and many other organizations concerned with local government.

I may add that as a former county official I have worked very closely with the National Association of County Officials on this problem over a number of years.

S. 910 is, I repeat, not the final answer to the problem. But it embodies features that have great appeal for both sides of the issue. It gives us a "beginning" system of payments in lieu of taxes that will open the door to a broad realistic plan for the future. By making it necessary for a major category of local governments to prove their eligibility for payments before the Federal Board, the bill should satisfy the strongest opponents of payments in lieu of taxes. The bill's greatest appeal is, of course, in the establishment of a Federal board charged with studying and analyzing the variegated and complex problems and with coming up with some solid answers. In this bipartisan objective board, we have an ideal forum in which all points of view and all phases of the situation will get a full and fair hearing.

In short, we have in this bill a neat start toward a broad and conclusive solution to the problem, and I urge the Members of Congress to act quickly and favorably on this measure.

In closing, I should like to call attention to one amendment placed in the bill by the committee. The amendment is section 9(f), on page 37 of the bill, and reads as follows:

(f) Each final order made by the Board under this Act for the payment of any award shall be final and conclusive upon all tax authorities and upon all Federal agencies, unless such order is modified or reversed by a court of competent jurisdiction or is adjudged invalid in whole or in part by the General Accounting Office.

The original language in the bill as introduced by the distinguished senior Senator from Minnesota read as follows:

Each final order made by the Board under this Act for the payment of any award shall be final and conclusive upon all tax authorities and upon all Federal agencies, and shall not be questioned by any court or by any accounting office of the Government, except that nothing contained in this section shall limit or impair the authority of the General Accounting Office to audit expenditures under this Act.

The difference between the section as originally in the bill and the section in the bill as it was proposed to be amended and was voted out of committee is that in the bill that was voted out of committee the order of the Board can be modified or reversed by a court of competent jurisdiction. The fear has been expressed that such a provision may open up the gates for all sorts of litigation and that, actually, awards made under the legislation may be completely frustrated by long and interminable litigation, if a court review is permitted.

We have a precedent for the making of orders by a board without court review. During the last war, the War Risk Litigation Board was authorized to make awards within its jurisdiction specifically without any court review. That act was reviewed by the Supreme Court, which held that the due process clause was not violated by cutting off court review so long as there was some procedure provided in the act itself for review of those decisions.

Mr. President, I am not going to press for the consideration of an amendment to restore the original language of the bill, but the matter is one of concern to the local governments involved; and I hope that the language placed in the bill will be given very careful consideration in the other body, when the measure comes before the committee in the other body, and finally by the conferees, when they arrive at the final language of the bill, which no doubt will need some adjustment in conference between the two Houses.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. ENGLE. I am very happy to yield to the senior Senator from Minnesota. I am sorry he had stepped off the floor when I complimented him for the effective and intelligent way in which he has pressed to get this bill on the floor, after

so many of us struggled for so many years and made no progress at all.

Mr. HUMPHREY. I thank the Senator. I may say to the Senator that I stepped off the floor to answer a personal telephone call. My daughter is going to be married, and I had a little consultation with the head of the household about that matter.

Mr. ENGLE. That is a very important matter, and I have no doubt it will take a great deal of consultation.

Mr. HUMPHREY. The observation made by the Senator from California relating to the amendment on judicial review is, to my mind, a very sound and valid criticism of the bill. The Senator from Minnesota, in committee, felt it was an unwise move to include the amendment; but the majority of the committee felt to the contrary. As the Senator from California knows, when a Senator in charge of a bill brings it to the floor as a bill representing the thought of the committee, that Senator is representing the committee bill, and it is his duty to present the bill as it was reported from the committee.

I am pleased the Senator from California has seen fit to withhold his amendment to strike the portion under discussion from the bill, because I believe, as the proposed legislation proceeds through the other body, we shall have an opportunity to make whatever corrective adjustments are needed. I shall be mindful, in my role as a Senator, and not as a subcommittee chairman, to try to get that portion of the bill changed, because I believe there is adequate protection and protections that go far enough, through the General Accounting Office procedures, without trying to limit the effectiveness of the bill by long court procedures which, for all practical purposes, would nullify any relief.

I thank the Senator for yielding to me.

Mr. ENGLE. I appreciate the remarks of the senior Senator from Minnesota. I can understand why some persons would say it is rather strange to cut off court review. That was the reason why I cited the precedent to which I referred. We have that precedent for cutting off court review of a matter finally determined by a Board. That does not relieve the fears, I suppose, of some persons who think that the courts always are to be open, under all circumstances. However, I am afraid the provision in the bill will simply result in no awards being made at all, because the matters could become the subject of extensive litigation. Inasmuch as the Federal payment is in the discretion of the Federal Board, and inasmuch, further, as the Federal payment is subject to review by the General Accounting Office, it seems to me the Federal end of the case is sufficiently safeguarded. So far as the local governments are concerned, all that this litigation procedure would do, in my opinion, would be to put some of these awards in litigation for a number of years.

I hope the matter will be thoroughly considered by the members of the committee when the matter comes before them again, and that it will be carefully considered by the committee in the other body when this bill is before that committee, as well as by the House of Representatives itself.

Mr. President, I yield the floor.

Mr. JOHNSTON of South Carolina. Mr. President, I commend the junior Senator from California for his remarks upon S. 910.

Several counties within my State of South Carolina are suffering at the present time because of the fact that a great deal of land in the counties has been taken by the Federal Government for its own use. I recall one instance when 250,000 acres were taken, most of it from one county. No county can permit that much land to be taken without suffering a great deal.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. JOHNSTON of South Carolina. I yield.

Mr. CURTIS. The principle of this proposed legislation has much merit, but I believe the proposal would not take care of some hardship cases, at least for a long time.

There is in Nebraska a situation which came about during World War II. The Navy acquired one-fourth of one county, which meant that the cost of supporting the county was thrown on the other three-fourths. This disrupted the entire school district. Whether there was a bond program in the county or not, I could not say.

At the present time this naval ammunition depot is on a standby basis. Ammunition is still stored in the igloos, but there is no payroll. No one is employed, other than the custodial force and a small force for inactivating the ammunition, yet the Government holds the entire amount of land. The land is not being sold.

Part of the land is leased for farming purposes, but part of it is not.

I disagree as to two provisions in the bill. First is the cutoff date of 1950. That would mean we would leave out certain situations where the local community has suffered the longest.

I also question the definition of industrial or commercial property. If a community has the benefit of a Federal activity, with people working who are earning money and spending it in the community, perhaps that community is in less need of help than if the Federal Government owned some property which simply was situated in the community. The land in that case is not productive from the standpoint of a payroll, nor is it turned back into private ownership, to again go on the tax rolls.

In the case of this particular depot I have mentioned, it will take 7 years to demilitarize the ammunition which is stored there. I am told this process is cheaper than paying freight on the ammunition, so that it could be hauled out and dumped in the ocean.

All the bill under consideration would grant such a community, I believe, after limited study, would be a right to go before a board and to talk about its grievance.

Mr. HUMPHREY. Mr. President, will the Senator yield to me, so that I may answer the Senator?

Mr. JOHNSTON of South Carolina. I yield.

Mr. CURTIS. Is my construction correct?

Mr. HUMPHREY. Yes; it would lay down a precedure for the community to go before the board and to seek whatever payment in lieu of taxes it might be entitled to receive. I add, in regard to the cutoff date, that the property to which the Senator from Nebraska refers would not be affected by the cutoff date. That refers only to the industrial and commercial properties. The other properties are not affected.

Mr. CURTIS. Let us suppose the bill were passed. Would it permit the payment in lieu of taxes for agricultural land owned by the Federal Government, which was acquired, let us say, prior to 1950 but after 1939?

Mr. HUMPHREY. If there were any special assessments to be made relating to that land, or to any improvements thereon or abutting thereto, the bill would require that the Federal Government pay the special assessments. If the land is classified as real property in the legal definition, the bill would permit the taxing authority to go before the board to seek what we might call, for the purpose of convenience, some tax relief.

Mr. CURTIS. But all the people would be able to seek would be a determination of their status.

Mr. HUMPHREY. Both.

Mr. CURTIS. They could not get any payment without further legislation, could they?

Mr. HUMPHREY. If the board determined that the piece of property was within the purview of the requirements of the language, first the people could receive a determination of their status, and, second, they could receive relief.

Mr. CURTIS. Is it the contention of the distinguished Senator that the language is limited to commercial or industrial property?

Mr. HUMPHREY. No, it is not limited only to commercial or industrial property.

Mr. CURTIS. Would it be the intent of the Congress to include agricultural land?

Mr. HUMPHREY. Yes. It would not be the intent of the Congress to include at this stage what we might call public lands. If one acquired for the purpose of agricultural production a piece of property upon which the Federal Government was conducting an operation, that land would fall within the purview of the language.

Mr. CURTIS. In the case I have cited the land was acquired not for agricultural purposes, but for the manufacture of and the storage of munitions. But the basic purpose of the land is agricultural. That is the use to which the land would revert, if turned back into private ownership. Would that be agricultural land, or commercial or industrial land?

Mr. HUMPHREY. Is the land being used today for an agricultural purpose?

Mr. CURTIS. A little of it is, around the perimeter, on a rental basis.

Mr. HUMPHREY. Is the federally owned land being used, for example, for the storage of agricultural commodities?

Mr. CURTIS. No. The Federal Government is leasing some of the land to individuals, who in turn farm this part of the land around the perimeter.

Mr. HUMPHREY. I understand.

Mr. CURTIS. My question is this: What determines whether the land is industrial or commercial? Is it the purpose for which the Government acquired the land, or the purpose for which the land is best suited?

Mr. HUMPHREY. It is the purpose for which the Government acquired the land or for which the Government is currently using it.

A second point is in regard to the definition of real property. The land to which the Senator refers could be subject to the review of the board for a payment.

Mr. CURTIS. I thank the Senator, and I thank the distinguished Senator from South Carolina. I did not realize I would take so much time.

The PRESIDING OFFICER. The Senator from South Carolina has the floor.

Mr. MUNDT. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment offered by the Senator from South Dakota will be stated.

The LEGISLATIVE CLERK. It is proposed to strike out all after the enacting clause and insert the following:

That this Act may be cited as the "Federal Contributions to State and Local Governments Act".

DECLARATION OF PURPOSE

SEC 2. (a) Although the United States is under no constitutional obligation to pay taxes, or to make financial contributions in lieu of taxes, to any State or to any political subdivision or instrumentality thereof with respect to any property of the Federal Government, the Congress has recognized that the exemption of Federal property from taxation by State and local governments has worked hardship upon such governments in a number of instances, and heretofore has enacted a number of legislative measures providing relief in varying forms for such governments.

(b) It is the purpose of this Act to provide for a comprehensive study of the nature and effect of such previous enactments, and for an investigation to determine the nature and effect of any further legislation which may be required for the relief of State and local governments from such hardship.

(c) It is hereby declared to be the policy of the Congress that no such additional relief shall be made to any State or local government with respect to any Federal property devoted to any Federal activity the establishment or retention of which within the territorial jurisdiction of such State or local government at any time has been solicited by such State or local government.

COMMISSION ESTABLISHED

SEC. 3. (a) There is hereby established within the executive branch of the Government a Commission on Federal Contributions to State and Local Governments (referred to hereinafter as the "Commission").

(b) The Commission shall be composed of five members appointed by the President, selected from among individuals of public stature who have had wide experience in governmental and fiscal affairs and who are representative of the general public interest.

(c) The President shall appoint the Chairman and the Vice Chairman from among the members of the Commission. A majority of the members of the Commission shall constitute a quorum. Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

(d) Members of the Commission shall receive compensation at the rate of $20,000 per annum, and shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties of the Commission.

STAFF OF THE COMMISSION

SEC. 4. (a) The Commission may appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of the civil service laws and the Classification Act of 1949, as amended.

(b) The Commission may procure, without regard to the civil service laws and the classification laws, temporary and intermittent services to the same extent as is authorized for the departments by section 15 of the Act of August 2, 1946 (60 Stat. 810; 5 U.S.C. 55a), but at rates not to exceed $50 per diem for individuals.

DUTIES OF THE COMMISSION

SEC. 5. (a) The Commission shall conduct a comprehensive study of the nature and effect of all previous enactments of the Congress providing for—

(1) the payment to any State or local government of any tax or special assessment with respect to any Federal real or personal property;

(2) the making of any payment to any such government in lieu of the payment of any tax or special assessment with respect to any such property; or

(3) the rendition of assistance to any State or local government through the making of grants-in-aid, the sharing of revenues derived from properties of the United States, or through the furnishing of services or facilities by the United States.

(b) The Commission shall conduct a comprehensive study and investigation of the extent to which State and local governments derive benefits directly or indirectly through payments made to them (1) by persons residing or employed upon Federal property, and (2) for or in connection with any property, trade, business, occupation, or transaction situated or occurring upon Federal property.

(c) The Commission shall conduct a comprehensive investigation to determine the extent, if any, to which there is need for legislation by the Congress to provide additional financial assistance for State and local governments to relieve hardships incident to the tax-exempt status of Federal property. Such investigation shall include inquiry to determine—

(1) the classes of Federal property, if any, with respect to which any such additional assistance should be granted;

(2) the nature and extent of any such additional assistance;

(3) the conditions, if any, under which such additional assistance should be granted;

(4) the annual cost to the United States of providing such financial assistance with respect to each such class of Federal property and with respect to all such classes of Federal property; and

(5) ways and means whereby State and local governments may be accorded effective right to apply property taxes in effect within their several jurisdictions to industrial plant equipment, materials, supplies, and inventories owned by private parties and used by them for commercial purposes within plant facilities owned or controlled by departments and agencies of the United States Government.

(d) On or before March 1, 1960, the Commission shall submit to the President, an interim report for transmittal to the Congress, on or before December 1, 1960, a comprehensive final report containing—

(1) the text of all provisions of law referred to in subsection (a), together with an analysis of the purpose and effect of each such provision;

(2) the findings of the Commission as to the facts disclosed by its studies and investigations made under subsections (b) and (c) of this section;

(3) its recommendations, consistent with the policy prescribed by section 2(c), as to any additional legislation the need for which has been disclosed by its investigation under subsection (c) of this section; and

(4) a detailed analysis of the relationship between any recommendations so made and the provisions of existing law set forth in compliance with paragraph (1) of this subsection.

(e) Upon the transmittal of such report to the Congress, the Commission shall cease to exist.

POWERS OF THE COMMISSION

SEC. 6. (a) To carry out the provisions of this Act, the Commission, or any duly authorized member or employee thereof, may hold such hearings, sit and act at such times and places, administer such oaths, and require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memorandums, papers, and documents as the Commission, or such member or employee, may deem advisable. Subpenas may be issued under the signature of the Chairman of the Commission or any duly designated member or employee, and may be served by any person designated by such Chairman or member. The provisions of sections 102 to 104, inclusive, of the Revised Statutes (2 U.S.C. 192–194) shall apply in the case of any failure of any witness to comply with any subpena or to testify when summoned under authority of this section.

(b) The Commission is authorized to request from any department, agency, or independent instrumentality of the Government such information or assistance as the Commission may deem necessary or desirable to enable it to carry out its duties under this title and such department, agency, and independent instrumentality is authorized to cooperate to the extent permitted by law.

EXPENSES OF THE COMMISSION

SEC. 7. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the provisions of this Act.

Amend the title so as to read: "A bill to establish in the executive branch of the Government a temporary Commission on Federal Contributions to State and Local Governments."

Mr. MUNDT. Mr. President, several of my colleagues have been inquiring as to how long I propose to discuss the amendment and whether or not I should like to have a yea-and-nay vote on it. The answer to the second question is "Yes." I do not intend to discuss the amendment at any great length. In order that we may determine whether or not there are enough Senators available to vote on the amendment whether they hear the arguments for and against it or not, I think it would be well to determine at this point whether or not there are enough Senators willing to have a yea-and-nay vote on it. For that reason I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MUNDT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUNDT. Mr. President, on my amendment I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. MUNDT. Mr. President, I ask unanimous consent that I may modify my amendment as to date, by virtue of the fact that the Senate is considering the proposed legislation much later than was anticipated. I ask that on page 5, line 23, I may strike out "March 1, 1960," and insert in lieu thereof "February 2, 1961"; and on page 6, line 1, strike out "December 1, 1960," and insert in lieu thereof "June 1, 1961".

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. MUNDT. Mr. President, the Senate is considering a very significant measure. I am something of a realist, and I realize the impracticability of trying to hold forth at great length in opposition to a bill which is cosponsored by 35 Senators at a time when it has been possible to have only a dozen Senators to come to the floor of the Senate. Even if, by some strange system of forensic legerdemain, I were to convince all who are present to hear me, that would be inadequate. However, I believe the record should be clearly made because I feel very definitely, as a member of the committee which considered the bill, that there are some perils involved which Senators should clearly understand before they vote for the passage of S. 910. I think they are perils which should be made abundantly clear to the public, to the Members of the other body, and to all persons concerned with the fiscal integrity of the country.

I might begin by pointing out that this is not a simple bill, and that this is not the first time it has been before the Senate. My congenial and friendly neighbor, the distinguished senior Senator from Minnesota [Mr. HUMPHREY], and I have argued this point many times. The same bill, with a different number, was debated by the Senate on July 27, 1956, almost 4 years ago. At that time, after some consideration, the Senate returned the bill to the committee from whence it came. I believe that the arguments which were made against the bill in 1956 are as valid now as they were then, and are, in fact, much more significant, because the financial problems confronted by the Federal Government are, if anything, more serious now than they were then. For those who are interested in going back into the history of the proposed legislation 4 years ago, when the Senate did not pass the bill, but returned it to the committee, the debate can be found in volume 102, part 11, pages 15051–15067 of the CONGRESSIONAL RECORD, with some scattering remarks on the succeeding pages.

I do not propose today to detain the Senate by reading all the arguments which were used then, except to say that those who are interested in searching the RECORD and finding the record of the facts will find, I feel certain, that the arguments made then are just as pertinent today.

There are various ways in which the welfare of a great Republic like ours can be destroyed or jeopardized. One way is by careless spending on the part of Congress. We can become freewheeling spenders and vote for every attractive suggestion or proposal, regardless of the billions of dollars which it will put the country into the red. I think we all recognize that that line of activity, if followed far enough, can create such a spiral of inflation as to cause disaster and distress to hundreds of millions of our fellow citizens, to say nothing of jeopardizing the solvency of the Government itself, and can cause a weakening of our position abroad at a time when fiscal sanity and fiscal strength are as essential to the survival of the free world as is a sound military establishment.

A second way in which the fiscal structure of a great country like this can be attacked is by Members of Congress generally adopting the tactic of a demagogue, who says, "I vote for all appropriation bills and against all tax bills; consequently, I should be returned to Congress over and over again." Here, indeed, is a manifestation of generosity and consideration for the people. In effect, such a person is saying, "Anything I can get for you, I will get by voting for an appropriation. But I will protect you against taxes sought to be levied by any of my associates."

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. LONG of Louisiana. I take it the Senator is not referring to any Member of this body.

Mr. MUNDT. I certainly am not going to particularize any generalities in which I have engaged.

There is a third approach, and it is the one to which I wish to call the attention of Senators who are present, and as to which I hope to leave my words echoing in that great plethora of empty chairs which I observe in the Chamber as we consider this tremendously significant spending program. That third way is to provide a whole sequence of back-door expenditures, whereby a great many channels are opened to uncontrolled and uncontrollable expenditures which are attached to the taxpayer, and which tend to pyramid the national debt. It has exactly as much impact on the cancerous situation called inflation as though Congress had actually appropriated the dollars specifically. It is in this third area that we are dealing here today—the back-door spending, the uncontrolled spending. It is the attempt by S. 910 to establish a new and third appropriations committee of Congress, except that this one would not be elected by the people, but would be appointed by the President.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. CURTIS. Briefly, what does the Senator's amendment do?

Mr. MUNDT. It proposes that instead of making an unguided tour up into the fiscal orbit, instead of passing now a bill which requires payments in lieu of taxes, as they are defined and established by an appointive board, we recognize that there is a problem in this area; we recognize that there are inequities; and that we establish a presidential board which, a year from next June, will make a report suggesting an approach which can be made within the constitutional procedures of the Government to assist, on an equitable basis, communities which have need for assistance.

Mr. CURTIS. The Board will have to report by June——

Mr. MUNDT. It will have to make a preliminary report in March, and a final report in June.

Mr. CURTIS. In June of what year?

Mr. MUNDT. In June 1961, so that before Congress adjourns that year, the Board will have presented us with a well-rounded version of an approach to meeting the problem.

In my minority views I point out five or six specific reasons why enactment of Senate bill 910 would create a great many more problems than it conceivably could cure.

Mr. CURTIS. Mr. President, will the Senator from South Dakota yield further?

The PRESIDING OFFICER (Mr. MCCARTHY in the chair). Does the Senator from South Dakota yield again to the Senator from Nebraska?

Mr. MUNDT. I yield.

Mr. CURTIS. Should a vote for the amendment of the Senator from South Dakota be considered as being against the making of any payments of this sort, ultimately?

Mr. MUNDT. No; a vote in favor of the adoption of my amendment should be considered as being against the making of any payments of this sort until we know what the Board finds—in other words, to wait until a year from now, when we can know what payments will properly be covered by the umbrella of the proposed legislation.

Mr. CURTIS. When could the payments begin?

Mr. MUNDT. In the case of rural areas, such as those which the Senator from Nebraska and I represent, I do not believe the payments could conceivably begin—under the terms of my amendment—until the Board's report was made, assuming that the Board found that such payments could justifiably be made at all, because—curiously enough—the bill provides for the making of payments to urban areas but generally relegates to further study by the Board the making of payments to other areas; and, of course, no one can know now what the Board in due time would determine as to them.

But there are several reasons which I hope will influence Senators to vote for the adoption of this amendment, so as to have a further study made before this venture is begun.

Mr. LAUSCHE. Mr. President, will the Senator from South Dakota yield to me?

Mr. MUNDT. I yield.

Mr. LAUSCHE. The Senator from South Daktota has said that the bill applies, especially as regards the properties in category one, to properties located in urban and suburban areas. I looked carefully at the bill, in an effort to determine what connotations it gives to the terms "urban" and "suburban." But the bill does not contain any definition of those terms. Will the Senator from South Dakota state his understanding of the meaning of the terms "urban" and "suburban"?

Mr. MUNDT. I shall be happy to do so, because in the absence of such definitions, I suppose we must revert to the common usage and to the definitions in the dictionary. Certainly both by common usage and by the definitions in the dictionary the terms "urban" and "suburban" are connected with such terms as "metropolitan" and "big cities." They refer to the larger gatherings of communities which operate under municipal law. I suspect that the Board could hold that the bill would apply to any community of a million or more persons, or perhaps to any community of 500,000 or more persons, but not to a community of much less than 500,000 persons. At any rate, here is one of the reasons, as I shall explain further later on, why I think a Board appointed by the President and charged with this responsibility should arrive at some precise language for such a measure.

Certainly I would hate to be the mayor of a city who was trying to obtain payments for his city under a measure similar to the pending one, and who was told that, unfortunately, his community was 500 persons or 100 persons short of the requisite size, and therefore no payment under the bill would be made to it, but, instead, that it would only have a chance to make a presentation to the Board, whereas a community which was 100 persons or 500 persons larger would definitely receive the payments, without being subject to challenge.

Mr. LAUSCHE. Mr. President, will the Senator from South Dakota yield further to me?

Mr. MUNDT. I yield.

Mr. LAUSCHE. Then, under the bill, the board would have to speculate as to the meaning of the terms "urban" and "suburban," would it not?

Mr. MUNDT. Yes, that is all anyone could do in those circumstances.

Mr. LAUSCHE. I believe the bill should cover metropolitan areas.

Mr. MUNDT. Certainly it should.

Mr. LAUSCHE. However, the bill would seem to leave that field to whatever interpretation the Board might make.

Mr. MUNDT. That is correct; and the interpretations and the findings made by the Board would not—curiously enough—be subject to challenge by the Congress, and never would be submitted to the Congress.

Furthermore, two of our colleagues on the other side of the aisle deplored, a little while ago, in the course of debate, the fact that the bill provides that such findings would be subject to review. They proposed that the provision for such review be eliminated from the bill—which would mean that the Board's findings would not be subject to challenge by anyone, anywhere, at any time.

Mr. LAUSCHE. Mr. President, will the Senator from South Dakota yield further to me?

Mr. MUNDT. Certainly.

Mr. LAUSCHE. The bill includes definitions of the terms "Federal agency," "Federal property," "real property," "controlling agency," "Board," "State," "tax authority," "tax," "taxable persons," "special assessment," "public improvement," and "industrial or commercial use." But the bill does not define the terms "suburban" and "urban." In other words, according to the whim of the Board, it could give to the terms "urban" or "suburban" whatever connotations it might decide upon.

Mr. MUNDT. The Senator from Ohio is exactly correct. I suppose that ultimately those questions would be carried to the courts by some aggrieved communities which felt they were urban, althought the Board felt they were not urban, with the result that the Board left them out in the cold, instead of bringing them into the warm embrace of these Federal funds.

Mr. LAUSCHE. Inasmuch as so many terms are defined by the bill, and inasmuch as the terms "urban" and "suburban" are certainly of considerable significance, should they not also be defined by the bill?

Mr. MUNDT. I entirely agree with the Senator from Ohio. However, he is directing attention to only one of a great many ambiguities which are to be found in the bill—all of which constitute an additional reason, in my opinion, why a proper and prudent approach to this matter would be to have a Federal board make findings in this area, and then come to Congress with a suggested program which could be approved by the Bureau of the Budget, instead of one which is seriously condemned by the Bureau of the Budget and also by the fiscal authorities of the country as being a glaring example of fiscal irresponsibility.

Mr. LAUSCHE. Mr. President, will the Senator from South Dakota yield further to me?

Mr. MUNDT. I yield.

Mr. LAUSCHE. It seemed to me that, in these circumstances, reference should be made at this point in the debate to the desirability of having the bill include definitions of the terms "urban" and "suburban."

Mr. MUNDT. Certainly that is the case; and let me state that I appreciate very much the significant contributions the Senator from Ohio has made. As always, they are helpful and informative.

Mr. DWORSHAK. Mr. President, will the Senator from South Dakota yield to me?

Mr. MUNDT. I yield.

Mr. DWORSHAK. Does the Senator's amendment deal with the public domain in the Western States?

Mr. MUNDT. Yes. My amendment provides that the board shall make a study of the entire area involving public ownership, because, strangely enough, and, in my opinion, most unjustly, the so-called public-land States would be permitted, by means of the bill, to pay the additional tax burden, but would not be permitted to receive any of the benefits. I am sure no one would consider Idaho a highly urbanized area; and I am sure the same is true as to Arizona or Nevada.

Mr. DWORSHAK. Mr. President, will the Senator from South Dakota yield further?

Mr. MUNDT. I yield.

Mr. DWORSHAK. It seems to me there would be inequity and discrimination if the tax program proposed by means of the bill were to go into effect, in view of the fact that the program would overlook the interests of States such as my own, in which the Federal Government owns 65 percent of the total land area. Something should be done to recognize the need for equitable treatment and for equalization of such assistance and payments in lieu of taxes.

Mr. MUNDT. That is correct. Of course, one of my objections to passage of the bill in its present form, instead of the making of a study, is that a whole saga of inequities and inequalities—of which the Senator from Idaho has mentioned one—would develop.

The Senator from Ohio placed his finger on another possibility—as between the urban and the nonurban communities.

Then there is this startling one, which is written in boldfaced type in the bill; namely, that the benefits in a whole series of categories would be made available to such communities only when such properties were acquired by the Federal Government after June 30, 1950. Later in my remarks I shall discuss this point in greater detail. But for the moment let me ask how any Senator would like to be confronted with so unjust a program. For instance, how would any Senator like to be the Governor of a State in which were located two urbanized communities, in one of which a Federal installation had been established on June 21, 1950, and, in the other, on July 2, 1950, less than 30 days apart, and then find that the program under the bill was to be applied to them or was to be decided as to them on the basis of the definite cutoff date provided in the bill. One gets a plush payment from Uncle Sam, this type of payment in lieu of taxes. The other is in the unhappy situation of having to pay higher income taxes to provide for the plush payment.

Mr. President, I do not disagree with the intent of this bill. I did not when I led the fight against a similar proposal on July 27, 1956, when I said, as appears in volume 102, part 11, page 15051 of the RECORD, that we are dealing with problems created by the Federal ownership of so much property in the United States, and I suggested then that we have a commission to make a study of the problem, which, if we had done it then, would have long since resolved the inequities.

Let me point out another factor. In the first place, this bill authorizes what is tantamount to an open-end appropriation, with no limit whatsoever. I do not have an educated guess as to what it is going to cost, because nobody knows. Somebody said it would cost $300 million

the first year. Another has said it would cost $30 milllion the first year. Nobody knows. This is something new and novel. It is something we should be reluctant to enact today, when taxpayers are asking us, "What are you doing to protect the Treasury? What are you doing to fight inflation? Are you attempting to balance the budget? Are you going to establish a reputation for fiscal irresponsibility in this Congress, or are you going to maintain a close watch on the people's dollars?" Here we are asked to appropriate nobody knows how much the first year, and it obviously is going to increase steadily.

I should like to point out something further. When we begin to make, in certain categories, payments in lieu of taxes, when we begin to make cash payments in others, there will be no turning back. After contributions are started in this area, we shall not be able to turn back. Once we enact this legislation, we shall be beyond the point of no return.

During the life of this bill, it will cost many hundreds of millions of dollars, and I predict it will cost us well over $1 billion in the first 5 years, and perhaps twice as much as that.

I do not believe any one of us, as the director of a private corporation, would consider for 1 minute being in favor of a 5-year program without having some idea of what the costs are going to be. Still we have no reasonable estimate so far as costs are concerned.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. MUNDT. I am happy to yield.

Mr. DIRKSEN. I am sure the administration, likewise, fully appreciates the problem that confronts the municipalities and the displacement of certain taxable values when they go into the hands of the Federal Government. That appreciation is borne out by the fact that, on a qualified basis, the administration was willing to go along with some kind of program, to be sure, limited in character.

When, however, the decisions in the Wisconsin and Michigan cases came down from the Supreme Court in 1958, I think for the first time the administration got some notion of the magnitude of the problem and what it might cost the Federal Government. I believe the lowest estimate was $500 million, but there was an estimate which bears out the contention of the Senator from South Dakota that this program could conceivably cost $1 billion a year. So there was a change of the administration's position on this matter. I think after the decisions in the cases involving the leasehold and the contractors were handed down, because of the burden taxed back against the Federal Treasury, for the first time they realized, budgetwise, that this program could have a tremendous impact on the well-being and the economy of the country.

I think that realization was borne out by the message of the President on the 1961 budget, because in that, among other things, he said:

> There are many problems requiring attention of the recently established Advisory Commission on Intergovernmental Relations. Foremost among these are the problems of allocation of tax sources among various levels of government and rapid growth of metropolitan areas.

Then there was this concluding sentence:

> An aspect of intergovernmental relations requiring attention in both the legislative and executive branches involves a series of court decisions permitting local taxation of federally owned property in the hands of contractors and leaseholders. This matter should be resolved in the context of the broader subject of Federal payments in lieu of taxes.

On that basis, the administration itself supports the contention made by the distinguished Senator from South Dakota when it says some further study should be given to this matter.

I think there are other involvements and other complications which also merit further attention. I hope that the substitute proposal offered by the distinguished Senator from South Dakota will prevail.

Mr. MUNDT. I thank the Senator very much for his very constructive contribution.

I point out that in the minority views which Senators have on their desks, at page 46, they will find detailed references to the Supreme Court decisions, which have altered the situation substantially since the proposed legislation was introduced by the Senator from Minnesota.

I may add to Senators who may happen to have their names on the bill that they may take that fact into consideration, also, because there is a new factor, a study of which and possible repercussions from which have substantially altered the situation, to such a point that the Budget Bureau, originally being in favor of a modest approach to this problem, has examined into the situation and has said that if we ever go into this fiscal adventure we shall have no opportunity to return. Who knows what impact it would have on the Federal budget once we get into the business of making payments in lieu of taxes in every one of the 50 States? We would open up a Pandora's box of expenditures of which there could be no foreseeable end.

After 150 years as a Republic, it is proposed that we make a change in public policy, on a sleepy afternoon, with scarcely a sufficient number of Senators on the floor so we can get the required 11 to get a yea-and-nay vote ordered on the amendment.

Mr. President, I think such a situation is dangerous. It is irresponsibility in action. There should be a sustained debate. I think opportunity should be given to all Senators to know what has happened in the Federal courts. I think we ought to know where we are headed and where we are going. If we pass an open-end appropriation bill as gigantic as this, I am sure future historians will look back upon this day and consider it as a very dark Wednesday in American history.

In the first category, my amendment proposes we study and ascertain the facts before we undertake to rewrite the course of American history in perpetual red ink.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. MUNDT. Yes.

Mr. LAUSCHE. This afternoon statements were made on several occasions to the effect that this is a temporary measure.

Mr. MUNDT. Five years.

Mr. LAUSCHE. And that it will come to an end in 5 years. Will the Senator from South Dakota give his interpretation of the possibilities of this program being ended at the conclusion of 5 years?

Mr. MUNDT. The distinguished Senator from Ohio is as astute an observer of public opinion, in my opinion, as we have in the Senate. The Senator was the Governor of a great State for many years. I am sure the Senator from Ohio must agree with me we cannot alter the budgetary processes of municipalities, of counties and of States by letting flow into their budgets from the Federal Treasury for 5 years an abundance of the people's money, and ever again expect to shut it off. Once these people have readjusted their spending programs, their budgetary methods, and their tax programs to the available Federal money, at the end of 5 years we can be assured we will be asked for more money rather than be able to shut off the money.

Mr. President, we ought to know what we are going to do before we start. I cannot recall any instance before when we have been considering a measure such as the one now under consideration, when even the sponsors of the proposal, who are honest and honorable men, are as perplexed as I am, and do not know what the measure will cost. The Bureau of the Budget does not know what it will cost.

How are we going to develop some clairvoyance, to determine how generous the Board is going to be in determining how much Federal money will be paid in lieu of taxes? After the appointment of the board we will not know. After confirmation of the nominations we will not know. Once we find out what the cost will be, it will not make any difference, because we are asked to give this Board supreme power.

I note that some associates of mine on the Committee on Appropriations are present in the Chamber. There is plenty of room left for more Senators, but I am glad to see them present.

Mr. President, I point out that members of the Committee on Appropriations are normally pretty jealous of their responsibilities, and face up to their responsibilities pretty seriously, be they Republicans or Democrats.

If we vote to pass this proposed legislation we vote to vacate permanently our responsibility and our authority in this whole area of expenditures. We shall never vote again on how much will be spent. Some board downtown will determine how much money is to be spent, and the Congress will never have a chance to OK it, to deny it, to increase it or to reduce it.

If the chief proponents of the bill have their way, they will take away the opportunity of the courts to review the matter. This is to be a board which

will have as much authority, it seems to me, in our great democracy, as any totalitarian oligarchy which could be established in any totalitarian country in the world.

Mr. DWORSHAK. Mr. President, will the Senator yield?

Mr. MUNDT. I am happy to yield.

Mr. DWORSHAK. The Senator referred to the fact that S. 910 was introduced by 35 Members of this body. However, is it not true that the bill, as reported by the committee to which the bill was referred, is a complete substitute, with none of the bill continued as it was originally introduced?

Mr. MUNDT. Yes; the Senator is correct.

Mr. HUMPHREY rose.

Mr. MUNDT. I will yield in a moment to the Senator from Minnesota, a tired gentleman who suddenly became activated.

I must say, while the bill is an entire substitute, it has not been changed materially.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. HUMPHREY. I was not going to interrupt while the Senator from South Dakota was simply giving his personal opinions, but when a question of fact comes up it should be answered factually.

The substitute was written for the purpose of taking into consideration three or four committee amendments which limited the bill rather than expanded the bill. In no way does the substitute get away from the fundamental purposes or objectives which were laid down in the original bill. I appreciate the fact that the Senator from South Dakota has stated that is so.

Mr. MUNDT. That is correct.

Mr. LAUSCHE. Mr. President, will the Senator yield for a further question?

Mr. MUNDT. I will yield, but before I yield I wish to say that if I were someone who had put his name on the bill before all of the facts had become available, and really wanted to be of service to my folks back home in this connection, I think I could in good conscience vote for the amendment in the nature of a substitute, because it seeks to achieve the same objective.

After all, those Senators who initially introduced the bill and brought it to the floor in 1956, many of whom are the same Senators whose names appear on the bill now, did so before the decision of the U.S. Supreme Court, which has entirely altered the arithmetic, the conditions and the potentialities of this proposed legislation.

I yield to the Senator from Ohio.

Mr. LAUSCHE. The argument has further been made that the bill deals with three inconsequential instances in which payments will be made in lieu of taxes, and that the bill is only temporary in its application, for a period of 5 years.

I wish to ask the Senator from South Dakota a question in this regard. In the minority views the Senator stated:

> Once started, the pressure would all be for the almost endless expansion of this concept of Federal payments to local communities with similar conditions or to other communities with different problems of like intensity and need.

How does the Senator from South Dakota envision that the inconsequential provisions now contained in the bill will be expanded in the future?

Mr. MUNDT. I appreciate the Senator's question. I should like to first call as my witness the distinguished junior Senator from California [Mr. ENGLE], who, in the course of his remarks a few minutes ago, gave me a text on this subject were I disposed to preach a sermon. The Senator said—and I wrote it down as he spoke:

> This is not perfect legislation, but it opens the door.

It opens the door. It opens the door to other measures of this type. What are they going to be? I will tell Senators. Every community in America which happens to have a Federal installation which was acquired prior to June 30, 1950, will come to Congress before the ink is dry on the legislation. Any Senator or Representative who is worth his salt is going to have to vote to start the program with the beginning of America. We cannot justify having two tax schedules in America, one for communities with installations taken over since June 30, 1950, and one for communities with installations dating before that time. No Senator could go home to face his people and say, "I thought it was all right to take care of the more recent acquisitions, but we are going to do nothing for you people who have had the installations for a long period of time."

The Senator from Iowa [Mr. MARTIN], who joined me in writing the minority views 4 years ago, used a good phrase. I wish to tell Senators what was said. The Senator used a very good analogy. He said:

> This is a philosophy I cannot accept.

The Senator was talking about two standards of morality; first, payments in lieu of taxes for communities with new Federal installations; and, second, extra tax burdens for communities with old Federal installations.

The Senator from Iowa [Mr. MARTIN] said, as appears in volume 102, part 11, page 15080 of the CONGRESSIONAL RECORD for July 27, 1956:

> This is a philosophy I cannot accept. This is a philosophy that if a man has been blind for some time he is accustomed to his blindness and therefore should not be helped to regain his sight.

I think that is pertinent, Mr. President. Senators ask, Where are these pressures going to arise for extending the $1 billion to $2 billion, or nobody knows how much? If we start picking up the tax bill for post offices and the tax bill for Federal installations and factories, we are going to have to pick up the tax bills also for the rural people of America, sooner or later. The people on the farms and ranches of America are going to say, "Why do you not pay taxes for the Indian reservations? Why do you not pay taxes for these great reservoirs which inundate hundreds of thousands of acres, when that land is the best farmland, the rich bottom land of America? Why do you not make payments in lieu of taxes for the grazing units? Why do you not make payments in lieu of taxes to help communities to eradicate the weeds along the highways which pass the great Federal installations of America?"

What will be done about the Federal forests? What will be done about the parks? Where will we stop, Mr. President? Where are the pressures going to arise They will come from the taxpayers who will rightfully feel aggrieved because, under the proposed legislation, they will be compelled to pay more taxes so that some others can receive benefits in the form of payments in lieu of taxes.

Perhaps this is what America wants. Perhaps we want all of the taxes to be paid by Uncle Sam. I submit that before we start out on a starry-eyed adventure of this kind we at least ought to have a study by competent fiscal experts in America. We ought to have a bill before us which deals equitably with the different classes and varieties of people, and the different types and sizes of cities, and we ought to discuss it, Mr. President, in the presence of more Senators than would be required for a jury in a county courthouse in South Dakota, when there is an investigation as to whether some man should be put in jail for drunken driving.

This is serious business. This proposal could change the whole character of American fiscal history. I see some of our Southern friends present. I can remember the glorious day of the South when they made a determined fight for the rights of States. Do those Senators wish to nullify, scrap, and scuttle forever any concept of the rights of States? By enacting the proposed legislation, the taxpaying and tax-returning function of the Government would be placed in the hands of the Federal Government, and the function of the States would be reduced to a ceremonial function of no consequence, because ultimately the hand which pays the taxes will control the way in which the moneys of America are spent. Short of bankruptcy, we can do no less.

Mr. President, I come to my second objection. I have discussed the fact that this is a blind flight into outer space financially. I wish to emphasize the discriminatory features, as between communities which acquired Federal properties before June 1950, and those which have acquired them later. I point out to my good friends from California, who are under the illusion that the great San Diego Air Base is going to come within the blanket of payments made available here, that such is not the case because it was created and installed a long time before 1950.

Mr. President, I believe we ought to treat like circumstances with like remedies when they are caused by identical activities of the Government. There is no significance in a calendar date which may be inserted to discriminate among people and among taxpayers and among communities. I point out that under the proposed legislation our farmers would be deeply affected. How many Senators stood on the floor today and said "Hur-

rah for the farmer. Hurrah for REA. Hurrah for RTA. How glad we are that 25 years ago America did something for the farmers." What a birthday present for the American farmer. What a birthday present if on the 25th anniversary of that wonderful development called REA we now tell the farmer, "We are coming at you with a new concept of taxes, and we are going to make payments in lieu of taxes to urban and suburban areas for industrial and commercial purposes, but we are not going to make any of these fees available for Federal grazing lands. We are not going to make them available for game refuges or Indian reservations."

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MUNDT. I yield to the able Senator from Minnesota.

Mr. HUMPHREY. The Senator knows very well there are shared revenues on Federal forests. The Senator knows there are leases on Federal grazing lands on which the Federal Government makes money. Why does not the Senator speak more accurately on that subject?

Mr. MUNDT. The Senator may know that in committee yesterday, although he was not there, though I know his heart was there——

Mr. HUMPHREY. My heart was there.

Mr. MUNDT. Yesterday when the Senator was understandably absent we renewed for the third or fourth time consideration of a bill for payments in lieu of taxes which would be available for GSA properties all over the country, industrial or otherwise, but such proposed legislation would not contain any discriminating features. The proposed legislation would deal only with purchases of property on which taxes were formerly paid and which were taken off the tax roll and made available. This standard legislation has been in operation for about 6 years and costs us, on the average, $3,300,000 a year. It is a quid pro quo for what the Senator is talking about so far as concerns forests, Indian reservations, and public grazing lands, some of which are located in the wonderful State of Minnesota, as well as in the State of South Dakota.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. HUMPHREY. The Senator has just said that under the proposed legislation, with respect to GSA properties on which taxes were formerly paid and which were taken over by the Federal Government, there would be a payment in lieu of taxes. Is that correct?

Mr. MUNDT. No. I said we had passed legislation which dealt with the problem, meeting it for 6 or 7 years, giving us time to make the kind of study required to determine whether or not anything additional is needed. That is something quite different from the multi-hundred-million-dollar proposition proposed in S. 910.

Mr. HUMPHREY. We shall come to that a little later, but what the Senator is really saying is that in legislation relating to General Services Administration property, payments in lieu of taxes are required. That is what the Senator wants?

Mr. MUNDT. No. This is a bill which operates under sharp restrictions and under an altogether different concept.

Mr. HUMPHREY. Will the Senator explain this to his slow-learning friend?

Mr. MUNDT. It has no connection with S. 910, but it does provide the type of situation which is operative now with respect to certain national forests and certain operations of that type.

Mr. President, turning to the third reason why I feel the proposed legislation should not be enacted at this time, a careful study of the situation should be made.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. LAUSCHE. I understand that an installation of an identical type and used for an identical purpose will be dealt with differently on the basis of the date of June 30, 1950.

Mr. MUNDT. The Senator is exactly correct. In one case the community will receive payments in lieu of taxes. In the other case the community will receive an extra large tax bill because it has to help to pay the taxes which community A receives, and nothing more.

Mr. LAUSCHE. That would mean that if there were two communities in Ohio with identical property holdings by the Federal Government, community A having had the installation on January 1, 1950, and community B having property acquired by the Federal Government on July 1, 1950, they would be dealt with differently?

Mr. MUNDT. The Senator is correct. There would be so much difference that the proposal would take away from one and give to another. That is about as great a difference as is possible.

Mr. LAUSCHE. Community A, the property of which was used before June 30, 1950, would get no payment in lieu of taxes, but would have to pay money to the Federal Government so that community B could receive the tax benefit.

Mr. MUNDT. The Senator is exactly correct.

Mr. LAUSCHE. So the first community would be benefited; the other would be burdened to provide the money to pay the first one the benefit.

Mr. MUNDT. That is precisely one of the reasons why the Budget Bureau and those who have studied this problem look at it with great concern, and why I have suggested in my amendment in the nature of a substitute that a board of fiscal experts devise some program so that if it were considered desirable to help community A, community B would be treated precisely the same. If anything, it seems to me, the community with the older establishment is more likely to need relief than the one with the newer facility, but I would be equally against the proposed legislation if the discrimination were reversed. I do not think we can afford in America to start discriminating against communities on the basis of some date picked out of the sky. Where the date was obtained, I do not know. Any other date would have served just as well; but the particular date was selected as the distinguished Senator from California [Mr. KUCHEL] said, as a part of the technique to open the door. The door must be opened somewhere. This proposal would open it and, of course, the rest would come rushing in.

Third, the proposed legislation fails entirely to provide for congressional review. I do not know of any other place where such legislation could be found. A project is authorized in the development of public works by the Committee on Public Works, of which the distinguished Senator from Oklahoma [Mr. KERR], is a member, and after that committee gets through with the measure it is sent over to the Appropriations Committee, which is headed by the distinguished Senator from Arizona [Mr. HAYDEN]. After the Committee on Appropriations gets through with it, it goes to the Senate. It goes through a similar process in the House of Representatives, and then it is probably considered in the conference committee.

What would happen under this proposal? This is an open-end authorization bill which says at the end of it, "Goodby, my dollar, goodby," because never again would Congress have an opportunity to act upon it. Never again does it come back. The proponents mention in the proposed legislation time after time—and they would use italics if they could—that the action of the proposed Board is to be final. If it does a good job, that is wonderful. If it wrecks the economy of the country, that is too bad. If there is discrimination among people forever, nothing can be done about it. The proposed legislation would turn them loose and let them function as third appropriation body of the U.S. Congress. No one in Congress would have a chance to stop any excesses in which they might engage. If the Appropriations Committee acts badly, we can change its action. We can reduce the appropriation. The President can veto the appropriation bill. But if the same kind of human error or extravagance should creep into the operations of the proposed Board, no one could do anything about it.

The General Accounting Office can check on the accuracy of the facts, but not with respect to policy. They can check only with regard to the bookkeeping that is involved.

The sponsors did insert a provision in the bill, while the bill was under consideration in committee, for a court review, so that the provisions in the bill, if enacted, will be in conformity with the law. However, two of the most ardent supporters of the bill have said on the floor of the Senate today that that looks as though they were holding back the hand of the Board too much. They said, "We will take away the court review provision. We will not do it here. We do not like to discuss that point very much. We will slip it through without a rollcall vote, and then we will try to knock out the court review provision in the other body."

My further objection is that this is dangerous legislation in the extreme. We are asked to engage in a carnival of

back-door spending so broad that we will not only shovel the money out the back door, but we will knock out the whole back end of the Treasury Building, and let the money roll out. Nobody will be responsible for an accounting of the expenditures as the spending goes on.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. LAUSCHE. I understand that the bill provides for a five-man Board, the members of which are to be appointed by the President. Is that correct?

Mr. MUNDT. That is correct.

Mr. LAUSCHE. Would the Board have discretionary power to determine what payment shall be made in lieu of taxes?

Mr. MUNDT. It would have complete, total, and final power. The Board would make the decision. That procedure would be unlike the procedure followed by the Indian Commission, which is set up along the same general lines, but of course the Indian Act treats Indians differently. The Indian Commission must make recommendations to Congress, and Congress ultimately passes on the recommendations. But with respect to the pending bill—this is it. The Board hands out the money.

Mr. LAUSCHE. Are any standards set up in the bill to limit the discretionary power of the Board in fixing the amount that will be paid?

Mr. MUNDT. I believe there are some standards set up. I wish to be fair to the sponsors. Yes; there are some standards set up, which may have some impact on the Board.

Mr. LAUSCHE. Where in the bill are the standards set up?

Mr. MUNDT. The Board has total control. There is some provision about surveys and investigations.

Mr. LAUSCHE. The bill refers to rules and regulations. However, where are the standards set up in the bill which limit the ceiling and floor within which the Board must operate?

Mr. HUMPHREY. Mr. President, will the Senator yield on that point?

Mr. MUNDT. I shall be glad to yield to the Senator. Some standards are fixed, although they are very vague.

Mr. HUMPHREY. It is hard to fix a standard as to what a tax shall be on a given piece of property unless we know what the assessed valuation of the property is. All that the Senator from South Dakota is saying is that he does not believe the local governments ought to have the revenues to which they are entitled and which they deserve to have. The Senator is saying that Uncle Sam ought to be excluded from paying his share of local government costs. That is not going to sound very good when he gets back home.

Mr. LAUSCHE. That does not answer my question.

Mr. MUNDT. I do not want property acquired after June 30, 1950, to be treated any differently from property acquired prior to that time. I do not want the property acquired later to shoulder the cost with respect to the other property.

Mr. HUMPHREY. What the Senator from South Dakota is asking for is more study and more study. Apparently he does not know that the administration is a slow learner and has been studying this matter for some years. The present administration has been studying it for 7 years. The previous administration studied it for 13 years. The Senator from South Dakota wants a study to go on for years and years. He wants the study to go on for 5 more years. In the meantime the local governments are going to lose the revenues. I know the Senator is dedicated to education. However, I should like to say to him that education is generally helpful.

Mr. MUNDT. I must interrupt the Senator at this point to say that when he said I want a study made for an additional 5 years, the Senator from Minnesota is 500 percent wrong. My substitute provides for an interim report by March and the final report by December.

Mr. HUMPHREY. It takes more than that time to get a commission started. It required 13 months to establish the Commission on National Goals, which was suggested by the President. The Senator is asking for a few more months.

Mr. MUNDT. The procedure for appointing the commission I suggest is exactly the same as the procedure the Senator from Minnesota suggests for the establishment of his commission.

Mr. HUMPHREY. That is correct.

Mr. MUNDT. If that commission can come into action and start getting results under one category, it can do the same in the other.

Mr. HUMPHREY. I say most respectfully that the difference is in the life of the commission. The Senator wants the baby to be born and have a quiet demise. I would like to have the baby born and then have it grow up and be able to produce some results. It takes a little time for the Commission to be established and to become acquainted with the facts, and then bring the facts to the attention of Congress. The Senator knows, as well as any other Member of the Senate, that a commission established for 1 year takes some time to be appointed, and that before it can get into action it will have to have its life extended.

The Senator gave us a very exciting picture of a governmental agency going on and on. What he is talking about is the proverbial camel's nose getting under the tent flap, because it will not be too long before the whole camel is in the tent. Then it will take another shove, next year, to keep the commission going.

Mr. MUNDT. I am not sure about the point the Senator is trying to make. However, the commission I propose shall, by next June, a year from now, come up with a report and come up with proposed legislation to meet these problems on an equitable basis. The Senator, in his bill, recommends a study, which I recommend in my substitute. The major difference is that, under the Senator's bill, payments are made as the study goes on.

Mr. HUMPHREY. The proposal before us requires that in 2 years a report shall be made to Congress. That is provided in the bill as reported by the committee. The Senator's substitute provides that procedure within 1 year. That is the first difference.

Mr. MUNDT. Yes.

Mr. HUMPHREY. The committee bill provides that in the 2-year period of time the Board will actually get some experience. It will not deal with theory only.

Mr. President, we have had 20 years of theoretical studies. We have spent more than $400,000 for a theoretical study by the Intergovernmental Relations Commission. What we need now is to deal practically with problems in communities which have Federal property located within their confines, and to have those communities present to the Board the facts in these cases. The local taxing authority would come before the Board, with the burden of proof on the local taxing authority to prove to the Board that it has a valid case and that the property in question is entitled to a payment in lieu of taxes. The Board would review that case and come up with a recommendation.

The Senator wants to make some more studies and employ a great many people who would look into these matters in this theoretical atmosphere, and then come up with some more recommendations. I say to the Senator that we have enough conclusions now to fill this Chamber. What we need is experience.

The bill reported by the committee would limit payments in lieu of taxes to three categories over and above what we have now. These categories are spelled out in terms of real property, commercial and industrial property, and special assessments. It seems to me that if we are to get any experience, it must be obtained through the provisions of our bill. Let us suppose a piece of Federal property is located on a street on which there will be provided gutter and curbing, with a special assessment to be made on the properties located on that street. Such a special assessment would be made, for example, on the grocery store located next door to the Federal installation, and on the hardware store located on the other side of the Federal installation. There is no reason why the Federal Government should not pay its share of the assessment for gutter and curbing.

What the Senator is saying is that the little hardware store and the little grocery store should pay for the Federal Government's share of the assessment.

The Senator from South Dakota is saying that the Federal Government should get a free ride at the expense of the other property owners. I point out to the Senator that 85 percent of the people in this country live in metropolitan centers. I am for the farmer, just as much as my friend from South Dakota is for the farmer. However, 87 percent of our population lives in urban centers. Those people are entitled to fair treatment just as much as the people in rural areas are entitled to fair treatment. The committee bill before us does not deny the people in rural areas fair treatment. The Sena-

tor's substitute amendment asks for more study. The committee bill provides for action as well as more study.

Mr. MUNDT. The Senator has asked me several things. I cannot very well answer him until I get the floor back from him.

What the Senator from South Dakota is saying is that if there is justification for taking care of the problem of the Federal installation between the hardware store and the grocery store, in a city in America, it is no more logical to ask that we also take care of a situation in rural America where there is an assessment for road construction and weed eradication and some other identical problems.

In one case we say, "Let us study the farmer's problem;" in the other we say, "We are going to get some experience by paying out cash to rural areas." It will be awfully costly experience, Mr. President.

The poor American taxpayer will really have an experience when he starts out on this new project. He cannot back up. The Board can, but he cannot.

Mr. HUMPHREY. Is the Senator indicating that the people back home, who pay property taxes, which constitute the heaviest load of taxation, are not taxpayers? There is no one who escapes paying taxes. Anyone who smokes a pack of Bull Durham or who buys a Cadillac is paying a tax. Whether he buys a bottle of vodka or a bottle of bourbon, he pays taxes.

The question is whether the man who carries the tax load on real property in his hometown will have to carry the load of the Federal Government, or whether the Federal Government, which can tax corporations, which can secure revenue from tariffs, which can impose high income taxes on those who can most afford to pay them, will be required to pay.

Consider the big town, or the small city, of Sioux Falls, S. Dak. Is the Senator from South Dakota saying that Sioux Falls is so big that it can impose taxes for gutters and curbs without requiring the Federal Government to pay its share? Is he saying that Du Pont, General Motors, or General Dynamics, who pay their fair share of the Federal revenues on a corporate income tax basis, are to get better treatment than John Doe for gutters and sidewalks, and that John Doe will have to pay an extra load of tax for the Federal installation? I am surprised. I did not know the Senator from South Dakota did not think more of his constituents than that.

It seems to me that if there is a Federal installation on the street next to the hotel in Sioux Falls, the Federal Government ought to be asked to pay its fair share of the cost of the municipal government.

Mr. MUNDT. If the Senator from Minnesota will take his seat and restrain his surprise, I will try to answer him.

I am very definitely concerned about the taxpayers of America. Where the Senator gets any idea that I think people do not pay taxes, I do not know. I am trying to place some kind of control on taxation by experience, by saying that there should be some scientific study or research on this proposal before we launch ourselves on a ride from which we cannot turn back, because once we have started to act, the acts in which we engage now will create precedents from which we cannot extricate ourselves.

So far as the people of Sioux Falls, S. Dak., are concerned, I hope the legislative record will show that in the opinion of the Senator from Minnesota and the Senator from South Dakota, Sioux Falls is an urban community.

I am a little skeptical. Its population is about 65,000.

If a curb is put in front of the post office there the city might well earn a few Federal dollars as payments in lieu of taxes but the citizens of Sioux Falls would have their income taxes increased much more or continued much longer to compensate the Federal Treasury for the great program of Federal payments, generally established by S. 910.

Insofar as other payments are concerned on Federal installations, the favored citizens who would receive them from June, 1950, I am sure would so load up extra taxes for a city like Sioux Falls they would never be able to figure much of a dividend from the hundred dollars or so they might get from putting a curb in front of a post office.

Besides, there are tremendous areas of public lands and country areas which are, by definition excluded from being included as suburban areas or urban areas and so would reap no benefits from this discriminatory legislation.

In my opinion, it is necessary to have a commission study and consider the needs of the country as a whole, in order to meet these problems equitably. This is very real and understandable. When the Senate debated this matter in 1956, I suggested that the matter be submitted to a board or commission for survey, study, and research. I suggest now that with the additional information, and with the whole new argument of the Supreme Court decision, after study for a year a board could come up with suggestions which would be equitable. It will then be possible to treat all cities and areas alike.

I should like to have some of the proponents of the bill give me a better reason, than the mere fact that it is a key to "opening the door," as to why they selected 1950 as the beginning of the world, so far as taxes are concerned, and that those with problems which developed since then can charge them off to the Federal Government, but those who had them earlier simply have to dig a little deeper into their pockets to pick up more taxes to pay the favored few. I cannot fathom any logical reason for that.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. LAUSCHE. My observation is that the bill authorizes the making of certain Federal contributions to local governments in lieu of the payment of, first, special assessments levied after the effective date of the proposed act upon real property situated in urban and suburban areas to defray the cost of local public improvements.

The definition of "public improvements" as contained in the bill covers not merely gutters and sidewalks in front of Federal properties, but "any street, road, bridge, sewer, water distribution system, drainage project, or other public improvement undertaken by or on behalf of any tax authority." That includes quite a gamut of activities.

In Ohio, water distribution systems are financed by a general tax; but there are States in which they are financed by special assessments. My query is, how will such assessments be levied on the basis of the tax value of the Federal property, or how?

Mr. HUMPHREY. I will give the Senator the answer.

Mr. MUNDT. Mr. President, I have the floor. I want to answer the Senator's question.

So far as I can see, this is one of the determinations which would be left up to the Board. It is much more appropriate that action be taken as a result of a study in legislative language, because I am certain the Senator from Ohio and I both agree that when we can have government by law instead of government by men, we operate on sounder grounds.

Mr. LAUSCHE. I do not want a Board created, regardless of how beneficent and humane we may expect them to be, without a limitation on its power, fixed by Congress. I do not want in existence a Board which would be subjected to the pressure of mayors, county commissioners, governors, Members of the House of Representatives, or Members of the Senate, in recognizing the divisions which will be made by the various local communities.

Mr. MUNDT. That is exactly what we will get with a Board which will not be subject to congressional review. No diminishment or expansion of funds can be enacted. There will be a complete abrogation of what I consider to be the constitutional responsibility of Congress to control acts of appropriation.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. HUMPHREY. I think the record ought to be made clear that any special assessment which has to be paid by the Federal Government as a result of the action of the Board must first be decided by the Board to be a special assessment which is in no way discriminatory against the Federal Goverment. In other words, if a special assessment is made on Mr. Smith's restaurant, Mr. Jones' hardware store, and Mr. Henry's garage, it will be on Mr. U.S.A.'s property at the same rate and with the same type of evaluation and same assessment being used at the local level. The bill specifically states that special assessments must also be levied on real property owned by taxable persons. If it is levied only on the Federal property, there would be no payments.

Mr. MUNDT. The Senator is speaking about paragraph 1, is he?

Mr. HUMPHREY. Yes.

Mr. MUNDT. I agree.

Mr. HUMPHREY. When it comes to an assessment, there is to be no discrimination in favor of or against the Federal Government. The Federal Government will be treated the same as will be all other persons for purposes of special assessments. I think that point should be made clear; otherwise, the record seems to be distorted.

Mr. MUNDT. Yes; that is clear. But that, in itself, is not a very good safeguard, because if the Federal building occupied two-thirds of the block, the tax or the assessment for curbing or for other improvements in that block could be imposed at a rather high level.

Mr. HUMPHREY. But I do not think the local government would be that dishonest. In any event, if the assessment were not made on the property of taxable persons, there would be no Federal liability.

Mr. MUNDT. I do not think so, either. But that would be possible.

Mr. HUMPHREY. I think the local board or assessing authority would do an honorable job.

But my point is that there could not be discrimination. The rates would have to be equal, and the assessment process for both Federal properties and taxable properties would have to be the same.

Mr. MUNDT. Furthermore, the pending bill constitutes a finding by Congress that hardships exist in certain situations, but without any evidence to support such findings, and without giving consideration to variations in regard to the types of construction and the types of area, whether urban or rural. Furthermore, the cutoff date of June 30, 1950, would be applied. The bill does not contain any clear definition of a situation which would create hardship. The result would be that although some communities would become prosperous as a result of the Federal installations, and other communities would find that hardships would be created for them, because of the Federal installations, the Board would make the final determination as to both of them. The Board might say, as to one of them, "This Federal installation does not cause you a hardship, so you will not receive any of these payments." And the Board might say to the other community, "This Federal installation does result in hardship to you, and you will receive the maximum payments."

Mr. LONG of Louisiana. Mr. President, will the Senator from South Dakota yield?

The PRESIDING OFFICER (Mr. LUSK in the chair). Does the Senator from South Dakota yield to the Senator from Louisiana?

Mr. MUNDT. I yield.

Mr. LONG of Louisiana. Consider the situation of a Louisiana community in which a Federal installation had been established, but later was closed, but where the local people had, during the operation of that Federal installation, bonded themselves up to the very limit, in order to provide schools for the children of the servicemen who lived there during the operation of the Federal installation, which later was closed. In that event, the local community would be head over heels in debt; but if the base had been established a long time ago—before the cutoff date provided by the bill—then, in the event the base were later closed, that heavily bonded community would have no recourse under the provisions of this bill.

Mr. MUNDT. The determination would be made on the basis of the cutoff date of June 30, 1950, of course.

Mr. HUMPHREY. In the case of a special assessment for improvement of the community or for the construction of the necessary facilities, the Federal Government would be required, by means of the bill, to make payments in accordance with the assessment standards provided for the entire assessment district.

Mr. LONG of Louisiana. But what would be the situation in the case of a community with a large bonded indebtedness?

Mr. MUNDT. I think the Senator from Minnesota and I agree that the distinction would not apply as to it.

Mr. LONG of Louisiana. But if the base were closed, the Federal Government would still own the property; but, because of the closing of the base, business activities would be greatly curtailed, and no doubt on the main street of that town there would be more closed stores than open stores, and there would be great economic hardship in the town. My guess is that in such circumstances, the people of the town would be delighted to pay the taxes, if only the base were reopened.

Mr. HUMPHREY. No doubt.

Mr. MUNDT. As to such communities, I think only the study provisions of the pending bill would apply.

Mr. LONG of Louisiana. But such communities would not, under the provisions of the bill, receive such financial assistance, although communities in which such bases continued to operate would receive the payments.

Mr. HUMPHREY. Under the bill, the taxing authority in the parish or the community or the county would be able to appear before the Federal Board and show that in that community there was a Federal installation which resulted in certain costs to the local government, in order for it to provide the public services the Federal installation required. Then it would be able to ask the Board to decide that, in view of the presence of the Federal installation, a payment in lieu of taxes should be made to that community. At least, the taxing authority would have the right to ask the Board to provide redress for its grievance; in other words, the community could ask for a payment in lieu of taxes.

But in the present situation no such right exists.

Furthermore, the bill would permit the Board to make a thorough study of such situations, which are encountered by many communities. In many communities, air bases, Army camps, and military installations for both production and for recruiting are being closed. This bill will be the first means of having a really conscientious and intelligent and thorough review made of what should be the Federal policy—first, as to individual cases, and, second, as to the general field.

Mr. MUNDT. Let me point out that if the pending bill is enacted, such Louisiana communities would have to pay their proportionate share of new taxes to help communities which would directly benefit by means of the cash payments which would be provided under the provisions of the bill, while the Board was studying the question of what program should be applied to those Louisiana communities.

My amendment calls for the making of the study by June 30 of next year; and that study would be made of the very problem the Senator from Louisiana has mentioned.

But under the provisions of the pending bill, such communities would only have the benefit of a study, whereas the more fortunate communities—those in which the Federal installations continued to be operated—would be able to receive payments in lieu of taxes, subject only to the cutoff date of June 30, 1950.

Mr. LONG of Louisiana. But the bill proceeds on the assumption that new Federal facilities, which bring in large payrolls, will cause great hardships. Actually, I find that, in general, such communities are very fortunate, and in many cases the Federal installations bring to those communities more benefits than the ones which would come from what we regard as industrial areas.

Mr. MUNDT. That is correct.

Mr. LONG of Louisiana. But, by contrast, the communities in which Federal installations have been closed have been practically destroyed, insofar as new business is concerned; yet they would have made large investments in order to provide the necessary facilities in connection with the Federal installations. The real hardships come—in short—on the communities in which the Federal installations have been closed, not on the communities in which new Federal installations have been developed and are in operation.

Mr. MUNDT. Let me point out that the reason why I am waging this rather lonely contest—and of course it is difficult to recruit a large army to shoot Santa Claus—is that I recognize that many real problems in this area are involved. I am primarily motivated by the realization that, under the pending bill, this problem would begin to be dealt with on the basis of a double standard, under which some communities would receive cash payments; but other communities would only be subject to the making of additional studies; and a third group would be subjected to whatever interpretations a Board—not yet chosen—might make. Of course, none of us can predict what those interpretations might be. Such a measure would be far less satisfactory than one which would result in the establishment of a board of fiscal experts—as I suggest—under a mandate to report to Congress its proposals for meeting these problems, and to do so by next June, so the Congress could pass on the problem at that session, and could bring about the enactment of a really effective piece of legislation fair alike to all concerned.

So far as timing is concerned, certainly the proper time to solve the problem is before the payments begin; the time to perfect the proposed legislation is before it is passed and placed in operation.

Mr. HUMPHREY. Mr. President, will the Senator from South Dakota yield?

Mr. MUNDT. I yield.

Mr. HUMPHREY. Let me say that as regards the installations to which the Senator from Louisiana has referred, no cutoff date will be applied, for they are in category 1 or category 2 of the bill. The cutoff date will be applied only to factories, or other industrial or commercial-type properties built by the Federal Government, and not now subject to payments in lieu of taxes. The only purpose of the provision for the cutoff date of June 30, 1950—and of course any cutoff date can be provided, as Congress may decide—is to save money for the Federal Treasury. June 30, 1950, marked the beginning of large-scale acquisition of industrial or commercial-type property by the Federal Government at the beginning of the Korean war. But if the Congress so prefers, a date in 1900, or even a date in 1800, could be used. My only purpose in preferring the date set forth in the bill is to save the Federal Government a great deal of money. The use of an earlier cutoff date would cost the Government a great deal more money.

Category 3 relates to commercial and industrial facilities, not to what we refer to as air bases, military installations, training schools, or the host of other activities, including navy yards, and so forth.

For instance, the Federal Government built the Twin Cities Arsenal, at Minneapolis-St. Paul. When the Federal Government owns the property, and builds the facilities, and then leases them to private concerns, they would be subject to payments in lieu of taxes if the taxing authority is able to prove its case. That is the difference.

But in Minnesota there is also Fort Snelling, located on a piece of real property which would not be affected in any way by the cutoff date provided in this measure. The taxing authority would not be able to make its application in regard to Fort Snelling, which was established in 1821, or to request payments in lieu of taxes, except if a special assessment is involved.

The only difference between the position of the Senator from South Dakota and my position relates to the limited payment provisions. The study portions of the bill and the commission which will make the studies are the same. In those respects, the pending bill and the amendment of the Senator from South Dakota are practically identical.

In fact, we took the suggestions of the Senator from South Dakota with respect to the study and investigatory powers of the Board. The Senator from South Dakota wants the Board to report back in 1 year. The Senator from Minnesota and the committee say it should be done within 2 years. We say it shall report twice a year to the President and the Congress with respect to the progress of the Board.

Mr. MUNDT. Also the proposal of the Senator from South Dakota does not provide for any payments during that period.

Mr. HUMPHREY. The difference is that, during the 2-year study period, the pending bill also gives the Board some experience in dealing with the practical situation of making payments in lieu of taxes on limited categories, which was a recommendation of the Bureau of the Budget in 1956.

Mr. MUNDT. Since withdrawn.

Mr. HUMPHREY. The Bureau of the Budget recommended it in 1956.

Mr. MUNDT. It has been since withdrawn.

Mr. HUMPHREY. The Bureau of the Budget, with Mr. Stans, says there are some court cases which alter the situation—which is not the fact. The Supreme Court case involving the Michigan statute merely held that where a State statute requires payments of a use tax by a lessee or contractor or permittee, the Federal Government shall pay them; that it is a private operation. That simply means that the Federal Government, in its lease arrangement, will add that much more to the rent it charges the contractor, and it will merely turn that back.

With respect to the study sections of the two proposals, they are practically identical. The difference between the two versions is that in the 2-year period the Senator from Minnesota and the majority of the committee say this five-man Board, with very severe limitation as to its jurisdiction, will be able to make token payments if the taxing authority of a State or local community can prove its case, within the limitations, under the proposed statute.

For example, if a taxing authority can prove that a hardware store is being charged $200 as its assessment for a new street, water system, or sewage plant, and there happens to be alongside of the store a Federal building that is not paying any assessment, that Federal building will be assessed for that special assessment on the same basis as the hardware store, on a nondiscriminatory basis.

We are going to get some experience in that field. The tax is levied in certain categories. The Atomic Energy Commission handles the situation under a special law. The General Services Administration already does it under a special law on some types of property. The TVA already does it under a special law. But let us say there is a commercial building and a Federal court building in a certain town and a new street is being put in, not just in front of the Federal building, but on either side of it, for a mile. The Federal building pays nothing. All the merchants on the street pay for the section in front of them. Under the pending bill, the taxing authority can go before the board and claim from the Federal Government its share of the special assessment.

In the second place, if the Federal Government leases property to a taxable person the taxing authorities may make claims for the amount of tax which would be payable if such property were owned by a taxable person. Also, the bill provides that the Federal Government shall be liable, if the taxing authority can make its case, for payment in lieu of taxes on the Federal commercial and industrial properties acquired after June 30, 1950.

The argument made against this proposal is that 1950 is a bad cutoff year. Any year is a bad cutoff year. We could go back to 1900, and the argument could be made that buildings were in existence before that year. The point is that we have to start somewhere. The committee does not say the bill is perfect. It is an experiment.

Congress can stop the operation of this law the first year. Agencies would have to come before the Appropriations Committees and show the amounts that would be required to make these payments in lieu of taxes.

Mr. President, this is not an unusual procedure. The Federal Court of Claims levies on people of the United States for claims. What we are trying to do is get both a study and a decision. This is not the greatest issue before the country, but many local governments are facing hardships in obtaining revenues. This bill provides for a complete, comprehensive study and report, due in not more than 2 years.

The bill, as reported from the committee, provides that the General Accounting Office shall review every single payment. The bill as reported by the committee provides for judicial review. The majority of the committee wanted that review available.

Mr. MUNDT. Does the Senator from Minnesota favor that provision?

Mr. HUMPHREY. The Senator from Minnesota voted against it, but I am chairman of a subcommittee, and I am here defending the bill as reported by the committee. I have taken the bill reported from the committee as is, and I am responsible for it. That is the way we legislate here.

I say we need this experience. We have had 20 years of study. We have had the Commission on Intergovernmental Relations study the matter. The Bureau of the Budget worked with me and other Senators for many weeks and months on the proposal now before the Senate, which is practically identical with the Bureau of the Budget proposal of 1956, and which was worked out by the Committee on Government Operations. We now come before the Senate asking for some results.

I must say it appears to me that Congress is not going to lose control of the matter. In the first place, all Congress would have to do would be to repeal the law. In the second place, money must be appropriated, and Congress does not have to appropriate it if it does not think the board is doing its job. In the third place, the board must report to the Congress and the President twice a year. I think we have provided for a good check over the board.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MUNDT. I shall yield in just a moment. I wish to reply to the Senator from Minnesota.

Mr. President, the legislation will not expire in 2 years. The measure is a 5-year bill.

Mr. HUMPHREY. But the report must be made within 2 years.

Mr. MUNDT. The study report must be made in 2 years, but the payments go on for 5 years. It is a 5-year payment authorization, and a 2-year study authorization, as against a 1-year study authorization and a no-payment proposal made by the Senator from South Dakota.

The Senator from Minnesota has said these are token payments. He has said that the payments to be made in those 2 years are token payments. If these are to be called token payments, I say they are going to be the biggest token the eye of man has ever looked at since the King of Egypt looked at the pyramids and said, "What a wonderful token the people have given me."

There is no limitation on amount. It is a question of the dexterity and the energy displayed by the local groups making their representations in this area on the three bases properly defined by the Senator from Minnesota, and those that happen to have, luckily, a calendar date which is of significance to them.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. MUNDT. Yes; I shall yield as soon as I finish my comment in reply to what was said by the Senator from Minnesota. I shall yield first to the Senator from Rhode Island.

The Senator from Minnesota has said there is a check on this program. It does not go back to the Appropriations Committees or to the Congress. I am talking about the money.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. HUMPHREY. Every item must be budgeted, and all the agencies must appear before the Committee on Appropriations with a budget request.

Mr. MUNDT. Let us see how it operates.

I read from page 37 of the bill, subsection (e).

(e) Upon the certification by the Board to any Federal agency of any final order of the Board awarding to any tax authority any payment under this Act with respect to any Federal property controlled by such agency, such agency shall pay to such tax authority the amount specified in such order.

True, the Congress can come along and abolish the agency; but the agency just lives within the law. The law tells the agency to do that. The law provides for the establishment of the Board. Is there any Member of Congress who is going to cut off the head of any agency which just does that which Congress says is established by the law? There is no screen, no veto, and no modification. Congress will have no control. The payment will be made by authority of law.

I now yield to the Senator from Rhode Island.

Mr. PASTORE. That is a question which I was going to ask the distinguished Senator from Minnesota to answer, as to exactly how this would work. I should like to know whether the money to be appropriated would be predicated upon claims to be decided, or whether the money would be appropriated according to claims already decided. I would understand there would be an obligation on the part of the Congress, inasmuch as the Congress passes the laws, to honor the claims once the Board decided them.

Mr. HUMPHREY. The Senator is correct. At the same time the item is budgeted and the Appropriation Committee would be entitled to review the entire matter. It is exactly like a Court of Claims appropriation.

Mr. PASTORE. That is correct.

Mr. HUMPHREY. The Court of Claims places a claim before the Congress of the United States.

Mr. PASTORE. I am not questioning the procedure at all.

Mr. HUMPHREY. That is shown on page 41, in section 12, under "Appropriations."

Mr. MUNDT. Mr. President, I now yield to my friend from Pennsylvania.

Mr. CLARK. Mr. President, I was interested in the argument of the Senator from South Dakota to the effect that the sky is the limit on the expenditures the bill would permit.

I wonder if the Senator places any reliance at all on the estimates made by the Bureau of the Budget, which are shown at page 23 of the committee report? It is there stated that the payments for special assessments would probably range between $200,000 and $300,000 a year; that the payments for property in the custody of private persons under lease, contract, or permit might amount to several million dollars a year; and that the payments on commercial or industrial property might run between $10 million and $20 million annually.

I realize it is stated later that these figures are more in the nature of a guess than a reliable estimate, but do those figures not give to the Senate some general idea as to how much the bill would cost?

Mr. MUNDT. I think it depends a little bit upon how one defines the word "general." The guess is stated. It is stated frankly as a guess.

We can be pretty accurate on the small, token aspects of the bill, the payments for gutters and sewers, and so forth. As to the rest of it, nobody knows where it will lead.

I have seen estimates and have discussed estimates as high as $330 million for the first year. Some are even higher. I certainly do not toss that figure out as anything other than a guess.

Mr. CLARK. Even if the guess or the estimate of the Bureau of the Budget were doubled, the annual cost of the bill would not exceed $50 million, would it?

Mr. MUNDT. Yes. If the costs were doubled it could exceed that figure. However, the figure could be quadrupled, or could be multiplied tenfold. How can anybody guess—the Bureau of the Budget or anyone else—what will be the thinking of the men whose decisions are to be final, or what will be the energy and the activity of the communities and the individuals who seek to benefit?

I should like to finish out the discussion of the appropriation part of the measure, if I may. This should be in the RECORD.

On page 41 we find section 12 of the bill. Let us see how completely the Appropriations Committee is excluded, the Constitution of the United States to the contrary notwithstanding, from having any control over what is done with the taxpayers' money:

SEC. 12. There are hereby authorized to be appropriated to the Board, and to each Federal agency controlling any Federal property, such sums as may be required for the discharge of its duties and obligations under this Act. Any sum determined by the Board to be payable under section 8 of this Act by any Federal agency shall be considered to be a necessary expense of such agency.

I can well imagine a situation which would arise when some community made its case and the Board gave an award, when there was insistence upon a payment from the agency. The legitimate and normal operations of the agency would have to be slowed down to half gear, or the agency would have to come to the Congress with a supplemental appropriation request, because, as I envision the language, it puts a first claim on the agency for first use of money which happens to be available for general purposes.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. MUNDT. I yield to the Senator from Ohio.

Mr. LAUSCHE. I should like to direct a question to the chairman of the subcommittee and to the Senator from South Dakota.

Mr. MUNDT. That is all right with me, if it is all right with the Senator from Minnesota. We are proceeding on an informal basis, trying to get the facts.

Mr. LAUSCHE. I invite attention to category 1, page 20 of the bill. The language deals with special assessments levied to finance local public improvements.

Local governments of Ohio finance some of their public improvements through general taxation. There are local governments in other States which finance certain public improvements, such as water distribution plants and sewage disposal plants, through special assessments.

My question is this: Is it not a fact that under the language contained in category 1 those States which finance through special assessments will receive the benefit of this provision and those States which finance through general taxation will not receive the benefits of it?

Mr. HUMPHREY. Would the Senator like to have me answer the question?

Mr. LAUSCHE. Yes.

Mr. MUNDT. I yield to the Senator.

Mr. HUMPHREY. I will say to the Senator from Ohio, the language is quite specific. One of the reasons why the language is specific is the desire to limit the initial effect of the bill and to hold down the cost, while we get some experience.

The language relates to special assessments; there is no doubt about it. It is

also stated that the whole subject shall be studied. It is entirely probable that we may, after a year, or 6 months—and not later than 2 years—have a recommendation to curtail the authority or to broaden it. We wished to get the program started. There is categorical evidence throughout the United States that the communities, the cities, the towns and villages have suffered because of Federal installations where no special assessments are being paid by the Federal Government. Because of the evidence, we tried to remedy the situation. We do not seek to take care of everything. Social security does not cover everybody, but we do not stop the program because of that.

Mr. LAUSCHE. That is not an answer to my question, I respectfully say to the Senator from Minnesota.

My question is, the State which finances through special assessments will receive the benefit of this provision?

Mr. HUMPHREY. That is correct.

Mr. LAUSCHE. And a State such as Ohio which finances through taxation will not receive the benefit of the provision. If that is a fact, then the proposal will not operate uniformly.

Mr. HUMPHREY. What I am trying to say to the Senator is that this is an initial attempt to try to find out how we can best provide for payments in lieu of taxes. We have limited it to the one category, to special assessments. Every State has special assessments. Whether all States finance all of their projects with special assessments I do not know, but I do know, I will say to the Senator, as a result of the work of the Intergovernmental Relations Commission, that every State has special assessments.

Mr. LAUSCHE. That is true. I know that.

Mr. HUMPHREY. Therefore, what we are seeking to do is to take care of one area.

Mr. LAUSCHE. Mr. President, will the Senator yield further?

Mr. MUNDT. I yield further.

Mr. LAUSCHE. Let us assume that there is a city which is urging the construction of a Federal post office building, and that the Representatives and Senators from the State desire to have the post office building. Would the bill, in effect, provide that for the building there would have to be payment of an amount equal to taxes which would have been imposed generally, such as to finance a water system?

Mr. MUNDT. I would say "yes" to that question.

Mr. LAUSCHE. If that is so, we have a paradoxical situation of people begging for an improvement and then saying, "You have to pay the taxes to put in the improvement."

Mr. MUNDT. The Senator is exactly correct. The Senator is anticipating the fifth point which I will make against the adoption of S. 910 today and in favor of my substitute proposal, which provides for a careful study, which will provide us with indisputable answers to all the imponderables and questions which have been mentioned.

So far as the Senator's question is concerned, the answer has to be "yes."

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MUNDT. The reason the answer has to be "yes" is that if a special assessment is levied upon some real property situated in an urban or suburban area, and I think Cleveland, Ohio, would come under that classification, after the effective date of the act, if the bill is passed—and I would assume it would be after the effective date of the act—to defray the cost of public improvements, the Federal Government would have to pay its share.

I yield to the Senator from Minnesota.

Mr. HUMPHREY. The Senator is correct. It is exactly as if the Senator were building a new house under an FHA mortgage guarantee. The streets must be put in. As a homeowner, the Senator would have to pay the special assessements. I have been doing that in Montgomery County.

If we build a new post office building, I assume there is some mail which must be delivered. I assume it would be a required public service. I assume it would not be simply some "boondoggling project" of the administration, to see if it could make somebody happy. I assume that the Congress is sufficiently responsible so that when it authorizes the construction of a Federal building it will be able to justify it to the people of the community.

Why should the Federal Government put up a building where there is a requirement of streets, water, and sewage and not have to pay its share of the expense? What is so sacrosanct about the Federal Government in that instance?

Mr. LAUSCHE. The Senator has answered a part of my question. The second part is this: If the public improvement, be it a sewage disposal plant or a water distribution system, is to be constructed out of general taxes, will the city be entitled to reimbursement? I put the question to both the Senator from North Dakota and the Senator from Minnesota. We agree on the assessment.

Mr. MUNDT. We agree on the assessment.

Mr. LAUSCHE. Where in the proposed legislation are those cities to be paid for projects constructed out of their own taxes?

Mr. MUNDT. I do not think they would be.

Mr. HUMPHREY. My understanding is that the language of the bill does not specifically say they would be, but the language of the proposed legislation is such that the community would have a better break if the legislation were enacted than it has today, because the taxing authority can go to the Federal Board and say, "We believe we are being discriminated against. There is a situation in Ohio in which there are general taxes rather than special assessments. We would like to have favorable consideration."

At least a hearing is available under the proposed legislation, and it is not a hearing before someone who wants to send someone to college or enroll him in a study course. The hearing would be before someone who could give relief or make recommendations to the Congress or to the President.

Mr. MUNDT. I should like to add that while a State may get a better break under the proposed legislation of the Senator from Minnesota [Mr. HUMPHREY] than if nothing were done, a State would get an infinitely better break under my proposal than it would get under either the status quo or under the measure proposed by the Senator from Minnesota, and I shall explain why.

Under my proposal the situation I have described, about which we are in agreement, and which is not included in the bill, would be studied under his bill or studied under my amendment; and under my bill if the study revealed an answer which was unsatisfactory, Congress could still write the legislation and make the corrections. Under the proposal of the Senator from Minnesota whether the Board say yes or no, the findings of the Board are final insofar as the application of the city is concerned, and even Congress cannot stop it. Even the President would be powerless.

Mr. LAUSCHE. If what has been said is true, the Board, without any legal justification, might say to an applying committee, "We will give you money even though the law makes no specific provision for it." I do not believe that can be done, but if it can be done, it ought not to be done.

Mr. MUNDT. I agree, because that is going back to government by men instead of government by law.

Mr. HUMPHREY. Mr. President, will the Senator yield for a request for a unanimous-consent agreement?

Mr. MUNDT. I yield, and will listen to it.

Mr. HUMPHREY. Mr. President, I suggest, in the light of some earlier consideration, a unanimous-consent agreement by which the time on each side for consideration of the amendment of the Senator from South Dakota [Mr. MUNDT] would be limited to 10 minutes on each side.

Mr. MUNDT. I did not quite understand the Senator's request.

Mr. HOLLAND. Mr. President, I object. I have some questions to ask, and I have not had an opportunity to do so.

Mr. President, may I have permission to address a question to both the Senator from North Dakota and the Senator from Minnesota?

Mr. MUNDT. The Senator is not asking me to yield the floor?

Mr. HOLLAND. I am not.

Mr. President, I note in connection with the power to levy non-Federal taxes that under subsection 3, line 3, on page 21 of the bill, taxes may be levied—

(3) taxes upon Federal real property acquired after June 30, 1950, which is in the custody or control of any Federal agency for industrial or commercial use.

I note also that in the definitions of "industrial or commercial use" which are found on page 23, there are quite a number of classifications. We find one in line 15: "the generation of electrical energy." Do I correctly understand that under the proposed legislation, provided a big power dam is constructed on property acquired after the cutoff date in

1950, the Federal Government could be taxed by the State and the local units of government which have jurisdiction at that place for the value of the powerplant which was paid for entirely by Federal funds?

Mr. MUNDT. I am very happy the Senator asked that question, because this is something which has crept into the bill in the last 4 years, with respect to which the history is not very clear. I believe it should be discussed on the floor today. I hope the Senator from Minnesota [Mr. HUMPHREY] will give us his version, because I suspect if it means what it could mean, that the State of South Dakota would be permitted to tax these multimillion dollar reservoirs and generating plants and collect taxes for the hundreds of thousands of dollars of inundated acres. If so, perhaps the Senator from South Dakota would then have to quickly vacate his position in opposition and join the 35 Senators who have cosponsored the proposed legislation, because this could then become the greatest bonanza ever for South Dakota that anyone could envision.

However, I cannot believe that is the intent of the bill, because it seems to me this would run the cost into such astronomical proportions that while South Dakotans might have a temporary carnival of joy about the fact that Uncle Sam would support their State in toto. it would not last long because it would bankrupt the Treasury and we would all be broke together.

However, I should like to have the proponents of the bill explain how they interpret this language which has crept into the bill.

Mr. HOLLAND. Mr. President, will the Senator from South Dakota yield for a question?

Mr. MUNDT. I yield.

Mr. HOLLAND. Does the Senator feel this would be a bonanza for a relatively flat State, such as I represent, in part, which has no facilities for the generation of hydroelectric power?

Mr. MUNDT. No, I believe this bill would be a bonanza for the State of Florida, because it is an old-established State which has some of the long-established installations because climate and natural attraction have taken them down there. There are many important taxpayers in Florida who would have tremendous taxes to pay for payments in lieu of taxes to people living in other areas of the country.

Mr. HOLLAND. To make the matter clear, is it the Senator's opinion in the case of dams, meaning the structure, meaning the power plant, meaning the overflowed area which is covered by the lake that have been acquired since the cutoff date of 1950, paid for entirely by the Federal Government, perhaps at the expenditure of hundreds of millions of dollars, that the local units of Government affected there and the State in which those properties are located could under the provisions of this proposed legislation which I have cited have the right to be paid taxes notwithstanding the fact that they are the principal recipients of the undoubted benefits coming out of those improvements in the way of smaller power rates and also developments which have come to their areas because of the location of those great power installations there?

Mr. MUNDT. I should like to have the chairman of the subcommittee express himself on that question, but it seems to me, as we read the language, assuming it comes within the right calendar year, that that seems to be implied. It conceivably could shoulder off on Uncle Sam the whole tax burden of some of the States of our Union which have tremendous hydroelectric installations provided other legislation does not touch them and if they were authorized after 1950. I cannot conceive that is the intent, but I would be happy to have the intent described in terms of what the subcommittee chairman had in mind, because it does seem to me some startling and speculative possibilities are raised by this new provision in the bill.

Mr. HOLLAND. One more question and I shall be through, and, if I may secure consent, I should like to address the same questions to the distinguished Senator from Minnesota [Mr. HUMPHREY]. Is there any other need, in the Senator's opinion, for the provision of this bill specifically excluding the power installations in the TVA other than the fact that these installations were otherwise included, provided the particular property had been acquired after 1950?

Mr. MUNDT. I think what the Senator says strengthens the sinews of his argument, for taking the two together, we must necessarily arrive at the conclusion that there is in contemplation some kind of fee or some kind of tax to be paid for through the generation of electric power. However, it is a rather ambiguous term. The provision could have been stated much more meticulously and precisely. I do not know whether by that language is meant all the inundated acres. I do not know whether by that language is meant the original tax base. I do not know whether it means the great structure which holds back the reservoir or whether it is stated in terms of the value which is set on the generation of power. Nor do I know which reservoirs and which hydroelectric projects would be included in—if any—and which would be included out. This is one more reason such a high level Commission as my amendment provides is needed to make recommendations which we all can understand.

However, if the Senator from Florida is going to ask the same questions of the chairman of the subcommittee, perhaps the chairman will be able to throw some additional light on this confusing but highly important subject.

Mr. HOLLAND. I appreciate the kindness and cooperation of the Senator from South Dakota. If I may, I should like to address the same questions to the Senator from Minnesota. I should like to ask unanimous consent to do that.

Mr. MUNDT. I yield for that purpose.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. HOLLAND. The Senator is familiar with the questions, which have to do with whether, under the bill as drafted, improvements constructed with Federal money for the purpose of generating electrical energy—"generation of electrical energy" are the words used in the bill—would be the subject for the making of claims and making of payments of Federal money to State and local governments in lieu of taxes.

Mr. HUMPHREY. I understand the Senator is referring to lines 12 through 25 on page 23 of the bill, in subsection (L).

Mr. HOLLAND. Subsection (L), and particularly——

Mr. HUMPHREY. Item 2 in subsection (L).

Mr. HOLLAND. Yes; item 2 in that subsection; and in relation to category 3 found on lines 3, 4, and 5 of page 21.

Mr. HUMPHREY. The items in lines 12 through 25 on page 23 of the bill, defining industrial and commercial use when used in connection with the generation of electrical energy, are to be interpreted as follows:

With the exception of these generating facilities which are already covered by Federal law, such as in the case of TVA and Grand Coulee and others, which are already provided for in terms of earned revenue or payments in lieu of taxes, the language in the bill to which I have referred will apply to other facilities.

For example, if a Federal generating plant were constructed today for some commercial-type installation it would be within the meaning of this bill, if the Board, after hearing the taxing authority, agreed that this was a commercial and industrial property.

In other words, if there is a Federal electrical generation facility which is engaged in a commercial or industrial activity, and which is not covered by another statute—and most of them are—then the Board, after listening to the plea of the local taxing authority, would be permitted to grant payment in lieu of taxes, provided the property was acquired by the Federal agency after June 30, 1950.

Mr. HOLLAND. I should like to ask the distinguished Senator this further question. Is it not true that most of the great installations which we have created by Federal investment for the purpose of producing electrical energy produce it for industrial and commercial use, as defined in the bill?

Mr. HUMPHREY. Yes, that is the fact, but most of them are already covered by existing statutes. TVA is exempted because it is covered by a generous payment in lieu of taxes law. If my memory serves me correctly, Grand Coulee is likewise exempted for the same reason.

However, in case there is, after 1950 a new facility which is not covered by special legislation, the Board, upon hearing the plea of the local taxing authority, could grant payment in lieu of taxes.

Mr. HOLLAND. May I ask the distinguished Senator from Minnesota one more question?

Mr. HUMPHREY. I yield.

Mr. HOLLAND. Why, if it was necessary specifically to exempt TVA, was it not equally necessary to exempt the other large installations of the Federal

Government which have been created for the production of electrical energy for industrial and commercial use, of which we have many dozens in the country?

Mr. HUMPHREY. I did not think it was necessary to give a specific exemption to TVA, because it was already covered by special statute. However, TVA wanted to be absolutely sure that there was no misunderstanding about it. Therefore, the exemption was taken care of in this way. However, every one of the large major generating facilities of the Federal Government is covered by a special statute dealing with profits from the installation going into the Federal Treasury and payments in lieu of taxes. That is also true of the Atomic Energy Commission. There are some 55 special statutes relating to payments in lieu of taxes and shared revenues.

However, where certain other cases are not covered, we are trying to grant equality of treatment in those instances.

Mr. HOLLAND. I thank the distinguished Senator. There is one more general question which I should like to ask him.

Some States, of which one is my State of Florida, have no property tax for State purposes. How would it be fair for the people of my State, through their appropriate contribution to Federal tax money, to pay anything to States in ad valorem taxes on property, when the people of my State cannot get back a single dime, because our constitution prohibits levying taxes on property for State use?

Mr. HUMPHREY. The Senator will surely agree that the counties and cities and towns practically live off property taxes. It is to them that special consideration is being given under the proposed legislation. This is a local government bill.

If, for example, a State has a special assessment, then it would be included. Of course, a special assessment is generally made on the basis of a local government. On the other part, on real property, the Senator would be correct. Where the total tax in a particular area includes the State property tax and the local tax, if a State did not have that property tax, it would not share in that benefit.

Mr. HOLLAND. Will the Senator from South Dakota permit me to make a brief statement?

Mr. MUNDT. I yield for that purpose.

Mr. HOLLAND. I should like to make a brief statement without his losing his right to the floor.

Mr. MUNDT. I yield, with that understanding.

Mr. HOLLAND. The Senator from Florida, when he was serving as Governor of his State, served on a committee which appeared before Congress, in an effort to get something done in this field for the benefit of States which were, we felt, being improperly deprived of the taxing power by reason of an unduly great spread of the Federal Government in its property holdings. There was nothing even remotely suggested in that effort at that time to bring such discrimination as is suggested here into the picture.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. HUMPHREY. I wish to correct a statement. The Senator is very courteous in yielding to me at this point. The bill is limited entirely to local governments making application for relief for payments in lieu of taxes. The Senator will note that at page 20 of the bill, in line 6, the words "exemption of Federal real property from taxation by local governments." In line 17 there appear the words, "Federal contributions to local governments in lieu of the payment."

Then the bill sets out three categories in which payments will be made. It relates to applications of local governments. I thought I should correct that point.

Mr. HOLLAND. I thank the Senator. It seems to me that the Senator from South Dakota is correct in his position that not sufficient study has been given to this subject to start with a program which is on its face not fair as between all the areas in this Nation.

Believing that, of course, I cannot vote for the bill. I regret that that is the case, because I think this is a subject matter which requires corrective action. I hope that at the very least a measure may come from Congress which will institute a study of sufficient duration and will be headed by persons of sufficient experience and representative quality and dignity to propose a program which will better appeal to the conscience of the Senate than does the program now presented, at least so far as I am concerned.

Mr. MUNDT. Mr. President, I express appreciation to the Senator from Florida. He has demonstrated his usual prudence and careful approach to legislative matters of this kind.

I simply wish there were some way in which to get the facts before the rest of the Members of the Senate, because I know Senators well enough to believe that they would not try to rewrite U.S. fiscal history without any more study than has been given to this bill, dealing with a matter which is uncertain and is filled with imponderables, taking action we cannot reverse, once we have set it in motion.

It is manifestly unfair to expect a State or city to start receiving payments by the Federal Government, on which it, in turn, bases its own tax schedules and its own budgetary methods, and then try to take the money away from the recipients after 5 years of benefits from the Federal Government.

The fifth specific reason why I favor the amendment in the nature of a substitute, besides the necessity for scientific study, is that as it is at present written the bill provides a bonus to the successful communities, those which have been able to come to Washington and induce the Federal officials to place Federal installations in their midst. Having gotten chambers of commerce to appear, and having worked with the Senators and Representatives, and having been able to demonstrate the merits of the location, then, after the honeymoon is over, and they have gotten the benefit of the fine, new installations and the new employment, they then say, "Would it not be fine if we could get the Federal Government to pick up the tax check, too?"

That is all very well for community A, which has succeeded in getting the installation. But community B, which also came to Washington and also wanted an installation, and also talked to its Senators and Representatives, lost a close decision, because the military people said the installation would go to community A. They are told, "You did not get the installation, the new employment, the new taxpayers, but you will have to pick up the extra share of the tax burden in order to pay the extra taxes which the Federal Government will pay to community A."

It seems to me that if we set in motion that kind of program, and are ultimately going to pay the taxes for the Federal installations, it will not be possible to buy an airplane ticket into Washington for 6 months, because every chamber of commerce will be coming here to get in on the act. They will not only have secured a Federal installation, but they will be able to have Uncle Sam pick up the tax bill and pick up the levies and assessments, and have the Federal Government pay the tax, while the rest of the country suffers. To me, that is manifestly unfair.

I think of a situation in my own State, where there are two equally fine communities, each deserving a Federal building—a post office. Only one such building is to be built this year, and only one community will get it. The other will not.

The community that gets it this year will open it with a ribbon-cutting ceremony, while the community which did not get the new Federal building this year would have to pay the taxes for the construction of gutters and pavements in front of its neighbor's new building, and, while it may continue to hope that it will get a Federal building next year, it will nevertheless continue to suffer.

I think that when Congress passes legislation of this kind, it simply has to be equitable all across the board, regardless of date, regardless of type of structure, regardless of the size of the city, regardless of whether it is a commercial institution in a big town, or an Indian reservation, or whether it is public grazing land, or there is a fee assessed for weed eradication along some country road.

I do not believe Congress should arbitrarily try to twist and pervert the tax procedures of the Nation, and do further injury to the rural people, by putting the budget in peril permanently, because there will be delegated to the Presidential Board more powers than either of the Committees on Appropriations of the House and Senate have under the Constitution. The Appropriations Committees have their findings subjected, and properly so, to the consideration of Senators and Representatives, but the appropriations made by the Presidential Board would be subject to no control whatsoever—no check, no correction, no surveillance. The Board would simply make them, and the country as a whole would have to pay the bill.

I think the prudent thing for us to do, to assure a solution of the problems in this field, is to adopt my amendment in the nature of a substitute, which provides that a careful study shall be made, and then set in motion, when we do act, legislation which will deal equitably with all the taxpayers of America.

The PRESIDING OFFICER. The question is on agreeing to the amendment in the nature of a substitute offered by the Senator from South Dakota [Mr. MUNDT]. The yeas and nays have been ordered, and the clerk will call the roll.

The Chief Clerk called the roll.

Mr. MANSFIELD. I announce that the Senators from New Mexico [Mr. ANDERSON and Mr. CHAVEZ], the Senator from Louisiana [Mr. ELLENDER], the Senator from Mississippi [Mr. EASTLAND], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Hawaii [Mr. LONG], the Senator from Arkansas [Mr. MCCLELLAN], the Senator from Wyoming [Mr. MCGEE], the Senator from Michigan [Mr. MCNAMARA], the Senator from Oklahoma [Mr. MONRONEY], the Senator from Montana [Mr. MURRAY], and the Senator from New Jersey [Mr. WILLIAMS] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senators from West Virginia [Mr. BYRD and Mr. RANDOLPH], the Senator from North Carolina [Mr. JORDAN], the Senator from Massachustts [Mr. KENNEDY], the Senator from Oregon [Mr. MORSE], and the Senator from Wyoming [Mr. O'MAHONEY] are necessarily absent.

I further announce that, if present and voting, the Senators from New Mexico [Mr. ANDERSON and Mr. CHAVEZ], the Senators from West Virginia [Mr. BYRD and Mr. RANDOLPH], the Senators from Arkansas [Mr. FULBRIGHT and Mr. MCCLELLAN], the Senator from Missouri [Mr. HENNINGS], the Senator from North Carolina [Mr. JORDAN], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Hawaii [Mr. LONG], the Senator from Wyoming [Mr. MCGEE], the Senator from Michigan [Mr. MCNAMARA], the Senator from Oklahoma [Mr. MONRONEY], the Senator from Oregon [Mr. MORSE], and the Senator from New Jersey [Mr. WILLIAMS] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Kentucky [Mr. MORTON], the Senator from Massachusetts [Mr. SALTONSTALL], the Senator from Kansas [Mr. SCHOEPPEL], and the Senator from Wisconsin [Mr. WILEY] are detained on official business.

The Senator from Kansas [Mr. SCHOEPPEL] is paired with the Senator from Massachusetts [Mr. SALTONSTALL]. If present and voting, the Senator from Kansas would vote "yea," and the Senator from Massachusetts would vote "nay."

The result was announced—yeas 24, nays 53, as follows:

[No. 195]

YEAS—24

Allott	Butler	Case, S. Dak.
Bridges	Byrd, Va.	Cotton
Brunsdale	Capehart	Dirksen
Dworshak	Holland	Robertson
Fong	Lausche	Russell
Goldwater	Lusk	Stennis
Hayden	Martin	Thurmond
Hickenlooper	Mundt	Williams, Del.

NAYS—53

Aiken	Frear	McCarthy
Bartlett	Gore	Magnuson
Beall	Green	Mansfield
Bennett	Gruening	Moss
Bible	Hart	Muskie
Bush	Hartke	Pastore
Cannon	Hill	Prouty
Carlson	Hruska	Proxmire
Carroll	Humphrey	Scott
Case, N.J.	Jackson	Smathers
Church	Javits	Smith
Clark	Johnson, Tex.	Sparkman
Cooper	Johnston, S.C.	Symington
Curtis	Keating	Talmadge
Dodd	Kefauver	Yarborough
Douglas	Kerr	Young, N. Dak.
Engle	Kuchel	Young, Ohio
Ervin	Long, La.	

NOT VOTING—23

Anderson	Kennedy	Murray
Byrd, W. Va.	Long, Hawaii	O'Mahoney
Chavez	McClellan	Randolph
Eastland	McGee	Saltonstall
Ellender	McNamara	Schoeppel
Fulbright	Monroney	Wiley
Hennings	Morse	Williams, N.J.
Jordan	Morton	

So Mr. MUNDT's amendment in the nature of a substitute was rejected.

Mr. HUMPHREY. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. KUCHEL and Mr. GRUENING moved to lay on the table the motion to reconsider.

The motion to lay on table was agreed to.

Mr. MANSFIELD. Mr. President, I support S. 910 and I should like to speak briefly about the bill, and then ask a question of the Senator in charge of the measure concerning the provisions of the bill.

Several counties in Montana have within their borders thousands of acres of land which were acquired by the Federal Government under title II of the National Industrial Recovery Act of June 16, 1933. These lands are under the jurisdiction of the Department of the Interior, to be administered for the benefit of various Indian tribes or groups.

These lands are, of course, not on the tax rolls. Hearings have been held by the Senate Indian Affairs Subcommittee on legislation which provides that these Bankhead-Jones lands be held in trust for the Indians in the area and become part of their reservations.

Three Montana Indian reservations are involved—the Blackfeet, Fort Belknap, and Fort Peck. More than 85,000 acres of land are in the Roosevelt County area, and are now being administered for the benefit of the Fort Peck Tribe. County and school officials in Roosevelt County and the Montana Association of County Commissioners have called attention to the hardship on local taxpayers because so much of the land within counties affected is not on the tax rolls.

As I read S. 910 and the Government Operations Committee report on the bill, Report No. 869, this legislation will provide for investigation of the tax injustice to which I have referred, testimony from local officials, and a report to Congress within 2 years of the date of enactment. This comprehensive report will embody results of the study and be accompanied by appropriate proposed legislation.

My impression of the bill's intent follows from this excerpt from the committee report, appearing on pages 1 and 2:

To aid the Congress in determining whether additional permanent legislation of this kind is required, the bill also provides that the Board shall conduct a comprehensive study and make a case-by-case analysis of virtually every phase of fiscal and related problems of local taxing authorities arising out of Federal immunity from local real and personal property taxes, including operation of existing programs.

This broad and comprehensive study authority of the Board is designed to provide, for the first time, a forum to which local taxing authorities may present their cases, regardless of whether or not they may be entitled to any payments. It is the purpose of these study provisions to enable the Board to compile all of the factual information needed to enable the Congress to legislate effectively in this field and to evolve a uniform program on a national basis which will provide local taxing authorities with the relief to which they may be entitled without unduly burdening the Federal Treasury.

I would appreciate comment on this point from the Senator in charge of the bill. I ask my colleague, Is it correct that if S. 910 becomes law, the county and school officials in Montana, whose tax base is small because of the large acreages of this type of Bankhead-Jones lands in their area, may present their cases to the Federal Board, which will make a thorough study of these problems, and then, within 2 years, make specific recommendations to Congress?

Mr. MUNDT. Mr. President, may I hear the question? I cannot hear a single thing the Senator is saying. I would like to know what the question was so I can understand the answer. May I ask the Senator to repeat?

Mr. MANSFIELD. I shall be glad to repeat the question.

I ask the Senator from Minnesota, Is it correct that if S. 910 becomes law, the county and school officials in Montana, whose tax base is small because of the large acreages of this type of Bankhead-Jones lands in that area, may present their cases to the Federal Board, which will make a thorough study of these problems, and then within 2 years, make specific recommendations to Congress?

Mr. HUMPHREY. The answer is "Yes."

Mr. MANSFIELD. Mr. President, I ask unanimous consent that there may be printed in the RECORD at this point a statement by my distinguished senior colleague from Montana [Mr. MURRAY].

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MURRAY ON S. 910—PAYMENTS TO THE STATES IN LIEU OF TAXES

I wish to concur in the remarks made by my distinguished colleague, Senator MIKE MANSFIELD, in expressing support of S. 910, a bill which authorizes Federal payments to the States in lieu of taxes. This legislation is of particular interest to States like Montana with large Federal property holdings.

Perhaps one of the most controversial issues that exists in Federal-State relations is Federal immunity from local real and per-

sonal property taxes and the operation of existing programs. This is especially important at this time when many of our States are finding it difficult to finance their own operations and services from State and local taxes.

The Federal Government is cast in a role somewhat like a monster as depriving States of taxes which are justly due them. The provisions of this bill will establish a bureau which will get to the heart of this problem and set up a criteria to judge whether the Federal Government is obligated to make payments to the States in lieu of taxes. If this legislation is enacted into law I am confident that it will go far in harmonizing the relationship that exists between the Federal Government here in Washington and the State, county, and local ruling bodies.

On the basis of my study of this proposal this does appear to be a good bill.

Mr. LAUSCHE. Mr. President, I offer an amendment to the committee amendment, on page 20, line 19, following the word "assessments," to add the words "and taxes."

With my amendment the language would provide that special payments in lieu of taxes may be made both in cases of assessments and taxes.

What I wish to point out is that, under the present provisions of this section, the benefits will vest in those States where public improvements are made through the laying of special assessments. In those States where public improvements are made through general taxes, the benefits will not vest.

I think there ought to be uniform operation of this provision. If a bridge, sewage disposal plant, or water distribution system is built through special assessments, under the proposed law those areas will receive the benefits; but if such projects are constructed through general taxes, the benefits will not be received. I think the provision as now written is discriminatory.

I ask Senators to search their minds and decide whether in their States public improvements are made through general taxes. In Ohio that is done. Under the language proposed in the bill, Ohio would receive no benefits.

Mr. HUMPHREY. Mr. President, I think the Senator from Ohio has made a very valid case, in reference to his State in particular. I regret that this matter was not carefully considered with reference to the State of Ohio. Perhaps some other States may be in the same predicament. As the Senator in charge of the bill, I support the amendment of the Senator from Ohio and hope it may be adopted.

Mr. MUNDT. Mr. President, I do not propose to take any time opposing this particular amendment, because if we are going to engage in this kind of fiscal irresponsibility, certainly the equity of the position of the Senator from Ohio is evident. If we are going to start in on a career of transferring to the Federal Government the obligation of unestimated and unpredictable payments in lieu of taxes, it is certainly manifestly unfair to discriminate.

I simply take the floor to ask the chairman of the subcommittee if he can give us even a wild guess as to how many extra millions of dollars will be added to the cost of the taxpayers under the bill by the adoption of the amendment.

Mr. HUMPHREY. Mr. President, I shall be more than happy to respond. This would apply in the States where there are taxes instead of special assessments. As I understand, that is the purpose of the legislative history with regard to the amendment.

Mr. MUNDT. I understand the purpose.

Mr. HUMPHREY. It would also give equity to those areas where the special assessment procedure is not used in local government. Therefore, I do not think it would cost any more money, because the whole purpose of the special assessment procedure is to take care of the type of financing of local improvements in local communities we have in mind.

Mr. MUNDT. It obviously would cost more money, because the purpose of the Senator's amendment is to make eligible for the payments certain States and certain communities which would not otherwise be eligible.

I am seriously concerned about this. I am sorry there were so few Senators present in the Chamber when we debated the issues involved. I do not want this Congress to be charged with being fiscally irresponsible, any more than does any other Member of the Senate.

I know that when we start engaging in backdoor funding of this kind, without even a prediction as to what it will cost, transferring the power of appropriations to a Presidentially appointed board, with no recourse to and no review by Congress, we are rewriting the fiscal history of this country pretty recklessly in this session of Congress.

I wish we could have the whole debate transferred over until tomorrow, so that the Senators who were not present on the floor this afternoon could read exactly what we are being asked to commit ourselves to do. My purpose in raising the question is to ask if anybody has an estimate as to the price tag of this new venture.

Several Senators addressed the Chair.

The PRESIDING OFFICER. Does the Senator yield, and if so, to whom?

Mr. MUNDT. I yield to my colleague from South Dakota.

Mr. CASE of South Dakota. In addition, it seems to me that what we are asked to do is to subordinate the Federal Treasury to the whim, the caprice, and the attitude of local taxing bodies. The local commissioners, council members, boards of county commissioners will be determining the demand upon the Federal Treasury. They will make the levies and the assessments which the Federal Treasury will be obligated to pay.

Mr. MUNDT. The Senator is exactly correct.

I should add one other thing, because it has not been stressed. There are enough Senators present now to help write the course of history. An appropriation is requested to be made entirely outside the realm of the Appropriations Committee, not to be reviewable by the Congress and not to be subject to a presidential veto. We are being asked to open up a whole new mechanism for pouring money out of the public purse, at a time when Senators are traveling around the country talking about being in favor of economy.

I do not think this Congress, which is ably led and which has had a good record up to now, should engage in this kind of reckless legislation. At least, we should not act until we have had 24 hours to study the record and to know what we are doing.

Mr. BRIDGES. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. BRIDGES. I commend the distinguished Senator from South Dakota for the fight he has made today. The Senator was not successful, but I will say that if this measure is passed the people of this country will live to regret it, and so will the Members of this body who vote for it, because it will be fiscal irresponsibility.

Mr. MUNDT. I appreciate the Senator's statement.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. MUNDT. I am happy to yield.

Mr. LAUSCHE. I concur with the views advanced by the Senator from South Dakota. I engaged in a discussion with the Senator this afternoon.

Mr. MUNDT. The Senator made a valuable contribution.

Mr. LAUSCHE. I feel that this measure is generally ill advised. However, if it is to be passed, there should not be discrimination against those communities which make public improvements through general taxation in favor of the local communities which do so through special assessments.

Mr. MUNDT. I quite agree with the Senator. I am not going to oppose the Senator's amendment, because if we are going into a new era of ignoring States rights, community rights, and taxpayers' rights, and if we are to transfer everything to a new totalitarian concept of government so far as the fiscal relationships are concerned, everybody should get under the tent. It should not be a certain select group. I am not going to oppose the Senator's amendment.

Mr. BUTLER. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. BUTLER. I commend the Senator from South Dakota for the very valiant fight he is putting up to save the fiscal responsibility of this body. I am very happy I had the opportunity to vote for the Senator's amendment. I shall most certainly vote against passage of the bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Ohio.

Mr. CARROLL. Mr. President, I should like to get the record clear on this point. I think the record is not clear.

I think the Appeal Board and the people who are filing applications ought to know what they are doing and what they can expect to be done.

This amendment has been offered by the Senator from Ohio. I think we have to define what it would do.

In Colorado a special assessment may deal with an alley paving district. If I correctly understand the amendment of

the able Senator from Ohio, the taxes would have reference to the alley paving district. If there were a curb or a road involved, there would be reference to that particular area and not to the whole program.

Mr. LAUSCHE. I can answer the question. I invite the attention of my colleagues to page 23 of the bill, paragraph (k), which reads in part:

> The term "public improvement" means any street, road, bridge, sewer, water distribution system, drainage project, or other public improvement.

Therefore, if one of those improvements is made with a special assessment and the community is entitled to receive the benefits of the law, another community should be entitled to receive the benefits if it makes an improvement through taxation.

Mr. CARROLL. Mr. President, I agree with the Senator from Ohio in that regard 100 percent. That is why I thought we ought to make a legislative history. There is a broad term, on page 20, in the language, "to defray the cost of local public improvements."

What does "local" mean? That word is too broad in meaning. That is why I think we need to have the record.

This is a reasonable and sensible proposal, and we should vote for it.

Mr. AIKEN. Mr. President, I should like to ask a question of someone who is familiar with the provisions of the bill.

I notice that the advisory committee which is to be established is to be composed of 12 members appointed by the President, of whom 3 shall be representatives of State governments and 6 shall be officers or employees of Federal agencies.

Three members shall be representatives of tax authorities. What tax authorities?

Mr. HUMPHREY. Local.

Mr. AIKEN. Local tax authorities?

Mr. HUMPHREY. Yes.

Mr AIKEN. The law would apply to property acquired after 1950?

Mr. HUMPHREY. Insofar as industrial or commercial property is concerned.

Mr. AIKEN. Would the law apply to property acquired prior to 1950?

Mr. HUMPHREY. It would permit the local taxing authorities to make an appeal before the Federal board in regard to properties other than commercial and industrial properties.

Mr. AIKEN. The language is wholly permissive, and the board could determine whether any contribution should be made in lieu of taxes?

Mr. HUMPHREY. That is correct, except for the special assessments and the item we listed.

Mr. AIKEN. Did the authors of the bill consider setting up some guidelines for the board to use in determining the matter?

Mr. HUMPHREY. Yes. Those are very well listed in the policy statement. The purpose is to avoid demonstrable financial hardship upon local governments, which the Bureau of the Budget recommended. We set up the definitions of what we mean by each of the items; such as "public improvement," "special assessment," "taxable person," and "industrial or commercial use."

The powers and duties of the board are described on pages 24, 25, 26, and 33 of the bill.

Mr. AIKEN. As I understand the proposal, a study committee is to be set up.

Mr. HUMPHREY. Yes.

Mr. AIKEN. To study the effects of the measure.

Mr. HUMPHREY. Yes.

Mr. AIKEN. In the meantime, the Board can make temporary payments to communities in lieu of taxes.

Mr. HUMPHREY. Yes, under the restricted three categories.

Mr. MUNDT. Mr. President, will the Senator yield?

Mr. AIKEN. Assuming that the Board decides to pay a community $10,000 in lieu of taxes, and that later a study group finds it is not feasible and should not be done, what will become of the $10,000?

Mr. HUMPHREY. The Board has two functions. Not later than 2 years, after amendment of the act, the Board must present a study to the Congress and to the President. In the meantime, the Board is authorized to make certain payments in the three categories which are listed.

Mr. AIKEN. What are those?

Mr. HUMPHREY. The categories relate to those where there are special assessments, to real properties which are leased for private purposes, and to commercial or industrial properties acquired after June 30, 1950.

Mr. AIKEN. The proposed legislation would cover real estate on which Federal buildings and new post offices have been built?

Mr. HUMPHREY. For special assessment purposes.

Mr. AIKEN. Only for special assessments?

Mr. HUMPHREY. The Senator is correct.

Mr. AIKEN. The real estate itself would not be covered?

Mr. HUMPHREY. Not unless it is used for commercial or industrial purposes.

Mr. AIKEN. To consider an example familiar to the Senator from Minnesota [Mr. HUMPHREY], what about the Fort Snelling property?

Mr. HUMPHREY. It would not be covered unless there were a commercial or industrial purpose or special assessments to be levied relating to that property. Of course, if something were built on the property after 1950 for industrial or commercial purposes the proposed legislation would apply.

Mr. AIKEN. May I ask one further question? Would the proposed legislation cover real estate taken from the national forests and the national parks?

Mr. HUMPHREY. It would not, because the Forest Service already has a system of shared revenues.

Mr. AIKEN. That is with respect to the national forests. I do not know about national parks.

Mr. HUMPHREY. National parks are not covered as so-called income-producing properties, and therefore would not be covered.

Mr. AIKEN. Nor would the proposal cover property which had never been held by the State?

Mr. HUMPHREY. I did not hear the Senator's question.

Mr. AIKEN. It would not cover any property which had always been Federal property and not held by the State?

Mr. HUMPHREY. Not for payment, but for study.

Mr. AIKEN. The proposal does not cover any public lands.

Mr. HUMPHREY. Not for payment, but for study.

Mr. MUNDT. Mr. President, will the Senator yield?

Mr. AIKEN. I do not have the floor but I will yield just the same.

Mr. MUNDT. The Senator from Vermont [Mr. AIKEN] did not get an answer to his question about the $10,000 which some eager, active, energetic, farsighted, and perhaps somewhat acquisitive community might get from a board of this kind. If they get it, they have it and no one can take it away from them. Congress cannot stop them and the board can rule it will not do so in the future, but that community has its $10,000 for all time to come. Even the President of the United States cannot veto it, because the Senate is now going on record—in a yea-and-nay vote, I hope—saying that in its opinion we are to have a third appropriating committee of Congress. There will be one in the House, one in the Senate, and one selected by the President of the United States, and the one selected by the President of the United States will not have to submit its appropriations to the Congress. Its appropriations cannot be vetoed by the President. If that does not epitomize financial irresponsibility after 175 years of American history, it will do in my book until something better comes along.

Mr. BRIDGES. The proposed legislation would give to the board much more authority than the Appropriation Committees of Congress have.

Mr. MUNDT. The Senator from New Hampshire is a distinguished and ranking member of the Appropriations Committee, and he voted for my amendment, as did the chairman of the Appropriations Committee, and as did, I am happy to say, practically all members of the Appropriations Committee who were here listening to the debate which has occupied us this afternoon.

Mr. AIKEN. Mr. President, I should like to ask the Senator from Minnesota [Mr. HUMPHREY] another question: Would the proposed legislation, if it should become law, apply to property acquired for missile bases?

Mr. HUMPHREY. No, not unless a special assessment were to be made, as is defined in the bill, for the local improvements related to that Federal property. Then it would. The categories are listed specifically—special assessments, taxes with respect to Federal real property in the custody or control of taxable persons, as if it were private enterprise and, thirdly, taxes upon Federal real property acquired after June 30 for industrial or commercial use.

This is a very limited bill in terms of its payments, but in terms of its study,

it is identical to the amendment offered by the Senator from South Dakota [Mr. MUNDT].

Mr. AIKEN. Would the bill apply to land acquired for radar installations?

Mr. HUMPHREY. It would not except for special assessments.

Mr. AIKEN. I was attempting to think of some installation in Vermont to which it would apply and I have been unable to do so.

Mr. HUMPHREY. If by chance at a radar base, a locality had to supply sewage, water, electrical energy, and streets, and there was an assessment made upon all the land around it, then the Federal agency that was in that particular area would pay its fair share without discrimination.

Mr. AIKEN. That would apply only where the public furnishes the electrical energy or water facilities and not where such facilities have been privately installed.

Mr. HUMPHREY. The Senator is correct.

Mr. DIRKSEN. Mr. President, a parliamentary inquiry. What is pending before the Senate?

The PRESIDING OFFICER. The question is on the amendment of the Senator from Ohio, which will be stated.

The LEGISLATIVE CLERK. On page 20, line 19, after the word "assessments," it is proposed to insert the words "and taxes," so as to read "special assessments and taxes levied after the effective date," and so forth.

The amendment was agreed to.

Mr. CAPEHART. Mr. President, I offer the amendment which I send to the desk and ask to have it stated.

The PRESIDING OFFICER. The amendment of the Senator from Indiana [Mr. CAPEHART] will be stated.

The LEGISLATIVE CLERK. On page 21, line 3, it is proposed to strike out the words "acquired after June 30, 1950."

Mr. CAPEHART. Mr. President, I will take only a moment. If this is a good amendment and a good bill and it ought to apply to all industrial and commercial users, why is it limited to property acquired after June 30, 1950? I repeat the question. If it is a good bill and ought to be passed, then why is it limited to property acquired after June 30, 1950? Why should it not apply to property acquired 20 years ago, 30 years ago, or 40 years ago?

Mr. BRIDGES. The answer is plain and simple. It is not a good bill.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. CAPEHART. I yield.

Mr. CLARK. The distinguished Senator from Minnesota is temporarily off the floor, but I believe I can answer the question. This has been a pretty complicated problem, which has been studied for a number of years. The important consideration is not to commit the Federal Government to too heavy a cost.

Mr. President, I now defer to the Senator from Minnesota, who has returned to the Chamber. He is much better qualified to answer the question. The question has been asked why this bill is limited to 1950.

Mr. CAPEHART. I believe the able Senator from Minnesota [Mr. HUMPHREY] was absent from the Chamber when I offered this amendment. The amendment was to strike, on page 21, line 3, the words "acquired after June 30, 1950."

Mr. HUMPHREY. The answer is quite simple. First, it was recommended by the Bureau of the Budget—not that that should be controlling, but at least it was a recommendation. In 1956, when a similar bill was before the Senate, they made that recommendation.

Second, this is a trial run. It is a fact that we have had little experience in these matters, and we thought we should get actual cases before the Board rather than academic discussions.

Third, in the light of the concern of the Senator from South Dakota [Mr. MUNDT] with respect to financial and fiscal irresponsibility, we thought we would limit it to commercial and industrial enterprises of recent years, starting with the Korean war. We could go back to 1800, or any other date we might wish, but the further we go back, the greater the cost would be, and the purpose of limiting it was to find a base point, which is not uncommon in legislation, to find some place after World War II and before the beginning of the Korean war to start with this proposal, and it seems to me by so doing we will receive the experience we need while the Board is making its study. In this way we answer some of the local government problems.

Mr. CAPEHART. Has not the Senator from Minnesota made the best argument in the world for postponing consideration of the bill until tomorrow, and perhaps table it and postpone further consideration for 6 months so that more study can be made? He admits it is a trial run. Why do we in the Senate turn over to the administration the responsibility for a trial run? Why do we not keep the responsibility in our own hands. If this is a good bill, let us pass it someday, but let us not pass something purely for the purpose of a trial run.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. CAPEHART. I yield.

Mr. HUMPHREY. I appreciate the sincere concern of the Senator from Indiana. He always demonstrates real concern over these matters—and I think properly so. This matter has been studied for 20 years.

Mr. CAPEHART. Mr. President, I believe I have the floor.

Mr. HUMPHREY. This has been studied by the Bureau of the Budget. It has been before us on four or five occasions, that I recall. The President's Commission on Intergovernmental Relations was established by President Eisenhower on the basis of an act of Congress, and it was my privilege to serve on that Commission with other Members of this body, and they made this recommendation. We would establish a board which would make a comprehensive study of the whole problem of payments in lieu of taxes while it is on the job. We would take three limited categories where there is a real need for payments in lieu of taxes, and have the board start there.

One of them is where a special assessment is made. Anyone who has ever been a local government officer knows about special assessments. Why, in the name of commonsense, if a new Federal court building is built, which requires tearing up the streets and remodeling the whole area, and requires putting in new streets and new gutters and new curbing and new sewers and new storm sewers, should we charge the assessment to the hardware store, to the general merchandise store, to the bank, by way of special assessments, but not to the Federal Government?

If the taxing authority has a case, with the burden of proof resting upon the local taxing authority, and it can come before the Federal board and convince the Federal board that a payment in lieu of taxes should be made, why should not that procedure be followed?

Second, if there are properties which were built by the Federal Government, or acquired, but which are now in the hands of private individuals for private purposes, we say that those properties likewise shall be subject to payments in lieu of taxes.

The bill would equalize competition. I am rather surprised that some people would be against it.

Lastly, if the Federal Government acquires or builds a factory in a community or builds an industrial or commercial concern since 1950—and if Senators wish to do so, they can set any date they wish to set—we decided we would limit it to those enterprises built since 1950. If there is such an industrial or commercial facility, and the local taxing authority comes before the Board and says, "Look, we have the International Harvester Co. plant here, and those people are paying taxes, but over there you have a Federal Government factory, which is making supplies, but that property is not paying any property taxes," why should not the local taxing authority be able to make that case before the Board? This involves no discrimination in assessments. It is a commercial facility that we are talking about.

Mr. CAPEHART. Many local governments of Indiana, if we are to exempt property in accordance with the present provision of the bill, which have property acquired in 1949, will be very unhappy.

Mr. HUMPHREY. If we set the date back to 1922, they will be unhappy too. A great many people will be unhappy if they get nothing.

Mr. CAPEHART. Why should it be limited to June 30, 1950? Why do we not provide the same exemption for all property?

Mr. HUMPHREY. Because of the very fact that the Senator from South Dakota [Mr. MUNDT] talked about a while ago, because it costs too much. We are being prudent. Why did we not set the disability age in the Social Security Act at age 20 instead of age 50? Why did we not make the minimum wage law universally applicable?

Mr. CAPEHART. Why should not the date be June 30, 1960?

Mr. HUMPHREY. If the Senator wishes to make it that date, he is at liberty to offer an amendment to that effect. The date we provide in the bill was agreed to by the municipalities. Every local government organization in the United States has gone over the bill very carefully. They did not all get what they wanted, but they support the bill. I do not want to have irresponsibility placed on my shoulders. I do not want to be caught up in the dragnet the Senator from South Dakota talked about. I want the bill to be responsible.

Mr. CAPEHART. Apparently the Senator wants to have only a little irresponsibility.

Mr. HUMPHREY. I want to have responsibility. I want to be able to say to the people who live back home that if the Federal Government continues to acquire more and more property, and if the Federal Government continues to have more and more commercial industrial property, the Government will at least be called upon to contribute its fair share in lieu of taxes, in a proper case. I may add, further, that some of these agencies will get rid of some of their property and start to sell it off, it will get back on the tax rolls.

Mr. CAPEHART. Would the Senator be willing to make the date June 30, 1930?

Mr. HUMPHREY. I do not want to be that irresponsible.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. CAPEHART. I yield.

Mr. CASE of South Dakota. I should like to ask the Senator from Indiana if he does not think his amendment ought to go further and apply to special assessments, as well as to taxes.

The clause which has already been amended relates to special assessments levied after the effective date of this act. If we are going to change the date, why should we not add special assessments which have been levied since June 30, 1950, to get uniform treatment?

It seems to me that the language of the bill would serve notice on all municipalities and communities not to make any improvements until after the effective date of the act.

Between the day on which we pass the bill, if we pass it, and the effective date of the act, any municipality that is prudent is not going to make any improvements, but will wait until the effective date of the act.

Let me read that clause on page 20, line 19:

> 1. Special assessments levied after the effective date of this act upon real property situated in urban and suburban areas to defray the cost of local public improvements.

If we pass the bill, why should any municipality make any improvement until the effective date of the act? If they will wait 30 days or 60 days, or until the bill becomes effective, they can come in then.

Mr. HUMPHREY. A municipality makes improvements because they need to be made. It builds sewers and provides water because that must be done. Under the bill the Federal Government will be asked by the local taxing authority to pay its fair share. It is possible constantly to bring up arguments against the bill. The real argument the Senator from South Dakota makes is that he does not want the bill. He does not want the local government to receive any help.

Mr. CASE of South Dakota. No, no; I do not want to have the sovereignty of the Federal Government in its taxing power subordinated to county commissioners and city councilmen and others, who do not have the responsibility for balancing the Federal budget. I do not want Congress to surrender its authority to an appointed board.

Mr. HUMPHREY. I say most respectfully to the Senator that if the Senator feels that way, he should introduce a bill to do away with the Federal Court of Claims, because the Federal Court of Claims makes levies, and agencies are required to pay them. What the Senator is talking about is not wanting to have any payments in lieu of taxes to local governments.

Mr. CASE of South Dakota. The Federal Court of Claims has the power to measure amounts of damage. Under the bill the Board would not measure the value of local improvements. The Federal Board would not measure the validity of a tax levy.

Mr. HUMPHREY. What the Board would do would be to see to it that the Federal Government was not discriminated against and that the local government was not discriminated against. I would not like to go back to my constituents and say that I had a chance in Congress to see to it that the Federal Government—which gets its revenues, not from taxes on real property, but from income taxes, excise taxes, tariffs, and taxes on big corporate wealth, and whose commercial enterprises compete with private enterprises—paid part of its fair share, but that I was one of those in Congress who said, "No; I am going to let those commercial enterprises go scot free from taxes."

Mr. President, I am not a socialist. I am surprised that some of my friends on the other side of the aisle should take the attitude they assume, particularly those who are supposed to be conservatives, and that they should argue for an exemption for the Federal Government on Federal property.

We have seen statements like this in newspapers: "This private utility pays taxes. This Federal installation pays none."

The Senator from Minnesota says that Members of Congress should vote for the bill, so that if there is a competitive commercial enterprise owned by the Government of the United States in a free enterprise economy, a payment will be made in lieu of taxes so long as that payment is not discriminatory. I believe in free enterprise. I do not simply talk about it; I believe in it.

Mr. CAPEHART. Mr. President, I would just as much dislike facing a city council or a county taxing unit in Indiana and saying that the Federal property was acquired in 1949 and, therefore, the law does not apply. If it is a good law, I repeat, it ought to apply to all persons equally. Why discriminate against a city in which the Federal Government acquired property in 1949, and say, "The law does not apply to you," but say to a city 10 miles away, where the Federal Government acquired some property in 1950, "The law applies to you"?

Mr. MUNDT. I can give one additional answer to the statements from the other side of the aisle. Earlier in the debate, the junior Senator from California [Mr. ENGLE], with his customary candor, and representing, in part, as he does, a great State, which should be one of the recipients of this bounty, referred to San Diego, with its tremendous naval base, and which was included in the act originally. However, it was decided that San Diego was too big, so the committee started these payments in 1950, and it is out, temporarily.

The Senator from California, thinking of the homefolks, as all of us do, says this is not a perfect bill; it does not cover all the projects it should, but it serves to open the door. Those were his words—"serves to open the door." So 1950 was chosen, because it "serves to open the door." Now they are all coming in. I quite agree with the Senator from Indiana. If we are to transfer our whole concept of government to the States and cities, we shall have one big, centralized power.

Where are all the advocates of States rights, whom we heard talk so much during the debate on civil rights? Where are all of those who sought to maintain some semblance of State rights and State functions? Where are they now? Here are the issues. It is not a matter of voting rights now; it is a matter of paying taxes and of determining who is to control what will happen to the money of the country.

If we are to "buy" this, let us "buy" it from the beginning of time. Let us not tell people who happen to be fortunate enough to have had an installation since 1950 that they will get the benefit, while we tell the people on the other side of that date that they will have to pay through the nose to help the fortunate people who got their Government installations since 1950.

I think the Senators from California are justified in making impassioned speeches defending San Diego, because San Diego has sustained a burden and is entitled to relief if other parts of the country are to get it. But we should have a set of procedures equally applicable to all.

If we are to transfer the tax burden and give the Senate a mark of irresponsibility, either in one fell swoop or on the installment plan—it does not make any difference—we shall be making our decision tonight. If we are going to do it, why not do it equitably and let all the cities participate? If we are going to establish this kind of procedure, there is not a Senator who does not realize that eventually we shall have to turn the clock back from 1950 to 1940 or to 1900 and to dates even earlier.

My good, candid friend, the Senator from Minnesota [Mr. HUMPHREY], says

it would cost too much money, and that we must have a point at which to start. I appreciate that. That was the first thought of the committee.

Mr. HUMPHREY. The Senator from South Dakota has talked about irresponsibility. I read from item (3), on page 21:

> Taxes upon Federal real property acquired after June 30, 1950, which is in the custody or control of any Federal agency for industrial or commercial use.

The San Diego Naval Base is not industrial or commercial use. We did not take words out of a catalog to determine how the bill would apply with respect to special assessments.

I think, at this point, this is a fair requirement. The study commission proposed in the committee bill, which is the same as the study commission of the Mundt proposal, might very well want to make a further recommendation. It might want to recommend a change of date. It might want to broaden the bill. It might want to restrict it. But the evidence is replete that there is a need for some consideration of special assessments.

Second, I cannot believe that the distinguished Republican Senator from South Dakota wants Federal Government activity—industrial or commercial—which is comparable with private enterprise activity, and not have the local government be enabled to come before a duly appointed board to try to get a payment in lieu of taxes. Otherwise, how can private enterprise be expected to survive?

The third point is that where Federal real property is in the custody or control of any Federal agency for industrial or commercial use—which is, in fact, private enterprise operating on a leased basis in Federal installations—it seems to me that there ought to be payments in lieu of taxes.

Mr. CAPEHART. I have no quarrel with the Senator from Minnesota. I agree with him 100 percent, except that I do not want to discriminate between a city which received a Federal installation in 1949 and one which received one in 1950, because in my State I know of no property which has been acquired since 1950. Perhaps that may be true in other States. If it is good for the goose, it is good for the gander. If it is good from 1950 to 1960, it is good from 1940 to 1950.

Mr. President, I am ready to vote.

Mr. DWORSHAK. Mr. President, will the Senator from Minnesota yield?

Mr. HUMPHREY. I yield.

Mr. DWORSHAK. I should like to ask the Senator from Minnesota to clarify the phrase on page 23, line 15, "generation of electrical energy." Will the Senator state exactly what that means?

Mr. HUMPHREY. I understand an amendment will be offered by the Senator from Florida concerning that langauge. It relates to electrical generating facilities which may be owned by the Federal Government, other than those which are at present covered by Federal statute. For example, the TVA is covered at present; therefore, it is excluded from the provisions of the bill. Grand Coulee is covered; therefore, it is exempt from the provisions of the bill.

However, let us assume that somewhere along the line the Federal Government builds a generating plant, and does not have applying to to it a special statute relating to shared revenues or to payments in lieu of taxes. In that case, the Federal Board could receive a request from the local taxing authority, on the basis of the local tax rates, for a payment in lieu of taxes. This language is a protective mechanism.

Mr. DWORSHAK. I can understand the need for some element of equity as between the generation of electrical energy by public plants and such generation by private plants; but in the case of the Bonneville area of the Great Northwest, for instance——

Mr. HUMPHREY. It is covered.

Mr. DWORSHAK. There is an accepted rate of 2 mills per kilowatt hour. If the Federal Government were compelled to make a payment in lieu of taxes in those areas of, say, 2 mills, how could the Federal Government pay 2 mills when it receives only 2 mills for the power?

Mr. HUMPHREY. The large power projects are already covered by special Federal statutes. There are some 55 special statutes relating to payments in lieu of taxes. They are not touched at all.

Mr. DWORSHAK. The language reads "the generation of electrical energy"; there is no limitation whatsoever.

Mr. HUMPHREY. It is a definition of the term "industrial or commercial use." This is a definition of the term, but the bill also makes it quite clear in section 2 that the statutes which are currently in operation will continue to apply.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. BUSH. Lest the Senator from Minnesota think he has no friends on this side of the aisle in this argument, I wish to compliment him on the splendid way he has handled the bill this afternoon.

I fully endorse what he has said concerning the necessity of passing the bill, of which I am a sponsor. I reject completely the charge of fiscal irresponsibility. On the contrary, I assert that by the passage of the bill Congress will only be recognizing its clear responsibility to the overburdened communities which have been invaded by the Federal installations for industrial and commercial use.

They come into our communities and grind up the streets and overtax our services, and become burdens, instead of assets, to the communities. I think it only fair that they carry their fair share of the load; and that is all the bill provides for.

So the bill calls for recognition of a responsibility which must be assumed; and I congratulate the Senator from Minnesota on his able handling of the bill.

Mr. HUMPHREY. I thank the Senator from Connecticut.

Mr. JAVITS. Mr. President, will the Senator from Minnesota yield to me?

The PRESIDING OFFICER (Mr. CANNON in the chair). Does the Senator from Minnesota yield to the Senator from New York?

Mr. HUMPHREY. I yield.

Mr. JAVITS. I should like to join in extending congratulations to the Senator from Minnesota. I am a cosponsor of the bill, which attempts to take sound steps in regard to these problems of the cities, counties, school districts, and local communities.

Earlier in the day I placed in the RECORD a memorandum used by the Governor of New York in approving a similar bill by which the State of New York assumed its share of the responsibility for such facilities in its municipalities.

I join the Senator from Connecticut in affirming the propriety of the position taken by the Senator from Minnesota on the bill; and I hope the bill will be passed.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Indiana.

Mr. BRIDGES. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

Mr. BRIDGES. Mr. President, I understand that the pending question is on the final passage of the bill.

The PRESIDING OFFICER. No; the pending question is on agreeing to the amendment of the Senator from Indiana.

Mr. BRIDGES. Then I withdraw my request for the yeas and nays.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Indiana.

Mr. HUMPHREY. Mr. President, before the vote on the amendment is taken, let us clearly understand that the amendment will call for a considerably increased cost, contrary to the position taken by the Bureau of the Budget.

Mr. CAPEHART. Mr. President, on the question of agreeing to my amendment, I ask for a division.

On a division, the amendment was rejected.

Mr. CASE of South Dakota. Mr. President, I submit an amendment which I send to the desk.

Mr. DIRKSEN. Mr. President, I propose at this time to move that the bill be recommitted. I shall do so for a very simple reason—namely, 10 months ago the Bureau of the Budget sent here a letter in which it stated that the Federal contractors had already been presented with $128 million in taxes, under this proposal. The latest estimate I saw this morning is that this can run to between $500 million and $1 billion.

Mr. CASE of South Dakota. Mr. President, will the Senator from Illinois withhold his motion, so I can offer an amendment which will take only 2 minutes to discuss?

Mr. HOLLAND. Mr. President, I have an amendment which I wish to offer before the final vote is taken.

Mr. CASE of South Dakota. Mr. President, I ask that the amendment I have sent to the desk be stated.

The PRESIDING OFFICER. The Senator from Illinois has the floor.

Mr. DIRKSEN. Mr. President, I withhold the motion.

Mr. CASE of South Dakota. Mr. President, I ask that my amendment be stated.

The PRESIDING OFFICER. The amendment submitted by the Senator from South Dakota will be stated.

The CHIEF CLERK. On page 37, it is proposed to strike out paragraphs (e) and (f), constituting lines 5 through 16.

Mr. CASE of South Dakota. Mr. President, I merely wish to read what my amendment will strike out of the bill. The amendment will strike from the bill the following, on page 37:

(e) Upon the certification by the Board to any Federal agency of any final order of the Board awarding to any tax authority any payment under this Act with respect to any Federal property controlled by such agency, such agency shall pay to such tax authority the amount specified in such order.

(f) Each final order made by the Board under this Act for the payment of any award shall be final and conclusive upon all tax authorities and upon all Federal agencies—

I suppose that means the Treasury Department—

unless such order is modified or reversed by a court of competent jurisdiction or is adjudged invalid in whole or in part by the General Accounting Office.

When the Board has made its award, it will be final; and the money will have to be paid out of the Treasury.

Mr. President, I now withdraw my amendment.

Mr. HOLLAND. Mr. President, I submit an amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment submitted by the Senator from Florida will be stated.

The LEGISLATIVE CLERK. On page 23, in lines 15 and 16, it is proposed to strike out "the generation of electrical energy."

Mr. HOLLAND. Mr. President, there are many controversial features of the bill; but I think this is a part of the bill which all Senators will wish to have stricken from it. This provision means that property used for the generation of electrical energy, and acquired by the Federal Government after June 30, 1950, shall be subject—provided the Supreme Court says so—to the payment to the various taxing units, municipalities, counties, school districts, and the like, of taxes which come from the Federal Treasury—in other words, taxes paid by all the people of the Nation. That means that such a community itself, which is the one most greatly benefited by the investment—and in some instances these projects have cost hundreds of millions of dollars—will be entitled to receive tax funds paid by all the people of the Nation to all its local agencies, when that particular community is the one that is really benefited; for it receives the benefit of the low rates, and it receives the benefits which accrue from the establishment in its area of industries which locate there because of the low rates, and it receives all the principal advantages which accrue from the location and the construction of the facility.

The distinguished sponsor of the bill has stated here on the floor, in response to questions—and I am sorry that not many Senators were present at the time; but I shall now quote the Senator from Minnesota, and if he thinks that I quote him incorrectly, I suggest that he immediately make that known—that if the property was acquired and if the power unit was constructed after June 30, 1950, and was selling power generally—that is to say, commercially—there would be no question but that the counties and municipalities and school districts involved and all other local taxing units involved would have a right to apply for and, if permission was given, to receive taxes from the Federal Treasury, because of the location of that beneficent development in that community. Mr. President, such procedure makes no sense to me.

I happen to represent, in part, a State which can have no hydroelectric power. We are perfectly willing to accept that situation, because we have to. But why should we be called upon to pay to the Federal Government taxes which, in turn, would, under the arrangement proposed by this bill, go to cities, school districts, and counties in areas which have been benefited by these huge Federal investments? The group to be benefited would be a limited one.

If I correctly understood the distinguished Senator from Minnesota, he stated that elsewhere in the bill there appears a provision which expressly exempts the TVA, and also stated that as to any of the great power facilities which already have received the benefit of legislation which requires contributions, the pending measure will not apply to them. I accept that distinction; but that does not change either the principle or the fact, because the principle is as I have already stated it, and the fact is that there are some electrical energy generating installations which would come within this provision.

Mr. President, I shall not talk about either fiscal responsibility or fiscal irresponsibility. But this provision was not contained in the original bill, as I read it hurriedly—and, again, the Senator from Minnesota should promptly correct me if I am in error. However, through some mistake or inadvertence, this provision must have gotten into the bill.

I do not believe the committee meant this provision to be included. I do not think the inclusion of this provision is justified. Therefore, my amendment calls for striking out this part of the bill.

Mr. HUMPHREY. Mr. President, I must say that, privately, I agree with the Senator from Florida. But this amendment was asked for some years ago by Members of this body who are somewhat more conservative than I am.

I think the Senator from Florida has made a valid case for the adoption of his amendment. But this part of the bill simply provides a definition of the term "industrial or commercial use." I think it would not really have any effect, because the large power projects are already included in what we call revenue sharing agreements or under provisions for payments in lieu of taxes.

I think the Senator from Florida has made a good case in favor of the adoption of his amendment. I am not at liberty to speak for the committee in regard to the amendment, but, privately, I would be willing to join the Senator from Florida in his position on the amendment.

Mr. GRUENING. Mr. President, I am a cosponsor of the bill and a member of the committee which reported the bill; and I favor the amendment of the Senator from Florida.

Mr. MUNDT. Mr. President, I rise to speak on the amendment.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. MUNDT. I yield to the majority leader.

Mr. JOHNSON of Texas. I understand there are other amendments to be offered, and a motion to recommit will be made, and there will be a vote on final passage. I have given no advance notice that the Senate would stay in session late this evening. I have just been reminded by one of my considerate friends that I should have alerted him to bring his pajamas if I expected him to stay very late this evening.

I wonder if we could have an agreement on a time limitation tonight or an agreement to go over?

Mr. MUNDT. If the bill is to go over until tomorrow, so far as I am concerned, I, in opposition, will agree to any limitation of time tomorrow that suits the majority leader.

Mr. JOHNSON of Texas. How about tonight?

Mr. MUNDT. I do not think so, because I would have to review the arguments whereas Senators could read it in the CONGRESSIONAL RECORD tomorrow if it goes over until tomorrow. In the event I misunderstood the majority leader, I will agree to closing the session tonight until tomorrow, and to first making a unanimous agreement on voting tomorrow.

Mr. JOHNSON of Texas. I thought I might get an agreement on a limitation of 2 or 3 hours tonight, so that we could have a vote by 9 o'clock, perhaps.

Mr. MUNDT. If the Senate wants to remain in session that long, it will be satisfactory to me.

Mr. HUMPHREY. Mr. President, I remember that when an almost identical bill was before the Senate in 1956, the Senator from South Dakota conducted a one-man filibuster on the bill near the end of the session. I was to attend to matters concerning the marriage of my daughter, but I will not be run out by delaying tactics, because I happen to think that the bill before us is an important measure. There is not one thing wrong with it that cannot be corrected in pretty short order.

I shall abide by the will of the majority leader, because he has been very considerate; but if the Senator from South Dakota thinks he is going to delay action on the bill indefinitely, he has in the Senator from Minnesota a fellow who can stay here from now to kingdom come.

Mr. MUNDT. Mr. President, I just got through saying I was perfectly willing to agree to any unanimous-consent request by the majority leader to end the session now and go over and vote to-

morrow under a unanimous-consent agreement, or, if the Senate wants to debate and vote on the bill, while we have so many Senators present, I am willing to do that tonight.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to the Senator from Illinois.

Mr. DIRKSEN. May I say to the distinguished Senator from Minnesota, in all kindness that we have abided his absence and we have not been bothered by whatever inconvenience there may have been in his absence over a protracted period of time. There have been no aspersions cast, and no provocation or inconvenience has been noted during his absence. I think the convenience of other Senators should be consulted. They have stayed in the Senate pretty religiously all day. It is now after 7 o'clock. I would much prefer not to stay until a late hour. I think I would be compelled to object to a request that the Senate remain in a late session this evening. I am quite content to come in earlier tomorrow, if that we must do; but I think the conveniences of Senators, their well-being, and the fact that they have engagements, should be considered. Several Senators on both sides of the aisle have already asked me about the matter, and they should be consulted. Therefore, I would certainly not agree to run into a late session. If it is desired to obtain a reasonable time limitation for tomorrow, it is perfectly agreeable to me. I shall try to be here. If I cannot be here, I certainly would not ask the Senate to abide my pleasure in the matter, because if I miss a rollcall, it is my fault.

Mr. JOHNSON of Texas. Mr. President——

The PRESIDING OFFICER. The Senator from Texas.

Mr. MUNDT. Mr. President, I had the floor and yielded to the majority leader, I believe, to present some parliamentary inquiries. I am perfectly willing to continue to yield, but if we are to go back to a consideration of the bill before the Senate, I propose to hold the floor.

Mr. JOHNSON of Texas. I wish to propose a unanimous-consent request.

Mr. MUNDT. Certainly; I yield for that purpose.

ORDER FOR ADJOURNMENT TO 10 O'CLOCK A.M. TOMORROW—UNANIMOUS-CONSENT AGREEMENT

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate convene at 10 o'clock tomorrow morning; that we have a morning hour; that at the conclusion of the morning hour we have a time limitation on the pending bill of not to exceed 30 minutes on any amendment, motion, or appeal, and not to exceed 1 hour on the passage of the bill, the time to be equally divided between the proponents of amendments or motions and the majority leader, if he is opposed; if not, by the minority leader.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request? The Chair hears none, and the agreement is entered.

Mr. JOHNSON of Texas. Mr. President, I move that the Senate stand in adjournment until 10 o'clock——

Several Senators addressed the Chair.

Mr. JOHNSON of Texas. Mr. President, I withhold that motion, if Senators wish to make insertions.

The unanimous-consent agreement, as subsequently reduced to writing, is as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That, effective on Thursday, May 12, 1960, at the conclusion of routine morning business, during the further consideration of the bill S. 910, cited as "Payments to Local Governments Act of 1959," debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to 30 minutes, to be equally divided and controlled by the mover of any such amendment or motion and the majority leader: *Provided,* That in the event the majority leader is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or some Senator designated by him: *Provided further,* That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of the final passage of the said bill debate shall be limited to 1 hour, to be equally divided and controlled, respectively, by the majority and minority leaders: *Provided,* That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal.

DEATH OF JOHN D. ROCKEFELLER, JR.

Mr. JAVITS. Mr. President, I announce to the Senate the death today of John D. Rockefeller, Jr., the father of the Governor of New York, and of five other children, Mrs. Jean Mauze, John D., III, Laurence S., Winthrop, and David, who have made their mark in the philanthropic, economic, and cultural life of our Nation. He and Mrs. Rockefeller established an outstanding family with a great tradition.

John D. Rockefeller, Jr., and the elder Rockefeller, contributed almost a billion dollars to philanthropy. John D. Rockefeller, Jr., was a very eminent citizen of my State of New York and made an outstanding record in war work. He helped to found the United Services Organization.

He was especially distinguished in the field of personal relationships in industry, and was the author of the book "The Personal Relation in Industry."

John D. Rockefeller, Jr., was especially outstanding in the field of medical research, having served as a trustee of the Rockefeller Institute for Medical Research from 1901 to 1954.

Mr. Rockefeller lived a good, fruitful, long life. He established the tremendously important and eminent family tradition of utilizing wealth for the highest purposes of public service. His death will be felt by the people of America; indeed, his passing will be mourned by people everywhere. He was an honored, distinguished, and most useful citizen of our State and Nation.

I express my condolences and sympathy to the family, and particularly to the Governor of our State, the Honorable Nelson Rockefeller.

Mr. KEATING. Mr. President, I join with my distinguished colleague from New York in expressing deep sorrow upon the passing of John D. Rockefeller, Jr. Mr. Rockefeller has done a great deal for our Nation and for the State of New York through his many cultural activities and through his generous and unflagging philanthropic efforts to improve the lot of thousands of people throughout our land.

Mr. Rockefeller, as my distinguished colleague has just noted, was particularly active in the work of Rockefeller Institute for Medical Research among his many other philanthropic pursuits. He was also deeply interested in his alma mater, Brown University, and served her well. In sum, he was a citizen of the first rank.

Mr. President, John D. Rockefeller, Jr., lived a life of great achievement and thereby left a proud tradition for his distinguished sons, who are indeed following in his footsteps.

I express to all of the members of Mr. Rockefeller's family my deepest regret and sincere sympathy upon his passing.

FOOD AND CONTAINER INSTITUTE, QUARTERMASTER CORPS, U.S. ARMY

Mr. DOUGLAS. Mr. President, I am informed that the military construction bill will be before the Senate on Friday, and I wish to put in the RECORD certain documents connected with authorization of $3,628,000 to transfer the Food and Container Institute from Chicago to Natick, Mass.

I wish to place in the RECORD a letter which I wrote this afternoon to our able colleague from Mississippi [Mr. STENNIS], the chairman of the subcommittee, bringing out certain facts in connection with this matter; also as a supporting exhibit, a letter from the vice president, R. J. Spaeth, of the Illinois Institute of Technology, giving a cost figure for an identical new building and moving costs in Chicago; namely, $3,690,170, only $62,000 more than the Natick figure; a memorandum from the Chicago Association of Commerce and Industry showing the heavy concentration of the Food and Container Institute's contracts in the Midwest and West; a statement by officers of leading food and container industries about the proposed transfer; another full memorandum from the Chicago Association of Commerce and Industry; together with a fifth exhibit which is a statement presented to the subcommittee by Raymond J. Spaeth, vice president of the Illinois Institute of Technology.

I ask unanimous consent that all this material may be printed as a part of the RECORD, so it may be available for the information of Senators when the military construction bill comes before the Senate.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., May 11, 1960.

Re Food and Container Institute (military construction bills H.R. 10777, S. 3006).

Hon. JOHN STENNIS,
Chairman, Subcommittee on Military Construction, Senate Armed Services Committee, Senate Office Building, Washington, D.C.

DEAR SENATOR STENNIS: I have just been informed that the Senate Armed Services Committee is proceeding to a consideration of the above bills for military construction authorization legislation, which in the Senate version, you will recall, includes an item for "Quartermaster Research and Engineering Center, Massachusetts: Research, development and test facilities, and troop housing $3,628,000" (p. 3, lines 3–5).

At the conclusion of the hearing in which you kindly received our testimony and that of other spokesmen from the Middle West in opposition to this item and in favor of retaining the Food and Container Institute in the Midwest, you may remember that an opportunity was expressly given for the presentation of further data to the committee concerning the costs of building comparable facilities in Chicago, and other material which might be relevant to the decision on this item. I am therefore enclosing for your information at this afternoon's meeting a letter which has just come from Mr. R. J. Spaeth, vice president of the Illinois Institute of Technology, which I believe to be of great importance to the recommendation which you may make from your subcommittee to the full committee.

It is clear from this letter that the earlier, higher estimates of construction costs in Chicago were based upon very informal conversations, for an area of space nearly 2 and 3 times the amount now being discussed at Natick and without benefit of any specifications provided by the Quartermaster Corps. The Illinois Institute has, therefore, recomputed these figures on the basis of 121,235 square feet as proposed for the new installation at Natick, and on the basis of a construction cost of $22 per square foot, which is soundly rooted in the costs of a research building currently under construction in Chicago.

With the savings in the smaller costs of relocation, the construction cost figures come to only slightly more than the figures recommended by the Quartermaster Corps in the pending bill; namely only $62,000.

If these costs are therefore so nearly the same (which I had hoped your staff might have a little more time to determine more completely), then the other factors of convenience of location to the food and container industries and the principal research establishments in these fields would seem to me to prove conclusively that this installation should be kept in Chicago, as urged by so many representatives of those industries.

In addition, I am enclosing a second item furnished to me by the Chicago Association of Commerce and Industry, which shows that the great preponderance of contracts let by the Food and Container Institute for research outside of its own facility are with firms in the Middle West and West. This merely confirms the obvious fact that the location of the Food and Container Institute will be more convenient in Chicago for the outside contracts which must be let as a part of its work.

May I express to you and to the other members of your subcommittee and of the full committee my earnest hope that the, to us, obvious advantages of maintaining this facility in Chicago will be given your most careful consideration. I only regret that the Quartermaster Corps did not give the Illinois Institute or those in whose behalf I requested it from the Chicago Association of Commerce and Industry a full opportunity to go into all of these details last fall before they ever brought up this recommendation to your committee.

With kindest regards,
Faithfully yours,

PAUL H. DOUGLAS.

EXHIBIT 1

ILLINOIS INSTITUTE OF TECHNOLOGY,
Chicago, May 9, 1960.

Senator PAUL H. DOUGLAS,
U.S. Senate, Washington, D.C.

DEAR SENATOR DOUGLAS: In your letter of April 28, 1960, to the Chicago Association of Commerce and Industry regarding retention of the Food and Container Institute of the Quartermaster Corps of the U.S. Army in Chicago you asked that the Institute check its earlier figures on the relative costs of building this facility in Chicago, and then prepare a new proposal based upon using the same square footage and type of facilities in Chicago as the Army proposed at Natick, Mass.

One of the Institute's problems in negotiations with the Quartermaster Corps was our failure to get a set of specifications of their requirements. As a result, we have never been able to provide the Quartermaster Corps with a specific proposal. The Institute's proposals were in informal conversations.

The report to the Committee on Armed Services, House of Representatives, by the Comptroller General of the United States, in April 1960, on page 29, first paragraph, stated that the facilities and equipment cost of the installation at Illinois Institute of Technology would be an estimated $5,940,000. The following paragraph states that the construction cost of these facilities at the Institute was considered to be on the order of $9,700,000. The Institute has no idea of how either of these two figures was determined, although general discussions mentioned a facility providing from 200,000 to 300,000 square feet of space. This amount of space with the necessary equipment might justify figures of this size.

The proposal submitted to Congress by the Quartermaster Corps, however, page 53 of the backup book, Quartermaster Research and Engineering Center, Mass., research and development, test facilities, and troop housing $3,628,000, requests facilities as follows:

	Construction	Equipment
Office and heavy laboratory building, partially air-conditioned, 59,375 square feet, at $21.25, plus site and utility costs	$1,336,000	
Relocation of equipment		$141,000
New equipment		306,000
Development building, addition and conversion, 52,800 square feet, at $16.75, plus site and utility costs	991,000	
Relocation of equipment		235,000
New equipment		517,000
Animal laboratory, 7,000 square feet, at $21.50, plus site and utility costs	155,000	13,000
Barracks for 16 men, 2,060 square feet	34,000	
Total (121,235 square feet)	2,516,000	1,212,000
Total project	3,628,000	

If the above is a correct statement of the needs of this facility, then it could be built adjacent to the institute campus practically within the budgeted figures requested.

The institute currently has under construction a research building substantially better than the space described in the Quartermaster Corps request to Congress. The institute building is entirely air conditioned, consisting of 60,000 square feet, with a total cost, including architect's fees, site preparation, utility extensions, and full construction of $21.10 per square foot. Allowing for a small increase in construction costs and the fact that this building will require some extended utility lines, but also providing better space than anticipated, we estimate the following costs:

121,235 square feet at $22	$2,667,170
100,000 square feet of land	100,000
Total construction and land costs	2,767,170
Probable savings in relocation of equipment from amounts budgeted:	
Estimated cost Chicago to Natick	376,000
Less probable savings in cost of	275,000
Trucking from 39th Street to 31st Street in Chicago	100,000
New equipment, same as in congressional request	823,000
Total	3,690,170

The Institute was visited last week by a site selection committee for the food radiation laboratory, which laboratory rightfully belongs immediately adjacent to the Food and Container Institute and food research program of the Quartermaster Corps. They state this laboratory would require an area of approximately 20,000 square feet. If this 20,000 square feet were added to the above project at a cost of approximately $22 per square foot, the entire Food and Container Institute and radiation laboratory could be housed in Chicago for a total construction and land cost of approximately $3,250,000.

We hope that these figures will be of help to the Quartermaster Corps and Congress in their consideration of retaining these facilities in Chicago.

Sincerely,

R. J. SPAETH,
Vice President and Treasurer.

EXHIBIT 2

CHICAGO ASSOCIATION OF COMMERCE AND INDUSTRY, CHICAGO, ILL., MAY 2, 1960

RELOCATION OF FOOD AND CONTAINER CONTRACTS

Through research assistance from private industry, the Government saves countless manpower hours each year. Sixty percent of the institute's cost contracts and over 55 percent of its no-cost agreements are with firms in Chicago or the Midwest. If the institute were moved to Natick, there would be a tremendous increase in the cost of supervising these contracts resulting from increased travel and telephone expense as well as travel time required. A breakdown of contract locations follows:

A. Cost contracts based on dollar value:

Midwest	$1,039,334.37
East (including New York, Pennsylvania, Washington, D.C.)	422,301.00
West coast	888,602.00
South (Georgia, Florida, West Virginia)	189,665.87

(These figures do not include an item for the Surgeon General in the amount of $849,000 because the work is being done at Fitzsimons General Hospital, Denver.)

B. Cost contracts based on percentage of total number of contracts:

	Percent
East	22.5
Midwest	49.3
West	22.5
South	5.7

(The item for the Surgeon General is not included in these figures.)

C. No cost contracts:

	Firms
Midwest (mostly Chicago)	17
East	4
West	4

EXHIBIT 3

STATEMENT OF THE FOOD AND CONTAINER INDUSTRIES ON THE PROPOSED MOVE OF THE QUARTERMASTER FOOD AND CONTAINER INSTITUTE FROM CHICAGO TO NATICK, MASS.

We, the undersigned, representing the major food and container organizations located in the Midwest, oppose the proposed move of the Quartermaster Food and Container Institute from Chicago to Natick, Mass,. for these reasons:

1. The Midwest has been for many years and is today the center of food and container research and development for the Nation because it is also the chief source of supply of the basic raw materials involved. Private laboratories of corporations, universities, and trade associations located in the Midwest are readily accessible to the Institute. The close liaison between these laboratories and the Institute aids it materially in the efficient, economical performance of its mission.

2. Nationally, Chicago is centrally located and easily reached by all forms of transportation. This is essential to the success of frequent scientific conferences, meetings, and consultations held by the Institute for representatives from private industry.

3. Recruiting technical personnel, a difficult job in any location, is simplified in Chicago because institutions doing graduate work in food and packaging technology are more numerous in the Midwest than in any other part of the country.

In summary, removal of the Institute from Chicago would deprive it of the knowledge and services of basic food and packaging science centered in the major food and container industry laboratories and institutions of the Middle West.

Daniel F. Gerber, President, Gerber Baby Foods, Fremont, Mich.; William A. Beich, Vice President, Paul F. Beich Co., Bloomington, Ill.; Russell D. L. Wirth, President, Red Star Yeast & Products Co., Milwaukee, Wis.; J. Clyde Loftis, President, Kraft Foods Co., Chicago, Ill.; Daniel J. Uhrig, President, American Bakeries, Co., Chicago, Ill.; R. G. Lucks, President, California Packing Corp., San Francisco, Calif.; K. W. Brighton, Vice President and General Manager, American Can Co., Barrington, Ill.; Roscoe G. Haynie, President, Wilson & Co., Inc., Chicago, Ill.; Herbert R. Stratford, Executive Vice President, Morton Salt Co., Chicago, Ill.; Dale W. Johnson, Manager, Edible Protein Products, Central Soya Co., Inc., Chicago, Ill.; A. V. Williams, Vice President, Lawry's Products, Inc., Los Angeles, Calif.; G. F. Atkinson, General Manager, Durkee Famous Foods Division, The Glidden Co., Chicago, Ill.; C. S. Bridges, President, Libby, McNeill & Libby, Chicago, Ill.; W. G. Mason, Vice President, Marketing, the Quaker Oats Co., Chicago, Ill.; P. K. Bates, Ph. D., General Manager of Research, Carnation Co., Van Nuys, Calif.; G. C. Scott, Vice President, Research, Green Giant Co., LeSueur, Minn.; J. B. Pardieck, President, California Vegetable Concentrates, Inc., Huntington Park, Calif.; Douglas S. Steinberg, President, National Confectioners Association, Chicago, Ill.; John T. Walsh, Director, American Dry Milk Institute, Inc., Chicago, Ill.; M. A. Peterson, General Manager, Idaho Potato Growers, Inc., Idaho Falls, Idaho; George L. Sternfield, Executive Vice President, Kitchen Art Foods, Inc., Chicago, Ill.; C. L. Griffith, President, the Griffith Laboratories, Inc., Chicago, Ill.; Robert W. Reneker, Vice President, Swift & Co., Chicago, Ill.; Arthur T. O'Connor, Secretary-Treasurer, Dean Milk Co., Franklin Park, Ill.; Robert J. Greenebaum, President, Inland Steel Container Co., Chicago, Ill.; R. Bruce Holmgren, Editor, Package Engineering, Chicago, Ill.; Harold M. Mayer, Vice President, Oscar Mayer & Co., Chicago, Ill.; Dwight P. Joyce, Chairman and President, The Glidden Co., Cleveland, Ohio; Philip N. Wrigley, President, Wm. Wrigley, Jr., Co., Chicago, Ill.; H. L. Slaughter, Vice President, Durkee Famous Foods Division, The Glidden Co., Cleveland, Ohio.

EXHIBIT 4

CHICAGO ASSOCIATION OF COMMERCE AND INDUSTRY, CHICAGO

Subject: Relocation on the Quartermaster Food and Container Institute for the Armed Forces.

I. THE PROBLEM

A. Relocation of the Quartermaster Food and Container Institute for the Armed Forces from 1819 West Pershing Road, Chicago, to the Quartermaster Research and Engineering Center, Natick, Mass., is now being considered. We believe there are distinct advantages to the Government in maintaining the Chicago location.

B. Producing and packaging new and improved foods presents practical problems as well as a need for basic research. To perform its mission efficiently the Institute must maintain frequent contact with commercial researches in the food and container fields and administrators of companies producing food and containers. Close cooperation with scientists and research workers in specialized fields and proximity to well-staffed laboratories are also important. Adequate libraries are essential.

II. THE INSTITUTE IN CHICAGO

The Quartermaster Subsistence School, forerunner of the Institute, was established in Chicago in 1921. Two factors dictated this location: (1) Proximity to the military procurement agency; and (2) proximity to research facilities at nearby universities and food and packaging industries.

After a consolidation during World War II, the Institute emerged in 1950 as an organization for research and development in foods and food packaging for the Department of the Army, reporting to the Quartermaster General. Three years later, when the Quartermaster's Research and Engineering Command was activated at Natick, Mass., the Institute was placed under its command.

The Institute partially occupies one of three 6-story buildings owned by the Government and called the Chicago administrative center. Last year (1959) the budget allotment to the Institute to cover cost of space it now occupies (including heat, electricity, janitorial service, and other housekeeping facilities furnished by the center) was about $265,000. Another half million dollars is allotted for maintenance of equipment, purchase of new equipment, perishable supplies, administrative travel, etc. The Institute presently employs about 246.

III. THE MISSION OF THE INSTITUTE

It is the mission of the Institute to:

A. Provide and/or coordinate the research, development, and engineering for Armed Forces rations and subsistence items and for containers.

B. Develop specifications and related standardization documents for the manufacture of supplies and containers.

C. Provide the technical and engineering services required to maintain rations and containers in the supply system.

IV. WHAT PROPONENTS OF THE MOVE CONTEND

Although it is also argued that the current facilities are unsuited to the research mission involved, relocation of the Institute has been proposed primarily to save money. The Army contends that since the Institute is no longer a tenant of a larger organization (as it was in 1952 when a similar move was considered) it can be more economically supported by consolidation with other Quartermaster research and engineering functions.

The Army states that the Chicago Administrative Center (which houses the Institute) has become "inefficient and excessively costly to operate" and that the move of all tenants of the center is "highly desirable." It is estimated that inactivation of the center will save the Quartermaster Corps in the neighborhood of $1,150,000 a year. Approximately one-third of the total cost will be saved by co-locating the Institute with the Quartermaster Research and Engineering Center in Natick.

V. WHY CHICAGO?

These are the six primary reasons for maintaining the Institute's Chicago site:

A. Unlimited research facilities are immediately available. The Institute now maintains close liaison with the University of Chicago, Northwestern University, Illinois Institute of Technology (and the Armour Research Foundation), the University of Illinois Medical Center, and Argonne National Laboratory, all located nearby. The John Crerar Library, in Chicago's Loop, is one of the great scientific libraries of the world.

B. Recruiting technical personnel, a difficult job in any location, is simplified in Chicago because institutions doing graduate work in food technology are more numerous in the Midwest than in any other part of the country. Convenient to Chicago are the University of Illinois at Urbana, Michigan State University, the University of Wisconsin, the University of Minnesota, Iowa State University, Kansas State University, and Purdue University.

C. Contacts with food industries, those with which the Quartermaster Corps spends it largest amounts of money each year, are easily maintained in Chicago, undisputedly the Nation's center for food production. Chicago produces more meat products than any other city in the Nation and ranks second in grain mill products.

It also is the country's major producer of containers of all kinds. The food and packaging industries maintain their principal laboratories in the Chicago area. The Government saves a great deal of manpower hours each year from assistance of industry food and packaging technologists furnished through industry advisory committees. There are 17 industry advisory committees and 29 task groups cooperating with the Institute. Members attend committee meetings at their own or their firm's expense.

More food and container trade associations, an important means of contact with the industries, are located in Chicago than in any other city in the United States. Many of these associations have their own research facilities.

D. Chicago is centrally located and easily reached by all forms of transportation. Communication, not only with the rest of the United States, but with the whole world, is convenient. With the opening of the St. Lawrence Seaway and establishment of direct flights between Chicago and European capitals, Chicago is no longer merely an inland city. All of this encourages nationwide food and packaging industry meetings and helps attract qualified personnel for the Institute.

E. A Chicago site would enable the Institute to maintain, at nominal cost, its close relationship with the Military Subsistence Supply Agency (MSSA) and the Army Subsistence Center. The Institute has daily contact with MSSA, located at 226 West Jackson Boulevard, Chicago. There are weekly conferences and daily telephone calls between the two agencies; it is estimated that there are several hundred calls weekly.

Any improvement or development of rations culminates in new or revised specifications used by the MSSA for procurement of subsistence supplies for the Armed Forces. Thus, it is of the utmost importance that the Institute be located in close proximity to the MSSA.

F. Unless its present activities are greatly curtailed, the Institute can be operated at less cost to the Government in Chicago than at Natick.

1. The Illinois Institute of Technology has land available and can arrange financing to provide a suitable facility to house this operation at a comparable, if not substantially less, cost than the same physical facilities can be provided and operated at Natick.

2. All services presently furnished by the Chicago Administration Center and allocated to the Institute (e.g., heat, electricity, janitor service, and other housekeeping facilities) will be required at approximately the same cost wherever the Institute is located. Any savings claimed in this category as a result of the proposed move are fictitious. (In fact, administrative travel and telephone costs will probably increase because of the need for close contact with MSSA.) Savings to the Quartermaster Corps may result but Government expenditures would not be appreciably reduced.

3. Relocation would involve a direct outlay by the Government of about $6 million.

(*a*) The Research and Engineering Command does not presently have sufficient space at Natick to adequately house the Institute. Estimates for proper facilities vary from $4 to $5 million.

(*b*) The movement of equipment and personnel (present strength about 246) would cost about $1 million.

I. MISSION AND PROGRAMS: QUARTERMASTER FOOD AND CONTAINER INSTITUTE FOR THE ARMED FORCES

A. Mission:

1. Provide and/or coordinate the research, development, and engineering required for Armed Forces' rations and subsistence items and for containers for quartermaster supplies (except fuels and lubricants) to meet anticipated tactical and logistical requirements.

2. Develop specifications and related standardization documents to guide procurement of these items.

3. Provide technical and engineering services required to maintain these items in the supply system.

A current official statement of the Institute's mission is provided in C below.

B. Program:

1. Research and development (primarily directed toward meeting future military requirements).

Food acceptance study.
Radiation preservation of food.
Food research.
Food products development.
Simplified food logistics.
Container development.
Aerial delivery equipment (one task only).
Support services:
Direct: Command and staff.
Indirect: Housekeeping, finance and accounting, transportation, communications, etc.

2. Operations and maintenance (primarily directed to present supply system).

Applications engineering.
Standardization.
Materiel exploitation.

C. An official statement of mission:

"Accomplishes that part of the command mission, as reflected in programs and/or technical projects which are approved and assigned by the Headquarters, Quartermaster Research and Engineering Command, including, but not limited to, the following:

"1. Executes a research and/or development program concerned with:

"(a) basic research in food nutrition, stability, and acceptance;

"(b) design, improvement, development, evaluation of military rations and food products for the Armed Forces;

"(c) design, development, and evaluation of containers for which the Quartermaster Corps has assigned responsibility;

"(d) research and development on irradiation preservation processes, and the establishment of the wholesomeness of foods so processed.

"2. Effects the command standardization program, as applicable.

"3. Provides technical services and engineering support to other elements of the Quartermaster Corps, Department of the Army and Department of Defense, as required." (From Organization Manual, Quartermaster Food and Container Institute for the Armed Forces, dated May 1958.)

D. Applications engineering program fiscal year 1959:

1. Technical and engineering services to the following:

Military Clothing and Textile Supply Agency.
Army Subsistence Center (Chicago).
Military Subsistence Supply Agency (Chicago).
Subsistence Division, OQMG.
Procurement Activity, Columbus General Depot.
QM Equipment and Parts Commodity Center.
Operations Control Office, OQMG.
Military Personnel and Training Division, OQMG.
Exhibits and displays.
Boards, etc.

2. Problem solution areas:

Radiation preservation of food—support to long-term animal feeding studies.
Time-temperature indicator for frozen food utilization of canned and glass-packed subsistence.
Moisture test for low-moisture fruits and vegetables.
Chemical and physical procedures for defining quantitatively the degree of smoking meat products.

E. Standardization program areas, fiscal year 1959:

Review of detailed plans as participating and interested activity.
Standardization projects:
Coordinated projects completed or in process as preparing activity:
Specifications.
Standards.
Studies.
Projects reviewed as custodian and interested activity.
Qualified products list projects.
Other standardization activity:
Preparation of purchase descriptions.
Miscellaneous.

II. HISTORY: QUARTERMASTER FOOD AND CONTAINER INSTITUTE FOR THE ARMED FORCES

A. Creation in 1936:

1. Established in July 1936, the Quartermaster Food and Container Institute for the Armed Forces was first known as the Subsistence Research Laboratory. Generally, its mission was to give the Office of the Quartermaster General technical advice on merits of the various food products it was asked to buy.

2. Originally housed on the first floor of Building A, Chicago Quartermaster Depot, in the space occupied from 1920 to June 1936 by the Quartermaster Subsistence School, the Subsistence Research Laboratory began its operations with two civilian members and one office. By September 1941 the technical staff numbered 13, and a rough division of responsibility was effected in terms of commodity groups. The tremendous increase in workload and a lesser one in personnel since World War II began necessitated establishment of separate commodity branches and delegation of responsibility and authority to them. New branches were established when the workload required and personnel could be obtained for them.

3. On December 14, 1942, the Subsistence Research Laboratory, initially a division of the depot and part of the Supply Division, Office of the Quartermaster General, became responsible to the subsistence and packaging section, Research and Development Branch, following establishment of the recently created Military Planning Division. For such administrative matters as personnel, supply, travel orders, and janitor services, it remained under the Chicago Quartermaster Depot. To alleviate overcrowding of the Subsistence Research Laboratory, a new laboratory was constructed on the sixth floor of Building B and was dedicated January 8, 1944.

4. Shortly after moving into its new quarters, the Subsistence Research Laboratory was redesignated the Quartermaster Subsistence Research and Development Laboratory. Far from the small, ill-equipped group it had been at the start of the war, the Subsistence Research and Development Laboratory, with accelerated activity, underwent new organizational changes. In the fall of 1944 its Director became, in addition, Director of the Subsistence Section in Washington, requiring him to divide his time between Chicago and Washington. Accordingly, he appointed two assistant directors, one for commodity development and one for technical services, to coordinate activities of the development and technical branches, respectively. In February 1945, a Project Control Board of Subsistence Research and Development Laboratory staff members was appointed to review and coordinate internal projects; at the same time, a Committee on Food Research was established by the Subsistence Section to set up and administer an external research program.

5. The laboratory's wartime activity was at its height by July 1945. Its personnel numbered 285, of whom 68 were military; it dealt directly with hundreds of food and food-packaging concerns, with university research groups; and had both formal and informal relationships with several other Government agencies.

In November it was made a class IV, later a class II, activity, and its wartime Director became its first commanding officer.

B. Major organizational changes in 1946:

1. Additional missions were assigned early in the postwar period, among them to provide research and development for containers of all Quartermaster supplies, except fuels and lubricants. The Subsistence Section in Washington was deactivated and its responsibilities transferred to the Subsistence Research and Development Laboratory. In recognition of its increased duties, the Subsistence Research and Development Laboratory was renamed the Quartermaster Food and Container Institute for the Armed Forces in 1946. Many organizational changes have been made since then—consolidation of a major portion of the wartime activities and some additional ones in the Food Laboratories, incorporation of the Committee on Food Research into the Scientific Liaison and Advisory Council where provision was made for container research as well, and incorporation of members of the group into the National Research Council Committee on Foods and Committee on Containers.

2. On October 1, 1953, the Quartermaster Food and Container Institute for the Armed Forces became responsible to the newly established Quartermaster Research and Development Command at Natick, Mass. Because physical facilities at Natick had not been completed at that time, operational control remained within the office of the Quartermaster General until February 1, 1954, when it was transferred to the Headquarters, Quartermaster Research and Development Command.

3. The Quartermaster Corps in 1953 began an extensive research and development program in the use of ionizing radiations for processing foods. This led to further organizational changes in the Institute. By late 1955, this program had assumed such significance that a separate branch was established in the Food Laboratories and a special office created under the Scientific Director. By early 1958 this office was reestablished as a division, organizationally on the same level as the Food Laboratory and Container Laboratory. Another new undertaking, applications engineering as distinct from research and development, begun by the Quartermaster Corps in 1955, led to organizational changes within the laboratories to reflect this distinction. As experience was gained with this new activity, it became apparent that applications engineering work could probably be conducted more effectively without organizational separation on the operating level. Accordingly, early in 1958, applications engineering elements within the laboratories, redesignated as divisions, were consolidated with research and development.

C. Chronology:

In 1920: QM Subsistence School activated in Chicago.

June 1936: QM Subsistence School deactivated (change 1, AR 350–910, April 1936).

July 1936: QMC Subsistence Research and Development Laboratory established in Chicago (letter from the Quartermaster General to commanding officer, Chicago Quartermaster Depot, July 24, 1936).

February–March 1946: Research and development of subsistence, subsistence packaging and containers for QM supplies (except POL) consolidated in Chicago at QMC Subsistence Research and Development Laboratory, the title of which was changed to Quartermaster Food and Container Institute for the Armed Forces (ASF Circular No. 46, p. 2, par. IV, Feb. 26, 1946; letter from OQMG to CO, QMF & CLAF, Feb. 26, 1946).

1950: Cognizance for research and development in the field of food (including food packaging) delegated by Department of Defense to the Department of the Army, which redelegated to the Quartermaster General. The QMF & CIAF was named as the implementing organization (RDB 251/5.1, May 22, 1950; G4/F1–30447, Jun 16, 1950; RDB 133/11, July 12, 1950; EFD 6/7, Nov. 24, 1950; and RDB 251/8, Feb. 5, 1951).

1953: QMR & E Command activated at Natick, Mass., and QMF & CLAF, formerly reporting directly to OQMG, placed under its command (DA GO No. 73, Sept. 28, 1953).

III. BOARDS, COMMITTEES, AND COUNCILS: QUARTERMASTER FOOD AND CONTAINER INSTITUTE FOR THE ARMED FORCES

A. Committees on Foods and Containers of the Advisory Board on Quartermaster Research and Development, National Research Council, National Academy of Sciences:

1. Established as a private, nonprofit corporation by legislative enactment in 1863, the National Academy of Sciences renders upon request, advisory services in the fields of the natural sciences and their application to agencies of the Federal Government and to others in programs of research directed toward the national safety or the general public welfare. The National Research Council was established in 1916 in response to a request by President Wilson that the base of the advisory services undertaken by the Academy be broadened.

2. The Quartermaster General in 1943 requested independence advisory service on his research and development program and for this purpose established a formal contract with the Academy-Research Council. To fulfill the terms of this agreement, the Committee on Quartermaster Problems was organized by the National Research Council under the Division of Engineering and Industrial Research.

3. In 1948, the scope of the quartermaster advisory activity was broadened, and the Committee was reorganized as the Advisory Board on Quartermaster Research and Development.

4. The Committee on Foods is one of a number of technical committees organized by the Advisory Board to provide advice in specific areas of quartermaster research and development. Its primary function is to advise the Quartermaster Food and Container Institute on the nature, scope, and conduct of the food research and development program directed toward most efficient achievement of its assigned missions. The Committee on Foods is organized into the following subcommittees:

Acceptance.
Animal products.
Cereal and baked products.
Dairy, oil, and fat products.
Experimental cookery.
Food stability.
Fruit and vegetable products.
Microbiology.
Nutrition.
Radiation preservation ad hoc on high level dosimetry.

5. The Committee on Containers is another of the technical committees organized by the Advisory Board to provide advice in specific areas of quartermaster research and development. It counsels the Quartermaster Food and Container Institute on the nature, scope, and conduct of the container research and development program directed toward most efficient achievement of its assigned missions. The Committee on Containers has two subcommittees—Subsistence Packaging and Container Research.

B. Quartermaster Corps industry advisory committees:

1. Industry advisory committees are established by the Quartermaster General at the request of the Quartermaster Food and Container Institute to furnish industry advice to the Institute on specific problems arising in research and development and applications engineering work on quartermaster items. These committees are composed of individuals representing specific industries.

2. These committees and task groups have been created by the Quartermaster General to advise the Institute:

(a) Food acceptance: Sensory testing methods.
(b) Animal products:
Canned fluid foods.
Canned meat.
Dehydrated meat.
Frankfurters.
Frozen breaded shrimps.
(c) Cereal and baked products:
Active dry yeast.
Canned steamed puddings.
Crackers, biscuits, and cookies.
Prepared bakery mixes.
Fresh pastries.
(d) Dairy, oil, and fat products:
Cheese.
Dry milk.
Fat spreads.
Milk products.
Shortening.
Frozen cottage cheese.
Mayonnaise and salad dressing.
(e) Food evaluation: Precooked frozen meals.
(f) Fruit and vegetable products:
Dehydration of fruits.
Dehydration of vegetables.
(g) General products:
Chocolate and cocoa.
Confections.
Instant coffee.
Prepared pie fillings.
(h) Nutrition: Vitamins.
(i) Radiation preservation of foods: Radiation preservation of foods.
(j) Food stability: Critical storage temperatures of frozen foods.
(k) Container:
Interior enamels for cans for meat and meat products.
Multiwall bags.
Mechanical appliances for demountable containers.
Flexible containers for processed foods.
Packaging of soaps.
Coatings and cold spray-type strippable coatings.
Standards for classification of defects on outside coated can.
Volatile corrosion inhibitors.

C. The Institute's freeze dehydration project, illustrating close cooperation between the Institute and scientific and industrial research organizations:

1. Extensive research, supported by numerous field trials, has clearly established the advantages of freeze dried meats for military personnel where refrigeration is inadequate or undependable. Freeze dried meats reconstitute within 10 to 15 minutes after the addition of water to provide a product virtually indistinguishable from the product prior to freeze drying, even though it is subjected to prolonged storage without refrigeration.

2. Freeze dehydration makes it possible to offer the soldier a greater variety of meat, including poultry and fish, than is possible with canning as a method of preservation. Precooked dehydrated meals can be prepared under field conditions in 10 to 15 minutes without trained personnel or special equipment enabling the Armed Forces to feed highly mobile, well-dispersed fighting units. From the logistical viewpoint, dehydration is being assigned increased importance, especially when supplying troops by air is required; there is a significant reduction in weight (on the average about 65 percent) and volume.

3. Development of dehydration techniques results from the close teamwork of the Institute and scientific and industrial research organizations.

(a) Basic laboratory work was, and still continues to be, conducted at the American Meat Institute at the University of Chicago. The University of California at Davis made significant contributions; valuable technical support came from the University of Illinois and Ohio State University. Current contracts require close cooperation with the American Meat Institute Foundation, Northwestern University, the American Institute for Biological Research in Madison, Wis., the University of Illinois, Illinois Institute of Technology, Rutgers University, Purdue University, Oregon State College, and the University of California.

(b) In the meat industry, Wilson & Co. has been active in developing freeze dried meat products and an efficient method of utilizing beef carcasses. Freeze drying facilities at Armour & Co. played an important role in the Institute's experimental program and Swift & Co. currently holds a contract for the development of a special prefabricated precooked steak.

Wilson, Armour, and the Courtland Laboratories of Los Angeles have been the sources of supply of freeze dried meat for field tests. These same organizations have also contributed substantially to the Armed Forces knowledge of production, procurement documents, and product testing. Anticipating future requirements of the armed services and the Institute, both Armour and Wilson are expanding their freeze drying facilities. A new Armour facility will open in March 1960, in Bellwood.

D. An example of the Institute's cooperation with the container industry:

Beginning after World War II, and on a continuing basis, Institute container technologists have worked closely with the research divisions of the two major can companies located in the Chicago area to review possibilities of reducing tinplate requirements for military canned ration items.

This cooperation has resulted in large reductions in tinplate requirements and a saving of literally millions of dollars in Armed Forces expenditures.

"[From Food Technology, 1959, vol. XIII, No. 11]

"MILITARY-INDUSTRIAL LIAISON

"A RECAPITULATION OF ITS VALUES IN IMPROVING RATIONS AND CONTAINERS

"Modern firepower—missiles, atomic bombs, and all the fantastic hardware developed in the last 10 or 15 years—tends to overshadow a very basic fact. Warfare tomorrow will be conducted by highly industrialized nations. Not for any personal reasons, but because I feel it urgently important, I would like to illustrate the importance of military-industrial liaison in wartime by a few observations on what was accomplished through the joint efforts of the military and the U.S. food industry in researching, developing, manufacturing, and distributing the rations of World War II. It was my privilege to be closely associated with this effort.

"PUTTING A NEW RATION SYSTEM ON A WAR FOOTING

"When the Subsistence Research and Development Laboratory, predecessor of the Quartermaster Food and Container Institute for the Armed Forces, Chicago, came into being in 1939, it quickly became evident to my small staff and me, that whether we liked it or not a part of our assigned task was to put Army rations—a whole new system of rations—on a war footing. Our immediate task was developing a food and packaging research and development facility capable of systematizing and improving the largely obsolescent and certainly inadequate ration system that existed. But research and development problems were not the only problems we had to keep in mind. We had to ascertain if we could, and to make some shrewd guesses if we could not, as to the time and the place and the forces who would be using World War II rations. It was evident, even before the United States entered the war, that this was to be a different kind of war—far more mechanized than World War I and with a third dimension, airpower, added to the picture.

"It was also evident that the industries—in our case the food and packaging industries—would be full partners in the effort.

"You cannot enter a war and then decide to revolutionize an industry in order to make it more responsive to military needs. During a war you make as few changes in the middle of the stream as possible. You learn how to use the industrial plants that you have, not to redesign them. You work with the veteran leaders of industry who have developed a great deal of sagacity in the manufacturing and distribution of food.

"It was reassuring that our laboratory was located in Chicago. A few blocks away were the Union Stockyards and the plants of Armour, Swift, Libby, and Cudahy. Outside our windows to the south were the spurlines that bore the packinghouse products out to the consumers. A few blocks to the east was a branch establishment of the Continental Can Co. The American Can Co. had a plant west of us. Within easy range were spice companies, coffee manufacturers, the Fulton Street markets, refrigeration companies, yeast companies, the Short Milling Co.—even a brewery.

"We in the United States because we hate war, have never located our industries and transportation systems in accordance with strategic military planning as was done in Germany to some extent before World War II and, more recently, in Russia. Therefore, to have our laboratory, which became during World War II an information and liaison center for the food and packaging industries, in Chicago was an undisguised blessing. We could not have handled the "crash" problems that poured in on us during the war without having at our elbow for immediate consultation the food experts available at the Union Stock Yards, the can companies, the canning companies, and the food plants, large and small, that stud the Chicago area and the Midwest. It is worth mentioning, in this regard, that two-thirds of lend-lease supplies delivered to our allies, flowed from the Chicago Quartermaster Depot, where we were located.

"BUILDING AN EFFECTIVE MILITARY-INDUSTRY LIAISON

"How do you go about building an effective liaison with industry during an emergency? There is never any question as to the patriotic desire of industry to cooperate, but there is a world of difference between desire and action. In tackling our problems—designing, developing, and getting into volume production the kinds of rations required for a new kind of war—one of our very first objectives, even before we got into World War II, was to get across to the food industries the nature and scope of the overall problem. Through letters, conferences in our laboratory experimental kitchen, talks before industrial groups—we made it known that this would be a new and different kind of war and that it would be necessary to probe deeply into the requirements underlying the use of rations in completely new combat and combat-related situations. It was not too well recognized prior to World War II that storage, transportation, and issue would be far more complicated, that the preparation and consumption of food would take place in all kinds of strange places, that new equipment, specifications, manufacturing techniques, would be involved, and that the volume of food going to the Armed Forces would exceed anything known before. Should another war come, however, the problems will be even greater.

"In these preliminary efforts to develop interest in military problems we met with virtually complete cooperation from the industries—the few instances of disinterest being due to a certain reluctance to face the fact that 'a war was going to be on.'

"But the war came and our job was quickly increased to a size far beyond what we had forecast. In fact, we began receiving, almost at once, very specific requests—requests for rations to meet the variables of climate (the subarctic, the desert), of terrain (mountains, jungles, etc.), and types of operation (paratroop drops, beachhead landings, etc.). Hindsight tells us that we should have broadened the field utility of some of these rations, but who would know that the K-ration with a caloric value of 2,700, designed for a maximum use of 5 days, would be issued interchangeably with C-ration without regard for time? But as time went on, the shakedown testing of actual combat gave us a more accurately adjusted view of the requirements, and before the war closed the general principles of feeding men for a war of the type of World War II were clear. In the main the rations developed and supplied the troops during World War II fulfilled their purposes. But I must emphasize again that our basic principle was working with the food and packaging industries as partners.

"WHY IS MILITARY-INDUSTRY COORDINATION OF SUCH IMPORTANCE?

"A brief answer to this question, based on the experience of World War II may be useful to have on record. As my many associates, military and civilian, who were engaged in food research and development in World War II will agree, there was virtually no aspect of military foods and feeding that did not demand our joint attention. In general, however, the areas that demanded closest coordination with industry were three: (1) the adaptability of foods and packaging to specific military operations, (2) the stability of foods and packaging under extremes of climate and military types of handling and storage, (3) the eating quality of foods. It is gratifying that these three areas—in terms of a possible future conflict—were covered at a 2-day conference last September, held at the Stockyard Inn. The proceedings of this conference are available in limited quantity at my office.

"Adjusting foods and packaging to 'military life' is more difficult in many ways than adjusting raw recruits to military ways of doing things. To do so requires a knowledge of the performance capacity of soldiers under stress, how ration systems fit into military operation systems, the potentials of the food and packaging industries for meeting the often exacting requirements of packaged rations—and a constant, day-after-day attention to the chemical, microbiological, physical, and psychological aspects of food. This is a large order as the outstanding group of men and women who made up my staff, and I myself, found out. It takes organization, it takes patience, it takes a stable program well supported by higher echelons to do the job. All of these things we had in World War II—and all of these things we shall need if another holocaust descends on us.

"In concluding, I would like to pay tribute to the able and dedicated people, military and civilian, who made up the SRDL of World War II. Not only did they advance the science and technology of rations and packaging but they also helped to create the understanding and ready communication among military, industry, and institutional groups that is being perpetuated today at the Quartermaster Food and Container Institute for the Armed Forces.

"ROHLAND A. ISKER,
"Colonel, Quartermaster Corps (Retired), Research and Development Associates, Food and Container Institute, Inc., Chicago, Ill."

IV. PHYSICAL PLANT AND SERVICES: QUARTERMASTER FOOD AND CONTAINER INSTITUTE FOR THE ARMED FORCES

A. Present physical plant, budget and staff:

1. The Institute presently occupies about 188,000 square feet in a facility called the Chicago Administration Center at 1819 West Pershing Road, Chicago. The Government-owned plant consists of three six-story buildings and a garage which were used as a supply depot from World War I to 1955 when the center was activated. Ten Government offices were housed in the center.

"A" building is partially occupied by the Quartermaster Chicago Administration Center, U.S. Army Subsistence Center, 5th Army Statistical and Accounting Division, 5th Army Veterinary Food Inspection Service, and by the Post Office Department Supply Center.

"B" building is partially occupied by the Quartermaster Food and Container Institute and the Military Subsistence Testing Laboratory.

"C" building is partially occupied by the Department of Agriculture Dairy Branch Laboratory, 5th Army Finance and Accounting Office and the U.S. Army Meat and Dairy Hygiene School.

2. In 1959 the budget allotment to the Quartermaster Food and Container Institute amounted to about $265,000 as payment for space it now occupies including heat, electricity, janitor service, and other "housekeeping" facilities furnished by the Chicago Administration Center. Approximately $500,000 is allotted for maintenance of equipment, purchase of new equipment, perishable supplies, administrative travel, etc.

3. The Institute presently employs about 246.

B. Support services provided by the Chicago Administration Center to the Quarter-

master Food and Container Institute for the Armed Forces:

1. General administration: Security measures; fire prevention regulations; establishment of a regular workday; declaration of holidays; general regulations; and customs of the installation.

2. Special staff services: Command inspection; intelligence; public information; claims and safety.

3. Management assistance services: Management studies and analysis; statistics and statistical analysis; personnel strength control; organization control; reports and forms control; and consultant.

4. Budget and funds control services: Personnel funding estimates and control; mission and local procurement funds estimates and control.

5. Finance and accounting services: Payroll, personnel, mission, and local procurement funds accounting; and cost accounting.

6. Machine accounting services.

7. Civilian personnel services.

8. Administrative services: Mail and records, records administration, messenger service, telephone, teletype, central reproduction, and motor pool.

9. Local logistic services: Supply operations, self-service supply center, purchasing and contracting, service unit (receiving).

10. Housekeeping services: Custodial (office areas); organizational and field maintenance of furniture and typewriters and office appliances; security (guards); fire protection; and repairs and utilities.

11. Common services: Medical (dispensary); salvage; packing and crating; transportation (except typing orders); labor and MHE equipment.

12. General auditing.

13. Local welfare services: Troop information and special services activities.

14. Restaurant.

V. PROPOSAL OF SITE FOR THE QUARTERMASTER FOOD AND CONTAINER INSTITUTE BY THE ILLINOIS INSTITUTE OF TECHNOLOGY

A. General proposal:

Illinois Institute of Technology (IIT) has offered to construct and finance a building (or buildings) sufficient to house the Institute on its campus on Chicago's near South Side. Facilities would be erected according to specifications of the Quartermaster Corps and under its direction and leased to the Institute (or an appropriate Government agency) for a period ranging from 10 to 25 years to allow a reasonable scheduling of amortization. Adequate parking facilities would be provided and housing for staff of the Institute on a preferential basis would be available in apartments owned by IIT in the vicinity of the campus. IIT would furnish all essential services at cost plus a small overhead fee.

The officers and members of the board of trustees of IIT believe that a mutually attractive agreement can be concluded. They are "flexible in their thinking" and will cooperate with the Quartermaster General and other responsible officials in developing a working relationship.

The Duke University contract with the Army Ordnance Corps is favorable precedent for this proposal. The Office of Ordnance Research, which administers an annual program of $5 million in basic research, is housed in a building on the Duke campus which was constructed by the university and leased to the corps.

B. Location:

IIT is located about 3½ miles south of Chicago's Loop between 30th and 35th Streets and extending between Federal Street and Michigan Avenue. The campus, served by frequent rapid transit and bus service, can be reached from the Loop in less than 15 minutes. Thirty-fifth and Thirty-first Streets will be interchanges on the new South Expressway connecting the Calumet Skyway and the Calumet Expressway on the south with Southwest, Congress, Northwest, and Edens Expressways on the north.

A site for the Institute is immediately available at the corner of 30th Street and Michigan Avenue. Land reasonably contiguous to this site has already been redeveloped and bordering properties are scheduled for redevelopment soon.

C. Services and other facilities:

All essential "housekeeping" services, including maintenance and repairs, janitor and guard service, steam, electricity, and heat, would be furnished by IIT at cost, plus a small overhead fee. Cafeteria or restaurant and private luncheon facilities, small meeting rooms and auditoriums seating from 250 to 750 would also be available.

Unique and costly equipment at IIT could be used by the Institute. Included is a nuclear reactor designed specifically for industrial research, a nationally recognized computer center, and a gas fission product source.

D. Estimated cost of new facilities:

Here is a first "crude" estimate of cost of facilities to house the Institute on the IIT campus:

Building: 180,000 square feet at $28 per square foot	$5,040,000
Laboratory equipment and installation: 180,000 square feet at $5 per square foot	900,000
Total	5,940,000

Facilities could probably be completed about 18 months after the final plans are submitted.

E. The future of the Institute at IIT:

Shortly after its formation in 1940, IIT began development of a completely new 110-acre campus called Technology Center. The program is now well under way—34 new buildings have been constructed or are under construction. They include a new $3.5 million chemistry building and facilities for the John Crerar Library, which will move from its present Loop site to the IIT campus. When completed, Technology Center, in the functional design of Ludwig Mies van der Rohe, the internationally recognized architect, will be one of the world's most modern campuses and one of the few ever designed as a unit. The center already houses, in addition to the IIT staff of 2,300 (1,200 of whom have advanced degrees in engineering and/or the sciences), the Armour Research Foundation, the Institute of Gas Technology, and the central research laboratory of the Association of American Railroads.

F. Notes to enclosures 1, 2, and 3 on pages immediately following:

Enclosure 1: Aerial view of campus, Illinois Institute of Technology. Elevated railway line is in right foreground. Site of new John Crerar Library building is in blue. One of the sites proposed for the Quartermaster Food and Container Institute is in red.

Enclosure 2: Map of Technology Center.

Enclosure 3: Map of Chicago throughways (completed and projected). IIT campus is in red. It is strategically situated for motor, bus, and elevated railway transportation.

(NOTE.—Enclosures 1, 2, and 3 are included in the files of the committee.)

VI. QUESTIONS PERTINENT TO PROPER USE OF APPROPRIATIONS FOR THE QUARTERMASTER FOOD AND CONTAINER INSTITUTE FOR THE ARMED FORCES

A. What is the basis for alleged savings resulting from the move?

1. Is any part of the alleged savings a "wash" entry applicable without regard to location?

2. If "repairs and utilities" costs are part of alleged savings, how does this cost per square foot of space at the Chicago Administration Center compare with cost at the Quartermaster Research and Engineering Center?

3. Does any part of alleged savings result from lower costs applicable without regard to location?

4. Is any part of alleged savings based on reduction in mission applicable without regard to location?

(a) If no reduction in mission is assumed, was consideration given to cost of—

(1) Replacing research facilities available at food and packaging industries and other institutions in the Chicago area?

(2) Maintaining communication with the Army Subsistence Center and Military Subsistence Supply Agency (which presumably will remain in Chicago)?

(b) If a reduction of the Institute's mission is contemplated, will it result in requirements for additional personnel and/or facilities for research and engineering in food and rations by the Navy, Air Force, Military Subsistence Supply Agency, or Army Subsistence Center?

B. Were alternatives to the move adequately explored?

1. Was a study made of the possibility of reducing costs at the Chicago Administration Center by moving any of these other Chicago Government agencies now leasing space in the Loop or elsewhere in the Chicago area to the center?

(a) Military Subsistence Supply Agency, 226 West Jackson Boulevard.

(b) District Engineer, U.S. Army, Merchandise Mart.

(c) Regional Engineer, U.S. Army, 536 South Clark Street.

(d) Chicago Ordnance District, South Wabash Avenue.

2. Were private institutions in Chicago, such as Illinois Institute of Technology, considered as possible sites for the Institute?

If so, what criteria were used?

C. Were other agencies involved in the move consulted regarding it?

1. The General Services Administration.
2. Air Force.
3. Navy.
4. Army Subsistence Center.
5. Military Subsistence Supply Agency.

D. Were any benefits to mission alleged as a result of the move?

1. If so, in what respect is the Quartermaster Research and Engineering Center superior as a site to the Chicago Administration Center?

If so, in what respect is Natick superior as a site to Chicago?

VII. EXPANSION OF CERTAIN ARGUMENTS FAVORING A CHICAGO SITE FOR THE QUARTERMASTER FOOD AND CONTAINER INSTITUTE FOR THE ARMED FORCES

A. Unlimited research facilities are immediately available:

1. Major scientific research facilities in the immediate locality include:

(a) The University of Chicago and the American Meat Institute on the South Side.

(b) Northwestern University Technological Institute, in Evanston.

(c) Illinois Institute of Technology and the Armour Research Foundation—just south of the central business district.

(d) The University of Illinois Medical Center, west and south of the central business district.

(e) Argonne National Laboratory, operated by the University of Chicago and located in Lemont.

NOTE.—Two major research facilities not located in the immediate locale of the Institute are nevertheless convenient and much used—the Forest Products Laboratory, maintained by the Department of Agriculture at Madison, Wis., and the Institute of Paper Chemistry in Appleton, Wis. Because it is a Government agency, the laboratory would be contacted by the Institute wherever it

was located, but proximity of the laboratory to Chicago has made close cooperation between the two Government functions possible.

2. Industrial research laboratories in the food and container fields are numerous in Chicago and the surrounding area because of the large number of food and container industries located here.

A list of industrial research laboratories in these fields follows this part (VII) of the appendix as enclosure 1. The Institute also obtains a great deal of information and assistance from General Mills, Inc., and the Pillsbury Co. in Minneapolis and Minnesota Mining & Manufacturing Co., St. Paul.

3. Technical libraries in the area offer a huge reservoir of literature on subjects of interest to the Institute. In addition to libraries at the major universities (Chicago, Illinois, and Northwestern) these are also available:

(a) The John Crerar Library. Founded in 1894, this is one of the greatest scientific libraries in the world. Its medical collection, comprising over 150,000 volumes, is the most comprehensive in the Midwest. Other extensive collections include the basic sciences (especially chemistry, physics, and geology), tehnology, and agriculture. They are supplemented by current subscriptions to 10,000 periodicals and other serial publications.

(b) Illinois Institute of Technology and Armour Research Foundation.

(c) Special libraries maintained by industries in food and packaging fields or at national headquarters by trade and professional associations.

(1) These libraries are devoted primarily to science-technology:

Armour & Co., 1355 West 31st Street, Chicago, Ill.

Victor Chemical Works, 11th and Arnold Streets, Chicago Heights, Ill.

Argonne National Laboratory, Post Office Box 299, Lemont, Ill.

Illinois Farm Supply Co., 100 East Ohio Street, Chicago, Ill.

American Can Co., 433 North Northwest Highway, Barrington, Ill.

Corn Products Refining Co., Chemical Division Library, Box 345, Argo, Ill.

American Institute of Baking, 400 East Ontario Street, Chicago, Ill.

Abbott Laboratories, 1400 Sheridan Road, North Chicago, Ill.

Baxter Laboratories, Inc., 6301 Lincoln Avenue, Morton Grove, Ill.

American Meat Institute Foundation, 939 East 57th Street, Chicago, Ill.

Libby, McNeil & Libby, 13636 South Western Avenue, Blue Island, Ill.

The Upjohn Co., Kalamazoo, Mich.

Dearborn Chemical Co., 1029 West 35th Street, Chicago, Ill.

National Dairy Products Corp., 923 Waukegan Road, Glenview, Ill.

Miles Laboratories, Inc., Myrtle & McNaughton Streets, Elkhart, Ind.

Velsicol Chemical Corp., 330 East Grand Avenue, Chicago, Ill.

American Dry Milk Institute, Inc., 221 North La Salle Street, Chicago, Ill.

Lewis College of Science and Technology, Route 66A, Lockport, Ill.

Wilson & Company, Inc., 4200 South Marshfield Avenue, Chicago, Ill.

National Confectioners' Association, 36 South Wabash Avenue, Chicago, Ill.

G. D. Searle & Company, Skokie, Ill.

(2) These libraries have collections in the biological sciences:

American Osteopathic Association, 212 East Ohio Street, Chicago, Ill.

American Medical Association, 535 North Dearborn Street, Chicago, Ill.

(3) These libraries relate primarily to metals:

Acme Steel Co., 100 Acme Avenue, Chicago, Ill.

United States Steel Corp. (south works), 3426 East 89th Street, Chicago, Ill.

Fansteel Metallurgical Corp., 2200 Sheridan Road, North Chicago, Ill.

Inland Steel Co., 30 West Monroe Street, Chicago, Ill.

B. Institutions doing graduate work in food and container technology are more numerous in the Middle West than in any other part of the country:

The following are within easy reach of Chicago:

1. Institute of Meat Research of the University of Chicago.
2. Illinois Institute of Technology, Chicago.
3. Armour Research Foundation, Chicago.
4. University of Illinois, Urbana, Ill.
5. Michigan State University, East Lansing, Mich.
6. University of Wisconsin, Madison, Wis.
7. University of Minnesota, St. Paul, Minn.
8. Iowa State University, Ames, Iowa.
9. Kansas State University, Manhattan Kans.
10. Purdue University, West Lafayette, Ind.
11. Bradley University, Peoria, Ill.
12. Wayne State University, Detroit, Mich.

C. Contacts with the food and packaging industries are easily maintained in Chicago:

1. Chicago is the center for the Nation's food production. The area is second in the United States in total value of food products manufactured for the consumer. In 1958 gross sales of food products amounted to $3.7 billion in the Chicago metropolitan area.

(a) Chicago is the center of distribution for the dairy industry. Wisconsin, Minnesota, Illinois, Indiana, and Michigan produce half of the Nation's butter and more than a third of its fluid milk. Wisconsin makes almost half of the country's domestic cheese. Most firms which distribute dairy products nationally have either main offices or processing facilities here. They include Kraft Foods Co., the Great Atlantic & Pacific Tea Co., Wilson & Co., Swift & Co., Beatrice Foods Co., and the Borden Co.

(1) Among the biggest milk distributors in Chicago are the Bowman Dairy Co., one of the Nation's largest independents, Borden and Hawthorne-Mellody Farms Dairy.

(2) The Chicago Mercantile Exchange operates as the Nation's leading "futures" market in butter (and eggs and onions as well).

(b) Poultry and eggs, both highly perishable commodities, are produced in quantity nearby and shipped out of Chicago to markets around the Nation. Iowa is first among all States in production of poultry and eggs; Minnesota is second in egg production and fourth in the production of chickens; Minnesota is second in turkey raising, and Iowa is fourth.

(c) A major portion of America's fruit and vegetables funnel through Chicago; in fact, more fresh produce passes through Chicago than through any similar center anywhere in the world because of its central location and the availability of refrigerated warehouse space. Chicago has nearly 34 million cubic feet of cooler and freezer space in public warehouses and about 20 million feet in private warehouses.

(d) Chicago handles enough grain to be known as the Nation's third largest granary. The value of crops harvested within a 500-mile radius of Chicago is 41 percent of the national total. Grain storage capacity in Chicago is nearly 80 million bushels. It manufactured over $56 million worth of grain mill products in 1954, second only to Buffalo, N.Y.

(1) Among the large firms in the baking industry located here are Continental Baking Co., Schulze & Burch Biscuit Co., Ward Baking Co., Gordon Baking Co., Piper Baking Co., the Great Atlantic & Pacific Tea Co., United Biscuit Co., Jewel Tea Co., Salerno-McGowen Biscuit Co., Consolidated Foods Corp., Carr Consolidated Biscuit Co., National Biscuit Co., Sawyer Biscuit Co., and Burny Bros., Inc.

(2) The Chicago Board of Trade has always been the world's leading market in "futures" trading.

(e) The city ranks first among all metropolitan areas of the Nation in meat production. About 47 percent of the Nation's livestock is produced within a 500-mile radius of the city. The Union Stock Yards in Chicago can handle more than 40,000 cattle and 120,000 hogs a day and turn out meat at the rate of 10,000 pounds a minute during an 8-hour day.

Despite decentralization in the industry, Chicago is still the national center of the sales market. In 1954 sales of meat was close to $149 million; New York sold about $67 million worth of meat in the same year. Leading Chicago manufacturers of meat products include Agar Packing Co., Inc., Armour & Co., the Great Atlantic & Pacific Tea Co., Hygrade Food Products Corp., Illinois Meat Co., Oscar Mayer & Co., Swift & Co., and Wilson & Co., Inc.

(f) Chicago is the center of the confectionery industry in the United States and produces about 25 percent of all candy manufactured in the country. E. J. Brach & Sons, Bunte Bros., Mars, Inc., Curtiss Candy Co., and Walter H. Johnson Candy Co. maintain headquarters in the city.

2. The Chicago area manufactures more containers of all types than any other area in the Nation because, as in the case of food products, it is close to sources of supply. Major manufacturers include the Container Corp. of America, which has its home office and five plants here, the American Can Co. (seven plants plus research and technical service department), and the Continental Can Co. (nine plants, Metal Research and Development Division, Central Research Division and six subsidiaries manufacturing paper and plastic containers).

(a) In tin cans and other tin wear, Chicago in 1954 stood first with a production valued at almost $97 million, compared with about $55 million worth for New York. No other metropolitan area had more than half the production of New York City.

(b) Only two areas in the the Nation produce more paperboard containers (specified for shipping 80 to 90 percent of Quartermaster Corp. items) than Chicago. Among the large manufacturers located here in addition to the three mentioned above are: Olin Mathieson Chemical Co., Owens-Illinois (National Container Corp.), Rheem Manufacturing Co., Stone Container Corp., United Biscuit Co. (Chicago Carton Co.) and Standard Brands, Inc. (Traver Partition Corp.).

Geographic representation on a current Institute industry advisory committee indicates the concentration of technical services of the fiberboard industry in the Midwest. When the industry was canvassed for technical professional personnel, the volunteer committee was composed of representatives from these cities:

East Walpole, Mass.
San Francisco, Calif.
Keokuk, Iowa.
Rittman, Ohio.
Toledo, Ohio.
Atlanta, Ga.
Indianapolis, Ind.
St. Paul, Minn.
Sandusky, Ohio.
Chicago, Ill.

3. Chicago is the headquarters of all major trade associations in the food industry and a large percentage of their national meetings and conferences are held here. Ninety-eight trade associations related either to food or containers are located in Chicago. There are 30 associations in the field of produce, dairy products, and general agricul-

ture; 10 in the field of meat products and livestock; 49 in the field of groceries, confectionery, bakery products; 5 in the field of flavoring extracts, sirups, and soft drinks; and 4 in the field of paper boxes and paper cartons.

(a) Meat and livestock associations in the city include the American Meat Institute (which represents about 500 members handling between 85 and 90 percent of all meat and meat products commercially produced in this country), the National Livestock and Meat Board, the National Association of Retail Meat Dealers, the National Association of Retail Grocers, and the National Livestock Producers Association. In the milling field, 5 of the 8 with large staffs are located here; in dairy, eggs, and poultry, 8 of the 11 with larger than average staffs have offices here.

(b) Major Chicago trade associations in the food and container fields are listed in enclosure 2 following this part (VII) of the appendix.

ENCLOSURE 1. INDUSTRIAL RESEARCH LABORATORIES IN THE CHICAGO AREA

(Source: Industrial Research Laboratories of the United States (10th ed.) Publication 379, National Academy of Sciences, National Research Council Washington, D.C., 1956.)

A. FOODS

American Bakeries Co., 919 North Michigan Avenue.
American Dry Milk Institute, Inc., 221 North La Salle Street.
American Institute of Baking, 400 East Ontario Street.
American Meat Institute Foundation, 939 East 57th Street.

Chicago Association of Stock Exchange Firms, 120 South La Salle Street.

EXHIBIT 5

STATEMENT OF RAYMOND J. SPAETH, VICE PRESIDENT, ILLINOIS INSTITUTE OF TECHNOLOGY, ON THE QUARTERMASTER RESEARCH AND ENGINEERING CENTER

The motivation for this move is most commendable—it is being undertaken in the spirit of economy. The economies to be effected, however, will result from the closing of the 1819 West Pershing Road Depot, of some 1,868,280 square feet, of which the Food and Container Institute requires only approximately 148,000 square feet, or only 8 percent, and not from the specific relocation of this activity in Massachusetts.

The proposed move of the Institute from Chicago will probably result in large new capital outlays and larger annual operating costs than if the facility were retained in Chicago.

It may be said that economies from centralized administration are possible at Natick. Research experience has proved, however, that decentralized research is not only effective, but even desirable, if it is necessary for the proper environment.

Chicago is the geographical center of the Nation's food industry. It is more accessible and readily available to all parts of the country, all of which is engaged in some aspect of the food industry. Chicago is the location for the Military Subsistence Supply Agency and the Army Subsistence Center, both of which of necessity must work in close collaboration with the Food and Container Institute.

Effective research requires effective communication—the costs of added travel to the distant location on the east coast by representatives of the food industry, by representatives of the Government agencies using these facilities, and by those Government and public individual research workers, all of whom must be in constant touch with this facility for effective results, will substantially exceed expenditures necessary for these contacts in Chicago. These added costs alone will more than offset any possible operating economies of the proposed location.

The cost of a new facility for this operation, including land, buildings, and equipment, would be no more, if not substantially less, in Chicago than in Natick. The cost of transporting present staff, recruiting new staff, disrupting and reactivation of the present program, could be avoided. Annual operating costs at Chicago would be less than at Natick.

Illinois Institute of Technology, one of the Nation's outstanding technological and scientific institutions, has sufficient land available immediately adjacent to its 110-acre campus for this activity. The institute's campus is part of Chicago's great urban renewal program, and is located just 3 miles south of Chicago's Loop. It is readily accessible to all forms of the city's transportation system. The campus has direct entrances to the city's new South Expressway, a part of the Federal Highway System.

A scientific and engineering staff of 2,200 and 7,500 students provide a constant pool and source of scientific manpower. The research facilities of the Association of American Railroads, the Institute of Gas Technology, and Armour Research Foundation are located on the campus. Of an eventual building program of some 60 new buildings, estimated to cost in excess of $60 million, some 36 new buildings, estimated to cost in excess of $60 million, some 36 new buildings, costing in excess of $30 million, have already been built or are under construction. Included in these is the new John Crerar Library, the largest technological library in the United States.

Already available on the campus are the necessary utilities such as steam for heating and processing, virtually every form of research services from glassblowing to all forms of metal process shops, and specialized laboratories, including large computers and a nuclear reactor. All of this manpower and facilities are available at their net cost to this possible new Government laboratory.

If the Government does not care to appropriate the same or a substantially less amount for the construction of this facility in Chicago, the institute can, and is willing to, finance the construction of this necessary building, the physical facilities built to the Government's specifications, and make it available to the Government on terms which will just cover the cost involved.

The institute has already provided the Army with a detailed proposal for a facility at the Illinois Institute of Technology campus.

We urge your committee to reconsider this move—and believe the retention of this operation in Chicago will, over the years, result in a more economical operation, a more effective research program for the food and container program of the Armed Forces and be more in the best interests of the food industry and the Nation.

Mr. DOUGLAS. Mr. President, in brief, may I say the Food and Container Institute has been in Chicago many years, has given good service, is in the heart of the region where both the processing and growing of food is concentrated, is in the heart of the container industry; and I am at a loss to understand this proposed transfer.

The Quartermaster Corps, I think, has been guilty of some pretty fast pitching on this matter. In discussing with the Illinois Institute of Technology their estimates of cost of a suitable new building in Chicago, the size of facility said to be needed was between 200,000 and 300,000 square feet of space. The cost estimate of the Illinois school then came to something over $6 million. The Quartermaster Corps then produced figures for only 121,000 square feet in Natick, at a cost of $3,628,000, and then said the Natick building would be much less expensive than the Chicago building. But the point is they were comparing space in Natick which was just about half the space that the Chicago estimate had been based upon.

We received only this afternoon the final figures from the Illinois Institute of Technology on comparable space; namely, 121,000 square feet. The figures show the Chicago estimate is virtually identical with the Natick estimate, there being a difference of only $62,000 out of a total of $3,600,000, or less than 2 percent.

I think it is ridiculous to locate a food research institute in Massachusetts. One might just as well locate an institute for the study of arctic diseases in Puerto Rico.

I am sure my good friends from Alaska would protest on that point.

CONFUSING RULINGS OF THE SUPREME COURT

Mr. THURMOND. Mr. President, a chain is no stronger than its weakest link. The chain of the National Government's operation is approaching the breaking point because of its weak link, the Supreme Court. Although the crescendo of criticism and expressions of alarm at the lawless, illogical, and inconsistent decisions of the Court have lost their news value to a large extent because of the long period of their continuance, the American public has not been any less aware of the continued unreliability of the Court.

The Congress has the duty and responsibility, as well as the authority, to correct the weakness of the Court. A number of bills are pending in the committees of both the Senate and the House which would establish reasonable qualifications for appointees to the Court, would limit the jurisdiction of the Court, and would insure that the Court cannot continue to flagrantly misconstrue the intention of Congress with respect to legislation which is passed. Action on these bills by Congress is long overdue, and it is high time that these bills were given the high priority they deserve by the committees to which they have been committed and by the leadership of both political parties.

On Monday, May 9, 1960, there appeared a column in the Greenville News, published in Greenville, S.C., entitled "Recent Rulings Baffle, Irk Lawyers, Laymen," written by the able columnist, Ray Tucker. Mr. Tucker points out the continuing inconsistencies in the Court's decisions and the apparent complete lack of legal ability by the members of the Court. I ask unanimous consent that this column by Mr. Tucker be printed in the RECORD following these remarks.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Greenville (S.C.) News, May 9, 1960]

RECENT RULINGS BAFFLE, IRK LAWYERS, LAYMEN

(By Ray Tucker)

WASHINGTON.—Although the sizzling presidential campaign has distracted public attention from the 1960 session of the Supreme Court, its recent rulings on important labor, civil rights, and foreign policy questions have baffled and irritated judges, lawyers, and laymen, including President Eisenhower, Secretary Herter, Attorney General Rogers, and the National Labor Relations Board members.

The High Tribunal has been accused of showing complete inconsistency and too rigid a regard for statutory technicalities when they collided with common sense.

Although it has frequently applied extra-legal and psychological principles in important cases, notably in the school segregation controversy, it has seemingly strained statutes or interpreted them so literally that the practical result has been harmful.

FIVE-TO-FOUR VOTES

Supporting this conclusion is the fact that there have been numerous 5-to-4 decisions and sharp exchanges between the majority and the minority—a division distressing to lawyers and jurists in lower courts.

It is probable that Chief Justice Earl Warren and his associates will set a record for many and massive dissents.

Several rulings on alleged victimization of individual freedom are cited as evidence of inconsistent interpretation.

A 51-year-old house painter in Portland, Oreg., who was brought here from Finland when he was a year old, was accused of having been a member of the Communist Party when he was 29. There was no evidence that he had taken any real interest in its affairs or activities.

NO ALLOWANCE

Since he had not become an American citizen, the law requires that he be deported, and so the Supreme Court held by a 5 to 4 vote. It is true that the statute, reenacted at the height of the Korean war, makes no allowance for extenuating circumstances.

But although a majority indicated in the housepainter's case that it was unsympathetic to the statute, it did not bother to suggest amendment, as it frequently does.

Dr. Willard Uphaus is spending a year in a New Hampshire jail because he refused to answer an Attorney General's questions about his guests at a "World Fellowship Center." The 69-year-old Uphaus calls himself a world pacifist.

NO ILLEGALITY

There was no evidence of illegality at the center. The defense argued that the Attorney General's questions were for the purpose of "exposure for exposure's sake," and not for a legitimate end. The Supreme Court minority agreed with this contention. But the majority upheld the State, and Uphaus remains in jail.

However, in a Little Rock case, the jurist freed two women refusing to reveal the names of members of the National Association for the Advancement of Colored People to city officials. The majority found that such a disclosure might cause harassment and encroach on individual freedom.

Here, it is possible that the jurists were swayed by whatever tenseness remains from the use of Federal troops in the Arkansas capital, a practical consideration that they did not apply in the Portland or Uphaus cases.

DISTURBING

President Eisenhower and Secretary Herter are seriously disturbed by another Federal court's peculiar ruling in a maritime controversy of great international importance.

But it followed the precedent set by the Supreme Court of when it refused to prohibit a union picketing of a "flag of convenience" vessel on the west coast.

The laws court found that union picketing of an Egyptian freighter at New York was lawful because it was not a labor dispute. The embargo on unloading was inspired by Egypt's refusal to permit Israeli ships to pass through the Suez Canal. The decision has led to a general boycott of American vessels in Middle East ports, and, as Herter said, inflamed an already dangerous situation in this key area.

IRRESPONSIBLE ACTION BY THE ATTORNEY GENERAL

Mr. THURMOND. Mr. President, every public official is under an obligation to act in a responsible manner in the discharge of his duties. Those public officials who hold their offices by virtue of election at the ballot boxes are more conscious of this obligation, for their continuation in office might well be contingent on their ability to act responsibly. In some instances, however, appointed officials lose sight of the obligation to act in a responsible way. We would like to think that these lapses are unintentional and mistakes of judgment. Occasionally, however, there is demonstrated such a complete lack of responsibility on the part of appointed officials, that, when coupled with surrounding circumstances, it leaves no room for doubt that the irresponsibility is intentional and for an ultra vires purpose.

Such an irresponsible act was committed by the U.S. Attorney General on May 9. On that date the Attorney General, professing to act under the terms of the so-called civil rights bill signed by the President last Friday, announced his intention to investigate voting records in four southern counties—and I quote the Attorney General—"in States where constitutional rights of citizens may have been infringed by discriminatory practices." The Attorney General also made the statement that each of the counties he named had a large Negro population but none on the election books.

The Attorney General's statement to the press was the height of irresponsibility, and unequaled for inaccuracy. By innuendo, the Attorney General has accused the election officials of these States and counties of discrimination against Negroes in the voting field, and worse, implied that they have committed violations of laws protecting the right to vote. This announcement was admittedly made before any investigation had been made.

One of the counties designated by the Attorney General is McCormick County, S.C. Incidentally, this is the county in which I was first employed after graduation from college as a teacher in the public schools. Although I have no specific knowledge about the other counties, all in States other than South Carolina, named by the Attorney General, I do know about this one.

Mr. Rogers, the Attorney General, stated categorically that there were no Negroes registered in McCormick County, S.C. That statement is not true. There are Negroes registered in McCormick County and, in fact, no Negro has ever been refused a registration certificate for any reason, or question of qualification. The election and registration books of this county have not been hidden, but have been open to public inspection at all times. The Attorney General made no attempt to get the facts before making his accusation, although the facts were available to him without any legal procedure, or any additional legislation such as that passed by the Congress recently. All that was necessary was an inquiry. This the Attorney General never made. Nor did he take the trouble to have one of his agents look at the registration books which have always been kept, when not in actual use by the board, in the public records section of the clerk of court's office in the county courthouse, and were not only open to inspection by the Attorney General, but also to any citizen who desired to see them.

Subsequently, the Attorney General has admitted that he had not received any complaint from anyone in McCormick County that he had been denied the right to register. He said that the information on which he acted was furnished by the Southern Regional Council and the National Association for Advancement of Colored People. No more unreliable source could have been found, and yet the Attorney General did not even bother to make a casual check for confirmation before making his slanderous statement.

This action was completely irresponsible. No bill passed by Congress authorizes the Attorney General to make false accusations against public officials, and as abusive as were some of the so-called civil rights proposals, none of them went this far. The statement of the Attorney General was false in several particulars, and was slanderous of the State of South Carolina, the county of McCormick, and individual officials of those governmental entities. His action was clearly motivated by a desire to appeal to the hate-mongering organizations which falsely profess to represent the Negro race and to control their vote. In short, it was a contemptible display of political demagoguery, without regard for the rights of the officials involved nor the responsibilities of his office.

Despite his loud proclamation, it is interesting to note that even as late as this afternoon, the Attorney General has still not informed himself by having the records of McCormick County inspected. All the officials of the State and county know at this point of the Attorney General's announced investigation is what they read in the newspaper. This lends emphasis to the conclusion that it is publicity to please the NAACP, and not substantive accomplishment of his duties, which prompted the Attorney General's announcement.

Mr. President——

The PRESIDING OFFICER. The Senator from South Carolina has the floor.

MEDICAL CARE FOR THE ELDERLY

Mr. THURMOND. Mr. President, it is a basic moral obligation of a people and of a country to insure that its elderly citizens do not want for medical care when they have reached the stage of life when medical care is most needed. Nothing short of callousness could describe the attitude of those who view with unconcern the plight of senior citizens who have reached the twilight zone of life and who are faced with financing burdensome medical bills with only limited means. Admonitions that such citizens should have foreseen the inevitable and

made preparations accordingly afford little comfort to those who are faced with such financial burdens in this area and offer no solution to this vexing problem. It is encouraging to note that many of our elder citizens have made preparations for this period of life to insure against financial ruin by catastrophic illnesses. According to the Health Insurance Association of America, about 43 percent of our over-65 people are now covered by health insurance. It is estimated by this organization that the proportion of coverage for those who want and need it will reach 75 percent by 1965, and 90 percent by 1970.

It is at once apparent, Mr. President, that much is being done in this area by those who will be directly affected—namely, the elderly themselves, and those who foresee the day when the age of retirement has been reached. However, much more can be done to assist the elderly in a manner which reflects dignity on those who are receiving such assistance.

It would be extremely unwise for the Congress to seek a solution in this area which will result in the expansion of the present social security program. The so-called Forand bill, which would bring old age health insurance into the social security program, is, in my opinion, an extremely unwise approach. The first objection to such a proposal is that the Federal Government would once again embark on a program which would carry this country closer to a socialistic form of government. Washington would irrevocably be placed in the health insurance business on a massive scale, for no private insurance company could compete against the Government. The second objection is that the social security program would be converted into something for which it was never intended. Up until the present time, the program has provided benefits in money alone. The effect of the Forand bill would be to convert the program into one of a compulsory health insurance nature, and, in effect, reduce the money benefits in proportion to the individual's and employer's investment.

Mr. President, a judicious legislative approach to the solution of assisting our elderly citizens with onerous medical expenses which I have advocated for some time is the easing of the tax burden, not only on those who have attained the age of 65, but also on those who would assist those who have attained that age.

At the present time, there is a bill awaiting the President's signature which adopts the approach I have advocated and which would go far in providing for the health care of the aged. H.R. 9660, which passed the Congress on May 5 of this year, contains provisions which will be a further inducement to those who are presently assisting their aged parents with medical expenses.

Section 3(a) of the legislation which is awaiting Presidential signature would amend section 213(a) of the Internal Revenue Code so as to allow a taxpayer to deduct, without regard to a 3-percent medical and dental limitation, expenses incurred by the taxpayer for the care of his dependent mother or father or the dependent mother or father of his spouse, if such dependent has attained the age of 65 before the close of the taxable year.

In approaching the problem of medical care for the aged in this manner, individual independence is preserved, better medical care is afforded, and the Government is not launched into a new program which will initially cost an estimated $2 billion a year.

I urge the President to affix his signature to this legislation.

THE FEDERAL MARITIME BOARD—A LEOPARD DOES NOT CHANGE HIS SPOTS

Mr. BARTLETT. Mr. President, I have very recently received a letter which once again proclaims the truth of the old adage that a leopard does not change his spots. I refer to the Federal Maritime Board.

On April 14 I made a speech on the floor of the Senate in which I praised—with faint damnation—the Federal Maritime Board and its new look with respect to its attention to the public interest in shipping rates. At that time the Federal Maritime Board had suspended proposed rate increases affecting the territory of Guam. Some months previously a similar rate increase had been protested by Alaskans. The Federal Maritime Board allowed the increase to become effective without hearings. The Board stated that its suspension powers were limited to 4 months and that 4 months would not afford adequate time for a hearing. Therefore, when I was informed that when the Guam rate increases had been suspended by the Board, I felt called upon to make a statement congratulating the Board on its new attention to the public interest, regretting that it came too late to relieve the people of Alaska from the unwarranted trouble and expense to which they have been exposed.

I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks the letter to which I have referred.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

POWELL, DORSEY, BLUM & WHITE,
Washington, D.C., May 5, 1960.

Hon. E. L. BARTLETT,
U.S. Senate, Washington, D.C.

DEAR SENATOR BARTLETT: I read with interest your Senate speech of April 14, 1960 (CONGRESSIONAL RECORD, p. 8031), regarding the proposed new freight tariffs for Guam. I represent Guam Associates, protestants and intervenors in the case, and should like to inform you as to the current status of the case (F.M.B. Docket 901).

When the proposed tariffs were posted, upon protest, the Federal Maritime Board suspended the increases until April 29, 1960. Under section 3 of the Intercoastal Shipping Act, 1933, as amended (46 U.S.C. 845), the Board is empowered to suspend such rates for a period of 4 months in which to conduct an investigation and hearing. In the case of the Pacific Far East tariff the suspension could have been until July 22, 1960, and until August 8, 1960, for the American President Line tariffs. However, the Board elected to suspend only about 5 weeks, or until April 29, 1960. (It is interesting to note that a pending bill, S. 3005, would extend such suspension period to 7 months.)

Under the various maritime statutes the burden of proof is upon the carriers during the investigation and hearings to sustain such proposed increases. In this case the increases are not uniform and are very numerous and complex; one tariff is an entire new document running over 100 pages, another about 80 pages, the third over 40 pages. Obviously a thorough investigation as warranted by the public interest would be very lengthy.

At the request of intervenors, Guam Associates, the Board granted a special hearing for oral depositions to permit the Acting Governor of Guam, Mr. Marc Boss, and the Speaker of the Guamanian Legislature, Mr. A. B. Won Pat, who were then in Washington, to be heard. The hearing was expressly "limited to the public policy area of the impact of such [proposed] increases on the economy of Guam." The carriers cross-examined the witness but introduced no evidence at that time. There have been no further intra parte hearings before the Board.

On April 28, 1960, the Board, apparently on its own motion, issued the third supplementary order in said case, in which it permitted the suspension to terminate and required an accounting procedure to be set up by carriers similar, I believe, to that used in the Alaska rate case.

I am petitioning the Board requesting that the suspension be continued and the said order be modified, pointing out the hardship to the people of Guam, and that (1) under the 4-month rule the suspension has still almost 3 months to run; (2) that although the burden of proof is on the carriers, they have produced no evidence, to intervenors' knowledge; (3) that intervenor has information tending to indicate that certain increases in foodstuffs may be in excess of 55 percent; (4) while, under the 4-month proviso it is still within the power of the Board to relieve and mitigate the hardship on the people of Guam, why must this course of action be pursued, which accrues only to the benefit of the carriers who receive the use and benefit of any excess money, although it has not yet been determined that their right to such excess money is warranted or lawful; and (5) that the arrangement ordered by the Board, while it may provide some ultimate benefit to shippers, places a heavy burden on consumers who have no recourse.

Guam Associates deeply appreciate your interest in their plight and think you may find the above of interest.

With kindest personal regards, I am,

Sincerely,

ROBERT M. KILGORE,
Attorney for Guam Associates.

Mr. BARTLETT. Alas, Mr. President, I find that my enthusiasm was premature.

It appears that the citizens of Guam are receiving the same type of treatment by the Federal Maritime Board accorded the citizens of Alaska previously. In point of fact, in view of the action of the Board in this case and the circumstances in this case, the citizens of Guam have received an even more cursory treatment from the Board than the citizens of Alaska if that is possible.

Mr. President, it was my fond hope that the protests raised by us Alaskans at the procedure followed by the Board in the Alaska proceedings had contributed to a "new look" on the Federal Maritime Board. This hope was encouraged by the procedure adopted by the Board originally in the Guam case. Its subsequent action however points up

once again the truth in the old adage that one cannot expect a leopard to change his spots.

In the Guam case the Board, under the statutes, had the power to suspend the increased rates for a period of 4 months. For reasons of its own it chose to limit that suspension to only about 5 weeks. Then, even after a hearing in which the difficulty and hardship which would be imposed upon the people of Guam if the increases were allowed, were clearly brought out, the Board then terminated the suspension. The Board could have maintained the suspension for almost 3 months more while the investigation continued. However, without completing the investigation and for no stated reason the Board decided to terminate the suspension. Now the citizens of Guam as well as the citizens of Alaska must pay increased rates, the legality or reasonableness of which has not been determined.

Now, Mr. President, let us examine the splendid alternative elected by the Board to safeguard the interests of the public while a determination is made as to whether the rates the public is paying are legal or not.

The Board requires the carriers to maintain an accounting of all moneys received under the increased tariffs while the investigation continues. If subsequently it is determined that certain of the fees received are in excess of fees determined by the Board to be lawful, then the carriers must make refunds to the shippers who paid such fees. At first glance this would seem to be a fair arrangement. While the carriers receive the use and benefit of such excess fees while the investigation is being carried on, they may not keep such funds as a windfall if the increased rates are determined to be illegal, but must disgorge such illegal gains back to the shippers who paid the increased rates.

However, Mr. President, let us look at the real situation created by this arrangement. When the shippers must pay the increased rates, they add such increases to their costs which in turn are passed on to the wholesaler and retailer and ultimately to the consumer. Therefore, the burden of the increased rates is really borne by the consumer. If the rates are determined to be illegal, the carrier must refund the excess to the shippers. The general public, the consumers, do not share in this refund; they have no recourse but must simply bear their loss. So, in the final analysis, the arrangement creates a windfall for the carrier during the investigation, and afterwards at least a part of that windfall may be had by the shippers if the increased rates are found to be illegal. But the consumers are without protection or recourse under this arrangement.

Mr. President, I want to make my position crystal clear—I do not know whether the increased rates in the Guam case should be granted or not, but I deplore the practice of the Federal Maritime Board that permits this present situation to exist.

And so, Mr. President, in summary, it is my painful duty to inform the Senate that the "new look" in the Federal Maritime Board was only a "flash in the pan" and that the Board has returned to its former patronizing attitude toward the general public.

AREA REDEVELOPMENT LEGISLATION

Mr. CLARK. Mr. President, the President of the United States still has before him for consideration the area redevelopment bill, which has been passed by the Congress and is now awaiting action in the White House.

In the hope that he may be persuaded to sign the bill, and thus bring some solace into the lives of so many presently unemployed Americans, I should like to place in the RECORD a series of statements and editorials from my State urging the President to sign the bill.

I ask unanimous consent to have printed in the RECORD a telegram from the Governor of Pennsylvania, David L. Lawrence, and an editorial entitled "Distressed Area Legislation Deserves Full-Scale Support," published in the Harrisburg Evening News of May 6, 1960. I point out that this particular newspaper is a strong Republican journal whose publisher was chairman of Citizens for Eisenhower during the 1956 campaign. I also ask to have printed an open letter to the President appearing in the Uniontown Evening Standard, Uniontown being the city in Fayette County where there is, I believe, the highest percentage of unemployed people of any place in my Commonwealth; a personal letter from Arnold Goldberg, editor of the Uniontown Evening Standard, to President Eisenhower, urging him to sign the bill; an editorial entitled "Area Redevelopment," published in the Uniontown Evening Standard of April 5, 1960; an editorial entitled "It Is Up to Ike Again," published in the Scranton, Pa., Times of May 5, 1960; and finally, a series of comments relative to the depressed area legislation, prepared jointly by the Pennsylvania Departments of Commerce, Labor and Industry, Public Instruction, and Agriculture, in connection with the Governor's office.

There being no objection, the various matters were ordered to be printed in the RECORD, as follows:

MAY 6, 1960.

President DWIGHT D. EISENHOWER,
The White House,
Washington, D.C.:

Earnestly urge your approval of bipartisan area development bill (S. 722) which will do much to relieve serious chronic unemployment problems in the Nation. No other piece of legislation is more vital to the economy of your home State.

DAVID L. LAWRENCE,
Governor of Pennsylvania.

[From the Harrisburg (Pa.) Evening News, May 6, 1960]

DISTRESSED AREA LEGISLATION DESERVES FULL-SCALE SUPPORT

Nowhere this session, not even during the civil rights battle, has the obstructionism of Dixie Democrats and diehard Republicans shown up more vividly than during the House action on the depressed areas bill.

The countdown started with the familiar filibustering of the southern Democrats, aided and abetted in this instance by the conservative Republicans. It was necessary to resort to a parliamentary device, Calendar Wednesday, to get the depressed area redevelopment legislation out of the Dixie-dominated Rules Committee because southern Democrats and conservative Republicans on the committee refused to clear the bill.

After attempting to force the majority of Representatives into voteless helplessness with all of the familiar dodges—time-consuming rollcalls and points of order—the Dixie Democrats backed off and permitted reasonable debate and responsible voting.

Here is probably the most vital piece of legislation, from the standpoint of Pennsylvania, that will come before this session of Congress. It is indeed a measure of our Commonwealth's tremendous stake in this legislation that Republicans and Democrats alike in the Pennsylvania delegation joined in forcing the issue.

Of the 28 Pennsylvania Congressmen, only 4 arrayed themselves with the Dixie Democrats, who in this case were fighting to protect the appeal of their low-pay, low-living-standard States for some new industries.

Voting against the best interests of 11 million Pennsylvanians on this issue were Harrisburg's Representative WALTER M. MUMMA and Representatives PAUL B. DAGUE and WILLIAM H. MILLIKEN, all three of them Republicans. A fourth Republican, Montgomery County's JOHN A. LAFORE, was paired against the bill. (Congressman LAFORE, although organization supported, was defeated just a few days ago in the GOP primaries by a young Republican candidate who made LAFORE's ultra-conservative voting record, including his previous stand against depressed area aid, the issue of his campaign.)

Every other Pennsylvania Republican and every one of our Commonwealth's Democrats, including Greater Harrisburg's Representative JAMES M. QUIGLEY, voted for this extremely worthy and desperately needed program.

The $251 million House bill and the $379 million Senate passed legislation now go to a conference committee. There is every indication and every hope that the more appealing House bill will prevail and will go to President Eisenhower. If he vetoes this bill, with its overwhelming emphasis on loans designed to help struggling communities help themselves, the President will be badly advised and woefully mistaken indeed. And he will be backing away from, if not downright breaking, a promise given in every campaign of recent years, both by his administration and his party, to set up a point 4 program for Americans and American communities who need help—and need it badly. The House passed bill deserves conference committee support and Presidential approval.

[From the Scranton (Pa.) Times, May 5, 1960]

IT'S UP TO IKE AGAIN

House Democratic leaders who engineered the strategy which brought about the passage last night of the $251 million depressed area bill are to be congratulated on their victory. They had to fight not only almost solid Republican opposition but a block of their own party members, chiefly from the South, in getting the measure through by a vote of 201 to 184.

Our own Congressman STANLEY A. PROKOP and Luzerne County Congressman DAN FLOOD, the latter a veteran in the fight for financial help from Washington for the Nation's economically distressed communities, were at the head of the Democratic forces which put the bill across. On the rollcall, 115 Republicans cast their votes against the measure, as did 69 Democrats. A coalition of 178 Democrats and 23 Republicans provided the strength needed to approve the measure.

Immediately, of course, the threat of a veto by President Eisenhower was raised. In 1958 the President killed, by pocket veto,

a depressed area bill carrying approximately the same amount in Federal funds. This year, as then, he favored an appropriation of not more than $55 million. Yesterday Republican spokesmen told the House that Mr. Eisenhower would approve a bill doubling the amount provided in the administration measure. The House was in no mood for such surrender, however, and in rapid succession rejected compromise proposals for $150 million, for $158 million, and for a $200 million fund that would be confined to loans.

Supporters of the more adequate bill won a battle yesterday, but they had not yet won the war. The Senate had favored a fund of $389,500,000 in the bill which it passed by an almost unanimous vote. The House version adopted yesterday, cutting the figure to $251 million, must now go back to the Senate for concurrence. If the upper branch does not accept it in its present form and sends it to conference committee, the measure would once more have to clear the House Rules Committee, which had kept the original Senate bill bottled up until the drastic Calendar Wednesday parliamentary tactics resorted to yesterday pried it loose.

The Senate would be well advised to approve the measure as it passed the House yesterday and send it without delay to President Eisenhower. While the talk of a veto is strong, the administration's radical reversal of its stand on the issue of medical care for the aged as disclosed yesterday indicates that the President is not above political expediency in a national election year. A veto of the depressed area bill could seriously hurt the Republican ticket next fall. If Mr. Eisenhower's brain trusters are smart, they should advise him to sign it, as he should with no consideration for politics.

[From the Uniontown (Pa.) Evening Standard, May 7, 1960]

OPEN LETTER TO THE PRESIDENT

Mr. President, on your desk, awaiting your signature, is an area redevelopment bill.

Early this week the House passed the bill asking for $251 million in Federal aid to encourage industrial development in chronic unemployment areas.

This bill has been called the Douglas-Clark-Flood area redevelopment bill in the Senate. Yesterday it passed the Senate.

The measure, Mr. President, carries the authorization for Federal loans and grants aimed to create jobs in depressed industrial and rural areas in the Nation. It sure would give this district a lift.

Two years ago you vetoed such a bill as being too costly to the Federal Government. You proposed a similar measure and established a figure of $53 million.

It may be costly in your understanding of costs but to us here in Fayette County those millions of dollars are far more important than the expensive Federal aid program overseas or the national security budget.

Mr. President in your tours across the seas you have seen depressed areas. But you haven't traveled through this Nation of ours and seen depressed areas not very far from the White House in Washington. Just a couple hundred miles, Mr. President, and you will be in Fayette County.

Come to visit us and we will show you why there are one out of every four persons who should be working but who is unemployed. That's 25 percent. They are unemployed not because they do not desire to work but because there are no jobs for them.

We have the highest unemployment rate in all of Pennsylvania, indeed among the highest in the Nation.

It is up to our leaders in business, industry, and Government to initiate a vigorous program to combat this economic distress. We need a comprehensive program like that envisioned in the area redevelopment bill to alleviate the suffering from unemployment.

Our people in Fayette County, Mr. President, do not want handouts. They accept relief because they must eat, they accept surplus food because their families must be nourished.

What our unemployed want, are productive jobs where they can use their skills and their talents to earn a decent living.

We have a labor surplus here, Mr. President. Many of the men are former coal miners who have lost their jobs because the mines in the county have closed. The coal is gone.

Our labor can quickly learn new industrial skills. Most of the men have technical and mechanical backgrounds.

All they need are plants in the area to give them the chance to work.

Unfortunately in Fayette County we have become experts on unemployment.

We are in the unenviable position during the years since the end of the Korean war of consistently having one of the highest rates in prosperous United States.

We have been struggling with this problem. We have been helping ourselves with aggressive industrial fund campaigns. We have raised $700,000 in the past few years to bring new industry to the district. Now we are running out of money.

That's why we need Federal help. The area redevelopment bill would provide that assist.

Federal assistance in loans to depressed areas, added to the 30 percent in loans from State organizations like the Pennsylvania Industrial Development Authority would give Uniontown and Fayette County the financial push it would need to attract more new industry.

Communities, like ours in Fayette County, are making substantial contributions to new industry. But many of them, have almost exhausted their financial resources.

Our community leadership has been magnificent. We have achieved much through the cooperative efforts of all segments of our community regardless of their position in life and of their political views.

Mr. President, this bill is again on your desk for signing or veto.

Sign it, please. It is the type of legislation that could be our salvation.

It is designed to have people help themselves. The more prosperous States would be benefiting those less fortunate. We are one Nation, not a country of 50 separate economic units. Prosperity should be enjoyed by all.

Labor surplus areas are not good for the future of the land. They make our prosperous periods more inflationary and our recessions more severe. They must be removed.

An area redevelopment bill, to us in Fayette County, is the most immediate piece of legislation that the Federal Government can now institute to eliminate some of our chronic labor surplus areas.

We here ask you to endorse this legislation.

We ask you to sign such a bill into law so we in Fayette County can live once again, standing on our own two feet, working daily to earn the livable wage that through the years has made America the most powerful Nation in the world.

THE EVENING STANDARD,
Uniontown, Pa., May 7, 1960.

THE PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: On your desk is the area redevelopment bill recently passed by both the House of Representatives and the U.S. Senate. Passage of this measure authorizing Federal grants and loans aimed to grant jobs in distressed industrial and rural areas could be the economic salvation for areas like Fayette County, Pa., of which Uniontown is the county seat.

With an unemployment rate of 23.8 percent, Fayette County has the highest rate in Pennsylvania and one of the highest unemployment rates in the United States.

We have been helping ourselves with an aggressive industrial fund campaign. We have raised over $700,000 in the past 6 years to bring new industry to this district. Now we have run out of money.

We are desperate for loans and grants. The area redevelopment bill would assist us in our drive to revitalize our area which has been in a depressed state due to unemployment. When our bituminous coal mines closed, thousands of skilled miners lost their jobs.

New industry would be our salvation. We trust that you will sign the $251 million area redevelopment bill.

Yours very truly,

ARNOLD GOLDBERG,
Editor.

[From the Uniontown (Pa.) Evening Standard, Apr. 5, 1960]

AREA REDEVELOPMENT

A letter from State Secretary of Labor and Industry William L. Batt, Jr., urges the passage of the Douglas-Clark-Flood area redevelopment bill (Senate bill 722) because it offers the brightest hope yet to clear the way for new jobs and new growth.

The bill has been passed by the Senate and is now awaiting action in the House of Representatives.

This bill we have spoken about on many occasions. One of the features would be Federal loans for industrial projects. These would be limited to a maximum of 65 percent of the total investment in such projects. Of course, local and private capital would also be used.

But 65 percent of the cost of a new plant on a Federal loan would give a community, such as Uniontown, added money as a selling point when it seeks new industry.

Many firms have contacted the industrial fund about locating here. The difficulty is getting together sufficient capital to purchase the land and make it suitable for industry. This must be done to compete with other communities also in the struggle to bring in new plants.

There would be Federal loans, under the bill, for public facilities like sewage disposal plants and water systems where improvements are essential to the success of the program and sufficient private capital is not available.

Another feature would be vocational retraining for the unemployed where needed with subsistence payments during the training period for those not entitled to unemployment compensation.

The greater part of the Federal Government's participation would be in the form of secured loans, repayable on established terms of interest. It involves no raid on the National Treasury.

The bill would establish specific definitions for "redevelopment areas" eligible for assistance. Generally speaking, these would be areas where unemployment of 6 percent or more has persisted for a long period.

Pennsylvania has its share of these areas, including the Uniontown-Connellsville district.

Others as listed in a booklet called "The Enduring Problem" are:

Altoona, Berwick - Bloomsburg, Butler, Clearfield-Du Bois, Erie, Indiana, Johnstown, Kittanning-Ford City, Lewistown, Meadville, New Castle, Oil City-Franklin-Titusville, Pittsburgh, Pottsville, St. Marys, Sayre-Athens-Towanda, Scranton, Sunbury-Shamokin, Mount Carmel, Wilkes-Barre-Hazelton, Williamsport.

In neighboring West Virginia the areas of Morgantown, Fairmont, Wheeling, Clarks-

burg, and Parkersburg are included. About every population sector in West Virginia is listed.

It is important that a bill such as the Douglas-Clark-Flood measure be approved by the House.

Its prompt enactment is urgently necessary.

SERIES OF COMMENTS RELATIVE TO DEPRESSED AREA LEGISLATION, PREPARED JOINTLY BY THE PENNSYLVANIA DEPARTMENTS OF COMMERCE, LABOR AND INDUSTRY, PUBLIC INSTRUCTION AND AGRICULTURE, IN CONJUNCTION WITH THE GOVERNOR'S OFFICE

It will shortly be the responsibility of President Eisenhower to decide the fate of a measure that the majority of Congress has tried for more than 3 years to enact into law—the Douglas-Clark-Flood area redevelopment bill, S. 722.

This week the bill finally passed with the nearly unanimous bipartisan support of the Pennsylvania congressional delegation and it passed the Senate by a vote of 45 to 32. Both Senators CLARK and SCOTT favored the measure.

It now goes to the White House, where the President has indicated he will veto it—as he has once before.

However, Mr. Eisenhower's expressed opinions of the bill have indicated that he has not had a full briefing to date. It is confidently assumed that the broader point of view, if brought to the President's attention, will yet prevail.

To be effective, however, this point of view must be conservative, and expressed by spokesmen recognized by the President as proponents of conservatism.

What then is the broader, conservative point of view?

It is, briefly, that Pennsylvania is plagued with long term unemployment far beyond the national levels of unemployment; that the State and every municipality has done everything possible to eliminate these pockets of chronic labor surpluses, but without appreciable effect; that the areas of comparatively high business activity and employment have been burdened disproportionately with taxes to provide relief for communities suffering from chronic unemployment; that the history of Pennsylvania's efforts to solve the problem is lengthy, unremitting, intelligent—but unavailing.

Pennsylvania's own Operation Bootstraps, the Pennsylvania Industrial Development Authority (PIDA) has been an excellent example, on a relatively small scale, of what this type of legislation can mean.

Since July 1956, PIDA has granted loans of $15 million to assist the financing of 116 industrial plants in more than 60 hard-hit Pennsylvania communities. Community funds of $9.3 million and first mortgages of $23.2 million bring the total value of PIDA developments to $47.5 million.

These projects have created 23,000 new jobs with an annual payroll of nearly $82 million, in areas where unemployment for 3 and 4 years has run as high as 25 percent.

The Commonwealth's investment is earning interest, and is being returned to a revolving fund. Meanwhile, the administrative cost of the program has been only $201,435—$189,299 of which went into engineering and legal fees. This works out to $8.75 per job.

It has cost enormous amounts to subsidize these surplus areas of unemployment in Pennsylvania. As Governor Lawrence pointed out in his press conference of April 7, "If we had solved chronic area unemployment in Pennsylvania in the last 7 years, we could have saved $360 million in unemployment compensation and $80 million in public assistance, or an average of $63 million a year."

These are demonstrable facts. If Pennsylvania's resources were sufficient, and if the problem of chronic unemployment were limited to Pennsylvania, we would be able to solve the problem by ourselves.

But long term, critical labor surplus areas are scattered throughout the Nation, in all directions. Pennsylvania, however, has more than any other State in the Nation. And Pennsylvania's resources are far from unlimited. Only about $4 million of PIDA's investment funds remain to be used.

The Douglas-Clark-Flood area redevelopment bill establishes what, in effect, is to be a National PIDA. The need for this kind of action on a national basis is undisputed; the difference of opinion lies only in the size of the program.

The President indicated that he favored a program in the neighborhood of $55 million, but later seemed willing to revise that figure upward. The Senate originally called for a fund of $389.5 million. The House of Representatives, in an effort to obtain White House approval, cut this figure by $140 million to a total of $138.5 million.

The bargaining and compromising have now ended. Either the President will accept the $251 million figure, or he will veto it.

The question can properly be raised: Is $251 million too much for the need? It will help to look at the problem in the same perspective as Pennsylvania's experience with PIDA.

In 44 months, Pennsylvania has advanced $15 million from a fund which started at $5 million and has since been augmented three times by legislative action. We have created jobs for 23,000 people, but there are still 199,100 unemployed in just 22 of the State's 36 critical labor areas which would qualify for assistance under the Douglas bill.

A Presidential veto will leave the Nation with 175 distressed labor markets as a drag on the national economy.

Presidential approval of the bill, on the other hand, will provide Pennsylvania with great assistance, over and above the stabilizing influence of PIDA, our local industrial development corporations, and the banks in these areas. It will also provide the rest of the country with a means of creating jobs that will put their own jobless people back to work in those areas where concentrations of long-term unemployment exist.

Without a Federal mechanism, such as the Douglas-Clark-Flood bill provides, Pennsylvania would be powerless to completely remedy the problem. We no longer live in a Nation, an age, or an economy where there is any hope of isolation. A factory closing in Des Moines affects people in Altoona. We could provide jobs for every available worker in Pennsylvania, and still be in difficulty if the rest of the Nation—and, most particularly, our neighborly and most competitive States—continued to suffer from chronic unemployment.

Pennsylvania has proved that the kind of activity to be established on a Federal level under the Douglas bill can work. It has also proved that, while the financial provisions of the bill are less than desired, there is a need for at least this much appropriation, and that the money can be profitably and wisely invested.

A veto of S. 722 would be the antithesis of constructive Government action. It would be a blow to good business and to the prospects of a continued rise in the economy of our State and Nation.

If these facts are made clear to the President by the conservative leadership in which he has confidence, there is every hope that he will sign S. 722 into law.

ADJOURNMENT TO 10 A.M. TOMORROW

Mr. CLARK. Mr. President, pursuant to the order heretofore entered, I move that the Senate stand in adjournment until 10 o'clock tomorrow morning.

The motion was agreed to; and (at 7 o'clock and 39 minutes p.m.) the Senate adjourned, under the order previously entered, until tomorrow, Thursday, May 12, 1960, at 10 o'clock a.m.

NOMINATIONS

Executive nominations received by the Senate May 11, 1960:

DEPARTMENT OF THE NAVY

Rear Adm. Morris A. Hirsch, U.S. Navy, for appointment as Director of Budget and Reports in the Department of the Navy for a term of 3 years.

APPOINTMENTS IN THE NAVY

The following-named midshipmen (Naval Academy) to be permanent ensigns in the line of the Navy, subject to the qualifications therefor as provided by law:

Alfred J. Cler
John H. Huhn
Robert S. McAfee

Robert M. Walters, midshipman (Naval Academy) to be a permanent ensign in the restricted line of the Navy, subject to the qualifications therefor as provided by law.

The following-named midshipmen (Naval Academy) to be permanent ensigns in the line of the Navy, in lieu of ensign in the Supply Corps as previously nominated, subject to the qualifications therefor as provided by law:

Charles L. Terry
Alton K. Thompson

The following-named (Naval Reserve Officers' Training Corps) to be permanent ensigns in the line of the Navy, subject to the qualifications therefor as provided by law:

James R. Barnes	Charles M. Ludwigsen
Barry T. Bates	Henry L. Luschen
Thomas J. Brock	Lee R. McDonald
Edwards L. Brockway	John J. McKenzie
Charles K. Brown	Michael J. McShea
Marion L. Brown	Philip E. Mackey
Richard B. Campbell	Danno F. Mahoney
Glen E. Clover	William F. Meyer
Dorvan G. Conell	William T. Mitchell
Thaddeus C. Cox	John P. Moran
John W. Crawford	Richard S. Morey
Stephen A. Diamond	Macy E. Overstreet
Burton A. Dole, Jr.	Hugh A. Reeder
Ted R. Fitzsimmons	Walter F. Schnabel
Roger H. Folts	Carl D. Scott
Robert L. Friedlander	Ronald C. Serviss
Donald P. Grant	Murle W. Shiveley
Joseph M. Hawes	Hugh L. Shoemaker
Raymond G. Hepburn	Melville Straus
Larry R. Hertzog	James D. Tadlock
William S. Hood, Jr.	Richard F. Veazey, Jr.
Richard E. Holloway	Richard W. Wallace
Carroll E. Jones	Rodney G. Wells
Neil W. Jones	John A. Westman, Jr.
David C. Kurtz	John R. Young
Marcus G. La France	

The following-named (Naval Reserve Officers' Training Corps) to be permanent ensigns in the Supply Corps of the Navy, subject to qualifications therefor as provided by law:

A. Donald Anderle	Ronald B. DeNeuf
Bruce R. Anderson, Jr.	John R. Dolina
Daniel B. Aron	Paul S. Finden
William D. Bain	Ted R. Fitzsimmons
Robert N. Berkopec	James R. Gear
David R. Bickerstaff	Kenneth W. Gilchrist
William L. Booth	Donald E. Godbey
Joseph A. Bosco	Thomas R. Gramins
James N. Bryant	Charles C. Griffith
Edward J. Budill	James T. Hannan, Jr.
Laird C. Cleaver	Alan R. Haugner
Russell M. Coombs	William L. Hinckley
Glenn C. Craig	William E. Horton
Robert C. Crites	Richard N. Howard

David A. Huey
Kenneth E. Kittock
Peter N. Larson
Richard N. Latzer
Trevor C. Lewis, Jr.
Stephen K. Liebmann
John C. Loustaunou
Milner W. McVadon
Weldon S. Meier
Leslie W. Michael
Clifford Mitman, Jr.
Robert A. Murphy
Paul T. Nagano
Edwin F. Nicholson
David W. Oakley
Robert E. Price
Jon N. Richardson
Frederick A. Roesch
Bruce S. Romney
David R. Sadtler
Carl D. Scott
Larry J. Shima
Stefan P. Shoup
Larry G. Showley
Robert E. Spratt
Edward P. Stone
James L. Uhles
David G. VanPatten
Brents R. White
Royce S. Williams

The following-named (Naval Reserve Officers' Training Corps) to be permanent ensigns in the Civil Engineer Corps of the Navy, subject to the qualifications therefor as provided by law:

James S. Balloun
James H. Blanchar
Richard B. Campbell
Ramsey L. Cronfel
Stephen A. Diamond
James C. Doebler
Edgar W. Fasig, Jr.
David L. Forney
William F. Frazier
Raymond G. Hepburn
Larry R. Hertzog
Richard E. Holloway
Robert T. Jackson III
Paul L. Key II
William M. Killen
David C. Kurtz
Billy B. Lowrey
Glen P. McCurdy
Richard E. Norton
Willis C. Pflugh, Jr.
Hugo P. Pomrehn
Joseph R. Ramos
Ralph R. Reynolds
William A. Sitnik

The following-named graduates from naval enlisted scientific educational program to be permanent ensigns in the line of the Navy, subject to qualifications therefor as provided by law:

George W. Fang
Jay E. Hinkel
Alfred E. Johnson

The following-named (civilian college graduates) to be permanent lieutenants (junior grade) and temporary lieutenants in the Medical Corps of the Navy, subject to the qualifications therefor as provided by law:

Julian L. Ragsdale
Ralph N. Salatino

The following-named Naval Reserve Officers to be permanent lieutenants (junior grade) and temporary lieutenants in the Medical Corps of the Navy, subject to the qualifications therefor as provided by law:

Carter S. Bagley
Warren M. Barrett
James W. Brough
John R. Clark
John R. Gaskill
Joseph C. Tatum
John W. Thompson
James T. Wilson

Henry E. Rasmussen-Taxdal, Reserve officer, to be a permanent lieutenant and a temporary lieutenant commander in the Medical Corps of the Navy, subject to the qualifications therefor as provided by law.

Marvin G. Caldwell, Reserve officer, to be a permanent lieutenant (junior grade) in the Medical Corps of the Navy, and to be promoted to lieutenant when his line running mate is so promoted, subject to the qualifications therefor as provided by law.

William H. Standley, Jr., U.S. Navy retired officer, to be a permanent captain, in the line of the Navy, pursuant to title 10, United States Code, section 1211.

Warren A. Wright, U.S. Navy retired officer, to be a lieutenant (junior grade) in the line of the Navy for temporary service, pursuant to title 10, United States Code, section 1211.

The following-named officer candidates to be permanent ensigns in the line of the Navy, subject to the qualifications therefor as provided by law:

James H. Ansley
Leroy R. Bannach
Niles W. Berry
Duane E. Buck
John E. Caler
James F. Callahan
Theodore R. Campbell
Vernon Clark
David L. Dawson
George F. Farnan
Gerald Forstner
Robert H. Fred
Christopher W. Galbreath, Jr.
Holmes B. Germany
William J. Gertz
John K. Hemmer
Roger W. Hightower
Donnell R. Kidder
Robert Kurz
Carl E. Lambach
Richard W. Lawrence
William W. Manlove
Samuel D. McLeod, Jr.
Jack L. Melton
Edward L. Owens
Gerald T. Parker
Eugene E. Perry
Carl E. Richno
Richard Riedel
Donald A. Rigg
James D. Ritchie
Anthony M. Rybarczyk
John P. Sandlin
Gordon E. Scott
Edman L. Sipe
Thomas G. Torkleson
James R. Wehner
Holman S. Whitford
Ward W. Wier
Richard E. Wood

The following-named officer candidates to be permanent ensigns in the Supply Corps of the Navy, subject to the qualifications therefor as provided by law:

Charles U. Allbaugh
James F. Bauer
Ronald L. Foltz
Bobby L. Gibson
Alfred C. Grosskurth
Keith D. Kaylor
Belton J. Littlefield
Arthur L. Matheny
Robert N. Varner
Phillip N. Tapia

Orrin B. Ross, U.S. Navy, for transfer to and appointment in the Supply Corps of the Navy in the permanent grade of lieutenant.

The following-named line officers of the Navy for transfer to and appointment in the Supply Corps of the Navy in the permanent grade of lieutenant (junior grade) and in the temporary grade of lieutenant:

John E. Dougherty, Jr.
Leonard G. Duffy
Charles H. Erwin
Robert P. Perry

The following-named line officers of the Navy for transfer to and appointment in the Supply Corps of the Navy in the permanent grade of lieutenant (junior grade):

Donald L. Moore
Harold S. Westphal

The following-named line officers of the Navy for transfer to and appointment in the Supply Corps of the Navy in the permament grade of ensign:

Phillip F. McNall
John E. Maxwell
Harvey W. Nix, Jr.

The following-named line officers of the Navy, selected as alternates, for transfer to and appointment in the Supply Corps in the permanent grade of ensign:

Carl W. Amick
George T. Bauer
Walter C. Ebmeyer
George R. Holdeman
Graves B. Stephenson

The following-named officers for temporary promotion to the grade of lieutenant in the Supply Corps of the U.S. Navy, subject to qualification therefor as provided by law:

Scott, William W.
Westphal, Harold S.

The following-named officers of the Navy for permanent promotion to the grade of lieutenant in the line and staff corps as indicated:

LINE

Simpson, Philip M.
Turner, Sherman W.
Hagen, James R.
Moore, Mark H., Jr.
Pendergraft, George W., Jr.
Warren, Billy R.
Kelly, James M.
Trabue, Howard W.
Singer, Freeman J.
Miller, Kenneth F.
Bruner, James R.
Cooper, Donald H.
Welling, Alan S.

APPOINTMENTS IN THE MARINE CORPS

The following named for permanent appointment to the grade of second lieutenant for limited duty in the Marine Corps, subject to the qualifications therefor as provided by law:

James N. Bacon
William J. Bunch
Richard T. Kerrigan
Donald L. Lamb
Lawrence R. Moore
Thomas A. Nolen
Wendell A. Parks
Donald L. Raper
Kelly J. Sanchez
Clyde R. Snodgrass
Bobby G. Turbeville

The following named (Naval Reserve Officers Training Corps) for permanent appointment to the grade of second lieutenant in the Marine Corps, subject to the qualifications therefor as provided by law:

Garrett W. McClanahan

The following named (Army Reserve Officers Training Corps) for permanent appointment to the grade of second lieutenant in the Marine Corps, subject to the qualifications therefor as provided by law:

George W. Burkley
Philip A. Forbes, Jr.
Charles B. Gay, Jr.

The following named (U.S. Air Force Academy graduates) for permanent appointment to the grade of second lieutenant in the Marine Corps, subject to the qualifications therefor as provided by law:

Robert L. Baker
James A. Kerr, Jr.
Charles M. McCain
James D. Mills
Wayne A. Peterson
Howard M. Whitfield

The following-named officers of the Marine Corps for permanent appointment to the grade of first lieutenant, subject to the qualifications therefor as provided by law:

Raymond C. Albro, Jr.
Richard P. Backus
Henry G. Beamer
Milton H. Bevis, Jr.

WITHDRAWAL

Executive nomination withdrawn from the Senate May 11, 1960:

POSTMASTER

Dodd M. Fisher to be postmaster at Mount Storm, in the State of West Virginia.

HOUSE OF REPRESENTATIVES

WEDNESDAY, MAY 11, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Colossians 4: 5: *Walk in wisdom toward them that are without, redeeming the time.*

Almighty God, in this moment of worship may there come into our bewildered minds and troubled hearts a reassuring sense of Thy presence and power, inspiring us with feelings of serenity and stability.

Grant that whenever we enter the sacred retreat of prayer our faltering spirits may be lifted from the lowlands of doubt and fear to the lofty heights of faith and courage, confident that our dream, of peace on earth, though delayed, will not be defeated.

Show us how we may help men and nations everywhere find the fellowship of Thy love and follow the light of Thy truth and walk together in the paths of mutual trust and good will.

We earnestly beseech Thee that our President, our Speaker, our Congress, and all who guide the affairs of our national and international life, may have a clear vision of Thy divine purpose and the wisdom and the will to pursue it faithfully.

Hear us in the name of the Prince of Peace. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 11713. An act to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes.

AUTHORIZING RESALE OF CERTAIN SHIPS TO THE REPUBLIC OF CHINA—CONFERENCE REPORT

Mr. GARMATZ submitted a conference report and statement on the bill (H.R. 8042) to authorize the Secretary of Commerce to resell four C1–SAY–1 type vessels to the Government of the Republic of China for use in Chinese trade in Far East and Near East waters exclusively.

RUMANIAN INDEPENDENCE DAY

Mrs. BOLTON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentlewoman from Ohio?

There was no objection.

Mrs. BOLTON. Mr. Speaker, Tuesday, May 10, was Rumanian Independence Day, a day which marks Rumania's achievement of national unity and independence. This day was appropriately observed in the House by speeches of Members of Congress, and elsewhere by public gatherings throughout the Nation.

The city of Cleveland includes a large number of persons of Rumanian descent among its populace, and I am privileged to represent many of them in my constituency. They have contributed significantly to every aspect of community life, and are among those who most conscientiously discharge the responsibilities of citizenship.

I am informed that the Cleveland Rumanian Independence Day rally will be held on Sunday, May 15, in the Carpatina Hall. This celebration will provide opportunity for the many friends of Rumania to join in honoring a courageous and resolute people, who have maintained their love of liberty in the face of harsh totalitarianism.

Despite every effort by the Communist rulers to extinguish freedom permanently from Eastern Europe, the Rumanian people retain a steadfast faith in liberation. On the occasion of this Independence Day commemoration, let us renew our historic bonds of friendship with a liberty-loving people and pray that they may soon again live in freedom and independence.

DEPARTMENT OF AGRICULTURE AND FARM CREDIT ADMINISTRATION APPROPRIATION BILL, 1961

Mr. WHITTEN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 12117, with Mr. KILDAY in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. The Clerk had read down to and including line 11, page 8 of the bill when the Committee rose last evening. If there are no amendments, the Clerk will read.

The Clerk read as follows:

SOIL CONSERVATION SERVICE

Conservation operations

For necessary expenses for carrying out the provisions of the Act of April 27, 1935 (16 U.S.C. 590a–590f), including preparation of conservation plans and establishment of measures to conserve soil and water (including farm irrigation and land drainage and such special measures as may be necessary to prevent floods and the siltation of reservoirs); operation of conservation nurseries; classification and mapping of soils; dissemination of information; purchase and erection or alteration of permanent buildings; and operation and maintenance of aircraft, $83,132,000: *Provided*, That the cost of any permanent building purchased, erected, or as improved, exclusive of the cost of constructing a water supply or sanitary system and connecting the same to any such building and with the exception of buildings acquired in conjunction with land being purchased for other purposes, shall not exceed $2,500, except for eight buildings to be constructed or improved at a cost not to exceed $15,000 per building and except that alterations or improvements to other existing permanent buildings costing $2,500 or more may be made in any fiscal year in an amount not to exceed $500 per building: *Provided further*, That no part of this appropriation shall be available for the construction of any such building on land not owned by the Government: *Provided further*, That no part of this appropriation may be expended for soil and water conservation operations under the Act of April 27, 1935 (16 U.S.C. 590a–590f), in demonstration projects: *Provided further*, That not to exceed $5,000 may be used for employment pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (5 U.S.C. 574), as amended by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a): *Provided further*, That qualified local engineers may be temporarily employed at per diem rates to perform the technical planning work of the service: *Provided further*, That not to exceed $600,000 of the amount appropriated under this head for fiscal year 1960 may be used to employ conservation aides and other nonprofessional personnel on a part-time or contract basis, and the amount so used may be transferred to and merged with this appropriation.

Mr. BOW. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting]. Seventy-four Members are present, not a quorum.

The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 86]

Alexander	Barden	Brewster
Alford	Baring	Brown, Mo.
Anderson, Mont.	Blitch	Buckley
Anfuso	Bonner	Canfield
	Boykin	Cederberg

Celler	Johansen	Scott
Chelf	Johnson, Colo.	Shelley
Coffin	Kelly	Sheppard
Davis, Tenn.	Kilburn	Smith, Kans.
Diggs	Lesinski	Spence
Dooley	Metcalf	Sullivan
Dowdy	Miller.	Taylor
Durham	George P.	Thompson, N.J.
Elliott, Pa.	Mitchell	Vinson
Flood	Montoya	Walter
Forand	Morris, N. Mex.	Weaver
Hagen	Porter	Willis
Hogan	Powell	Winstead
Holifield	Rooney	Young
Jackson	Scherer	

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. KILDAY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 12117, and finding itself without a quorum, he has directed the roll to be called, when 374 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

AGRICULTURAL CONSERVATION PROGRAM SERVICE

Agricultural conservation program

For necessary expenses to carry into effect the program authorized in sections 7 to 15, 16(a), and 17 of the Soil Conservation and Domestic Allotment Act, approved February 29, 1936, as amended (16 U.S.C. 590g–590(o), 590p(a), and 590q), including not to exceed $6,000 for the preparation and display of exhibits, including such displays at State, interstate, and international fairs within the United States, $242,000,000, to remain available until December 31 of the next succeeding fiscal year for compliance with the program of soil-building and soil- and water-conserving practices authorized under this head in the Department of Agriculture and Farm Credit Administration Appropriation Act, 1960, carried out during the period July 1, 1959, to December 31, 1960, inclusive: *Provided*, That not to exceed $26,832,950 of the total sum provided under this head shall be available during the current fiscal year for administrative expenses for carrying out such program, the cost of aerial photographs, however, not to be charged to such limitation; but not more than $5,458,900 shall be transferred to the appropriation account "Administrative expenses, section 392, Agricultural Adjustment Act of 1938": *Provided further*, That none of the funds herein appropriated shall be used to pay the salaries or expenses of any regional information employees or any State information employees, but this shall not preclude the answering of inquiries or supplying of information at the county level to individual farmers: *Provided further*, That such amounts shall be available for administrative expenses in connection with the formulation and administration of the 1961 program of soil-building and soil- and water-conserving practices, under the Act of February 29, 1936, as amended (amounting to $250,000,000, including administration, and no participant shall receive more than $2,500, except where the participants from two or more farms or ranches join to carry out approved practices designed to conserve or improve the agricultural resources of the community): *Provided further*, That no change shall be made in such 1961 program which will have the effect in any county of restricting eligibility requirements or cost-sharing on practices included in either the 1958 or the 1959 programs, unless such change shall have been recommended by the county committee and approved by the State committee: *Provided further*, That the proportion of the State fund initially allocated to any county for the 1961 program shall not be reduced from the distribution of such funds for the 1959 program year: *Provided further*, That not to exceed 5 per centum of the allocation for the 1961 agricultural conservation program for any county may, on the recommendation of such county committee and approval of the State committee, be withheld and allotted to the Soil Conservation Service for services of its technicians in formulating and carrying out the agricultural conservation program in the participating counties, and shall not be utilized by the Soil Conservation Service for any purpose other than technical and other assistance in such counties, and in addition, on the recommendation of such county committee and approval of the State committee, not to exceed 1 per centum may be made available to any other Federal, State, or local public agency for the same purpose and under the same conditions: *Provided further*, That for the 1961 program $2,500,000 shall be available for technical assistance in formulating and carrying out agricultural conservation practices and $1,000,000 shall be available for conservation practices related directly to flood prevention work in approved watersheds: *Provided further*, That such amounts shall be available for the purchase of seeds, fertilizers, lime, trees, or any other farming material, or any soil-terracing services, and making grants thereof to agricultural producers to aid them in carrying out farming practices approved by the Secretary under programs provided for herein: *Provided further*, That no part of any funds available to the Department, or any bureau, office, corporation, or other agency constituting a part of such Department, shall be used in the current fiscal year for the payment of salary or travel expenses of any person who has been convicted of violating the Act entitled "An Act to prevent pernicious political activities", approved August 2, 1939, as amended, or who has been found in accordance with the provisions of title 18, United States Code, section 1913, to have violated or attempted to violate such section which prohibits the use of Federal appropriations for the payment of personal services or other expenses designed to influence in any manner a Member of Congress to favor or oppose any legislation or appropriation by Congress except upon request of any Member or through the proper official channels.

Mr. QUIE. Mr. Chairman, I offer an amendment which is at the Clerk's desk.

The Clerk read as follows:

Amendment offered by Mr. QUIE: On page 13, line 24, after the word "program", strike out "for any county may," and strike out line 25 and page 14, line 1, strike out the words "approval of the State Committee".

On page 14, line 6 strike out "in such".

On page 14, line 7 strike out "counties" and "on the recommendation of such".

On page 14, strike all of line 8, except the word "not".

Mr. QUIE. Mr. Chairman, I offer this amendment which would change the present procedure whereby the county-by-county transfer of 5 percent of ACP money to SCS when they give technical assistance to ACP would be changed to a direct appropriation. There is strong support for this proposal in my State. I can read to you a resolution, which is short, from our Minnesota Association of Soil and Water Conservation Districts:

Whereas the 5 percent transfer of ACP funds has proven inadequate to pay for the additional workload of the local soil conservation district; and

Whereas this 5 percent transfer has caused dissension between districts and ASC committees and whereas additional Federal funds for technical assistance to districts are not available: Now, therefore, be it

Resolved, That the practice of 5 percent transferral of funds be discontinued and that the Soil Conservation Service be appropriated sufficient funds to adequately process all ACP referrals.

What this proposal I have made would do is to provide for the expeditious use of this money so that it would not depend on the county-by-county transfer arrangement.

I notice in the hearings, part I, page 555, the testimony of Assistant Secretary of Agriculture Peterson:

TRANSFER OF ACP FUNDS FOR TECHNICAL ASSISTANCE

From time to time we have discussed with this committee the problems associated with the transfer of agricultural conservation program funds to reimburse the Soil Conservation Service for technical services rendered in assisting farmers with the establishment of certain conservation practices for which cost sharing is available. Last year your committee suggested that the Department give further study toward the simplification of (1) the processes involved in estimating the needs for technical services to be furnished by SCS and (2) the actual determination of costs of technical services rendered to ACP. It was suggested that the study include the feasibility of using a flat charge per hour for the reimbursement of technical services rendered.

The Department has since made an extensive study of this problem and has established new and simplified procedures which are being used in connection with the 1960 agricultural conservation program. The new procedures are substantially simpler on both points recommended by the committee. We have adopted State by State a flat per hour charge for the reimbursement of technical services. We have also adopted State by State a fixed percentage of the amount of the cost of technical services which is to be absorbed by the Soil Conservation Service from its regular funds. Both of these determinations are made on the basis of past history in each State.

We believe these simplified procedures will substantially reduce the paperwork involved in the transfer of ACP funds to SCS. Under the new procedures there is less paperwork involved in developing the transfer agreement county-by-county and we have eliminated the referral-by-referral accountability for transferred funds.

We believe these new procedures are about as simple as they can be made under a county-by-county transfer arrangement. As we have expressed to this committee before, however, we believe that substantial savings could be made if the financing of this work was provided for at the national level.

The transfer of ACP funds for needed technical services seems to have become stabilized for the past several years. Nationwide the transfers have been holding steady at a total of between $7 and $8 million annually. We believe it would benefit both programs and afford more services to farmers if a specific dollar amount of ACP funds would be earmarked for technical services in the appropriation act in lieu of the provision for county-by-county transfer arrangements.

The Department of Agriculture is proud of the soil and water conservation progress that has been made in recent years. The programs conceived by the Congress are sound. Our legislative tools, I believe, are adequate. And firsthand observation in the field during the last 5 years convinces me

that the programs the Congress has authorized are being carried forward vigorously and efficiently, both by the soil conservation districts and other local organizations, and the Soil Conservation Service. I believe the budget we have proposed will permit us to continue this great work, at a reasonable rate of speed, in fiscal year 1961.

So you see that Assistant Secretary of Agriculture Peterson recommends that this change be made. He states that last year recommendation was made by the committee that the Department make a study of transfer simplification. This has been done. He further says:

We believe these simplified procedures will substantially reduce the paper work involved in the transfer of ACP funds to SCS.

He said that these new procedures are about as simple as they can be made under the county-by-county transfer arrangement, but he goes on further to say that he believes there should be a change. The Department believes it would benefit both ACP and SCS programs and would afford more services to farmers if a specific dollar amount of ACP funds would be earmarked for technical services in the appropriation act in lieu of the provision for county-by-county transfer arrangements.

My amendment would allow the full 5 percent moneys as has been the custom in the past to be used for this technical assistance by SCS. As I stated, it would be a more expeditious way.

The only disagreement I have been able to find so far in the discussions I have had is the feeling that if we make direct appropriations of the 5 percent ACP funds, the SCS funds may be cut. I do not believe this would be a serious difficulty as long as we agree that 5 percent of the ACP funds go over to SCS. We must provide the funds necessary for technical assistance needed in the ACP projects. I believe strongly that this change would be the most desirable position for us to take.

Mr. WHITTEN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I, too, have received resolutions through the years like that referred to by the gentleman from Minnesota. The Soil Conservation Service would like to get its hands on this money if it could. We have had a good deal of experience and difficulty with these programs in past years. The Soil Conservation Service was supposed to supply the technical assistance for the ACP work. The ACP started out setting up qualifications. The ACP was supposed to determine where they wanted the work and the SCS had to get the money from them to do the work.

This amendment would throw us back to where we were before the committee took hold of it and changed the requirements as they are in the present bill and program. This money is provided for ACP work down at the county level. But the way it has worked in the past, the ACP organization was the last on the list to get the money.

It was our committee that changed the situation. We feel the local people should determine where they want to spend their money for this assistance and not have somebody take it away from them at the State level.

Mr. QUIE. The county has to get approval of the ACP groups and SCS will do the work.

Mr. WHITTEN. I know the gentleman is doing what he thinks is right.

Mr. QUIE. ACP does not want a transfer of the funds, and so forth.

Mr. WHITTEN. SCS wants to get it without strings attached.

Mr. QUIE. Both parties have to agree. I grant the gentleman's statement is true before we had that reorganization, before there was coordination between the two, perhaps. They were completely apart for a while. We have brought them together.

Mr. WHITTEN. May I say to the gentleman with all modesty it was this committee that brought them together, and we did it with this vehicle. I do not want to return to what the gentleman advises.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota [Mr. QUIE].

The amendment was rejected.

Mr. GUBSER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GUBSER: On page 15, line 11, after the word "channels", strike out the period and insert ": *Provided further*, That no part of any funds appropriated for the agricultural conservation program shall be utilized to survey acreage which has been certified by a member of the Society of Professional Engineers."

Mr. GUBSER. Mr. Chairman, may I say that I fully realize the subject matter of the amendment I have offered has not been considered by the subcommittee and I also admit that it is a matter which should be considered in hearings. I am, therefore, offering this amendment solely for the purpose of focusing attention on the problem in the hope that in the committee hearings next year this proposal will be considered.

A few weeks back members of the Society of Professional Engineers pointed out to me that county ACP committees have refused to accept certified surveys of acreage which had been made by professional engineers and that the county committees have been using their own personnel at Federal expense to conduct surveys.

The professional engineers feel this is a duplication of service and a waste of public funds.

I respectfully request that in the event this amendment is voted down the committee give consideration to this problem next year.

Mr. WHITTEN. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from California [Mr. GUBSER].

Mr. Chairman, I appreciate the frankness of the gentleman who offered this amendment. Our committee will naturally be interested in going into the matter thoroughly. We realize when you describe by name a particular organization certain questions come up.

I am hoping that the gentleman will withdraw his amendment on my assurance the committee will look into the subject thoroughly next year.

Mr. GUBSER. Mr. Chairman, I ask unanimous consent to withdraw my amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read as follows:

Marketing services: For services relating to agricultural marketing and distribution, for carrying out regulatory acts connected therewith, and for administration and coordination of payments to States, $26,838,000, including not to exceed $25,000 for employment at rates not to exceed $50 per diem, except for employment in rate cases at not to exceed $100 per diem pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (5 U.S.C. 574), as amended by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), in carrying out section 201(a) to 201(d), inclusive, of title II of the Agricultural Adjustment Act of 1938 (7 U.S.C. 1291) and section 203(j) of the Agricultural Marketing Act of 1946: *Provided*, That the Department is hereby authorized and directed to make such inspection of poultry products processing plants as it deems essential to the protection of public health and to permit the use of appropriate inspection labels where it determines from such inspection that such plants operate in a manner which protects the public health, and not less than $500,000 shall be available for this purpose.

Mr. DINGELL. Mr. Chairman, I make a point of order against the language beginning in line 2, page 17, commencing with the word *"Provided,"* right down through the end of that paragraph on page 17, line 9.

This constitutes legislation on an appropriation bill.

Mr. MARSHALL. Mr. Chairman, I make a point of order against the entire paragraph, beginning in line 15, page 16, through line 9 on page 17, on the ground it is legislation on an appropriation bill.

Mr. WHITTEN. Mr. Chairman, the committee does not care to oppose the point of order. I do not think there is any question but what points of order lie.

The CHAIRMAN (Mr. KILDAY). The gentleman from Mississippi concedes both points of order. The Chair sustains the point of order of the gentleman from Minnesota and the entire paragraph is ruled out as legislation.

The Clerk read as follows:

FOREIGN AGRICULTURAL SERVICE

Salaries and expenses

For necessary expenses for the Foreign Agricultural Service, including carrying out title VI of the Agricultural Act of 1954 (7 U.S.C. 1761–1768), and for enabling the Secretary to coordinate and integrate activities of the Department in connection with foreign agricultural work, including not to exceed $25,000 for representation allowances and for expenses pursuant to section 8 of the Act approved August 3, 1956 (7 U.S.C. 1766), $4,447,000: *Provided*, That not less than $400,000 of the funds contained in this appropriation shall be available to obtain statistics and related facts on foreign production and full and complete information on methods used by other countries to move farm commodities in world trade on a competitive basis: *Provided further*, That, in addition, not to exceed $2,493,000 of the funds appropriated by section 32 of the Act of Au-

gust 24, 1935, as amended (7 U.S.C. 612c), shall be merged with this appropriation and shall be available for all expenses of the Foreign Agricultural Service in carrying on the purposes of said section 32.

Mr. LIPSCOMB. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. LIPSCOMB: On page 18, line 10, after "$4,447,000", insert the following: ", of which not less than $800,000 shall be used to purchase foreign currencies or credits owed to or owned by the Treasury of the United States".

Mr. LIPSCOMB. Mr. Chairman, this amendment provides that of the $4,447,000 for necessary expenses of the Foreign Agriculture Service, $800,000 shall be used to purchase foreign currencies or credits owed to or owned by the Treasury of the United States.

The amendment places a limitation of $800,000 on the direct dollar appropriation use, and applies to the increase recommended by the committee for certain attaché expenses.

In prior years these attaché expenses were paid from foreign currency allocations, and this is the first time these are to be paid by direct dollar appropriation.

The language as proposed by this amendment to this bill is the same as the language included in H.R. 11666 making appropriations for the Department of State, and passed by the House.

From a reading of the hearings there appears to be no evidence that this limitation will hinder the operations of the Foreign Agriculture Service in any way.

Through a limitation of this kind the Congress can help assure that dollars will not be used when foreign currencies are available from the Treasury of the United States.

This amendment is offered, in the last analysis, to protect the interest of the American taxpayer. Certainly every precaution must be provided to assure maximum utilization of foreign currencies owed to or owned by the U.S. Treasury for the operation of this program, rather than, instead, opening the door for possible needless expenditure of dollars. I believe this amendment will provide a necessary safeguard.

Mr. Chairman, I ask favorable acceptance of the amendment.

Mr. WHITTEN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I certainly am in accord with the purpose of the gentleman who sponsors this amendment. As I said yesterday, as chairman of the committee, we felt that they certainly should use this money to buy foreign currencies and use the foreign currencies to the fullest extent that they can.

Mr. Chairman, in some of the countries where formerly we had available foreign currencies, now that they have gotten back on their feet and are now able to buy some of these surplus commodities, we do not have this great amount of foreign currencies like we did formerly. We used to have considerable foreign currencies in West Germany, for example. However, now no foreign currencies are available in some of those countries, and there is competition between the State Department and various other Departments for what may be available. It is hard to tell at this time just what countries will have currencies and what will not. Now, to say that this money is only available to purchase foreign currencies, I think it will go much further than we should. I say again that we feel the Department should use all of its foreign currency if it can be done, but we do not want by indirection to cancel out some of this work which we think is essential. May I say that the foreign currencies are probably more important to us in these areas where they have dollars and where we can sell, than in some of the countries where they have no currencies and we have to give commodities to them. So, I therefore hope that the amendment will be voted down, and I assure the gentleman that the department is seeking to do the best possible job and to do what the gentleman seeks to do by his amendment.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I was not aware that this amendment dealt with representation allowances. May I ask the chairman of the subcommittee if it does so deal and if there is there $800,000 worth of representation allowances in this bill?

Mr. WHITTEN. As to representation allowances, no. This takes care of expenses of operation; travel, secretarial services, costs of preparing reports. The gentleman will remember that a few years ago we arranged, and I think we made great progress, in having agricultural attachés report directly to the Department of Agriculture. They gather statistics in foreign countries on what production is there, as to probable markets, movement of crops and various other matters. I think they have done a splendid job. This is a part of the cost of their work.

Mr. GROSS. I have been unable to find more than $25,000 for representation allowances, and it is set out as a line item.

Mr. WHITTEN. It is limited to that in the bill.

Mr. GROSS. Twenty-five thousand dollars is all that has been set out as a line item for liquor and entertainment.

Mr. WHITTEN. Yes. But so far as the committee is concerned, we have had no detailed information along the lines the gentleman refers to. You know, these farmer representatives do not go in for all the kinds of entertainment that some of the others do.

Mr. GROSS. I will say to the gentleman that after the information obtained when the Defense Department appropriation bill was before us last week, that there was $1,300,000 of representation allowances in that bill, and it was to be found under operation and maintenance, as well as various other titles, I do not feel constrained to oppose this very strongly. However, I assure the gentleman and any other chairman of a subcommittee that next year, if I am fortunate enough to be reelected, I am going after each one of these. And I shall tell the gentleman why.

I discovered a day or two ago that the Government is spending the taxpayers' money to finance nine sociologists to study behavior at cocktail parties.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. HOFFMAN of Michigan. I want to ask the gentleman what he is kicking about if the farmers are learning about cocktail parties. I thought the gentleman was for the farmers.

Mr. GROSS. I am not opposed to farmers learning about cocktail parties.

Mr. HOFFMAN of Michigan. Is he against their exercising their civil rights to attend cocktail parties?

Mr. GROSS. I want them to enjoy all their rights, civil and otherwise.

Mr. HOFFMAN of Michigan. Is not the gentleman for the farmer?

Mr. GROSS. Certainly.

Mr. HOFFMAN of Michigan. Then why should they not know about cocktail parties?

Mr. GROSS. They should.

Mr. HOFFMAN of Michigan. Well, all right.

Mr. GROSS. But I would like them to spend their own money to learn.

Mr. HOFFMAN of Michigan. Oh, well, everybody else is getting Government money.

Mr. GROSS. According to a magazine article these analysts have found "that the room in which the bar is situated tends to become crowded; that there is a variety of guests, who will cringe in corners, while others sing, dance, slop martinis on the piano, and pursue members of the opposite sex to the pantry or beyond."

According to the magazine article, this study of cocktail parties is one of a series of studies being made by the U.S. Public Health Service on "Functions of Play in Developing Adult Behavior." How much has been spent on this behavioral business, I do not know, but the article says the total cost to U.S. taxpayers for the series of studies on this subject is $89,811.

Mr. WHITTEN. May I say to the gentleman that I am glad that he pointed out that this is a Public Health Service matter and not attributed to the Department of Agriculture. But in view of that, this committee is going to look into this matter closely to see that we do not use any money in this area along the lines of the article that the gentleman has just read.

Mr. GROSS. Mr. Chairman, I have another one which I hope the gentleman from Rhode Island [Mr. FOGARTY] will look into; and I would like to take just a moment, with the indulgence of the House, although it does not bear upon this particular subject. This is an Associated Press item of May 6 from Roanoke, Va. It says that:

Nine beagle puppies, all from good canine families, won a 10-weeks' study course on the campus of Hollins College for Girls.

Dr. Allen D. Calvin, associate professor of psychology, will teach them a course in discipline on a grant from the U.S. Public Health Service.

They will live in air-conditioned pine-paneled quarters and eat a special diet.

I call the attention of the House to this because it involves another grant from the U.S. Public Health Service, which means, of course, that American taxpayers are putting up the money.

Mr. Chairman, I predict the day will come when the taxpayers will rise up and demand an end to the use of Federal funds for the study of behavior at cocktail parties and teaching discipline to dogs in colleges. I am afraid, however, that the uprising of those who pay the bills will come too late.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California [Mr. LIPSCOMB].

The question was taken; and on a division (demanded by Mr. LIPSCOMB) there were—ayes 22, noes 52.

So the amendment was rejected.

Mr. BARR. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the gentleman from Iowa has gone into the question of representational allowances. I would like to try to get in this record what we are trying to do with this bill.

First of all, I should like to congratulate the committee and especially the staff for a beautifully written report. This is a very understandable report. We had defense up last week, and frankly, it might as well have been written in Turkish. I simply could not understand it. But after reading this report, I should like to ask a question of the committee.

I have almost no farmers in my congressional district. There are literally no farmers in my district. I represent a great urban district which pays $355 million a year in Federal taxes. After reading this report, may I ask if the committee is urging someone like me to vote for this appropriation? I want to be sure.

Let me go through the report and see if I have the figures straight. I should like to be corrected if I am possibly wrong. As I understand the report and statement of the committee, the United States has spent about $26 billion since 1952 on the farm program. In that period of time farm income has dropped from an annual average of $14.4 billion in 1952 to about $11 billion in 1959. So this $26 billion has not kept up farm income.

Second, it does not seem to have kept the farmers on the farm. Farm population is down about 3 million, as I understand it, from the last figures I have. It does not seem to have protected the small farmer.

Lastly, this $26 billion, I presume, was designed to bring our agriculture into some sort of stability, but I notice from your figures our surpluses have jumped from $2.5 billion in 1952 to $9.2 billion in 1960.

The cost to my congressional district, our part of this $4 billion appropriation, is about $100 per family.

The question in my mind is, Should I vote "aye" when my name is called on this bill? The report would seem to indicate we have been pouring money down a rathole here.

Mr. WHITTEN. Is the gentleman asking a question?

Mr. BARR. Yes.

Mr. WHITTEN. May I say that a big part of this bill is commitments where we now have contracts, so we have to pay them. Our report points up the feeling we have, which is very similar to that of the gentleman, that we need to do something. On the other hand, until we get an improvement over what we have, if we did not pass this bill, I think we would wreck American agriculture. If we did wreck it, do not think it would not pull down the gentleman's section and the industrial sections and everybody else. The point is that we are getting into more and more trouble, and, in spite of the cost, the farmer's situation is getting worse. We point that out in an effort as best we can to push forward some improvement.

But I do not think we would be doing the right thing not to pass this bill—we would be violating contracts and we would be making bad matters worse. But we certainly need to improve the way in which we are handling this.

Mr. SANTANGELO. Mr. Chairman, will the gentleman yield?

Mr. BARR. I yield to the gentleman from New York.

Mr. SANTANGELO. I believe I have the same type of district as the gentleman from Indiana. I do not know whether the gentleman was on the floor yesterday when I pointed out certain elements involved in this appropriation. I believe you still have some schoolchildren who are sharing in the school lunch program; is that not correct?

Mr. BARR. That is correct.

Mr. SANTANGELO. And your people are also sharing in the special milk program; is that not correct?

Mr. BARR. That is correct.

Mr. SANTANGELO. People in the gentleman's district are sharing in food donations for needy people. Therefore, to a large extent, the people from the city districts are sharing in this abundance that the farmers are producing. Therefore, to that extent your people are deriving some benefits in this area. I also pointed out yesterday, if the gentleman recalls, that many of these benefits are mixed benefits and that the farmers to the extent of the $1,200 million, which is the sum for the restoration of the capital impairment of the Commodity Credit Corporation, are getting that direct benefit—and only that direct benefit. Does the gentleman believe that helping foreign countries to develop themselves is not helping us indirectly? If so, then I think the gentleman is missing the point insofar as the benefits which the United States derives from the aid to agriculture. I submit that point for the gentleman's consideration.

Mr. BARR. I would just like to point out to the gentleman who represents a city district just like mine that we are perfectly willing to help; but I think if we keep on helping like this, we will wind up not having any farmers left.

May I ask one more question here with reference to personnel? I notice that the personnel in the Department of Agriculture has jumped from 67,000 in 1952 to 86,000 today. At the same time farm families have dropped around 700,000 and the farm population has dropped 3 million. Would someone explain to me why we need more people in the Department, when we have a smaller number of farmers to work with?

Mr. WHITTEN. The gentleman will remember that we wrote this report and pointed these facts out because we have some question about it, too.

Mr. BARR. You pointed it up, but I cannot understand why you did not explain what happened and how they got up that high.

Mr. WHITTEN. That is done by the action of the Department and the Congress, frankly, because we have more peaple dealing with many programs such as brucellosis eradication and more people on meat inspection work to protect the public health. There are more people in the soil conservation districts. Newly organized districts under the basic law are entitled to have additional personnel. So this is the combined responsibility so far as these increases are concerned of the Congress and the Department. We do point out that while they have done well with the additional people, all this does not necessarily answer this problem.

Mr. HORAN. Mr. Chairman, will the gentleman yield?

Mr. BARR. I yield to the gentleman from Washington.

Mr. HORAN. I want to say in support of what the chairman of this subcommittee has said that we have many programs that were voted for in the last several years by this Congress of which you have been a Member and the preceding Congress. There is the poultry inspection program, the soil bank program, and so forth. All of these programs require personnel to make them go. If the gentleman was here and heard the debate yesterday, he knows that we believe Congress has a responsibility to correct some of these things. Maybe we can cut out some personnel, but when the Congress votes for certain programs we on the Committee on Appropriations must recommend the funds for such an activity and for such programs.

Mr. BARR. I thank the gentleman. I do want to congratulate the committee again. They were extremely candid in this report. In fact, they were so candid I am almost tempted to vote "no."

Mr. HOFFMAN of Michigan. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, when I came here in 1935, I thought the best way to serve my people and the people of the country was to—well, I guess I was an isolationist and I thought if we stayed out of foreign entanglements, as the first President advised, and each of us attended to his own business here at home and let the other fellow do the same, we would get along pretty well. I have learned since—or at least I have been told—that the Lord did not make the world as he should have made it and that each of us knew better how to operate the other fellows' affairs than he did and that we

ought to remake the whole universe, and as a start remake nature's laws. Now the gentleman asked about city folks and how they should vote on this farm bill. Another gentleman replied, "Well, we are giving you free food—vote for it." That is not all the Federal Government is giving you. You would be surprised at what all you are getting if you would add it all up. Some of your gifts were called to my attention this morning by the editorial in the Chicago Tribune of this morning entitled "Unwed Mothers on ADC." It starts with comments about an unwed mother who let four children burn to death while she was in a saloon drinking liquor. It then goes on to complain about the cost to Cook County. One gentleman said the program was costing the people of his district about $20 million. ADC is costing the taxpayers of Cook County $52 million a year. The editorial intimates congressional meddling is responsible for what has happened in Chicago and other cities.

We encouraged the colored folks to go to Chicago where they lack jobs, homes, and practically everything else necessary to enable them to care for themselves.

The Tribune says this:

The chief cause of the high cost is well known. It is the migration to Chicago of thousands of Negroes from the rural South who lack a tradition of normal family relationships and who have difficulty getting jobs and economic security.

I will put the editorial in the RECORD. It goes on to show that every time we monkey with nature or with the world the way the Lord created it, we get into trouble. We not only have a surplus of wheat and cotton—I remember a member of a committee that I was once on who drew several thousand dollars one year for cotton surplus. One year he drew $130,000. Now here they have a surplus of individuals. Foreign nations will not take them as it will wheat or other crops. So Chicago has to support them. The surplus under ADC, I am wondering, whether after all, it might not be well to accept some things as they are and let the Lord run the universe for a while—let the South solve some of its problems. There is a possibility it can do a better job than we can. They at least have had experience. One result of our intermeddling has been to cost the city $52 million a year to care for illegitimate and other children—and I call the attention of the gentleman from Alabama, Mr. JONES, who spoke quite eloquently on this subject, at a hearing in North Carolina. How would it be if we just let the Lord and nature get along as best it may for a year or two? Do not refuse to help; just give the Lord a chance for 6 months or 9 months, and see how things come out.

It seems to me, in view of this editorial and our meddling in the affairs of every one, perhaps if we put our trust in Him and let Him do it, instead of trying in just a few months to remake the whole world, we might get along a little better. Perhaps if we let the farmers alone they may get along all right. Think it over. But read this editorial:

THE UNWED MOTHERS ON ADC

Judge John Gutknecht dismissed manslaughter indictments against an unmarried woman whose four children died in a fire while she was drinking in a saloon. He expressed regret that no criminal prosecution against the woman was possible and denounced the State of Illinois for supporting her on aid to dependent children while she produced the four children.

"I know that children have to be taken care of," said the judge, "but after the first illegitimate child comes the mother should be locked up."

We share Judge Gutknecht's indignation over the death of the children and the misconduct of their mother but doubt that his proposed remedy is a practical one. There is no easy solution of the bastardy problem and no quick way to relieve the taxpayers of the enormous cost of supporting illegitimate children on ADC.

Each session of the legislature has considered the ADC problem and study after study has been made by other groups. Currently, a study is being made by a firm of management consultants hired by a citizens' committee appointed by the Cook County board. It will be surprising if the consultants come up with anything new.

In this county, ADC is costing the taxpayers $52 million a year. The chief cause of the high cost is well known. It is the migration to Chicago of thousands of Negroes from the rural South who lack a tradition of normal family relationships and who have difficulty getting jobs and economic security.

Bastardy is involved in 38.5 percent of the Negro families on ADC as against 9 percent of the white families. The relief authorities are beginning to report second and third generation ADC clients of unmarried parenthood.

A first-rate report on the situation has been written by Jefferson G. Ish, secretary of the Illinois Public Aid Commission and vice president of the Supreme Liberty Life Insurance Co. It was read originally before a Chicago chapter of a national fraternity of Negro business and professional men, and later was published in the public aid commission's magazine.

Mr. Ish pointed out that as Negroes get job security and establish normal family homes they adopt a code of sexual morality that is usually stricter than that of the community as a whole. He urged the Negro community to take the lead in making known the distressing facts about the ADC program and in promoting all steps to improve it.

Proposals like Judge Gutknecht's to lock up all unmarried mothers do not contribute to public understanding of this question. Real encouragement, however, may be drawn from the signs that Negro leaders are beginning to face the problem and to seek solutions.

The CHAIRMAN. The time of the gentleman from Michigan [Mr. HOFFMAN] has expired.

The Clerk read as follows:

FARMERS HOME ADMINISTRATION

To carry into effect the provisions of titles I, II, and the related provisions of title IV of the Bankhead-Jones Farm Tenant Act, as amended (7 U.S.C. 1000–1031); the Farmers Home Administration Act of 1946 (7 U.S.C. 1001, note; 31 U.S.C. 82h; 12 U.S.C. 371; 35 D.C. Code 535; 60 Stat. 1062–1080); the Act of July 30, 1946 (40 U.S.C. 436–439); the Act of August 28, 1937, as amended (16 U.S.C. 590r–590x—3), for the development of facilities for water storage and utilization in the arid and semiarid areas of the United States; the provisions of title V of the Housing Act of 1949, as amended (42 U.S.C. 1471–1483), relating to financial assistance for farm housing; the Rural Rehabilitation Corporation Trust Liquidation Act, approved May 3, 1950 (40 U.S.C. 440–444); the items "Loans to farmers, 1948 flood damage" in the Act of June 25, 1948 (62 Stat. 1038), and "Loans to farmers, property damage" in the Act of May 24, 1949 (63 Stat. 82); the collecting and servicing of credit sales and development accounts in water conservation and utilization projects (53 Stat. 685, 719), as amended and supplemented (16 U.S.C. 590y, z—1 and z—10); and the Act to direct the Secretary of Agriculture to convey certain mineral interests, approved September 6, 1950 (7 U.S.C. 1033–1039), as follows:

Mr. LAIRD. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I take this time to direct a question to the subcommittee which has to do with a wire which I received from the chairman of the Extension Directors Subcommittee on Legislation. This wire reads as follows:

EATONTON, GA., *May 9, 1960.*

HON. MELVIN R. LAIRD,
Member of Congress,
Washington, D.C.:

In response to a request that I furnish you statement in regard to proposed earmarking of Federal funds, we believe that the cause of the wide variation of budget and needs of the 50 States that earmarking of funds limits flexibility necessary for effective administration of program and needs of the extension work. We recognize the urgent need for salary adjustment of county extension workers. Twenty-two States have indicated need of Federal fund to raise salary of extension staff. However, in some States the county salaries are comparable to similar position in the State.

W. A. SUTTON,
Chairman, Extension Directories Subcommittee on Legislation.

I wonder if the chairman of the subcommittee would comment on this wire which makes sense to me.

Mr. WHITTEN. I will be glad to. The Association of Land Grant Colleges, for whom Mr. Sutton speaks, requested the Department and the Budget, I believe, to allow a $6 million increase for the Extension Service. There have been many increases for the Extension Service during the last 7 years, about 90 percent. The Extension Service, the Department of Agriculture, and the Bureau of the Budget requested from the committee $2,865,000 for rural development, all of it for additional people. The committee in reviewing the situation, and the increases of the past, determined that at the Federal level we have had something over 20 percent increase in supervisory personnel in the Extension Service. At the State level there had been an increase of over 20 percent in supervisory personnel.

Further, it was the committee's feeling that this rural development type of work was in line with the type of work the county extension workers are now doing. In some of the States in recent years the increases have been used for more people, and the need to raise the salaries of local agents has increased and the need for additional people has gone down.

So the committee has gone along with a $2 million increase. The committee feels that it should be used at the county level where the need really exists.

Mr. LAIRD. But in those States where the county and State salaries are presently on a comparable basis, these funds

can only be used for increases as far as the county is concerned?

Mr. WHITTEN. As far as the bill is concerned, it can be used at the county level for either new employees or salary increases.

Mr. LAIRD. But it cannot be used to pay State salaries if they are on the same salary scale with the counties.

Mr. WHITTEN. It has to be worked out at the county level. Our report points out what the States are paying at the different levels.

Mr. LAIRD. It would apply at the county level only?

Mr. WHITTEN. This provision requires a State matching of funds; and where needed the State presumably would match the funds.

Mr. LAIRD. So the funds would not be available to those 28 States?

Mr. WHITTEN. If they do not need more people and if they do not need salary increases, I do not know whether they would or not.

Mr. LAIRD. They would need it if they were on a comparable State and county salary scale.

Mr. WHITTEN. If the people are being paid adequately, I cannot conceive what they would want it for, especially when the State has to match dollar for dollar.

Mr. LAIRD. They would have to put up 100 percent as far as salaries of State employees are concerned. Is that correct?

Mr. WHITTEN. It has to be matched; yes.

Mr. LAIRD. Could they match this money to pay State salaries?

Mr. WHITTEN. No. This increase is for work at the county level.

Mr. LAIRD. They cannot match and pay salaries of the State employees?

Mr. WHITTEN. Not with this small increase here. The balance of the appropriation is not involved.

Mr. LAIRD. So if they were to change the salary scale within the State they would have to pay 100 percent of the increase for the State employees and on a matching basis for the county employees?

Mr. WHITTEN. There has been a 90-percent increase in the Extension Service in recent years. This request for 1961 was for aid to the rural development program in the counties. There have been ample funds at the State and Federal level for supervision, so we are appropriating this additional money that has been requested for rural development to the counties. We tie it down to the counties so it would not be used to pay a lot of additional State supervisory personnel.

Mr. LAIRD. But you earmark just the $2 million on a different basis than the authorizing legislation.

Mr. WHITTEN. In a different way from the other part of the appropriation, but it is in line with the gentleman's position and the authorizing legislation.

Mr. GROSS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, during general debate yesterday there was considerable discussion of various farm programs designed, I take it, to obviate the necessity for tremendous appropriations such as are contained in this bill. The committee report, page 9, in one paragraph, sets forth the guidelines for excellent farm legislation. Let me read this paragraph:

> It is the belief of a majority of this committee that, for the protection of our overall economy, farm prices must reflect cost plus a reasonable return. Such prices, however, must be made contingent upon farmers holding farm production, in terms of bushels, bales, and pounds, to domestic and normal foreign markets. If that is done an adequate price can be obtained at the marketplace.

Mr. Chairman, I would like to call the attention of the gentleman from North Carolina [Mr. COOLEY] to the fact that years ago the Congress twice passed the McNary-Haugen bill, and it was twice vetoed by then President Calvin Coolidge. May I say to the chairman of the Committee on Agriculture of the House if he would pull that bill out, dust it off, and revise it to conform to present conditions, it would be the most effective farm legislation that could be enacted. It should carry, in addition to cost of production plus a reasonable profit at the marketplace, a provision, and a stringent one, against the importation of agricultural products that are in surplus or in adequate supply in this country.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from North Carolina.

Mr. COOLEY. Does the gentleman have any reason to believe that the present Secretary of Agriculture would approve that bill?

Mr. GROSS. I would not care whether he approved or did not approve it.

Mr. McGOVERN. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from South Dakota.

Mr. McGOVERN. I would like to commend what the gentleman has said with regard to the guidelines suggested in this excellent report by our committee. I would also call the gentleman's attention to the fact that a bill which would do substantially what this report recommends was introduced by the gentleman from Texas [Mr. POAGE] and about 20 other Members of the House in this session. That legislation is now pending before the committee. I am hoping that the gentleman and others on his side will join with us in helping pass that legislation.

Mr. GROSS. I must disagree with the gentleman to this extent: I do not see too much resemblance between the Poage bill and the McNary-Haugen bill.

Mr. McGOVERN. But it does follow the guidelines that the gentleman has just underscored in the committee report in helping farmers adjust their production to what the market will absorb at a fair price.

Mr. GROSS. I hope that the Committee on Agriculture of the House, as I said before, will dig out the McNary-Haugen bill, bring it up to date, insert needed features, and put marketing controls on bushels, pounds, and bales, not on acreage. Acreage controls will not work, but production can be controlled through allocated marketings. In exchange for effective controls, there must be cost of production plus reasonable profit prices, paid in the market places for the products of American farms.

Mr. McGOVERN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I take this time simply to propound an inquiry of the chairman of the committee relative to the bottom line on page 22 of the report, which reads:

> The committee believes, however, that existing stations should not be closed in working out this redirection of funds.

This refers to agricultural experiment stations. We have had a considerable amount of anxiety in our State because of a report emanating from the other body suggesting that our agricultural experimental station at Newell, S. Dak., be abandoned, and possibly a larger station established in a neighboring State. It seems to us this would be an unwise act to lose the existing investment that the Government has at the Newell station. If there is to be any enlargement of the function of that station, it ought to be built on the foundation that is already there rather than being developed in some other nearby area. I am wondering if the language in the report would cover our situation and give us some assurance that the committee is saying in effect that this important station at Newell should be retained.

Mr. MARSHALL. Mr. Chairman, if the gentleman will yield, when the committee reviewed the request from the Department of Agriculture we felt that it would be unwise to close many of these stations which have done such a worthwhile job for agriculture. It is true, however, that some money will have to be absorbed, but it is not the intention of the committee that we close them, and we indicated that we thought it would be unwise to close these stations.

Mr. McGOVERN. I appreciate that because I think it would be false economy either to close down or curtail the important work being done at Newell. We ought to be moving in the other direction.

The Clerk read as follows:

LIMITATION ON ADMINISTRATIVE EXPENSES

Nothing in this Act shall be so construed as to prevent the Commodity Credit Corporation from carrying out any activity or any program authorized by law: *Provided*, That not to exceed $44,726,000 shall be available for administrative expenses of the Corporation: *Provided further*, That $1,000,000 of this authorization shall be available only to expand and strengthen the sales program of the Corporation pursuant to authority contained in the Corporation's charter: *Provided further*, That not less than 7 per centum of this authorization shall be placed in reserve to be apportioned pursuant to section 3679 of the Revised Statutes, as amended, for use only in such amounts and at such time as may become necessary to carry out program operations: *Provided further*, That all necessary expenses (including legal and special services performed on a contract or fee basis, but not including other personal services) in connection with the acquisition, operation, maintenance, improvement, or disposition of any real or personal property belonging to the Corporation

or in which it has an interest, including expenses of collections of pledged collateral, shall be considered as nonadministrative expenses for the purposes hereof: *Provided further,* That no part of these funds may be used to formulate or administer a program which provides for reclassing of Commodity Credit Corporation cotton after time of sale to private individuals or organizations: *Provided further,* (1) That no part of this authorization shall be used to formulate or carry out a price-support program for 1960 under which a total amount of price support in excess of $50,000 would be extended through loans, purchases, or purchase agreements made or made available by Commodity Credit Corporation to any person on the 1960 production of any agricultural commodity declared by the Secretary to be in surplus supply, unless (a) such person shall reduce his production of such commodity from that which such person produced the preceding year, in such percentage, not to exceed 20 per centum, as the Secretary may determine to be essential to bring production in line within a reasonable period of time with that necessary to provide an adequate supply to meet domestic and foreign demands, plus adequate reserves, or (b) such person shall agree to repay all amounts advanced in excess of $50,000 for any agricultural commodity within twelve months from the date of the advance of such funds or at such later date as the Secretary may determine, (2) that the term "person" shall mean an individual, partnership, firm, joint-stock company, corporation, association, trust, estate, or other legal entity, or a State, political subdivision of a State, or any agency thereof, (3) that in the case of any loan to, or purchase from, a cooperative marketing organization, or with regard to price support on an agricultural commodity extended by purchases of a product of such commodity from, or by loans on such product to, persons other than the producers of such commodity, such limitation shall not apply to the amount of price support received by the cooperative marketing organization, or other persons, but the amount of price support made available to any person through such cooperative marketing organization or other persons shall be included in determining the amount of price support received by such person for purposes of such limitation, and (4) that the Secretary of Agriculture shall issue regulations prescribing such rules as he determines necessary to carry out this provision.

Mr. AVERY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I would like to inquire of the chairman of the subcommittee, the distinguished gentleman from Mississippi [Mr. WHITTEN], about the dates that are employed on page 30 relative to certain restrictions on the administrative expenses of the Commodity Credit Corporation. The gentleman is well aware, I am sure, that those are the same dates that were included in the appropriation bill for 1960. The same two dates that are included on line 13 and again on line 16 in the 1960 appropriation bill.

So, my question is this: Why do we use those same dates in the appropriation bill for fiscal 1961?

Mr. WHITTEN. Last year the gentleman from Kansas offered an amendment that was intended to do what this does. Later it became part of the bill. The language as it now appears is the product of the conference of last year. This was new language. This year the department has had the job of working up regulations and providing means for carrying them out.

The Department sent up this language exactly as it appears here for the remainder of this year, presumably on the basis that if you did not have the language in this bill it would expire the 1st of July. The funds to which this language would be tied themselves would lapse the 1st of July. So this is essential to carry it on for the remaining 6 months.

The Department is of the opinion, so the individuals I discussed it with say, that if this language stays as it is, it will control this year. In next year's bill, it will be early enough after a year's experience to see whether this exact language should be carried forward, even if we attempt to do the thing that this does. So they have carried it forward for the remainder of this calendar year in order to have a year's experience before they will recommend whether this particular approach should be continued or not.

The committee went along exactly with the language that the Department sent up for the reasons that I have mentioned to the gentleman.

Mr. AVERY. If I may interpret what the gentleman from Mississippi has said, it means this; that despite the fact that there will be no limitation on loans for production in 1960, because most of these programs were developed back in fiscal year 1959—I am thinking primarily about corn, wheat, and I presume cotton—those programs were developed and announced in fiscal 1959, in May of last year. Therefore, since we are talking about a limitation on administrative expenses, the Comptroller General has ruled that there will be no limitation on any program that was developed prior to July 1, 1959, because we legislated for the fiscal year 1960 last year.

Mr. WHITTEN. May I say to the gentleman that, while the language is in there to develop and pay, if you had the language controlling the making of the loan, it would be just as effective if you did not have the other part. So, since the payment or the extension of the loan would follow after July, it is my sincere opinion that anything you did next spring, after they have had a year's experience and have a chance to recommend to the Budget any changes that would be in order, it would be ample time to deal with the situation in next year's bill. The controlling factor is in the fall of the year when the loan is made.

Mr. AVERY. Mr. Chairman, the Comptroller General has ruled just the opposite, that the year of production is immaterial, or when the loan is made; it is when the program is developed, because this is administrative expenses we are talking about. So he has ruled that that is not important as to when the loan is made. It is when the program is developed and announced, therefore, there is no limitation on most of the production in 1960.

Mr. WHITTEN. The announcement is made about price support levels.

Mr. AVERY. And acreage allotments.

Mr. WHITTEN. Anyway, I am following the Department in this. This is the Department's recommendation. The committee took it lock, stock, and barrel without changing it. It was sent up, as I have explained, on the basis that I have pointed out.

Mr. AVERY. The gentleman can give us assurance, then, that there is no thinking on the part of the committee that this language would escape a restriction on the 1962 production—the program will be developed in fiscal 1961 as appropriated in this bill; this mention of 1960 would not preclude that limit?

Mr. WHITTEN. I do not think so. It was so presented to us.

The CHAIRMAN. The time of the gentleman from Kansas [Mr. AVERY] has expired.

Mr. AVERY. Mr. Chairman, I ask unanimous consent to proceed for 1 additional minute.

The CHAIRMAN. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. WHITTEN. May I say to the gentleman, I do not think this is sound legislation.

Mr. AVERY. I understand.

Mr. WHITTEN. And I am opposed to it now as I was before. But I have tried to explain to the gentleman the basis of it.

Mr. AVERY. One more question, if the gentleman permits. On line 16 he will notice, in the bill before us today, we refer back again to 1960 production. We are talking about primarily 1961 in this bill. The Comptroller General has ruled year of production did not prevail—that is, 1960 production limitation did not prevail this year because we are talking about administrative expenses which for 1960 crops were expended largely in fiscal 1959. But since the year 1960 is used in the bill, and they will be working in 1961, that provision in line 16 will not preclude such subsequent limitation?

Mr. WHITTEN. That is my understanding. And may I say this; while I oppose this language and this approach, because I think personally it is unsound, certainly I cannot speak for the subcommittee. The subcommittee's action is not in any way to end this provision at this time. If it should develop we are in error about this, certainly as a spokesman for our subcommittee, I could not take it that we had intentionally eliminated this restriction, much as I would like to.

Mr. AVERY. I appreciate the position of the gentleman from Mississippi, and I further appreciate his inclusion of this provision in the bill despite his opposition to it.

Mr. COOLEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. COOLEY: On page 30, beginning on line 6, strike out, "*Provided further,* That no part of these funds may be used to formulate or administer a program which provides for reclassing of Commodity Credit Corporation cotton after time of sale to private individuals or organizations."

Mr. COOLEY. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. COOLEY. Mr. Chairman, this is a very important amendment which I propose. I hope I may have the attention of the Members of the House as I present my views concerning the limitation which I now propose to strike out.

I do not question for one minute the fact that the chairman of the Subcommittee on Agricultural Appropriations is a devoted friend of agriculture. I do not doubt that he was prompted by the purest of motives in placing this limitation in this appropriation bill. But I do seriously question his wisdom. Unfortunately, only one member of his subcommittee is particularly interested in cotton as a commodity.

We have a cotton program which has been in operation for many years. Unfortunately, in former years, because only some of the cotton sold was reclassified, some of the cotton merchants were granted a refund, a substantial refund, in toto amounting to about $166 million. I certainly do not approve of that procedure. Neither does any member of the House Committee on Agriculture approve of the granting of these huge rebates to cotton merchants. But we do approve of a reclassification of cotton at the time of delivery, and that is exactly what the Department of Agriculture now proposes to do. Here is a statement from the Department announcing this program:

CCC To Sell 1959 and Prior Crop Cotton on Basis of Reclassification

Beginning August 1, 1960, the Commodity Credit Corporation will offer all 1959 and prior crop upland cotton for sale subject to reclassification before final settlement, the U.S. Department of Agriculture announced today.

Detailed provisions regarding sampling, classification, and settlement for the 1959 and prior crop cotton are now being developed. They will be contained in a cotton sales announcement to be released from the New Orleans Commodity Stabilization Service Commodity Office in sufficient time to begin sales under the new provisions on August 1, 1960.

Cotton from the 1960 crop purchased by CCC under the Choice A program will be offered for sale by local sales agencies and by the New Orleans office on the basis of the quality assigned the cotton by USDA Boards of Cotton Examiners prior to its purchase by CCC.

This will result in the 1960 crop of Choice A cotton being handled during the 1960–61 marketing year on the same basis as the 1959 crop of Choice A cotton was handled during the 1959–60 marketing year.

This matter came up last fall. I attended a meeting in New Orleans which was attended by reputable representatives of all segments of the cotton industry. After a thorough discussion, substantially all those in attendance were in complete agreement that all CCC cotton should be reclassed at the time of sale.

Thereafter we called another meeting here in Washington in December. It was a joint meeting between the House Committee on Agriculture and the Senate Committee on Agriculture. That committee meeting was held in our committee room. At that time a very distinguished subcommittee of the cotton industry made certain recommendations, one of which was that the Secretary should provide an equitable program for the reclassification of cotton at the time of delivery.

The matter was then brought to the attention of the Department of Agriculture and after consideration by officials in the Department of Agriculture one of the officials in high places indicated to us that he wanted to put into operation this recommendation of the cotton industry.

Here is the recommendation: "Work out an equitable reclassification privilege for the purchase of CCC stocks."

Now then our Subcommittee on Cotton of the Committee on Agriculture unanimously urged the Department of Agriculture in a formal letter to adopt this recommendation. Here is the text of that letter:

JANUARY 6, 1960.

Hon. MARVIN MCLAIN,
Assistant Secretary of Agriculture,
Washington, D.C.

DEAR MR. MCLAIN: Representatives of the cotton exchanges and the Cotton Merchants Association have reported to our committee the progress made in working with the Department on the five points which they and other segments of the cotton trade believe are necessary to the operation of the exchanges and an effective private merchandising system in 1960–61.

We are pleased to know that you are giving careful consideration to each of the five points presented to the Agriculture Committee in December, and that definite progress is being made toward satisfactory solutions.

With respect to classification at the time of sale, it is inconceivable to us, as you stated it was to you, that buyers of cotton or any other commodity sold on description should be denied the right to have the actual quality checked at the time of delivery. Departmental technicians have testified to us that cotton in storage does change in color and that Government stocks are subject to a continued culling process which emphasizes occasional and unavoidable classing errors. The resulting commercial risks of buying on catalog description are sufficiently great that prospective purchasers are compelled to protect themselves in the prices they will pay and the loss to the CCC is substantial. Failure to sell on terms which assure the buyer he will get what he has bought not only costs the Government heavily but delays the disposition of Government stocks directed by section 201 of the Agricultural Act of 1956. It ignores numerous congressional directives to sell on terms and conditions that will promote utilization of ordinary private channels of trade and to protect small business firms.

As our committee sees it, the record before us shows that the cotton can be sampled at time of delivery and that the purchase price based on the quality determined by Government classers, subject to established departmental appeal procedures, can be collected by draft against a bank letter of credit with full protection of the Government interest and assurance to the purchasers that they can bid for CCC cotton knowing they will get cotton of the description bought.

Some such provision to permit accurate checking of quality at the time of delivery would have the added advantage of reducing costs (only the bales which are sold would be sampled) and by using the letter of credit method of payment would protect the Government investment without resorting to any refunds, which are always likely to involve public misunderstanding.

HAROLD D. COOLEY, W. R. POAGE, GEORGE GRANT, ALEXANDER PIRNIE, DON L. SHORT, JOHN L. MCMILLAN, THOMAS G. ABERNETHY, CARL ALBERT, BILLY MATTHEWS, CLARK W. THOMPSON, W. PAT JENNINGS, E. C. GATHINGS, HAROLD B. MCSWEEN.

The Department officials indicated to us they would adopt the recommendations, but that because of some conversations which Department officials had had with the chairman of this subcommittee, they seemed to be somewhat reluctant to put the program in operation. Thereupon we called a special meeting of the full Committee on Agriculture. A resolution was presented and unanimously adopted recommending the initiation of this new program. Here is the text of the resolution:

Whereas this committee has had under consideration for the past several months questions relating to the reclassing and sale of cotton owned by the Commodity Credit Corporation; and

Whereas the views of cotton producers, cotton users, and the cotton trade generally appear to be virtually unanimous that CCC cotton should be reclassed at the time of sale: Therefore be it

Resolved, That the Secretary of Agriculture is urged to put into effect as expeditiously as possible the uniform policy of reclassing all CCC cotton at the time of its sale and that this be done in such manner that the procedure will not involve rebates to the purchaser but that, instead, the final price of the cotton which the purchaser will be obligated to pay will be determined by the reclassing carried out at the time of sale and that all of every lot of cotton sold shall be reclassified.

It was sent to the Department notwithstanding the objections of the gentleman from Mississippi, the chairman of the subcommittee, and although the Department was somewhat reluctant to disagree with his views, the Department announced the program. Now the gentleman from Mississippi will know what was said. I only know by hearsay what was said in that conversation. Without attempting to quote that conversation verbatim, we were told that the officials in the Department were told by the gentleman from Mississippi in effect: "I write the checks—I write the checks and if you do not do this, I will not write the check and you will have no money to pay the employees of the Department of Agriculture engaged in this program."

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. Now if the gentleman wants to deny he made that statement—I yield.

Mr. WHITTEN. First, I do categorically deny it. But I would also like to have the name of the person you said told that to you. I would like to know who he is.

Mr. COOLEY. I thought I heard the gentleman say here on the floor yesterday, "I write the checks and you endorse them." Is that not in the RECORD?

Mr. WHITTEN. As a matter of fact, I said that we do—and it is a fact that we do.

Mr. COOLEY. When did you start writing the checks? Congress writes the checks. You are supposed to carry out

the intent and purpose of the legislative committees of the Congress.

Mr. WHITTEN. Read the bill and read the report. You will find the names of the Members on the report.

Mr. COOLEY. I read the report and I read the bill. This man who talked to us, I do not think was talking to us in confidence.

Mr. WHITTEN. Will you give me his name because he told you an unmitigated lie and I would like to know his name.

Mr. COOLEY. I do not want to start a fight now between the gentleman and any official of the Department of Agriculture. The gentleman knows whether he said it or not. It is almost identical with the language that the gentleman used here on the floor yesterday—"That our committee writes the checks."

Mr. WHITTEN. Unfortunately, we do have to write the checks.

Mr. COOLEY. And the gentleman said on the floor, "You are just merely endorsers of the check." Now here you have it—that an administrator in the executive branch of the Government wants to do something and he is intimidated.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. Now I did not say that you intimidated him, but he was intimidated to the point that he did not issue this order until our legislative committee had unanimously urged him to do it and commended him for his efforts. He issued the order which is, in effect, why the gentleman from Mississippi and his committee want to cut off the money.

Since when did the Appropriations Committee arrogate to itself such mighty power as to say that Congress authorizes an act but we will cut it off, notwithstanding the views, the unanimous views of all the Committee on Agriculture, Republicans and Democrats alike? It seems to me this is a kind of test. Who is going to run the Department of Agriculture? The Subcommittee on Appropriations or the legislative committees of this Congress and the Members of Congress themselves? If we yield to this limitation, then we have our only forum thereafter in the star chamber sessions of the Committee on Appropriations. You cannot even get into that room without special permission.

Mr. BOGGS. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield.

Mr. BOGGS. I attended the gentleman's joint session last fall. The gentleman referred to meetings held last fall in my district in Louisiana, and later here in the gentleman's committee room on agriculture, which was a joint meeting of the two Committees on Agriculture. It was my recollection, coming to the merits of the issue before this body, that this representation on reclassification was sponsored by everyone.

Mr. COOLEY. And the Department is trying to carry out the wishes of the people who are most concerned with the stability of the cotton crop, and of the Committee on Agriculture, providing for a fair and equitable basis of sale, so that the cotton buyer will not have to buy a "pig in a sack."

Mr. BOGGS. When the gentleman talks about reclassification, he simply means that when he comes in to buy a given item the item is as represented; is that correct?

Mr. COOLEY. That is correct.

The CHAIRMAN. The time of the gentleman from North Carolina [Mr. COOLEY] has expired.

(By unanimous consent Mr. COOLEY was granted 5 additional minutes.)

Mr. BOGGS. Will the gentleman yield further?

Mr. COOLEY. I yield.

Mr. BOGGS. It is very interesting that at this moment a hearing is going on in the other body involving the sale of drugs, and one of the issues involved is whether they are selling what is represented.

Mr. COOLEY. That is correct.

Mr. BOGGS. So what is involved here is that Congress is arrogating to itself the right to say when an industry cannot make proper representation of what they are selling.

Mr. COOLEY. Yes. And I want to know why cotton has been singled out.

Mr. BOGGS. If you sold an automobile or grain or anything else, and you misrepresent it, you would be subject to accounting in the courts?

Mr. COOLEY. Certainly. All we want is to have the same integrity in Government transactions that you now have in private trading.

I have here a telegram from a large number of cotton merchants. They are all in favor of striking out this amendment. There are letters from the American Cotton Producers Association, the American Farm Bureau Federation, and so on. I will not take the time to read them but will insert them in the RECORD at this point:

AMERICAN FARM BUREAU FEDERATION,
Washington, D.C., May 9, 1960.

The Honorable HAROLD D. COOLEY,
Chairman, House Committee on Agriculture, U.S. House of Representatives, Washington, D.C.

DEAR CONGRESSMAN COOLEY: We believe that the House Agriculture Committee was right when they asked the U.S. Department of Agriculture to institute a procedure for 1960 and prior crops of CCC cotton whereby purchasers of such cotton could get it reclassed.

In our opinion, cotton should be sold on the basis of weight and class at the time of sale. This is customary in all normal merchandising procedure with which we are familiar. Where a purchaser requests reclassification of CCC cotton, we suggested to the Department that the entire purchase be reclassed.

We hope that nothing will be done by the Congress to countermand in any way the action of the Department with regard to reclassification of CCC cotton.

Sincerely yours,

JOHN C. LYNN,
Legislative Director.

NATIONAL COTTON
COUNCIL OF AMERICA,
Washington, D.C., March 18, 1960.

The Honorable HAROLD D. COOLEY,
Chairman, Committee on Agriculture, U.S. House of Representatives, Washington, D.C.

DEAR MR. COOLEY: We have just learned that the House Committee on Agriculture passed a resolution urging the Secretary of Agriculture to reclass all cotton sold by Commodity Credit Corporation at the time of sale and wish to commend the committee for its action. We hope the Agriculture Committee will continue to press the Secretary to act on this.

The National Cotton Council strongly supports this principle and has also urged the Department of Agriculture to authorize reclass at the time of delivery. At its recent annual meeting in Dallas, the council unanimously approved the following resolution which was recommended by both its committee on production and marketing and its committee on foreign trade:

"8. That the council urge the U.S. Department of Agriculture to recognize the right of purchasers of carryover cotton from CCC stocks to obtain a fair delivery equal to the quality bought by means of reclassification by a regular Government classing board at the time of delivery and, if the quality is different from that advertised, an adjustment of price upward or downward."

It is an established fact that cotton often deteriorates in storage. The extent of deterioration, of course, depends on the conditions under which the cotton was grown, harvested and ginned and the condition of it when it went into storage and the storage conditions. There is no way to determine in advance the change that will occur and it is impossible to determine the change that has occurred without reclassing the cotton.

It is also inevitable that some cotton will be improperly classed because of human errors.

Except in the case of cotton all major commodities sold by CCC are sold on the basis of the quality being equal to that for which the buyer pays. There should be no exception to this principle of the right to a fair delivery.

As long as there is a possibility that the value of the cotton received in a purchase from CCC may be less than the amount paid, there is a risk involved on the part of the purchaser. The cost of the risk must be included in the price.

The increased cost will be reflected in a higher price to mills at home and abroad. The effect of this will be to place cotton at a further disadvantage at home with man-made fibers and to increase the cost of the export program abroad. We believe this further disadvantage is not in the interest of the farmers nor the other segments of the industry.

Inasmuch as CCC still has approximately 6 million bales of cotton to dispose of, it is important that sales practices be adopted which are fair and reasonable and which will not be a deterrent to the expansion of consumption.

We appreciate your efforts in this regard.

Sincerely,

WM. RHEA BLAKE,
Executive Vice President.

PLAINS COTTON GROWERS, INC.,
Lubbock, Tex., May 9, 1960.

Congressman HAROLD D. COOLEY,
House Office Building,
Washington, D.C.

DEAR MR. COOLEY: Enclosed with this letter is another one from Mr. Wilmer Smith, president of the American Cotton Producer Associates, concerning the important question of reclassing of Commodity Credit Corporation stocks.

The Plains Cotton Growers, Inc., has gone on record opposing reclassing after sale which would permit refund to shipper. Our position is exactly that as outlined in Mr. Smith's letter for the majority of the ACPA members.

With best wishes, I am,

Sincerely yours,

GEORGE W. PFEIFFENBERGER,
Executive Vice President.

HOUSTON, TEX., *May 10, 1960.*

Hon. H. D. COOLEY,
Chairman, Appropriations Committee on Agriculture Committee, House Office Building, Washington, D.C.:

We understand House appropriation bill for agriculture to be considered possibly Tuesday contains provisions prohibiting reclass of Government-owned cotton after sale to cotton trade. Since it is a well established fact that cotton deteriorates in grade while in storage, and since numerous clerical errors in classing and cataloging occur, we, the undersigned cotton merchants and brokers of the Houston Cotton Exchange, both large and small, think this provision very harmful and contrary to accepted trade practice, and we solicit your help in getting it deleted from the bill before final passage. In our opinion the buyer is entitled to receive the quality he buys based on classification at time of delivery rather than some earlier classification which may not be correct at time of delivery.

S. B. Locke & Co., Ernst Cohn & Co., Geo. H. McFadden & Bro., Inc., Reinhart Co., Anderson Clayton & Co., Emmet V. Clark, P. G. Pauls & Co., K. Dean & Co., Otto Goedecke, Inc., F. Hart & Co., Hendeson Cotton Co., V. A. Maudr & Co., Frank Mayes & Co., Miller Cotton Co., Houston Cotton Co., Weil Bros. Cotton, Inc., W. J. Schmitz & Co., John I. Steen, W. H. Strickland, H. T. Witherspoon, W. R. Wilson & Co., W. A. Willis.

AMERICAN COTTON
PRODUCER ASSOCIATES,
Lubbock, Tex., May 9, 1960.

Congressman HAROLD D. COOLEY,
House Office Building,
Washington, D.C.

DEAR MR. COOLEY: In view of recent developments regarding the reclassing of Commodity Credit Corporation cotton, we wish to reiterate the stand of the American Cotton Producer Associates on this question.

The majority of the members of the ACPA are opposed to reclassing of cotton after sale in such a manner that would permit or require refunds from CCC to the shipper. In the past this has led to unjust and unfounded criticism of the entire agricultural program, and this we want to avoid at all costs. We are opposed to the "pick and choose" method of reclassing selected bales in any given purchase.

We are not opposed to reclassing if it is done before sale, and if the entire lot being purchased is reclassed. We believe this reclassing before sale should be automatic in all cases. The chief item we are concerned with is that there be no refunds.

I trust this will clarify the position of the majority of the ACPA members.

With best wishes, I am,

Sincerely yours,

WILMER SMITH,
President.

Now, why should this committee apply to cotton some rule or regulation that is not applicable to wheat and corn, or any other commodity? Why should a merchant be forced to accept something that has actually been misrepresented? The gentleman from Mississippi [Mr. WHITTEN], may say that cotton does not deteriorate in storage. All the evidence shows that it does deteriorate in storage. He may say that he is against these refunds. Our committee will say we are against refunds, too, but under the proposal of the Department of Agriculture there cannot hereafter be any more refunds. The purchaser pays 85 or 90 percent of the purchase price in cash, and the other is paid when the grades are determined and accepted. So that there are no refunds.

Mr. ALGER. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield to the gentleman from Texas.

Mr. ALGER. Mr. Chairman, I want to join with the gentleman who is presenting these figures to us and tell him I commend him for his position and assure him that we in Dallas, which is one of the largest cotton exchange centers in the country, fully share his view and his concern as he expressed it to the House. I merely join with him in agreeing with his statement on reclassification. It is right and correct.

Mr. COOLEY. I thank my colleague. I think people all the way from New York to Galveston agree that this limitation should be taken out and the Department of Agriculture should be permitted to put into operation and effect an equitable reclassification program which will guarantee to the purchaser that he will receive the quality of merchandise that he obligates himself to pay for.

I hope this amendment will be adopted and that we will proceed with the program that the Department of Agriculture after careful consideration has decided to put into operation.

I know some other members of our committee will explain in detail just how the program will work. I would like for the gentleman from Arkansas [Mr. GATHINGS] who is chairman of our cotton subcommittee, to consume time to explain it, because he has worked on it faithfully and diligently. Members on both sides of our committee feel that the limitation should be stricken out.

Mr. MARSHALL. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, on every occasion that I have appeared before the legislative Committee on Agriculture I have always been treated with the utmost respect, and I was somewhat amazed to hear the remarks that were made a few minutes ago about the attitude of our committee.

We have tried in every way possible to be fair with the members of the Agriculture Committee when they have appeared before our committee. I know that we have sat long hours and listened to a lot of testimony.

I want to say to the Members of the House that as far as this matter is concerned this is not a matter of just one member of the committee; our committee is just as unified, or even more so perhaps, than the Committee on Agriculture.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. MARSHALL. I yield to the gentleman from North Carolina.

Mr. COOLEY. The gentleman will not deny my statement to the effect that you hold star chamber sessions behind closed doors.

Mr. MARSHALL. We certainly do. That has been customary for a long time.

Mr. COOLEY. Why should the custom be continued?

Mr. MARSHALL. And, yet every person who has asked for an opportunity to appear before our committee has been given that opportunity.

Mr. Chairman, I think we ought to get into the meat of this thing. Our committee has a responsibility too; we have a responsibility to the taxpayers of the country as well as we do to the cotton-growers and the warehousemen; we have that responsibility. We have a responsibility that the House has delegated to us, to go into these matters to find out about them.

The distinguished chairman of the House Committee on Agriculture was giving you an opinion that we were using cotton somewhat differently. I would like to say to the distinguished Chairman of the House Committee on Agriculture that my people, the warehousemen, who deal in corn and wheat and those commodities, would be most happy to have this kind of arrangement. Our committee found some astounding things that took place.

What do we do with this reclassification of cotton? The Government classifies this cotton; the buyer buys the cotton; he asks for a reclassification; he gets a reclassification of that cotton. It is reclassified and is a lower grade. What does the Commodity Credit Corporation do? They give him a rebate. Then many times these warehousemen export that cotton. What has happened? The thing that has happened is that it is then reclassified again at a higher grade.

We are not dealing in small items in this particular thing; what we are dealing with is shown by these figures: In 1956 there was a refund of $4,544,751; in 1957 it was $7,927,254.

Now listen to this. We come up to 1958 and we get a refund of $62,474,370; in 1960 we had a rebate of $11,639,154. We dropped down because we did something about this reclassification. Can a man who buys corn which has been graded by the Commodity Credit Corporation obtain a rebate on the grade of that corn? Of course he cannot. Can the man who buys wheat from Commodity Credit come in and ask for a refund because he disputes the grade? No; he cannot. Those commodities are sold on the basis of the grade which is presented.

The question is clear, and it is just as simple to me as day and night. If this Congress wants to permit the people who handle this cotton, and many of them are huge exporters, to come in and get a rebate on a grade which has been as fairly established as it can be, then you vote for this amendment which has been offered. But if you want to conduct the Commodity Credit Corporation operation in cotton in the same manner in which it is conducted in the case of other commodities, then you vote down the amendment. If you want to open up the Treasury of the United States to where you can say, "Come in with a shovel, we are going to give you gold on the basis of a rebate," vote for this amendment.

If you want to protect the farm program, if you want to have a farm program, then the things we are talking about in this amendment must stop and they must stop now.

This is not a matter of the chairman of our committee. It is a matter which came before our entire committee and it is one on which we are in accord.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. MARSHALL. I yield to the gentleman from Minnesota.

Mr. ANDERSEN of Minnesota. I want to state to the Committee that I am in full agreement with what my colleague from Minnesota has just said.

Mr. HORAN. Mr. Chairman, will the gentleman yield?

Mr. MARSHALL. I yield to the gentleman from Washington.

Mr. HORAN. May I say that when our committee saw these huge raids on the Treasury of the United States, we wanted to sort of close the door as best we could against it.

Mr. MARSHALL. I thank the gentleman. I urge the Members of the Congress to weigh the facts in this particular matter and vote down the amendment, as I am sure you would if you understood all of the facts.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. MARSHALL. I yield to the gentleman from North Carolina.

Mr. COOLEY. I agree we want to close the door, but under the proposal of the Department so that there will be no more rebates.

Mr. NATCHER. Mr. Chairman, will the gentleman yield?

Mr. MARSHALL. I yield to the gentleman from Kentucky.

Mr. NATCHER. As a member of this subcommittee, certainly I do not profess to be an expert on cotton, but I want to say to the members of the Committee if you want to dissipate the funds of the Commodity Credit Corporation here is the place to do it. All you have to do is to adopt the pending amendment. There has been $166,585,849 paid in rebates since 1956. Who received the rebates? In a number of instances warehousemen and big operators who have the cotton under their jurisdiction. I say again, if you want to dissipate the funds of the Commodity Credit Corporation here is the place to do it. I thank the gentleman for yielding.

Mr. MARSHALL. Furthermore, Mr. Chairman, as far as we are concerned, in trying to treat the taxpayers of this country fair and to fulfill our responsibility as delegated to us by the Congress, we are calling this matter to your attention and taking the stand that we have, at a time when we hear so much about the cost of the Commodity Credit Corporation, your Committee on Appropriations could take no other course than we have taken. I hope you will sustain the course we have taken to protect the assets and the integrity of the Commodity Credit Corporation.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. GATHINGS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the subcommittee on agricultural appropriations went into this question, and as the result of their recommendation and that of the General Accounting Office, the Department changed its plans on reclassifying cotton. Now, at that time, when they changed the plan for the current year, which they did, being effective August 1, 1959, what did they do? They went back and reclassed all of the cotton from 1957 and years earlier, and in reclassing that cotton it showed that it was $12 a bale lower in value. That is under the plan of the gentleman from Mississippi and this Subcommittee on Appropriations—$12, in round numbers, a bale lower in value. Of course, it does lose its quality when it is in storage for any length of time of a few months or more.

As a matter of fact, during the number of years that $166 million that has been referred to by the gentleman from Minnesota was refunded, the average loss on that cotton for those years—you move an awful lot of cotton out of the CCC—was $11.02, which means an additional cost to the taxpayer. Everyone recognizes that cotton is going to deteriorate in storage, particularly in damp areas. The facts show it. The only thing that is now being urged by the gentleman from North Carolina in striking this language is to approve the program that the Department of Agriculture wants to put into effect. Under that program only the cotton that is sold shall be reclassed, and you buy exactly what you pay for. Under that plan, if the grade deteriorates, you will pay less for it than when it went into the CCC's stock originally from the farmer's hands. It would be less if it deteriorates. But, if the grade shows a quality rise, why, whoever buys that cotton would have to pay more for it. It is just that simple.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. GATHINGS. I yield to the gentleman from Texas.

Mr. POAGE. Would the gentleman make it plain that there is no refund under the program proposed by the Department of Agriculture and which our committee recommends, it simply says that you take the cotton at the time you buy it, class it out, and pay for what you get, and there will be no refund?

Mr. GATHINGS. No refund at all, because here is what happens under this plan that the Secretary of Agriculture wants to put into effect. Eighty-five percent of the value of that cotton that went into the CCC originally, 85 percent of that class you pay in cash on those bales of cotton, and then they draw down these samples and reclass it. The buyer would be required also to deposit with CCC, pending the reclass of the cotton being purchased, an irrevocable letter of credit to pay whatever balance would be due when the value is determined as a result of the regrading.

Mr. BOGGS. Mr. Chairman, will the gentleman yield?

Mr. GATHINGS. I yield to the gentleman from Louisiana.

Mr. BOGGS. Would it be fair to say that the gentleman speaking represents perhaps the biggest cotton-producing district in the United States? The gentleman will certainly say that he is not speaking at the behest of the larger shippers or exporters of cotton.

Mr. GATHINGS. I agree with the gentleman. The American Cotton Producer Associates is in favor of the plan of the Department of Agriculture in this instance, and I want to say that various other producer organizations also favor it, among them being the American Farm Bureau Federation.

Mr. BOGGS. Let me ask another question, because I am in a position of being a layman in this matter in which the gentleman is expert. When the gentleman from Minnesota got so emotionally involved here a moment ago about the refund, is it not a fact that if a businessman went in and bought a bale of cotton that was classified as top or what have you, but which turned out to be spotted, what the refund provision meant was that he only paid for what be got?

Mr. GATHINGS. Certainly. Here is the situation. At that particular time the buyer of that cotton had an option to have a part of his purchase reclassed, that part that he determined that he wanted to have reclassed only. Under the plan now that the Department wants to put into effect, all this shall be reclassed and the buyer just pays what the reclassification shows it was at the time of delivery.

Mr. Chairman, I hope the gentleman's amendment is approved.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. SMITH of Iowa. Mr. Chairman, I ask unanimous consent that the gentleman from Arkansas [Mr. GATHINGS] may proceed for 1 additional minute.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. GATHINGS. I yield.

Mr. SMITH of Iowa. One of the subcommittees of which I am a member, in looking into some of the Public Law 480 sales, discovered that the Department of Agriculture was accepting the exporters' grading or classification of cotton in determining how much refund should be given. But that has nothing to do with this.

Mr. GATHINGS. None whatever. The Agricultural Marketing Service, and the Agricultural Marketing Service only, the Cotton Class Division of the AMS, is the agency that is charged with the responsibility of reclassing the cotton.

Mr. SMITH of Iowa. Large refunds were made due to the fact that they permitted the exporters to do the reclassifying. That has nothing to do with this amendment?

Mr. GATHINGS. No. The Agricultural Marketing Service itself makes this classification.

The Department plan to reclass at the time of sale has overwhelming support because it recognizes the essential obligation of the Government to deliver to buyers that which is sold to them and collect the correct price for the cotton delivered.

Mr. WHITTEN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I ask unanimous consent to proceed for 10 additional minutes and to revise and extend my remarks.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. WHITTEN. Mr. Chairman, one of the things to be regretted in situations that we face on occasion is that personalities seem to get into these discussions. I have no personal animosity in any direction, departmentalwise or otherwise. I do have a responsibility and an obligation as chairman of a subcommittee, by appointment of the House of Representatives, to do the very best I can to bring together these various matters; to recommend to the subcommittee first and then to the Congress what I consider to be the soundest approach that we can make.

I will succeed only as I get support.

I am sure that my friends and colleagues, who seem to feel very strongly about this matter and who indicate that there is some competitive situation between positions—and, goodness knows, I want to assure everyone there is no such feeling on my part; but I do know that all of us are a little quick tempered right now. I do not appreciate the statements made, with no name given. It is hard to agree on legislation. It is hard to get together on a farm bill. I know there are those who have not had a chance, perhaps, to read our hearings; but here are the facts in this matter.

Many of your big international cotton merchants are, in addition, big warehousemen. They have made millions of dollars a year storing cotton which belonged to the Government in their own warehouses. When we finally, against the opposition of these international cotton merchants, when they were holding cotton off world markets while they were getting rich in Mexico and elsewhere—got the Department to offer cotton in world markets—these same international cotton merchants who had opposed sales became the chief buyers, frequently buying cotton that was in their own warehouses where they had the opportunity to know what they might get in a reclassing of that cotton, which is a tremendous advantage.

We had an investigation of this matter. Believe me, I wish that my friends on the legislative committee on most of these occasions had my job, because it is not a task for which you get much thanks. I wish they would take it over because, goodness knows, they would quit spending much of what they commit us to.

Our investigation showed that some of these merchants had gotten as much as $12 and $15 million a year in rebates on cotton that they bought, which they had in their own warehouses. Some of that cotton was reclassed for the Government by classers who worked, normally, for the buyer who would benefit from any down class. The names are shown in our hearings of 2 years ago.

Mr. JONES of Missouri. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman.

Mr. JONES of Missouri. If the gentleman knows that to be a fact, does he not think that the Government has a case of fraud? And does the gentleman not think that his committee has the responsibility of seeing that that is prosecuted? What the gentleman has said clearly outlines a criminal offense.

Mr. WHITTEN. You know, I have just been accused of going far beyond my authority. But I do not have any control over the Department of Justice.

Let me say to my friend from Missouri, we printed these investigations. They were printed. They are in the hearings. I know the gentleman, like myself, does not have time to read all the hearings; I do not have time to read hearings from other committees sometimes, too. But may I point out to him that insofar as the testimony showed, much of this cotton that had been reclassed and on which these rebates were given was, in turn, sold in world trade at higher than the original class. This is a matter of record.

We are told that under this amendment, if it is adopted, you will not have any rebates. That is technically right but misleading, because if the present plan goes through they will not get rebates but will obtain discounts, because they will pay you 85 to 90 percent to start with, and you get a discount. Is not that something, to shift from a rebate to a discount?

What are we doing in this bill? We talk about a frank and fair market. In our limitation we say, "Reclass this cotton if you want to and put it on the counter and let everybody have the same chance to bid, not only the fellow who has it in his warehouse and has the opportunity to know what he is buying." We say, "Reclass at the time of sale if you want to, but do not sell it and then reclass."

The big shipper has an advantage. The Government pig is in his warehouse, in his poke, so he buys it sight unseen to the Government, sight unseen to his competitor. He knows what he is getting. Where he once got a rebate, now he would get a discount. We would still have to sign the check. Now he would come in and get his discount. We sign the check to restore impairment to the Commodity Credit Corporation.

Let us see what is involved here. I do not want to get excited about this, but it is quite hard not to in view of some of the statements that have been made about me personally. Goodness knows, somebody had better start trying to run something. Our Committee on Agriculture sent a resolution down to the Department. Let me read what it said:

> Whereas the House Committee on Agriculture has had under consideration for the past several months questions relating to the reclassing and sale of cotton owned by the Commodity Credit Corporation; and
>
> Whereas the views of cotton producer, cotton users, and the cotton trade generally appear to be virtually unanimous that CCC cotton should be reclassed at the time of sale.

We do not do that. We do not even try to prevent reclassing at the time of sale if that is possible.

The producers, the users, and the trade generally are mentioned, as having agreed, but the taxpayer is not mentioned.

I am afraid what is wrong with this now is that we have a national farm program whereby we divide up these apples and give everybody in the deal a part of it. In this bill here today our committee has had to sign checks for about $4 billion. We had to pay back what the Commodity Credit Corporation has paid out. Actually the producers are not opposed to our position. Let me quote them. The North Carolina Cotton Promotion Association, Inc., on March 29, 1960, sent this telegram to Secretary Benson. I quote:

> North Carolina cotton producers urge 1960 regulations on reclass of CCC stocks of cotton reflect fairest price to farmers in operation. It is strongly recommended these regulations be framed to prohibit rebating purchasers following final sale.

Let me quote the message of the Tennessee Agricultural Council:

> Following wire sent today to Agriculture Secretary Benson: "Due your current consideration involving reclass of CCC cotton stocks we wish to reaffirm our previously expressed opposition to reclass except where determined to be necessary by USDA and then only before being offered for sale."

So everybody will have fair treatment.

Then I quote the Louisiana Delta Council, which sent this telegram to Secretary Benson:

> In view of continued discussion of reclassing CCC cotton stocks, we would like to restate position of this and other organizations affiliated with the American Cotton Producer Associates: "Continue prohibition against reclassing of CCC stocks after sale."

Mr. Chairman, somebody is being taken when it is said the farmers are for the huge sums being paid to the cotton traders which are charged to them.

Mr. Chairman, I apologize for being excited about this matter but it was pretty hard to take a while ago to be accused of threatening anybody. I do not believe anybody who has known me in my 19 years of Congress would say that I have ever resorted to a threat.

If you vote for this amendment, it is not going to change my feeling toward you. I will have done my best. I do say, if you vote for this amendment, you are continuing to give an unfair advantage to the big American international cotton interests who have warehouses and who have this cotton in their own warehouses. Again our committee urges the Department to reclassify cotton where it finds it necessary. Reclass it if need be and lay it on the counter and give every bidder an equal chance, and thereby protect the Government's investment. What is wrong with that? Read our limitation again. It says only that the cotton cannot be reclassed after the time of sale. You cannot sell it to somebody, and after it is the buyer's cotton go out and reclass it and give him a discount as they would now, or a rebate as they formerly did. My friends, if ever there was a time in history, if you are interested in American agriculture, now is the time to begin to protect the assets of the Commodity Credit Corporation. If you do not find some way to do it, it is not only the cotton trade that will go down but the cotton farmers as well. We have brought to

you our honest and sincere judgment with respect to this matter. We are asking for fair treatment to every bidder and buyer. Let all cotton be reclassified. Lay it on the counter. Give them all a chance. We do not believe in this extra advantage—it cost us $166 million since 1956. Again I ask you to think this matter over carefully. In this meeting that they talk about, we asked whether these buyers who would get a reclassification and a discount would sell the cotton in the world markets and in world trade at the new rate. They said, "Oh, no." We asked them if they would show us their books because they said that they lost money. There again, they said, "Oh, no." They claimed they wanted a reclassification at the time of sale. We authorize that in the bill.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Texas.

Mr. POAGE. Does the gentleman mean to say he contends it would be all right to reclass at the time of sale—and that is all we are proposing?

Mr. WHITTEN. Certainly.

Mr. POAGE. If the gentleman means that a reclass is made when these people bid—and they bid on the catalog and they have the bales delivered to them—if the bales are to be reclassed when they are delivered, I do not think there is any difference of opinion between us.

Mr. WHITTEN. My friend shifted words on me.

Mr. POAGE. Is not that at the time of sale?

Mr. WHITTEN. You say, "Delivered" and I say again if there is to be a reclassification, do not let the fellow who buys the cotton that is in his warehouse who can know what he has and then reclass the cotton after it is delivered to him—which means you just give him the warehouse receipt and the cotton stays in his warehouse.

Mr. POAGE. When do you want the reclassification?

Mr. WHITTEN. Prior to the sale.

Mr. POAGE. Prior to the sale—that is the point.

Mr. WHITTEN. Here is the point—there is no such thing as a reclass at the time of sale or so I am advised. It has to be before or after. All the wires and telegrams that I received were to the effect that they wanted the reclassification at the time of sale. But, when you analyze it, there is no such thing. The reclassification is made either before it is offered for sale or after it is sold to somebody and it has been reclassified after he has made a firm sale. We say—do it in advance and give everybody an equal opportunity and let us stop this unfair practice which is costing us $166 million per year.

Mr. GATHINGS. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Arkansas.

Mr. GATHINGS. I understand that you want to reclass all the cotton in the CCC stocks; is that it?

Mr. WHITTEN. I want the CCC to make its own determination.

Mr. GATHINGS. You would want to reclass the cotton before sale and not after the sale?

Mr. WHITTEN. Certainly.

Mr. GATHINGS. In other words, you want to reclassify the cotton before sale. As a matter of fact, there will not be too much cotton moving out of the Commodity Credit Corporation because in 1960, because of the fact they have that 115-percent support level on B cotton, it has to come out of the 115 percent above the support level of B cotton, and there will not be too much cotton moving out. If you are going to spend millions and millions of dollars here reclassifying all these stocks of cotton and then if only a little cotton is sold, and 6 months later you have to reclassify the stocks again and 6 months later you have to reclassify it again——

Mr. WHITTEN. Mr. Chairman, I am sorry I cannot yield further to my colleague. I can understand that where $166 million in rebates are concerned, they will fight very, very hard to get that right back whether it is in the form of discounts or otherwise. May I say this—the cost of reclassifying cotton is peanuts as against $166 million. Not only that but the Department says, if we reclass it we can include those charges in our selling price. They testified that they can pass it on. Let me say again, if you do have to reclass every 6 months, do not reclass at all. But, if so, then let us treat everybody alike, including the taxpayers.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield.

Mr. GROSS. How about corn and wheat and rice that the farmers sell?

Mr. WHITTEN. If you are going to vote for this amendment, you ought to change your method of selling wheat and corn. You have not had this benefit. If these big cotton firms take this on, you can rest assured that these other big merchants in corn and rice and wheat will take it on. We cannot stand it. We are just about bankrupt. I hope you will vote down this amendment which will provide millions in discount or rebates, charged up to the farmers.

Most Members seem not to realize that we are about to lose a farm program because of payments to nonfarmers, who advocate abolishing the price support system.

Mr. JONES of Missouri. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I feel sorry for those who do not understand this any more than I do, and I have had some experience with it. I am going to try to make two or three statements which I hope will be helpful.

In the first place, when this cotton is originally graded, it is classed by hundreds of people employed by the U.S. Government. During the cotton season there are many people who perhaps are not as well trained in the grading of cotton as they should be. It goes into the loan as being of a certain grade, staple, or whatever it is. Then, when we get ready to have a sale of cotton, the people make a bid, and they are bidding on a certain grade, whether it is 1 inch or whatever, and naturally they expect to buy the grade which they think they are buying. As a matter of equity, if you go into a store and say you want to buy a particular grade of a product and you pay for it on that basis and you get home and you find there was a flaw or something in there, you would go back to the merchant and show him the flaw, and if he did not make you a refund I think you would have just cause to lose confidence.

What has happened in the past is this: Under the CCC sales program, when a purchaser bought cotton he looked it over. When he found that some of the cotton was overclassed he made demand for a refund, but if he found that some of it had been underclassed and he got a better bargain, he did not say anything about it. So the only cotton that was reclassed was that which had been overclassed, and it was an honest mistake that somebody made. Because it had been overclassed, a refund was made.

Now, we have said when we reclass this cotton we are not going to accept the obligation to reclass only that which the buyer picks out but it will all be reclassed, and then if some of it has been undergraded, we will get a higher price than the Government had made a loan on.

Another thing I think we should bring out is the fact that this section of this bill, whether the committee admits it or not, is legislation in an appropriations bill. I submit to you that if we are going to operate under our system of committees—I do not say that every member of the House Committee on Agriculture is an expert—I know I am not an expert, but I do believe that if I put in a lot of time and try to inform myself, on things that pertain to the agricultural economy that are referred to the Committee on Agriculture, I think the decisions on policy should be made there. Because there might be a difference of opinion between the Committee on Appropriations or the individuals on that committee—I have the greatest respect for all those on the committee—the chairman, Mr. MARSHALL, Mr. ANDERSEN, and all of the other gentlemen on the committee. I do not doubt their sincerity at all. But I do say, with all sincerity, that I think the Committee on Appropriations has encroached upon the duties of the other committees of Congress. I think that policy is growing too much. I do not think that could have been sustained on a point of order, but I think anyone reading this section will admit that it is legislation.

They are legislating in this appropriation bill, which is contrary to the rules of the House.

Another statement has been made here which I think has been misleading and confusing, and I want the chairman of the committee to pay particular attention to this. The officials of the Department of Agriculture when they were before our committee when we were considering this and before our committee adopted unanimously a resolution asking the Department of Agriculture to reinstate this practice of reclassification, we asked about other commodities; and I think I am correct when I say that if

I as a purchaser go to the Department of Agriculture and buy 10,000 bushels of wheat supposed to be of a certain grade, make the purchase on that grade, but when the wheat is delivered to me it grades lower, that I do not pay the amount I originally agreed; I pay the amount based upon the class of wheat at the time of delivery. I ask the gentleman from Mississippi [Mr. WHITTEN] if that is correct? The gentleman made a statement a minute ago. Can he not answer my question?

The CHAIRMAN. The time of the gentleman from Missouri has expired.

(By unanimous consent Mr. JONES of Missouri was allowed to proceed for 5 additional minutes.)

Mr. WHITTEN. May I say to the gentleman from Missouri I join with the gentleman from Minnesota. I was quoting him. I was also speaking my own understanding of the matter, but I am not an expert on that.

Mr. JONES of Missouri. Let me rephrase my question. I do not want to be misleading. The chairman has made a statement here. He is a good friend of mine and much as I admire him on many things I think sometimes he, like the rest of us, gets a little confused.

As a matter of equity, would it be fair for the purchaser to pay the price for the commodity at the time he was buying or to pay the price for the commodity at the time it was delivered. Which would be fair?

Mr. WHITTEN. May I answer that in my own way?

Mr. JONES of Missouri. Yes.

Mr. WHITTEN. Classifying is an art, not a science. The same classifier will class the same bale one way one day and another way another day.

Mr. JONES of Missouri. The gentleman is evading the question. I am not going to yield further. I asked a straight question. Is it or is it not? Is it right or is it wrong? And the answer can be yes or no, or right or wrong. You are trying to get in an argument about the art of classifying cotton. That is not the question. The question is one of fact: Should a man pay for something he does not get?

Mr. WHITTEN. He bought cotton of a certain class that is offered in the catalog. This is from the stock. There is no guarantee by the catalog that they will deliver that. There is a need to reclass cotton, but the catalog does not guarantee that, on the day you get it, it will be that. It is listed in the catalog, showing the day it was classed. That governs.

Mr. JONES of Missouri. I wish to yield now to the gentleman from Minnesota to answer the question about wheat and corn.

Mr. MARSHALL. The gentleman from Missouri asks me a question concerning statements I made relative to the grading of wheat and corn?

Mr. JONES of Missouri. Yes.

Mr. MARSHALL. I will say to the gentleman that the buyer of stocks from the Commodity Credit Corporation buys those on the basis of the grade; he pays for it on the basis of that grade, and they are accepted on a basis of that grade. If they grade at a lower grade in his estimation he can ask for an appeal of that grade, but it does not usually affect the price which he pays for that commodity.

Mr. JONES of Missouri. What does he appeal to?

Mr. MARSHALL. He appeals to the Federal Grading Authority.

Mr. JONES of Missouri. And then if it is graded lower does he get a refund?

Mr. MARSHALL. No.

Mr. JONES of Missouri. What does he get to make up for it?

Mr. MARSHALL. I do not know of any instance on record for cotton where a rebate has been made for change of grade.

Mr. JONES of Missouri. Do they give him more wheat for it? Do they give him something? My point is this: If I buy wheat and it turns out to be a lower grade than I paid for, does the gentleman mean I do not get a refund?

Mr. MARSHALL. You do not.

Mr. JONES of Missouri. Why does a person appeal from a grade then? That is what I want to know; what does he get on an appeal?

Mr. MARSHALL. Attempts have been made to re-collect on that basis. To my knowledge they have not been able to do so.

Mr. JONES of Missouri. If you have corn that has molded, it might be taken in as No. 2 corn. If it has deteriorated in a bin it is not going to be sold except as such.

Mr. MARSHALL. He has accepted the grade of that corn on the basis of purchase, and he accepts it on that basis. That corn may be shipped in a car for 2 weeks, then he takes an appeal, the grade is appealed, and the grade is lowered. Can the Government back up that kind of a setup?

Mr. JONES of Missouri. I refuse to yield further. Let me make this statement: The gentleman has said that there is an appeal. I leave it to your reasonable judgment. If there is a provision for appeal and there is no provision for a refund what is the use of having an appeal? Does that not make sense?

Another thing. Let me say this: I am not smart, but I can listen sometimes. I do know that the representatives of at least two divisions of the Department of Agriculture have appeared before our committee this past week. I asked them specifically about this and they told me unequivocally that in the case of wheat or corn or grain if the Government made a sale and that wheat, corn, or grain did not measure up to the standards that the purchaser was paying for, there was a refund.

I make that statement unequivocally.

Mr. SANTANGELO. Mr. Chairman, I rise in opposition to the pending amendment.

Mr. Chairman, I direct my attention to representatives of the city who perhaps have been as confused as I have been in the past. If this amendment is adopted it will be one of the greatest boondoggles and giveaways that this Congress has ever made. We have seen the extent and the enormity of it to the tune of $166 million-plus. There have been some conversations by the gentleman from Louisiana and the gentleman from Alabama that it is unfair for these people to get a lesser classification or lower grade than they bargained for. That is not the case, however. They know what they are getting because the representation to them is that it is a certain class on a particular date. Many of the people who are buying these commodities are warehousemen who have the cotton in their warehouses and they know the condition, they know the true classification.

Let us see what the Assistant Secretary of Agriculture, Mr. McLain has to say. On page 456 of the hearings, part 3, a question was asked by Mr. WHITTEN:

> Do you just say that it is what you classed it on that day it appears in the catalog?
>
> Mr. MCLAIN. We just say "This is what it was the day it was classed."
>
> Mr. WHITTEN. So there is no misrepresentation to the buyer, is there?
>
> Mr. MCLAIN. In that sense, no.

There is no representation. They know the custom is they are buying it on the date it is classified. There may be a change, but in the past they have come in and asked for a rebate and now it is a discount, and that has cost the Government, through the Commodity Credit Corporation, $166 million.

If you continue this type of practice, the city folks will say, "Well, a plague on both your houses," and it will destroy the farm program. The farmers will be in another terrible fix.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. SANTANGELO. I yield to the gentleman from North Carolina.

Mr. COOLEY. May I say to the gentleman that our committee has made no such proposal. Our recommendation was to the effect that the procedure should not involve rebates to purchasers. We abhor that $166 million rebate just as much as your committee does, but what we are saying is that a man should not be forced to buy a pig in a sack.

Mr. SANTANGELO. The gentleman knows and the trade knows that they buy it as it is classified, and if you will look at page 458, you will find out the number of warehousemen who have the cotton stored in their warehouses, and they know what it is. They are not being deceived or fooled.

Mr. COOLEY. You are talking about something that is water over the mill. Let me read a statement, and this is important. This is language of Mr. McLain:

> I have been pretty close to the grain business all my life and know that all grain is bought and sold on the basis of what it is the day that you buy and sell it.

Mr. SANTANGELO. Apparently he is telling the legislative committee one thing and then telling the Committee on Appropriations another thing. I trust this amendment will fail.

Mr. JONES of Missouri. Mr. Chairman, will the gentleman yield?

Mr. SANTANGELO. I yield to the gentleman from Missouri.

Mr. JONES of Missouri. One short question. I am asking this in all sincerity. Does the gentleman believe that

the recommendation made by the House Committee on Agriculture that the Department adopt a certain procedure, or to put it in another way, do you think that we are asking them to go back and do exactly as they did, say, 2 years ago?

Mr. SANTANGELO. The gentleman from North Carolina answered that question. He said you are asking not to go back. That is the answer to your question. But, what we are saying, it should be classified before it is sold so that they will be protected more than they have been protected in the past, but they know that up to this point they are buying the thing as it was classified when it is in the catalog.

Mr. JONES of Missouri. Do you think we have not made some provision in there to protect against the very thing that you are saying and we are not reverting to the past practices but asking for equity?

Mr. SANTANGELO. We are asking that the farmer be protected and also the purchaser; that the cotton not be classified after sale, with none of these rebates or discounts, which is discrediting this farm program.

Mr. ABERNETHY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes and to revise and extend my remarks.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. ABERNETHY. Mr. Chairman, I come from a cotton growing district made up of very small cotton farmers. I believe I represent in the State of Mississippi more cotton farmers—not more cotton acres, but more cotton farmers than any other Member from our delegation.

I am not in the slightest affiliated with nor interested in international cotton shippers, cotton merchants or any of the so-called big-business cotton people. However, my philosophy of government is such, it has been and always will be, that I believe my Government ought to deal rightly and fairly with all people, irrespective of their size or whomever they happen to be. It is my feeling that American citizens should all have equitable treatment at the hands of their government. It is with that philosophy, and that view that I address myself to this amendment, that I support it and beg you to support it. I believe it is right. I believe it is fair; and I believe it is in the interest of the cotton industry, particularly the cotton farmers of my congressional district.

I have the highest regard for my colleague from Mississippi, an able member of my delegation, and an able and effective Member of this House. I concede to him that he was motivated by the highest of principles when he included the language in this bill which we propose to strike. It just happens that my committee, all 34 members thereof, completely disagree with him and his colleagues on the Appropriations Committee.

What are we asking this House to do? We are asking you to permit the establishment of a program for the disposal of Commodity Credit cotton in identically the same manner that it disposes of other commodities to which it has taken title. What we seek is to bring the cotton disposal program in line with the disposal of wheat, corn, feed grains, and all other commodity stocks. We are asking that the Department apply the same rules and the same regulations to all commodities alike, which rules and regulations we firmly believe to be sound and equitable and which we also believe will be in the best interest of our farmers. We do not seek special privileges for anyone. In fact, these are things which we protest and abhor. We would not under any circumstances be a party to such.

With all deference to those who have contended to the contrary, I can assure you that if you go to the Commodity Credit Corporation and purchase wheat or corn of a certain quality and a certain grade, if the Corporation does not deliver to you the quality or grade which you purchased, then you are entitled to and you will receive an adjustment. As my colleague from Missouri [Mr. JONES] pointed out a few minutes ago, there is a systematic means of appeal made available for that specific purpose. The Government is bound to make good on its representations. The only sort of Government which refuses to make good on those conditions is found behind the Iron Curtain.

How does the proposal which we support function with reference to cotton? The cotton is cataloged according to staple and grade. It is offered for sale according to staples and grades. When a purchaser orders from that catalog he is entitled to have delivered not only the quantity ordered but also the cotton of the staple and grade which he ordered.

Let us compare the situation to that of a wholesale hardware house which lists items for sale according to quality and grade in its catalog. Therein you will find listed certain sizes and grades of pipe. Let us say that from the catalog you ordered 6-inch pipe. They shipped it to you but when it is delivered you find it is 8-inch pipe. If the delivery happens to be of a better grade as in this case and a higher priced pipe than that which you ordered, then you should pay the difference, that is, if you keep it. That is what we propose in the amendment we offer here today. If it is of a cheaper grade, such as 4-inch pipe, then you are entitled to a credit, that is, if you retain it. That is exactly what we support here today with regard to the disposition of Government stocks of cotton. If you order from the Government's catalog a particular bale of cotton which you cannot see (and you cannot see it because the stocks are stacked in warehouses, four, six, or eight bales in height, spread over an area of acres and acres), then you are entitled to have delivered exactly the quality which you ordered.

If it is found upon delivery that the purchaser has received a higher quality cotton than that which he ordered, then our amendment requires him to pay for it, in full. If the delivered order is found to be of a poorer quality then the purchaser is required to pay only for that which he received.

This is exactly what the Department of Agriculture is proposing in its disposal program. Certainly the equity of it cannot be challenged. And we of the legislative committee support it because it is equitable. I have never found that we got in trouble when we deal rightly and fairly with our people.

There may be some in our country—and unfortunately there are a few—who offer to sell goods of a certain quality and then deliver goods of a poorer quality. In some instances they get by with it. But that does not make it right.

Do you think your Federal Government should be permitted to do that? Do you think it is right? Do you think it is fair? Do you think it has merit? Is it the sort of example you would have your Government establish? Or be a party to? Are you going to force the establishment of a sales program which would deny the great Government of the United States of America the privilege of making restitution for its mistakes? Or will you require our Government to live up to the same principles that we expect of ourselves as citizens? Actually this issue is just that simple.

Mr. Chairman, much has been said about this $166 million refund. What is the truth about it? These refunds were made possible under another program, under another set of rules. We do not approve that program or system, either. We do not seek its reinstatement as has been inferred. We agree it was wrong, and we congratulate our colleagues on the Committee on Appropriations for complaining about it. We salute them for uprooting and putting a stop to it. We think they rendered a fine service to our Government and also to our farm people. All of us stand foursquare on that point.

Under the old program, these merchants bought cotton from the Commodity Credit Corporation. On delivery they picked out the good bales and said, "Oh, we have a premium here so we are not going to ask that these higher quality bales be reclassed. We will just retain these." But some of the cotton delivered was not up to the quality of that which they purchased. So, they sought and regained a reclass of this particular cotton. Thus the rebates of $166 million.

That program was a mistake. We fully agree with that. Such should never have been permitted. The administrators of the program made a mistake and a bad one. They are not proposing to return to such a disposal program and we would not condone or tolerate it if they did.

We have now recommended to the department that it put into effect a disposal program which has been endorsed from one end of the cotton belt to the other—the cotton farmers, the cotton trade and everybody that I know of—including the American Farm Bureau Federation which is the largest farm organization in America.

We are seeking the institution of a program which will require the entire delivery to be reclassed, not just a part but all of it. If the grade delivered is better than that which the purchaser bid

for, then he will be required to pay for the better grade; if it is of a lower grade then he will be required to pay only for the lower grade. Is that not right? Is that not what should be done?

Now, my friends on the Appropriations Committee themselves say they do not object to a reclass. In fact, they recommend it. But they say reclass all of the Federal stocks before every sale. Nothing could be more costly or impossible.

I think I can straighten you out on that. Do you know how many bales of cotton there are in storage today? I understand that there are about 8 million now stored in Commodity Credit Corporation stocks.

Do you know how often they have these sales? As often as once a week, several sales each month.

Are you going to require the Government to spend 69.7 cents a bale—which is the approximate cost—to reclass every bale when we know only a small portion will be sold? And then follow this up, week after week, sale after sale? It would cost better than $5 million to reclass every bale right now? Is this to be done over and over and over before each sale? Why it would soon wreck the Commodity Credit Corporation. If the entire stock moved out on one sale the proposal would have merit. But on the contrary only a small amount is bid off at each sale.

Of course, you are not going to require such as that, but that is what our friends on the Appropriations Committee have contended should be done. It is most impracticable and too costly. We ask that they reclass only the amount which was purchased by the merchant.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. COOLEY. Mr. Chairman, I ask unanimous consent that the gentleman from Mississippi may proceed for 5 additional minutes.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. ABERNETHY. I thank my distinguished chairman. We ask that the reclassing be limited to only that which the purchaser bought.

Who is going to pay for the reclassing under the program which we, on the legislative committee, are supporting? Would the Government have to pay? No; the Government would not pay one dime of it. But that is what the Committee on Appropriations is recommending. They not only recommend that the Government reclass at its expense the entire 8 million bales of cotton before the next sale, but they recommend that this be the practice before every sale. Mr. Chairman, we are confident they just have not studied this matter through. Under the program which we of the legislative committee support and which the Department has announced, this costly expense would be avoided completely, and the cost of reclassing all purchases will be paid for by the purchaser.

Mr. Chairman, I am very sorry that this hassle has taken place this afternoon. Maybe it is not quite correct to describe it as a hassle because I recognize the sincerity of everyone and the existence of honest differences of opinion. I concede to those who differ with us the right to their views and I have no doubt but that they concede the same to us. I regret that the issues could not have been fought out in the committee rooms. As for our committee we had no knowledge that the Appropriations Committee would tack a limitation on its bill which is nothing short of legislation and actually the prerogative of the legislative committee. Therefore, we would have been derelict in our duty and responsibility if we had not met the issue head on.

Mr. Chairman, in conclusion I want to repeat, all we are asking you to do is to require the Government of the United States, of which you and I are a part and an arm thereof, to live up to its representations and to the same degree of scrupulous dealings that is expected of its citizens.

The CHAIRMAN. The time of the gentleman from Mississippi [Mr. ABERNETHY] has expired.

Mr. BOGGS. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I am not a member of the Committee on Agriculture nor a member of the Committee on Appropriations. I have the highest affection and the most profound regard for both the chairman of the Committee on Agriculture and the chairman of the subcommittee presiding over this legislation. If it were not for the fact that the office of the Commodity Credit Corporation which handles this program is located in my city, and if it were not for the fact that many millions of bales of this cotton move through the port which I represent, I would not presume on this body to enter into this debate. But in view of the fact that this is the case, I hope you will bear with me for just a few moments.

I was much interested in the remarks of my good friend from New York [Mr. SANTANGELO] when he referred to the basic difficulties confronting people who represent urban districts in connection with the farm program generally. It happens that I represent a district that is almost as urban as that represented by the gentleman from New York. I would say to the gentleman and to the chairmen of this committee and the Committee on Agriculture that what we are concerned with is a Pandora's box of a program which has turned over the entire cotton industry to the Federal Government.

This problem being discussed would not have arisen if we had normal channels of trade and commerce for the disposition of cotton. Formerly the producer, the trader, the merchant, the textile mill all did business across the table.

Were that the case now you would not have this trouble. But the truth is the Government today is the main factor in all cotton operations.

I was quite amazed last year to learn that on a day when for the first time in modern history no cotton moved on the New Orleans Cotton Exchange, on that very day the Community Credit Corporation, or the Government of the United States, sold something like a half million bales of cotton. So that at the time when the merchants and exchanges, and all the rest of them, were laying off personnel because they had no work for them to do, the Commodity Credit Corporation in New Orleans was putting on hundreds of extra people to handle this program.

So that if there ever was a program—and I say this without being critical of anyone—where the Government has taken over lock, stock, and barrel, it is the cotton program. This is what happens when you have almost complete Government operation. I do not know what the solution is. I do not pretend to give you a solution, but I do know that we have opened up all kinds of Pandora boxes. And I know that the amendment of the gentleman from North Carolina is fair and necessary if the cotton exchanges could function we would not need the amendment because the Government would not own all the cotton.

I heard my good friend the gentleman from Georgia [Mr. PILCHER], who sits on the Foreign Affairs Committee, talking about the great international merchants; and I have heard all these names thrown around, all of these comments about boondoggling, and so on and so forth.

I am not too much influenced by them, for all of you know people use these adjectives to discredit or credit an operation. But I will say that if there ever was a boondoggle it is this differential that for some reason or other we have had to create so that if you buy cotton for consumption in Japan you pay 6 or 8 cents less than you do for cotton for consumption in Georgia or in North Carolina or in South Carolina. We have had to do this, we are told, in order to get this cotton into channels of world trade. The so-called international merchants are the ones who moved about 6 million bales of it this year under this program. This comes back to our Committee on Ways and Means, because the gentleman from Georgia [Mr. DAVIS] complains, and probably with some justification, if not a great deal, about the discrimination against the textile industry in the United States as a result of this price differential for foreign textile mills.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. BOGGS. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

Mr. WHITTEN. Reserving the right to object, and I do not want to, I would like to have some indication about how many Members wish to speak on this amendment. I ask unanimous consent that this amendment and all amendments thereto close in 30 minutes, the last 5 being reserved to the Committee.

Mr. HIESTAND. Mr. Chairman, if the gentleman will yield, I would like 10 minutes.

Mr. WHITTEN. I cannot agree to that, the gentleman understands.

Mr. HIESTAND. Mr. Chairman, reserving the right to object, I sat here patiently all afternoon listening to the debate on the other side of the aisle and have had no opportunity to speak. I re-

spectfully request that I be afforded 10 minutes' time.

Mr. WHITTEN. Mr. Chairman, I withdraw my consent request; I do not want to preclude the gentleman if he wants later to get recognition.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana that he proceed for 5 additional minutes.

There was no objection.

The CHAIRMAN. The gentleman from Louisiana is recognized.

Mr. BOGGS. Mr. Chairman, the reason I mention all this is because I think it is pertinent. I hear much talk about scandal in warehousing. I do not know whether there is any scandal in it or not, although I hear people talking about it; but, after all, we know that cotton textile mills used to pay for warehousing cotton. If the Government of the United States pays for it—and today the Government is the biggest warehouser in the business—the mills will not. Now the Government pays.

All this means that today the question is: What kind of merchant is the Government? That is really what is involved here.

Is reclassification something new in the cotton business? I do not think so. As far as I know it has been going on ever since people have been trading in cotton; and as far as I know it was carried on until July 31, 1959, by the Commodity Credit Corporation. I can assure the gentleman from Minnesota that I am as much opposed to rebate, to fraud, to boondoggling as he is; but I also believe in fairness, in equity, and justice. The gentleman in response to the question of the gentleman from Missouri [Mr. JONES] regarding grain made certain assertions. I will read to the gentleman from testimony on the 1960 cotton program, a joint hearing before the Subcommittee on Cotton, and so forth, Committee of the U.S. Senate, testimony of Mr. McLain, in response to a question which I asked. I asked the identical question the gentleman from Missouri asked; and Mr. McLain, the Assistant Secretary of Agriculture, said this:

Congressman BOGGS, grain is sold on the basis of the grade the same day it is sold. You would not think of selling a carload of corn unless the fellow you sold it to had a right to get a grade the day he sold it. He would think that you were stupid if you talked about anything else.

I do not know whether there are any grainmen here, but this is true.

The cotton people think this is a privilege they ought to have. I personally, and I am speaking personally now, have a lot of sympathy for that point of view.

I said:

How is grain sold?

It is sold in many ways.

I said:

I do not know. Tell me about it.

He said:

I have been around long enough to know when people buy grain that they like to know what they are buying, not what the grade was at 6 or 3 months ago, but today.

Mr. MARSHALL. Mr. Chairman, will the gentleman yield?

Mr. BOGGS. I yield to the gentleman from Minnesota.

Mr. MARSHALL. I am so much pleased that the gentleman called that to my attention because that is exactly what I intended to say. The grain we have been talking about is graded on the day it is sold, not 3 months afterward.

Mr. BOGGS. Mr. Chairman, I do not want to inject myself into the heat that seems to be involved here between these two great committees. As I said in the beginning, I have profound respect for both of them. The thing that concerns me about the language written into the legislation by the gentleman from Mississippi [Mr. WHITTEN] is that it is an absolute prohibition against the trade practice which I think is completely legitimate and which has been carried on by the trade ever since it has been in existence.

The language suggested by the gentleman from North Carolina [Mr. COOLEY] may have some defects, I do not know, but it permits this body working in conjunction with the other body to work this thing out so that it can be fair and equitable to the people who purchase cotton. I say this is what we should do.

In conclusion and in reiterating what the gentleman from Mississippi [Mr. ABERNETHY] says, may I say that this is what the Government of the United States should do. If the Government of the United States has become the biggest warehousemen, the biggest storer, the biggest seller, the biggest exporter, then the Government of the United States owes the same degree of integrity as any other vendor and for us to do less than that is simple dishonesty.

Mr. HOEVEN. Mr. Chairman, I rise in support of the Cooley amendment.

Mr. Chairman, I ask unanimous consent to proceed for an additional 5 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

Mr. WHITTEN. Mr. Chairman, reserving the right to object, and I shall not object, I ask unanimous consent that all debate on this section and all amendments thereto close in 30 minutes, the last 5 minutes to be reserved to the committee.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa [Mr. HOEVEN] to proceed for an additional 5 minutes?

There was no objection.

Mr. HOEVEN. Mr. Chairman, at the outset I would like to clarify the RECORD as to the grading of corn and wheat. I think there should be no question that every bushel of grain delivered in this country is at the grade at the date of delivery. Now, when the Commodity Credit Corporation sells grain, the purchaser pays for the actual grade delivered by the Commodity Credit Corporation. If a warehouseman storing grain for the Commodity Credit Corporation delivers grain of a higher grade than called for by Commodity Credit Corporation warehouse receipts, the excess value is credited to a premium account. Later, if he delivers a lower grade than called for by the Commodity Credit Corporation warehouse receipt, the discount which would be assessed against him is offset against this premium account. Cash is not paid for deliveries of grain to the Commodity Credit Corporation if of a higher grade than called for by the warehouse receipt. I hope that will clarify the RECORD.

Now, Mr. Chairman, I do not pose as an expert on cotton. In fact, I know very little about it, although I have learned a lot about that commodity during my several years as a member of the Committee on Agriculture. The procedure for Commodity Credit Corporation cotton sales has for some time now been a point of dispute between the Agricultural Appropriations Subcommittee on one side and the House Committee on Agriculture and the Department of Agriculture on the other side. Naturally the members of the Committee on Agriculture, the legislative committee, are jealous of our rights and prerogatives. It has been clearly indicated heretofore, that there has been entirely too much of this usurpation of the committee's rights and prerogatives.

Section 408 of the bill is also controversial. That section is within the jurisdiction of the Committee on Banking and Currency. It seems to me that the legislative committees of the House should establish policy and do the legislating and let the Committee on Appropriations appropriate the money.

The proviso in the bill relating to reclassing of cotton would, in effect, reverse the announced method that the Commodity Credit Corp. will use in selling its cotton, and it would require a return to "catalog buying," which practical experience has proved unsound. Under the announced method of operation, the Commodity Credit Corp. will take in cotton from farmers under nonrecourse loans, and by direct purchaser, under the "A" program. After the required period of time has expired and if farmers have not repaid their nonrecourse loans, the Commodity Credit Corp. will take title to the cotton. This cotton is classed and graded at the time it comes under loan, or is purchased. At a later date, which is often several years, the Commodity Credit Corp. will sell the cotton by competitive bids but will guarantee a certain quality. Even under ideal storage the quality of cotton tends to deteriorate with age. After the sale the cotton will be reclassified at the buyer's expense, and if it does not meet the guaranteed quality, the Commodity Credit Corp. will make an adjustment for the buyer. If the quality is above that guaranteed quality, the Commodity Credit Corp. will receive an adjustment from the buyer. This is completely fair, equitable, and just.

Mr. Chairman, it may be rather unique for a corn farmer to take the floor in behalf of the small cotton farmers, and shippers. What we are proposing to do here by striking this provision from the bill is for the benefit of the small cotton

farmer. The big cotton farmer can take care of himself. He knows the ins and outs of the trade. It is the little fellow who needs our protection.

The present announced procedure is better, first, because it treats all commodities alike. Commodity Credit Corporation sells its other commodities on the basis of reclassification at the time of sale. It is sound administration to treat cotton in the same manner.

Secondly, it is a sound and equitable method of doing business. It is fair to both the buyer and the seller. The buyer knows what he is getting rather than buying a "pig in a poke" as proposed by the bill.

And, thirdly, the procedure under which adjustments are made is a two-way street. If cotton reclasses higher than that agreed upon, the buyer must reimburse CCC. What could be more fair and equitable and just?

Reclassification before final settlement is necessary to assure purchasers that they will receive what they pay for. This is particularly important to small shippers. Large merchants can operate better than small merchants when reclassification is not permitted, since they can operate on the basis of averages on a large volume of cotton. Small merchants handling limited quantities of cotton find it difficult and could incur substantial losses on particular lots of cotton. Therefore, it is highly desirable to keep small merchants in the program to the maximum extent practicable.

As to saving some money, the Department of Agriculture is convinced, and I am convinced, that selling cotton subject to reclass yields a higher net return to CCC on its investment and minimizes rather than adds to the capital impairment of the Commodity Credit Corporation. While an adjustment is required when cotton is sold in this manner, it is believed that, if cotton were not sold subject to reclass, buyers would have recognized the fact that the cotton may deteriorate after extended storage periods and protect themselves by submitting lower bids.

And so approval of the amendment is going to save the CCC some money. Both the Committee on Agriculture and the Department of Agriculture feel that the proviso set out in the bill is unsound because it would again, as I say, require "catalog buying," buying a "pig in a poke," which would be detrimental to the small shipper when the purchases from a great big pile of stored cotton in the warehouses, he knows he has to gamble, whereas the sharp, big operator, the big shipper, knows what he is doing, and can afford to put in a lower bid.

Mr. PELLY. Mr. Chairman, will the gentleman yield?

Mr. HOEVEN. I yield.

Mr. PELLY. I do not quite understand; after a reclass, is there a protection to the taxpayer and the Government against a windfall just as there is to the purchaser?

Mr. HOEVEN. There is; if the quality is above a guaranteed quality, CCC receives an adjustment from the buyer. It works both ways.

Mr. PELLY. Under the Cooley amendment?

Mr. HOEVEN. Yes. It saves the taxpayer money and saves the CCC money. The proposed amendment is fair, equitable, and just and should be adopted.

The CHAIRMAN. The Chair recognizes the gentleman from Texas [Mr. POAGE].

Mr. POAGE. Mr. Chairman, I think there have been altogether too many things said this afternoon but some things still need to be said. I have no ill feeling toward anyone. I do not charge any improper action, but I do feel that the subcommittee has exercised unsound judgment.

I think we should point out clearly that what we of the Agricultural Committee are asking the Government to do is exactly what that same Government requires of individuals. When individuals make sales of this kind they have to make good, they have to deliver what they purport to offer. I think a good many of our Members do not understand, even after the prolonged discussion, as to how CCC cotton is sold.

Cotton is sold from a catalog, a book, a big book like the telephone book. It says that 500 bales of Strict Middling cotton is in a warehouse at Waco, Tex. Cotton buyers all over the country are invited to bid. They have no way of seeing the cotton. They must bid on the representations in the catalog. If they bid as much as the minimum they will be considered. If anybody bids above the first bid, the high bidder gets the cotton. They are bidding on something which is described to them by their Government. They are told that this is Strict Middling cotton, and if it turns out that it is Low Middling, they are certainly not getting what they bid on. Is it fair for the U.S. Government to sell cotton that way? I think the gentleman who preceded me explained it very well. Certainly the big cotton firms are going to know about how much of this cotton will be overclassed and how much underclassed. They will know the average, by which all cotton may be expected to fall under the catalog grades, and they will bid low enough that overall they will suffer no loss. The law of averages—the basis of all insurance will protect the large cotton firms—at the expense of the Government. Surely the Government will get less for the commodities it sells when there is an uncertainty as to the quality of what it sells. Surely, the small cotton buyer cannot protect himself because the law of averages offers him no help. If you or I were to buy 1,000 bales of cotton thinking it to be Strict Middling, and it turned out to be Strict Low Middling, it would break us. That is why the big firms can live under the subcommittee's proposal while the small buyers cannot.

If we do not believe in maintaining grades we ought not to have grades in the United States. The reason we have grades in all commodities is that we believe it enables the producer to get a fair market and for the buyer to know just what he is buying. That is the only purpose of having grades. If we are to describe cotton by grade and then not have the U.S. Government live up to the announced grades, then it seems to me we had better quit grading any commodity.

There are a number of other fields of misunderstanding, but in only 2 minutes I cannot go into many of them. The gentleman from Minnesota is under a severe misapprehension when he tells us that wheat and feed grain grades are not made good. The U.S. Government sells wheat and feed grains on the basis of the grade at the time of the sale. The grade is taken at that time and that is all that we are asking for cotton. Grain is graded at the warehouse at the time it is weighed out to the buyer; we ask that cotton be graded at the time it is delivered. We do not sell grain by catalog. There is no such thing as selling these grains by catalog. They are sold by actual inspection, and it is made at the time of the sale. That is all in the world we are asking for cotton.

Mr. MARSHALL. If the gentleman will yield, I want to concur in what the gentleman says. That is what I have been trying to say, too.

Mr. POAGE. That is all we ask for cotton; that it be classed at the time it is sold. We just ask for cotton that the buyer should be able to see what he is getting at the time of delivery—he cannot see before delivery—and that if it develops that the Government cannot deliver what it advertised that it should adjust the price in line with what is actually delivered. If you are not going to allow cotton to be classed at the time it is sold you are asking it be classed a long time before it is sold. The result must be to cause the bids to be considerably less than they would otherwise be.

When you seek to involve your Government in some sharp practices which would not be tolerated in private business you must expect the Government to lose in the long run. I urge you to do the fair and the honorable thing. I urge you to let those who buy cotton from their Government have the same assurance of truthful representations that they would have if they were dealing with private business, or even if they were buying grain from the Government.

The CHAIRMAN. The Chair recognizes the gentleman from Maine [Mr. MCINTIRE].

Mr. MCINTIRE. Mr. Chairman, I rise to express support for the amendment that has been proposed. I also want to express to the Subcommittee on Appropriations for Agriculture my appreciation of the courtesies they have extended to me from year to year in the opportunities to present testimony before them. I sincerely appreciate it.

I was interested in the remarks of the gentleman from Louisiana [Mr. BOGGS] in which he comments on the fact that cotton finds itself in a situation where Government is now the biggest exporter, Government is the biggest warehouser of cotton, and Government is the biggest seller of cotton. This is a fact in relation to the commodity cotton in which many of us have been very much concerned as we analyze new farm pro-

grams. I think his remarks to that point are a good warning to those who think Government planning for every commodity is the only answer to American agriculture.

This predicament in which cotton finds itself repeatedly, as exemplified by the confusion in the discussion of this detail this afternoon, is a very good point to keep in mind as we think of farm programs which are supposed to be in the best interest of the American farmer.

I urge support of the proposed amendment.

The CHAIRMAN. The Chair recognizes the gentleman from North Carolina [Mr. WHITENER].

Mr. WHITENER. Mr. Chairman, not being a member of either of the committees involved in this discussion today, I am a little reluctant to inject my remarks into the program. However, coming from an area which is both a heavy cotton producing area and the heaviest cotton manufacturing area in the United States, I believe I have a bona fide interest in this matter. As I understand the Cooley amendment, its effect would be to put a purchaser from the Government in the same position as a purchaser from a private seller.

Some of you gentlemen, perhaps, are not familiar with the customs of the cotton trade. When a cotton manufacturer or a cotton buyer purchases cotton from a seller, it is subject to classification—or reclass, if you desire to call it that. Then if the parties are unable to agree on the reclass, under the standard cotton contract the classification is then submitted to arbitration.

The parties are bound to abide by the decision of the arbiters.

As I understand this amendment, it would merely say when an individual buys from the Government on the basis of a catalog quotation, saying that the cotton is Strict Middling of a certain staple length, then if it does not come up to that specification, the purchaser is entitled to have a classification and to get what he has agreed to buy from the Government in the first instance. That is to say, the buyer should only pay a price commensurate with the quality of the cotton delivered to him. I submit to you that this is merely fair play. It is consistent with the customs of the trade.

I cannot see how the adoption of the Cooley amendment will in any way prejudice the position of the farmer who, in the first instance, is selling this cotton to the Government. His transaction is over. He sold it at a certain classification which, apparently, was agreeable to him—or he put it under the loan program. The farmer is not injured in any way. If it is injurious to purchaser, then the Government should live up to its contract and to its agreement with the purchaser. Our Government should do the right thing with those people who are purchasing on a quotation from the Federal Government.

The CHAIRMAN. The Chair recognizes the gentleman from Virginia [Mr. JENNINGS].

Mr. JENNINGS. Mr. Chairman, I hope we can bring this question into a little better perspective. Many accusations have been hurled by people who, I think, have honest differences of opinion. But first of all, I would like to make it clear that the members of the legislative committee are not in any way connected with the large exporters or with the warehousemen, as has been charged here today. I am not a member of the cotton subcommittee, but it was my privilege to listen to the testimony throughout the hearings. I listened to the testimony, I feel, with an open mind and impartially. First of all, these hearings were conducted in a very fine and open manner. Everyone who was interested in this problem was asked to testify. Both the chairman of the legislative committee and the appropriations subcommittee were present. The resolution that was adopted by the legislative committee was read in part, but all of it was not read, and I would like to read it at this time:

> Whereas this committee has had under consideration for the past several months questions relating to the reclassing and sale of cotton owned by the Commodity Credit Corporation; and
>
> Whereas the views of cotton producers, cotton users, and the cotton trade generally appear to be virtually unanimous that CCC cotton should be reclassed at the time of sale: Therefore be it
>
> *Resolved*, That the Secretary of Agriculture is urged to put into effect as expeditiously as possible the uniform policy of reclassing all CCC cotton at the time of its sale and that this be done in such a manner that the procedure will not involve rebates to the purchaser but that, instead, the final price of the cotton which the purchaser will be obligated to pay will be determined by the reclassing carried out at the time of sale and that all of every lot of cotton sold shall be reclassified.

As I understand it, that is exactly the same procedure that is asked for and is given to the grain trade.

This is the testimony of Secretary McLain before the committee:

> I have been very close to the grain business all my life and know that all grain is bought and sold on the condition of what it is the day that you buy it and sell it.

That is everything in the world we are asking for under this Cooley amendment, that this cotton be classed what it is the day you buy it or the day you sell it.

The CHAIRMAN. The gentleman from Washington [Mr. HORAN] is recognized.

Mr. HORAN. Mr. Chairman, I think it has been established that this language sought to be stricken is not legislation, and that the Appropriations Committee is completely within its rights in putting in a restriction against the possibility of loss to the American taxpayers of $166 million in the future. The other committee has this correspondence with the Department, but why in the world we should not take a firm stand and have something written in ink instead of water is beyond me. I think this language should be allowed to remain in the bill. I think this language is fair. Certainly it is fair to the American taxpayers, and it ought to be allowed to remain in the bill.

The CHAIRMAN. The gentleman from California [Mr. SISK] is recognized.

Mr. SISK. Mr. Chairman, I am not a member of either of the committees that have been discussing this bill, but I am concerned with this provision because it is the understanding of the people in my area that this language would tend to preclude the movement of cotton out of Commodity Credit warehouses and would simply cause potential buyers to lay off and refuse to purchase cotton.

I think that basically we agree in principle. We agree that some of these rebates and some of the things they have found to have happened in their investigations have certainly not been good. They are things that should be prohibited. But it seems to me that the language which has been used here is not in the best interests of the cotton industry. If allowed to remain exactly as it is in the bill, it could preclude the movement of a lot of cotton from the Commodity Credit warehouses.

In handling cotton, if a potential purchaser desires to buy 10,000 bales of cotton and makes an offer of a certain price, say 30 cents per pound for middling inch cotton, and the Government says, "We will take it on that basis," then of course the purchaser wants to know that he is going to receive value in line with what his offer is. This language which says "after the time of sale" becomes rather important. When is the sale consummated? I would like to ask the chairman that question.

Mr. WHITTEN. May I say what our intent was. At the time the trade is closed. That is the time of sale. We mean it is reclassed in time to offer it to all business. There is no question as to what we intended.

Mr. SISK. As a practical matter, it seems to me you are saying that the Government would have to go in constantly and reclassify this cotton every month or every year in order to have it available for sale. Otherwise, the purchaser would have no way of knowing exactly the grade at that particular time.

Also, Mr. Chairman, I regret very much that the section dealing with poultry inspection was stricken from the bill on a point of order. It is my hope that the other body will restore this language and further my understanding that the members of the subcommittee will accept the provisions in conference.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FOUNTAIN. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The CHAIRMAN. The gentleman from Minnesota [Mr. MARSHALL] is recognized.

Mr. MARSHALL. Mr. Chairman, sometimes you get to the point in debate where you get a little bit away from the subject, although I must say this debate has generated a great deal of discussion and much of it has been to the point.

I would like to read the language that has been objected to and which the amendment would strike out:

Provided further, That no part of these funds may be used to formulate or administer a program which provides for reclassing of Commodity Credit Corporation cotton after time of sale to private individuals or organizations.

What is wrong with that language? Just what is wrong with it? It means exactly what it says, that it is sold at the time of sale and no reclassifying to permit rebate after that time. If you want to open up the door—this is the Treasury, remember—you are starting a precedent here. How can you hold the line on wheat, corn, and all the rest of the commodities the Commodity Credit Corporation holds on a basis of that kind? I could not venture to guess how much that would cost the taxpayers of this country.

I think this debate has been wholesome; I think it has been good. I admire all my friends on the committee and have as much respect for them as I ever did. It is a good committee.

Much has been said about jurisdiction. Having served on the Committee on Appropriations I must say that we are subject to criticism. There are numerous times when we on appropriations do things we know in the eyes of many people are unpopular, but we feel duty-bound, with the responsibility you have delegated to us, to watch for what we think are loopholes and those things that we think will render programs more economical and more efficient. Your Appropriations Committee, not only our subcommittee, but other subcommittees, have saved literally millions of dollars to the taxpayers of this country.

The CHAIRMAN. The gentleman from Ohio [Mr. Bow] is recognized for 2½ minutes.

(By unanimous consent Mr. Bow was allowed to yield his time to Mr. WHITTEN.)

The CHAIRMAN. The gentleman from Mississippi [Mr. WHITTEN] is recognized for 7½ minutes to close debate on this amendment.

Mr. WHITTEN. Mr. Chairman, may I say that in the heat of debate we say lots of things, but I want to say again what some of my friends may have heard me say frequently before: I have never tried to threaten or throw any weight around. I learned long since that not all people on the committee or subcommittee will agree with me. While our efforts have been successful many times, there have been others where we have not succeeded. I learned a long time ago not to say, "I will do so and so." I have never hesitated to say where I will stand, but I have never threatened anybody in the Department of Agriculture, I have not indicated that I would take anything out or that I would put something in; but I have said I would stand for what I think is right.

Let us see again where disagreement comes about. Most arguments come up because folks do not agree on what the facts are. Let me say again that cotton classing is an art, not a science; it is not an exact science in the least.

It is testified repeatedly before our committee that you can have the same bale of cotton classed by 10 classers, and they will differ among themselves; and you can have it reclassed a month later, the same bale, and if they did not know it, the same classers would differ again. It is a matter of judgment.

Again, we have millions of bales of cotton that are stored in warehouses. The Government pays the warehouse charges. Your big international cotton traders own much warehousing. They have the CCC cotton in these warehouses. I would recall to your minds the quotation read by my colleague from New York [Mr. SANTANGELO]. The Department testified that there is no misrepresentation in offering any of this cotton. A few years ago they had cotton which had been on hand for 7 or 8 years. Perhaps reclass was essential. However it is essential that it be listed in a catalog so all bidders can bid with full knowledge.

Let me say that all cotton is classed. The catalog shows when and what the judgment of the classer was at the time of classing. There is no misrepresentation nor any guarantee.

A man who buys cotton from CCC takes that fact into consideration when he bids.

Here is what we tried to do. I have heard everybody on the floor say, and I have done it, and our report points it out, that we have spent $26 billion in the name of agriculture and that perhaps everybody in the world is getting something out of it, yet the farmer today is much worse off. He needs farm legislation, perhaps worse than does the Treasury.

Our committee did have an investigation made of the sale of cotton to these cotton traders after we had virtually forced competitive sales, and it was found that $166 million was paid out in rebates to shippers. This showed up as a loss to the Commodity Credit Corporation and thus has been charged to farmers, big and little, where others got the money.

I said earlier I am not bragging about the signing of any checks. Sometimes I am ashamed that I cannot hold the expense of the Department down better than we have been able to do. Unfortunately frequently the horse is gone, when we get called in.

The trade insisted we would ruin everything if we stopped reclass after sale.

Do you know how we stopped it? We pointed out the facts to Secretary Benson and he stopped it for a year. And in that year when they reclassed all cotton, as our subcommittee recommends, they sold 6 million bales of cotton. There was no reclass, no discount. It worked very effectively and the Government received more cash.

The same group that got the $166 million has conceived the idea now that they will not ask for a rebate, they will ask for an arrangement whereby they may pay 90 percent of the purchase price, and then adjust, based on reclass after the cotton is theirs.

I have the highest regard for the Legislative Committee. I do not appreciate some things said here today. If the question here is a matter of which committee runs the Department it is not of my making. The facts are that for years the Department has done precious little listening to us. We have differed with them, but we cannot run them.

What can be more fair than this? Everybody within the sound of my voice knows that the Commodity Credit Corporation has a tremendous investment and that the officers of the Corporation owe it to the people to get as much as they can for the commodities they have. They can get better bids if they reclass, lay it out on the counter so that everybody can bid. Do you not think we have an obligation to say if you are going to reclass this cotton, please reclass it and lay it out on the counter so that there will be some competition in the sale.

These shippers do not want equal treatment, they want an advantage. They are unwilling to let the Government lay it out on the counter at a new class. They are unwilling to bid against their competitors. In our provision we say to the Department if you want to reclass, do so, but please lay it out and have some competition in its sale, and we will not have so much depletion of the capital of the corporation under those circumstances. To refuse that appears to us to be asking an unfair advantage.

Let me say one other thing. Here is the difference between cotton, corn and wheat. In reclassing corn and wheat, when you have it reclassed and export it, the exporter has to offer in world trade at the new class. Where cotton shippers have gotten reductions through reclassing in the process they have picked up from $14 to $20 a bale in some instances, and they have sold in world trade at higher than the first class. These facts are clearly shown in our investigators' reports which are included in the hearings. They do not offer such CCC cotton in world trade at the new class as is required with grain.

Now, there has been much ado and argument made on jurisdiction. We do not have it so far as running the Department is concerned. This is simply a limit on the use of funds, which is within the rights of our committee, if we can sell it to the Congress. That is all it is. Somehow, I sense the outcome. It has been said you can defeat anybody on merit, but it is difficult to defeat anyone where millions of dollars are involved.

However strong the hopes of our colleagues on that committee may be as to what the Department will now do, if their amendment is adopted the language goes out and we will not have a thing in the world to prevent their going back to the system of rebates.

Here today we decide whether we will begin to bring some economy in the running of our agricultural program. We must, first because it is right, and because if we do not we will lose our farm program, at least in my opinion.

If the amendment is approved it will be up to the Department. The Department can do as it pleases, and again, if they do not go back to rebate but try this new system of selling and collecting 85 percent, reclassing, then giving dis-

counts, it is tweedle-dee and tweedle-dum, as I see it. That is the same as rebates.

Mr. Chairman, in our bill we give them everything they said they wanted. We merely would prevent reclass after title has passed.

The CHAIRMAN. The time of the gentleman from Mississippi has expired. All time has expired.

Mr. SANTANGELO. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and seventy-five Members are present, a quorum.

The question is on the amendment offered by the gentleman from North Carolina [Mr. COOLEY].

The question was taken; and on a division (demanded by Mr. COOLEY) there were—ayes 85, noes 65.

Mr. WHITTEN. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. COOLEY and Mr. WHITTEN.

The Committee again divided, and the tellers reported that there were—ayes 116, noes 67.

So the amendment was agreed to.

Mr. YATES. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. YATES: On page 31, line 23, after the word "provision", strike the period, insert a colon and the following: *"Provided further,* That none of the funds herein appropriated shall be used to formulate or administer any program which does not provide for maximum use of Government-owned facilities for storing surplus commodities."

Mr. WHITTEN. Mr. Chairman, I reserve a point of order against the amendment.

Mr. YATES. Mr. Chairman, it is not my purpose to do a vain thing. I would just as soon have a ruling on the point of order and not make a speech in the event the point of order is sustained.

Mr. WHITTEN. The gentleman showed me the amendment. I reserved the point of order so he could explain it. I ask unanimous consent that the amendment be again read.

The CHAIRMAN. Without objection, the Clerk will again read the amendment.

There was no objection.

The Clerk again read the Yates amendment.

Mr. WHITTEN. I shall not press the point of order, Mr. Chairman.

Mr. YATES. I thank the gentleman.

The CHAIRMAN. The point of order is withdrawn.

Mr. YATES. Mr. Chairman, the purpose of this amendment is obvious. One of the most staggering costs of the farm program is the amount of money that is expended for storage. As was pointed out in the report of the committee, in 1959 storage and handling charges totaled $481.7 million. For 1960 storage charges for surplus commodities are estimated at $612 million. For the fiscal year which is the subject of this bill storage charges are expected to exceed $700 million.

The Government itself owns facilities in which there can be stored 985 million bushels. These facilities are not being completely used. When I mentioned my amendment to a number of Members, they said, in surprise, "Aren't these facilities being used at the present time?" The answer is no. These facilities are being used only partially at the present time. They are being used to the extent of only 65 percent.

Next year storage charges are going to be increased drastically. Why should they not be kept to a minimum? Why should not the taxpayers be protected by making sure Government storage facilities will be used? There is no reason why commercial facilities should be utilized when Government space is available at a much lower cost.

May I read from the hearings at page 549 the colloquy between the gentleman from Minnesota [Mr. MARSHALL] and Mr. Berger, Administrator of the Commodity Stabilization Service. Mr. MARSHALL said:

It has also been said that it is the policy of the Department of Agriculture to automatically use newly constructed private facilities for takeover gain in preference to existing Government-owned facilities regardless of whether there was any need for that in the area or not. Are these reports correct?

Mr. BERGER. That is true.

A little later Mr. MARSHALL said, and there is a wistful quality in his voice as I read it:

It seems a little strange that the taxpayer should be called upon to pay for this storage in a newly constructed private facility when there is already plenty of space in the Government elevator.

The gentleman's amazement is understandable. Should these surplus commodities be sent to commercial warehouses when Government facilities are available? Do you know what the difference in cost is? According to the hearings of this committee and also in the report of the Fountain Subcommittee on Government Operations, it costs 5 cents plus a fraction to store the surplus commodities in a Government facility. Do you know what it costs to store them in a commercial facility? Sixteen cents-plus. The cost of storage in Government facilities is only one-third of what it is in commercial facilities.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from Illinois.

Mr. MICHEL. The language of the gentleman's amendment reads "maximum use." How would the gentleman define maximum use?

Mr. YATES. The maximum use possible.

Mr. MICHEL. Would that still be at the discretion of Commodity Credit? When one says maximum, would you expect that it would be the very last Government bin available. The last bin could be in the State of Washington, as I pointed out yesterday and the grain to be stored could be in some State like Ohio or Pennsylvania, and it would have to be shipped completely across the country.

Mr. YATES. I suggest to the gentleman that the administration's handling of the program has not been one that would give confidence. They are not administering it most efficiently and economically at the present time, but we have no alternative. We must leave it to their discretion. That is why I would say to the gentleman, that the term "maximum" means the maximum extent possible. There is discretion on the part of the corporation, but they must use the Government facilities that are available in preference to comparable commercial facilities. The term 'maximum" as I construe it, means to the greatest maximum possible.

Mr. WOLF. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from Iowa.

Mr. WOLF. I would like to point out for the information of the Members that grain in many Government bins in the State of Iowa is moving just a few miles into private storage. That was brought out recently in hearings in Iowa. I believe that is what the gentleman from Illinois anticipates.

Mr. YATES. I think one has only to look at the report of the committee to see why this amendment is so necessary. This committee made a thorough investigation of the storage situation and was shocked with much of what it found. In the course of its investigation it discovered that tremendous quantities of grains are being moved from one part of the country to another without reason. In 1955, even though storage was available in the arid West, grain was moved to the West Coast. Why? The corporation does not want to use Government storage. I hope this amendment is agreed to.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from North Carolina.

Mr. COOLEY. I do not question the purpose of the gentleman, and I think the gentleman has a very fine purpose in mind, but I doubt very much that the program could work under the gentleman's amendment. You refer to maximum use of Government-owned facilities. Suppose you have a warehouse located in Seattle, Wash., and you have a commodity down in Savannah, Ga. You would not want to ship the commodity from Savannah, Ga., to Seattle, Wash., because you had a warehouse there?

Mr. YATES. Of course not, Mr. Chairman. But, I want to point out that is exactly what the administration has been doing much too frequently. That is the reason for my amendment, to eliminate wastefulness.

Secondly next year will bring an enormous increase in storage charges.

There will be a tremendous corn crop. There will be great quantities of other products to store. The cost will exceed $700 million. Certainly every effort should be made to reduce costs wherever possible. This can be done through maximum use of Government facilities. I see no reason why they all cannot be used during the next year.

Mr. COOLEY. Could you not improve your amendment by putting in the words "comparable Government facilities and at comparable cost"?

Mr. YATES. It is my intention that my amendment be reasonably applied and reasonably administered. Where the corporation has a reasonable choice between Government and commercial facilities, it should obviously select the Government facilities. My amendment was originally drafted in the form suggested by the gentleman, but it would have been subject to a point of order. That is why I changed it to the language I used.

Mr. COOLEY. Of course, I would much prefer to use Government facilities wherever it is feasible and economical to do so.

Mr. YATES. Everybody agrees with us on this point. The committee itself says so in its report. The purpose of my amendment is to make sure that the recommendations of the committee are carried out by putting in the bill that which is contained in the report.

Mr. COOLEY. In other words, if a private warehouse is available and a Government warehouse is available in the same locality, then you suggest that the Government warehouse be used.

Mr. YATES. I do, indeed. That is the purpose of my amendment to make sure that the program is operated as efficiently and as economically as possible. The use of Government facilities will reduce storage costs by millions of dollars.

Mr. JONES of Missouri. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield.

Mr. JONES of Missouri. I am in accord with what the gentleman is trying to do, but I think you have possibly overlooked something. You have used the words "no funds appropriated shall be used to formulate or administer any program." I am for the prohibition as to the formulation of a program hereafter, but I think it might run into some trouble when you use the words "administer any program," as the chairman pointed out, where you already have a program. In other words, if the word "administer" is included, then I am afraid you might get into trouble.

Mr. YATES. May I suggest to the gentleman that this is an appropriation bill for the fiscal year beginning on July 1, 1960. It applies only to expenditures in that fiscal year. It is only for 1 year.

Mr. JONES of Missouri. But you are administering a program which is already in effect which will be carried over until that year, and that is where I am afraid you are going to get into trouble.

Mr. YATES. Insofar as the operation of my amendment is concerned, it would only be applicable for the next fiscal year. I think it should be in the permanent law, and I suggest your committee might want to draft a bill to make it permanent law. It is most desirable.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield.

Mr. JUDD. Just for the purpose of adding something to the legislative history on this matter, let me pose another illustration. Suppose there are two storage facilities in the same neighborhood and some grain or commodities are moved out of the Government-owned facility so that it is empty.

Do you think that under your amendment the Administrator of this program ought to move surplus commodities out of the privately owned warehouses into the Government-owned warehouses in order to get maximum use of the Government-owned warehouses?

Mr. YATES. If it saves the Government money I think it would be a desirable thing to do.

Mr. JUDD. So it would depend upon the situation; only if it would save money or be advantageous to the Government, it should be done?

Mr. YATES. If it saves the Government money it should be done.

Mr. JUDD. I am glad to have a statement of the gentleman's intention.

The CHAIRMAN. The time of the gentleman from Illinois [Mr. YATES] has expired.

Mr. SANTANGELO. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I am very pleased to support this amendment offered by the gentleman from Illinois [Mr. YATES].

As I calculated, this will save the taxpayers a great deal of money in storage charges; it will save, even at the reduced rates, $30 million.

The potential storing capacity of the Commodity Credit Corporation today is 985 million bushels of grain. We are storing today in Government-owned bins and facilities operated by the Commodity Credit Corporation, about 600,030,000 bushels of grain. We are 32 percent under its capacity use. As you know, proper management requires a warehouseman to leave about 10 percent free for air conditioning of the grain. So it leaves 22 percent differential between capacity and what we are using. We can store in Government-owned warehouses 285 million additional bushels of grain. It costs the Government 6½ cents a bushel per year as opposed to 16½ cents a bushel in private warehouses.

The chairman of the subcommittee which went out to Des Moines, Iowa, Mr. SMITH, held an investigation that disclosed that the Government policy was to take grain out of Government bins and put it into private-owned warehouses, even though there was available space in Government bins, only for the sake of transferring it, at a cost of 3½ cents a bushel in transferring it. It is this administration's policy to take grain out of Government bins and put it into commercial warehouses. It has cost $612 million to the taxpayers in 1960, and it will cost $700 million in 1961. In addition to that, the Government is refusing to use the mothball fleet which we have throughout the United States. We have ships which have been turned over by the Maritime Service in the James River in Virginia, in the Astoria River in Washington and also in the Hudson River in New York. The Government has taken out grain from 30 ships, a total of over 10 million bushels of wheat. They have 86 ships which are now being used for the storage of wheat. They have 86 ships which are completely vacant. We can store 22 million bushels of wheat in those particular ships at practically no cost to the Government and yet the Department of Agriculture is disinclined or very reluctant to use those storage facilities which the Government has, which would cost the people of the United States very little money. The Department is dedicated to the proposition that storage must go into private warehouses. I say it is time we stopped this staggering cost of warehousing costs so that we can give some relief to the taxpayers of the United States.

I hope this amendment will prevail.

Mr. WHITTEN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I think the objections raised are rather sound. I discussed with the author of the amendment the suggested language that I think would make it in line with the committee report. We had not put it in the bill. Personally, if the gentleman were to consent to add to his amendment the words "consistent with the economical operation of the corporation," I, individually, would have no objection.

Mr. YATES. I am willing to accept such a modification, and I ask unanimous consent that the words suggested by the gentleman from Mississippi be added to my amendment.

The CHAIRMAN. The Clerk will report the modification referred to.

The Clerk read as follows:

Strike out the period, substitute a colon and add: "Consistent with the economical operation of the corporation".

Mr. HORAN. Mr. Chairman, may we have the entire amendment read?

The CHAIRMAN. Without objection, the Clerk will read the modified amendment.

There was no objection.

The Clerk read as follows:

Page 31, line 23, after the word "provision", strike the period, insert a colon and the following: *"Provided further,* That none of the funds herein appropriated shall be used to formulate or administer any program which does not provide for maximum use of Government-owned facilities for storing surplus commodities, consistent with the economical operation of the corporation."

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. HORAN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I want to point out something I think the Committee should take into consideration at this time. First of all, if we start watering down this amendment it will mean nothing. There is nothing to prohibit the Commodity Credit Corporation today from using Government storage where it is available.

Let me point out another thing: Today we have oldtime operators and cooperators who know what they are doing and are doing it at the minimum charges. They pay taxes, both income and property, in their communities; your Government bins and warehouses do not. When it comes to figuring out how much you are going to save you must take into consideration the income and property taxes the warehouseman pays, both the grain warehouseman and cotton warehouseman. I think that is

a very, very important factor. It is obvious that if you have empty bins and they are being wasted that should not be, but I am told by those in the corn business that we are going to need all of the bins that exist in another year unless we have legislation out of this Congress that will correct some of the things wrong today with our farm program, and I do not think you are going to waste this Government storage. But you might be making a very, very big mistake if you put the Government bins ahead of income- and property-tax-paying Americans.

I think one further observation very much in point is that there is no guarantee——

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. HORAN. I yield.

Mr. MICHEL. I think there is one further observation the gentleman could very well make and that is that the Government does not assume the obligation the private warehouseman assumes in the matter of guaranteeing like kind and quality of the grain he delivers. When grain deteriorates in Government-owned bins it is a direct loss to the taxpayer. If grain deteriorates in the hands of a private warehouseman he suffers the loss. Only recently one of the grain elevators in my district paid $40,000 to CCC for deterioration of grain in its keeping.

Mr. HORAN. And if I might go further, we have no guarantee that the bureaucrat operating a Government warehouse is as smart as the man who has been all his life in the grain business or the cotton business and knows what is involved in storage.

I think if you water this amendment down a little bit further so it means nothing, I might be able to vote for it.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. HORAN. I yield.

Mr. YATES. I would say to the gentleman that the adding of those words was not done with the intent of watering down the amendment.

Mr. HORAN. Then I am violently opposed to it.

Mr. YATES. Its one purpose is to add a certain amount of discretion to the administration so that it is not straitjacketed by the terms used. This is a program that requires some flexibility and that is the only purpose in adding the words that were added. It is the intention of the amendment to have Government utilities used to the greatest extent possible.

Mr. HORAN. I have been around here long enough to know that this House can act foolishly sometimes. I hope the amendment will be defeated.

Mr. SMITH of Iowa. Mr. Chairman, I rise in support of the pending amendment.

Mr. Chairman, I would like to point out that if we do not adopt this amendment, we can expect the Department to continue the policy of preferring warehouses that are not yet built. The policy of the Department of Agriculture at this very minute is to prefer warehouses that are not yet built today over empty Government bins that are in the country today.

Mr. HORAN. Where is there any prohibition against the use of the empty bins?

Mr. SMITH of Iowa. There is no prohibition, but the policy of the Department is it will not use the Government warehouses.

Mr. HORAN. But there is no prohibition against using them, is there?

Mr. SMITH of Iowa. The very purpose of the amendment is to get them to use Government-owned space and discontinue the inflexible policy of encouraging overexpansion in areas where it is not needed.

Mr. YATES. I agree with the gentleman entirely. Because of the statement of the gentleman from Washington as to what the attitude of the Department of Agriculture is it is necessary to have an amendment of this type to show what the congressional intention is, namely, that Government-owned facilities shall be used to the fullest extent possible.

Mr. SMITH of Iowa. If we do not have this amendment adopted there will be no alternative for many elevator operators but to expand capacity beyond reasonable future needs in many communities where it is not needed. The legitimate elevator operator with adequate storage must build additional warehouse space if a fly-by-night competitor comes along and decides to build. He has to protect his own business and build additional warehouse space in order to minimize the cutthroat competition that will in future result from an operator with a warehouse paid for by the Government. The policy is to use those warehouses in preference to the empty Government bins as long as anybody has warehouse space vacant, even where the warehouse space in the community greatly exceeds the space reasonably needed in the future in the regular grain merchandising business.

I want to point out when you use the argument of preparing warehouses in that because they pay local property taxes you are in favor of Federal aid to education because, after all, it is the local property tax that goes for education. I am not saying that it is a bad thing to have Federal aid to education, but I want to point out to those who oppose Federal aid to education that when they use the tax excuse they are favoring Federal aid to education.

May I also point out that the operators who are operating the Government storage program have had a good experience in handling grain and they have shown, as a matter of fact, that they can operate warehouse facilities with less loss than most of the warehousemen in the business. Do not be mislead by the argument previously made that the technicians do not know how to handle Government grain. The actual deterioration is less for them than it has been for most of the operators. I was acting as chairman of a subcommittee which last December secured evidence and testimony showing that the policy of the Department had gone so far as to provide for emptying Government bins to fill new warehouse storage that was not even built by a regular elevator operator.

There seems no question that additional storage will be needed this fall. Unless the policy is changed, additional grain will be placed in new warehouses which reluctant warehousemen were forced to build to protect themselves against a fly-by-night operator and the result would be bad for both the taxpayers and the legitimate warehouse operator. This amendment will help assure the use of 300 million bushels of empty Government space during the next year when the additional space is needed in addition to existing warehouse space. The amendment will, of course, only be effective for a 1-year period.

Mr. O'HARA of Michigan. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Michigan.

Mr. O'HARA of Michigan. I would like to point out to the gentleman that this policy of the Department of Agriculture and the Commodity Credit Corporation of preferring private facilities over Government-owned facilities is just another expression of the policy of the Bureau of the Budget as enunciated in its bulletin last year, about which I complained in the Congress in debate on the defense bill. The Budget has directed these agencies to prefer private facilities to Government-owned facilities. That applies to agriculture as well as defense.

I am heartily in support of the amendment offered by the gentleman from Illinois.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois [Mr. YATES].

The amendment was agreed to.

Mr. WHITTEN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, may I say that the amendment the gentleman offered is to a great degree in line with the committee report. I also agree with the point made by my colleagues on the committee on the Republican side. We want to be sure the language carries out the intent of Congress, and that it will not result in increased costs or needless harm to private industry.

I therefore felt I could not oppose the amendment because it is in line with what we wrote in the report, and I just want to reassure my colleagues that in conference we will try to modify the language, if necessary, to carry out the views of the subcommittee.

The Clerk read as follows:

SEC. 408. No part of the funds appropriated by this Act shall be used to pay the compensation of any employee or officer of the Department, except the Secretary of Agriculture, who, in addition to other regularly assigned responsibilities, serves as a member of the Board of Directors or as an officer of the Commodity Credit Corporation after February 1, 1961.

Mr. BROWN of Georgia. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. BROWN of Georgia. Mr. Chairman, section 408 provides that none of the funds appropriated by H.R. 12117, making appropriations for the Department of Agriculture and Farm Credit

Administration, shall be used to pay the salary of any officer or employee of the Department—except the Secretary—who serves as a member of the Board of Directors of CCC, or as an officer of CCC, in addition to other regular duties with the Department.

This reverses a decision made by the Banking and Currency Committee and the Congress in 1949, when the CCC Charter Act was amended to strike out a similar restriction which had been enacted in 1948. It is, therefore, legislation, and the mere fact it is put in the form of a limitation on the use of funds appropriated by the bill does not save it. As paragraph 1691, volume 7, of Cannon's Precedents of the House of Representatives puts it:

> The purpose rather than the form of a proposed limitation is the proper criterion by which its admissibility should be judged, and if its purpose appears to be a restriction of executive discretion to a degree that may be fairly termed a change of policy rather than a matter of administrative detail it is not in order.

Again in paragraph 1606 of the same volume, the following is found:

> Whenever a purported limitation makes unlawful that which before was lawful or makes lawful that which before was unlawful it changes existing law and is not in order on an appropriation bill.
>
> A proper limitation is negative and in the nature of a veto, and when it assumes affirmative form by direction to an executive in the discharge of his duties under existing law it ceases to be a limitation and becomes legislation.

Section 408 in effect requires the Secretary to take affirmative action. To carry out the farm programs financed by CCC, the Secretary would have to appoint new Board members, recruited from private life, to replace the six Department officers other than himself who now serve on the Board. He would also have to recruit and appoint new personnel to serve as officers of the Corporation. This not only means the section constitutes legislation, but also means it is not entitled to the protection of the Holman rule, because it would not save the Government money. On the contrary, it would require hiring new employees at additional expense to the Government.

The CHAIRMAN. Does the gentleman from Mississippi [Mr. WHITTEN] desire to be heard on the point of order?

Mr. WHITTEN. Mr. Chairman, the section clearly provides a limitation on the use of funds that are appropriated in this bill. It does not change the Commodity Credit Corporation charter. It does not change any basic law. It just simply limits what the money in this bill can be used for. It has been my experience and observation during the years here that the Chair has many times said that it is a negative limitation on the use of money and that it is clearly in order, and on that I rest the committee's position.

The CHAIRMAN (Mr. KILDAY). The Chair is prepared to rule.

The gentleman from Georgia [Mr. BROWN] makes a point of order against the language in section 408 of the bill on the ground that it constitutes legislation on an appropriation bill.

The Chair has had an opportunity to examine the precedents in this connection, including the precedents to which the gentleman from Georgia has referred and from which he has read. The Chair would also refer to paragraph 1694 of Cannon's Precedents, volume 7, the language being:

> While a limitation may not involve change of existing law or affirmatively restrict executive direction, it may properly effect a change of administrative policy and still be in order.

The Chair has examined additional precedents bearing on this question. The Chair is constrained to hold that section 408 is a restriction on a manner in which the funds can be used, and constitutes a negative limitation, and, therefore, overrules the point of order.

Mr. BROWN of Georgia. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

> Amendment offered by Mr. BROWN of Georgia: On page 34, line 8 through line 14, strike out section 408.

Mr. BROWN of Georgia. Mr. Chairman, section 408 of the bill would reverse a decision made by the Congress and the House Banking and Currency Committee in 1949. At that time, after a year's experience with a provision of law that required that two of the members of the CCC Board be outside members; that is, not officers or employees of the Government; the Congress repealed this restriction. Instead, the Congress in 1949 restored to the Secretary of Agriculture the power to appoint the members of the Board, and to appoint officers and employees of the Department as Board members. This practice was followed for years, until 1948, when the requirement for two outside members of the Board was written into the law. Less than 1 year later, after experience had proved that the provision was no workable, the experiment was abandoned.

I regret that the Appropriations Committee has undertaken to rewrite the law in this manner. This is a matter within the jurisdiction of the legislative committee, the Banking and Currency Committee. It is a matter that the Banking and Currency Committee has fully considered in acting on the law as it exists today.

The amendment will not save money; on the contrary, it will require the Secretary of Agriculture to go out and hire new people to run the Corporation. It will result in conflicts and confusion between the Corporation and the Department. It did not work when it was tried before, and I am convinced it will not work now.

Furthermore, this provision would, on the basis of past experience, cause a major and costly reorganization within the Department of Agriculture. It would not only result in no improvement in operations, but would result in division of responsibility, duplication of effort, overlapping of authorities, inability to obtain informed consideration of major policy matters, and confusion in field operations affecting almost every segment of commercial trade relating to agricultural commodities. It would make the CCC subject to more and more pressure for actions to the special benefit of individual groups.

The CCC is a facility of the Department of Agriculture created for the specific purpose of providing a workable mechanism for carrying out price support programs as directed by Congress. Whatever the provisions of statutes governing price support, this mechanism must be left in a workable condition. It will not function in a vacuum, and it must operate in concert with the other major activities of the Department. Section 408 should be eliminated from the bill.

Mr. McDONOUGH. Mr. Chairman, I rise in support of the amendment.

Section 408 of the Department of Agriculture appropriation bill, 1961, provides as follows:

> SEC. 408. No part of the funds appropriated by this Act shall be used to pay the compensation of any employee or officer of the Department, except the Secretary of Agriculture, who, in addition to other regularly assigned responsibilities, serves as a member of the Board of Directors or as an officer of the Commodity Credit Corporation after February 1, 1961.

This provision, if enacted into law, would nullify the deliberate action of Congress in amending the Commodity Credit Corporation Charter Act in 1949 to permit members of the Board of Directors of the Commodity Credit Corporation to be otherwise employed in the Department of Agriculture and to permit the staff of executive officers of the Corporation to have duties not only in connention with Commodity Credit Corporation but also in connection with related operations of the Department.

The Charter Act as originally enacted on June 29, 1948, provided in section 9 that:

> Employees of the Corporation or any department or agency of the Federal Government, if also directors, shall not comprise, in the aggregate, more than three of the members of the Board.

It also provided in section 10 that:

> Responsibility for the day-to-day conduct of the business of the Corporation shall be vested in a staff of executive officers, headed by a chief executive appointed by the Board and responsible to the Board. Members of the executive staff shall devote their full time to the affairs of the Corporation.

In 1949 the Secretary of Agriculture recommended that the restrictions of sections 9 and 10 of the charter quoted above be eliminated. In his letter of March 9, 1949, to Senator Thomas, chairman of the Senate Committee on Agriculture and Forestry, the Secretary stated, in part, as follows:

> The changes involving the authority of the Secretary of Agriculture and the internal organization of the Department which are proposed in S. 900 will make it possible for the Secretary to discharge effectively his responsibility for the formulation and administration of the agricultural programs of the Federal Government and to coordinate and integrate all the activities of the Department.

The Secretary of Agriculture recommended, among other things, that section 9 of the charter be amended so that the Board members could hold other

offices or positions in the Department and could be given other duties by the Secretary of Agriculture and that section 10 be amended to remove the requirement for an executive staff which would be prohibited from performing duties other than those concerned directly with the Corporation.

Full hearings on the Secretary's recommendations were held before the House Committee on Banking and Currency and the Senate Committee on Agriculture and Forestry. As a result an amendment to the Commodity Credit Corporation Charter Act was enacted on June 7, 1949, which carried into effect the recommendations made by the Secretary of Agriculture.

Section 9 of the CCC Charter Act, as amended, specifically provides that:

> In addition to their duties as members of the Board, such appointed members shall perform such other duties as may be prescribed by the Secretary. Each appointed member of the Board shall receive compensation at such rate not in excess of the maximum then payable under the Classification Act of 1949, as may be fixed by the Secretary, except that any such member who holds another office or position under the Federal Government the compensation for which exceeds such rate may elect to receive compensation at the rate provided for such other office or position in lieu of the compensation provided by this section.

In order to give the Secretary the benefit of the appraisal of the Corporation's policies by a group of outside individuals, section 9 was also amended to provide for an advisory board "reflecting broad agricultural and business experience in its membership."

Section 10 was amended to eliminate the requirement that the Corporation's business be conducted by executive officers required to devote their full time to the affairs of the Corporation. As amended, section 10 provides, in part, that:

> The Secretary shall appoint such officers and employees as may be necessary for the conduct of the business of the Corporation, define their authority and duties.

It is apparent, therefore, that section 408 of the Department of Agriculture appropriation bill, 1961, would nullify the existing legislation with respect to the management of the Corporation and would impose the very requirements which Congress deliberately sought to eliminate from the Commodity Credit Corporation Charter Act by the amendments made therein in 1949.

Denying payment to Department officials who may now serve in dual capacity on the Commodity Credit Board would eliminate the services on the Board of top officials in the Department of Agriculture, except for the Secretary, as now provided in the charter of the Commodity Credit Corporation.

The Commodity Credit Corporation Board is composed of the following: Secretary of Agriculture, Chairman; Under Secretary of Agriculture, President; Assistant Secretary—Agricultural Stabilization; Assistant Secretary—Marketing and Foreign Agriculture; Assistant Secretary—Federal-States Relations; Administrator, Agricultural Marketing Service; and General Counsel of Department of Agriculture.

If section 408 remains in the appropriation act, all these officials, except the Secretary, could not serve after February 1, 1961.

The proposed new section 408 would also eliminate as officers of the Commodity Credit Corporation those who also hold other offices within the Department of Agriculture. This will eliminate the use of such men as officers as Under Secretary of Agriculture as President; Administrator of Commodity Stabilization Service as Executive Vice President; Associate Administrator, Commodity Stabilization Service, Vice President; Deputy Administrator, Price Support, Commodity Stabilization Service, Vice President; Deputy Administrator, Operations, Commodity Stabilization Service, Vice President; Deputy Administrator, Production Adjustment, Commodity Stabilization Service, Vice President; General Sales Manager, Commodity Stabilization Service, Vice President; Executive Assistant to the Administrator, Commodity Stabilization Service, Secretary; Director, Fiscal Division, Commodity Stabilization Service, Controller; Deputy Director, Fiscal Division, Commodity Stabilization Service, Treasurer; Deputy Director, Fiscal Division, Commodity Stabilization Service, Chief Accountant.

All the Board members and offices of the Corporation receive only one salary, that is, the salary of the position which they hold as an employee of the U.S. Department of Agriculture.

The history of the present Commodity Credit Corporation Charter Act, as amended, does not contemplate such arrangement as section 408 would impose.

If only part-time Board members, from outside the Department of Agriculture, are used in these capacities, such serious difficulties as the following would be encountered:

They would be unfamiliar with much of the operations involved; there would be delays in Board actions, which at times are required on relatively short notice; there would be added salary, travel, staff and other costs.

If full-time Board members and officers who have no other functions within the Department are required there will be created another echelon of highly paid Government employees.

There would be two major areas of operations and responsibilities, to a large extent duplicating, within the Department of Agriculture: Secretary of Agriculture and Commodity Credit Corporation Board and its officers. Major conflicts and confusion may result.

I urge the adoption of the amendment offered by Mr. BROWN of Georgia to repeal section 408 of this bill.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. McDONOUGH. I yield to the gentleman from Texas.

Mr. PATMAN. I just want to state that I am in accord with the views expressed by the gentleman as well as the views expressed by the gentleman from Georgia [Mr. BROWN]. I hope this amendment is adopted.

Mr. McDONOUGH. I thank the gentleman.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. McDONOUGH. I yield to the gentleman from Mississippi.

Mr. WHITTEN. The statement is made that none of the funds for the Department of Agriculture can be paid to these men. These gentlemen are paid now from funds of the Department of Agriculture.

Mr. McDONOUGH. They are paid—that is their regular salary.

Mr. WHITTEN. This provision says that the funds of the Department can no longer be paid to an official who runs the Corporation. The Corporation officer would be paid from the Corporation's funds if this became effective.

Mr. McDONOUGH. Mr. Chairman, I urge the adoption of the amendment to repeal section 408.

Mr. COOLEY. Mr. Chairman, I move to strike out the last word and rise in support of the amendment offered by the gentleman from Georgia.

Mr. Chairman, this is obviously another effort on the part of this Subcommittee on Agricultural Appropriations to take over the Department of Agriculture and to defeat the intent and purpose of Congress in the passage of laws which are now in operation.

In the opening section of the act of 1949, on basic agricultural commodities, the Congress said this:

> The Secretary of Agriculture is authorized and directed to make available through loans, purchases, or other operations, price support to cooperators for any crop of any basic agricultural commodity, if producers have not disapproved marketing quotas for such crop, at a level not in excess of 90 per centum of the parity price of the commodity nor less than the level provided in subsections (a), (b), and (c) as follows.

Again under a title, "Designated Nonbasic Agricultural Commodities," the Congress said this:

> The Secretary is authorized and directed to make available * * * price support to producers for tung nuts, honey, milk, butterfat, and the products of milk and butterfat as follows.

Under another title, "Other Nonbasic Agricultural Commodities," the Congress said:

> The Secretary is authorized to make available through loans, purchases, or other operations price support to producers for any nonbasic agricultural commodity not designated in title II.

In the Agricultural Act of 1954 the Congress said, in title I, "Set Aside of Agricultural Commodities":

> The Commodity Credit Corporation shall as rapidly as the Secretary of Agriculture shall determine to be practicable, set aside within its inventories not more than the following maximum quantities and not less than the following minimum quantities of agricultural commodities.

Then in title VII, "National Wool Act of 1954," Congress said in section 703:

> The Secretary of Agriculture shall, through the Commodity Credit Corporation, support the prices of wool and mohair.

So it is clear to see that Congress has charged the Secretary of Agriculture

with certain responsibilities and by the acts of Congress he is required to exercise these authorities and responsibilities through the Commodity Credit Corporation. Section 401 of the act of 1949 says:

> The Secretary shall provide price support authorized or required herein through the Commodity Credit Corporation and other means available to him.

We have directed him to use the Commodity Credit Corporation as an instrumentality and agency through which he will administer these programs which are now in operation. Why should we now divorce the Secretary of Agriculture from the Board of the Commodity Credit Corporation? In other words, in effect, you would have two Secretaries of Agriculture—one would be Mr. Benson and the other would be some outsider who might be brought in by the CCC Board as President of the Corporation and be charged with these responsibilities which the Congress has vested in the Secretary of Agriculture. It seems to me there is no getting around it that this, in effect, is an insult—an insult to the Secretary of Agriculture. Now not that I mind him being insulted, but I do not want him to be insulted on this occasion.

I say in all seriousness this amendment would increase the cost of the farm program. All members of the Board of Directors of the Commodity Credit Corporation serve without pay. They are appointed by the President by and with the advice and consent of the Senate. Nothing that I am aware of has developed that would indicate that any of the Board members now in office are corrupt individuals or that their jobs could be performed any better by persons outside the Department of Agriculture having no responsibility for the working of farm programs.

Mr. McDONOUGH. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield.

Mr. McDONOUGH. Is this an invasion of the authority of the Committee on Banking and Currency?

Mr. COOLEY. Certainly it is. That is the committee that is responsible for the creation and financing of the Commodity Credit Corporation, through which agency all of these programs operate.

Mr. DIXON. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield.

Mr. DIXON. Under the arrangement in this bill, the Secretary would be held responsible for the Commodity Credit Corporation?

Mr. COOLEY. He would have no control over the members of the Board.

Mr. DIXON. So where would you place the responsibility in a situation like that?

Mr. COOLEY. That is what I say. I hope the Brown amendment will be adopted. I hope the Commodity Credit Corporation will continue to operate in the future as it has in the past.

Section 408 of this bill, if enacted into law, would nullify the deliberate action of Congress in amending the Commodity Credit Corporation Charter Act in 1949 to permit members of the Board of Directors of the Commodity Credit Corporation to be otherwise employed in Department of Agriculture and to permit the staff of executive officers of the Corporation to have duties not only in connection with Commodity Credit Corporation but also in connection with related operations of the Department.

The Charter Act, as originally enacted on June 29, 1948, provided in section 9 that:

> Employees of the Corporation or any department or agency of the Federal Government, if also directors, shall not comprise, in the aggregate, more than three of the members of the Board.

It also provided in section 10 that:

> Responsibility for the day-to-day conduct of the business of the Corporation shall be vested in a staff of executive officers, headed by a chief executive appointed by the Board and responsible to the Board. Members of the executive staff shall devote their full time to the affairs of the Corporation.

In 1949 the Secretary of Agriculture recommended that the restrictions of sections 9 and 10 of the charter quoted above be eliminated. In his letter of March 9, 1949, to Senator Thomas, chairman of the Senate Committee on Agriculture and Forestry, the Secretary stated, in part, as follows:

> The changes involving the authority of the Secretary of Agriculture and the internal organization of the Department which are proposed in S. 900 will make it possible for the Secretary to discharge effectively his responsibility for the formulation and administration of the agricultural programs of the Federal Government and to coordinate and integrate all the activities of the Department.

The Secretary of Agriculture recommended, among other things, that section 9 of the charter be amended so that the Board members could hold other offices or positions in the Department and could be given other duties by the Secretary of Agriculture and that section 10 be amended to remove the requirement for an executive staff which would be prohibited from performing duties other than those concerned directly with the Corporation.

Full hearings on the Secretary's recommendations were held before the House Committee on Banking and Currency and the Senate Committee on Agriculture and Forestry. As a result an amendment to the Commodity Credit Corporation Charter Act was enacted on June 7, 1949, which carried into effect the recommendations made by the Secretary of Agriculture.

Section 9 of the CCC Charter Act, as amended, specifically provides that:

> In addition to their duties as members of the Board, such appointed members shall perform such other duties as may be prescribed by the Secretary. Each appointed member of the Board shall receive compensation at such rate not in excess of the maximum then payable under the Classification Act of 1949, as may be fixed by the Secretary, except that any such member who holds another office or position under the Federal Government the compensation for which exceeds such rate may elect to receive compensation at the rate provided for such other office or position in lieu of the compensation provided by this section.

In order to give the Secretary the benefit of the appraisal of the Corporation's policies by a group of outside individuals, section 9 was also amended to provide for an advisory board "reflecting broad agricultural and business experience in its membership."

Section 10 was amended to eliminate the requirement that the Corporation's business be conducted by executive officers required to devote their full time to the affairs of the Corporation. As amended section 10 provides, in part, that:

> The Secretary shall appoint such officers and employees as may be necessary for the conduct of the business of the Corporation, define their authority and duties.

It is apparent, therefore that section 408 of the Department of Agriculture appropriation bill, 1961, would nullify the existing legislation with respect to the management of the Corporation and would impose the very requirements which Congress deliberately sought to eliminate from the Commodity Credit Corporation Charter Act by the amendments made therein in 1949.

The CHAIRMAN. The time of the gentleman from North Carolina [Mr. COOLEY] has expired.

Mr. HOEVEN. Mr. Chairman, I rise in support of the Brown amendment which would strike section 408. It should be apparent to everyone that if this provision remains in the bill it will mean duplication of effort, more cost to the taxpayers, and more confusion.

The history of the present Commodity Credit Corporation Act, as amended, certainly does not contemplate such an arrangement as section 408 would impose. You would have only part-time Board members. They would likely be from all over the country. They would be paid a per diem and expenses for flying back and forth between their homes and Washington. Sometimes immediate decisions have to be made by the Commodity Credit Corporation Board, and waiting for Board members to arrive in Washington might prove very costly when important decisions have to be made without delay. These outside Board members would not be familiar with much of the operations involved and great confusion might result.

To those of you interested in economy in government, may I point out that there would be added salaries, travel, staff, and other costs. As presently constituted, the Commodity Credit Board costs the taxpayers no additional money. They are employees in the Department of Agriculture on regular salaries. They receive no additional compensation. It looks like utter folly to go back to a system repudiated by Charles Brannan when he was Secretary of Agriculture. There would be two major areas of operations and responsibilities duplicated within the Department of Agriculture. You would have a Secretary of Agriculture under section 408 who would be the President of the Board. Then on the outside, looking in, you would have a new Commodity Credit Board and its officers. This can only result in a lot of conflict and confusion. Certainly it would not be for the best interests of agriculture.

Anyone who wants to be fair must admit that the affairs of the Commodity Credit Corporation belong in the Department of Agriculture. The Secretary of Agriculture, as head of the Commodity Credit Corporation, is responsible. He should have the Board available at all times within the Department, so that the Commodity Credit Board can function as the Congress intended when the basic law was enacted.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. WHITTEN. Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments thereto close in 20 minutes, the last 5 to be reserved to the committee.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

The CHAIRMAN. The gentleman from New York [Mr. MULTER] is recognized for 3 minutes.

(By unanimous consent Mr. POAGE yielded his time to Mr. MULTER.)

The CHAIRMAN. The gentleman from New York is recognized for 6 minutes.

Mr. MULTER. Mr. Chairman, I rise at this time to reassert an argument I made on this floor in the 81st Congress, in April 1949, on the identical subject. At that time, too, there was an attempt to bypass the Banking and Currency Committee which has jurisdiction by the rules of the House over the Commodity Credit Corporation and the basic legislation under which it operates. At that time, too, there was an attempt to take the powers vested in the Commodity Credit Corporation by its charter, away from the Department of Agriculture.

Mr. Chairman, it is no secret that I have been less than charitable in some of the remarks I have made about the present gentleman who occupies the high office of Secretary of Agriculture, not that I do not like the gentleman, but I did not like and I do not like many of the things he does in connection with the operation of that important office; and I am sure I will have occasion again to find fault with some of the things he does as Secretary of Agriculture. However, I am now speaking, not in favor of the Secretary of Agriculture, I am speaking in favor of the orderly process of legislation and in favor of the orderly process of government. If you want responsible executive agencies then your legislative committees must bring to you the legislation which empowers the executive to act. The executive should act in accordance with that legislation and be responsible to the Congress accordingly.

If the Brown amendment prevails then we will have orderly process of legislation and we will have orderly government in operation. The Appropriations Committee has sought by section 408 in this bill to take away from the Commodity Credit Corporation the very things given to it by the charter of the Commodity Credit Corporation—and, mind you, this is not the time to argue whether we want the Commodity Credit Corporation—I can agree with some that we can improve its operation and I can agree with others that we may be able to dispense with it entirely—but since we have it let us legislate for it properly and not through the Appropriations Committee or through an appropriation bill.

It has already been said to you that unless the Brown amendment prevails you are going to get duality of government, you are going to get outsiders who are not in the Department of Agriculture trying to run the agricultural program. I think it is a tough enough job for the Agriculture Department to do that without the outsider who is not responsible to the Congress trying to do it. Section 408 will not only dissipate the control that should be vested in the Department of Agriculture, but in addition to that it also will make it extremely costly.

The history of the present Commodity Credit Corporation Charter Act does not contemplate any such arrangement as section 408 contemplates and intends to put into operation and which will go into operation unless the Brown amendment prevails.

If only part-time Board members from outside the Department of Agriculture are used in these capacities then we will encounter serious difficulties, caused by persons who are unfamiliar with the required operations. There would be delays in Board action which at times are required to be done on relatively short notice. There would be additional salaries, travel, staff, and also additional incidental expenses and other unnecessary costs.

One of the main faults I found with the operation of the Commodity Credit Corporation was that there is too much waste there now. Let us not as legislators indicate our approval of any more waste. Let us try to make the operation as economical as possible. If full-time Board members and officers who have no other functions within the Department are required, then by the section of the bill, now sought to be eliminated, there will be created another echelon of highly paid Government employees. If you are going to get the job done it has to be done by paid employees. But let us not have two sets of them. One is enough. The job should be done by the Commodity Credit Corporation. There will be two major areas of operation and of responsibilities, to a large extent duplicated within the Department of Agriculture unless the Brown amendment prevails.

I think it is quite sufficient to say that the Committee on Agriculture rightfully complains that its jurisdiction is being invaded. It is quite enough that the Banking and Currency Committee urges that its jurisdiction is being invaded. But beyond those two good reasons for taking out section 408 there are all the other very valid reasons I have stated for concentrating control and power where it belongs and eliminating waste and saving expense. I urge that the Brown amendment be adopted.

The CHAIRMAN. The Chair recognizes the gentleman from California [Mr. HIESTAND]

Mr. HIESTAND. Mr. Chairman, here we have a matter of organization. I very much dislike to disagree with my good friend, the chairman of the Subcommittee on Appropriations, and I appreciate the work that the Committee on Appropriations has done. I have been voting with them and backing them up 100 percent of the time. But here, Mr. Chairman, comes a case where we are going to be involved in more money instead of saving money, and there I feel constrained to support the gentleman from North Carolina, the chairman of the Committee on Agriculture.

The Commodity Credit Corporation was organized under Banking and Currency because of its large loan necessity. It was felt at that time that the general control should have been under Banking and Currency, and it is still. I believe the point of order should have been sustained because this not only limits an appropriation but it also changes the effect of the legislation. It divorces the responsibility from agriculture where it should be. The Corporation's activities are not an end in themselves, but a means of implementing farm programs. I think that is very important.

The Department of Agriculture has to operate the Commodity Stabilization Service, it has the responsibility for acreage allotments, market quotas, the Wool Act, the Sugar Act, and other departmental activities which are closely related to the price support program. If you take away the responsibility of that, they have no authority over a farm program whatsoever.

Conceivably there will be many executive decisions made by the top Agriculture Department officials which, if this amendment is left in the bill, could then be vetoed by another Bureau. We would be setting up a new and a different Bureau and, Mr. Chairman, I am opposed to that. These executive decisions must be implemented. They must be implemented by people who have the authority to implement them. If we take away that authority, we are weakening the whole program. I do not defend everything about the program, but certainly those in charge should have the power to administer it.

Again, Mr. Chairman, let me reiterate that this was tried and it failed. Congress reversed itself. I hope that the amendment to kill this section 408 is adopted.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. MARSHALL].

Mr. MARSHALL. Mr. Chairman, this language was put in by the Committee on Appropriations for many of the very reasons that the people are saying it ought to be taken out for now. We put it in because we felt that a corporation of this size ought to have people who were working full time taking care of the assets of that corporation. These people who are members of the Board now are people who are full-time employees of the Department of Agriculture. Those people have their hands full working with the activities of the Department of Agriculture.

Furthermore, they are very often placed under pressures which interfere with the operations of the Department

of Agriculture. Many times they are called out of town to make decisions. There have been times that the Commodity Credit Corporation board has been in difficulty meeting to make decisions because these people have been out of town. We thought from the standpoint of good administration and good sound administration and saving the assets of the Corporation, that it was time that some attention was paid to those things. It was not our purpose to take any slap at anybody. Why would we do that? We work with the people of the Department of Agriculture, and we have repeatedly said that those people are dedicated people. We have repeatedly said that they are fine people.

Mr. WIER. Mr. Chairman, will the gentleman yield?

Mr. MARSHALL. I yield to the gentleman from Minnesota.

Mr. WIER. Did your committee find any evidence that the employees that constitute this Board of Directors of the Commodity Credit Corporation were being imposed upon working for Mr. Benson and would be in an unfavorable position to disagree with the Secretary of Agriculture, or would there be a tendency to go along with their boss?

Mr. MARSHALL. Certainly, where you have a man who is the head of the department, a policy department, it would be expected that that man would have an influence over anybody who was working in the department. We have heard some testimony that that might not be the most wholesome thing. The pages of our hearings are filled with places where there has been poor judgment used. We do not say that anybody is to blame for making some of those decisions. But, a number of those top people in the Department who are working with those things have other things to do. They have $9 billion worth of commodities on their shelves.

The CHAIRMAN. The Chair recognizes the gentleman from Utah [Mr. DIXON].

Mr. McDONOUGH. Mr. Chairman, will the gentleman yield?

Mr. DIXON. I yield to the gentleman.

Mr. McDONOUGH. The charter of the Commodity Credit Corporation provides that it shall consist of six members in addition to the Secretary who shall be appointed by the President with the advice and consent of the Senate. These people are not picked by the Secretary of Agriculture. They are appointed by the President of the United States with the advice and consent of the Senate, and, therefore, they should be devoted to the task to which they are appointed.

Mr. DIXON. Mr. Chairman, in summary I support the Brown amendment which would eliminate section 408 for reasons as follows:

First, it would place the CCC Board outside of the Department of Agriculture.

Second, that violates the first principle of all effective administration, which is unity of command. You cannot place responsibility on either the Board or the Secretary if you do this.

Third, a somewhat similar arrangement was made under Secretary Brannan. He came to the Hill and asked its repeal because it was absolutely unworkable. And it was repealed.

Fourth, it would cost a great deal more money because at present the Board consists of the Secretary, the Under Secretary, the Assistant Secretary for Stabilization, the Assistant Secretary for Marketing, the Assistant Secretary for Federal-State Relations, the Administrator of Marketing, the General Counsel of the Department. They are on the Board. They are serving at no extra expense for this activity.

In addition to that, it would take out 10 more officials who are already being paid by the Department who would have to be replaced. I doubt that they could be replaced anywhere with the type of men we have working for the Commodity Credit Corporation.

Really, this is one of the greatest corporations in the whole world. We cannot trust it to bring in unprepared outside people who possibly will have vested interests or would be asked to rid themselves of these conflicting interests. That absolutely could not work as well as the arrangement we have now. We tried this arrangement once and it did not work and it will not work again.

I certainly favor the Brown amendment and favor striking section 408 out of the bill.

The CHAIRMAN. The Chair recognizes the gentleman from Mississippi [Mr. WHITTEN] to close the debate.

Mr. WHITTEN. Mr. Chairman, I am sorry that our subcommittee gets accused of trying to usurp jurisdiction, which really we have not done. If we have tried to do that, we have not been very successful, so I do not think any harm has been done. Actually I might say facetiously, if we had, it would have been in areas which these committees have abandoned. The facts are that we have not done that in any of these instances. It is clearly within the rules to write restrictions on the use of funds. It is effective only as the House may approve it and Congress may approve it. Perhaps in our efforts we have challenged these two committees to exercise their jurisdiction to save a country.

Both of these provisions have been held in order which means that they were within the rules of the House, and they are clearly within the jurisdiction of this Appropriations Committee. Again, they will be effective only as the Congress approves it. The other was disapproved. It seems impossbile to get out a farm bill or to cut down our expenditures. Too many seem to have a vested interest. If we have succeeded in pointing up what we consider our failures we will have had some success. We lost on the other effort. I anticipate we will lose this one.

But I want to say again—and I would like the gentleman from California to listen to this; he just read the law which says that the officers of this Corporation shall be nominated by the President and confirmed by the Senate. If you adopt everything in this bill, that would still be the law. All we are saying is, having reviewed these tremendous expenditures and again, having had to sign the checks and read the papers which condemn the cost of agriculture, and after hearing all the speeches about how we are spending this country into bankruptcy through this Corporation—we are just saying that a $14½ billion corporation is too big to expect these full-time employees in the Department to run it in their offhand moments.

For instance, here are the present directors—and I cast no reflection on them. Mr. True D. Morse, Under Secretary of Agriculture, who has to say grace over the whole operation of the Department. He also in his spare moments has to supervise this $14½ billion Corporation.

If that Corporation had been run so well that it had gotten to where it came to your committee and asked to reduce its borrowing authority through the years, I might understand that; that would be all right. But the only jurisdiction that I think my friends on the Committee on Banking and Currency have exercised in recent years is that they met every year or two and increased the borrowing authority of the Corporation at the taxpayers' expense.

As the chairman said, the Agriculture Committee has directed the Secretary of Agriculture to spend funds of the Corporation. He certainly has done so. Between that course and other compulsory programs we have spent $26 billion and the Corporation, instead of having $2.5 billion worth of commodities on hand, as it had in 1952, now has $9 billion worth; and it gets worse and worse, largely because every group gets its cut and farm income has dropped $3 billion in 7 years.

I hope those committees who think we have tried to invade their jurisdiction, and we have not, will not think I am out of order when I say that I surely hope, if you are so jealous of jurisdiction, you will take action. We, the people of the Nation, could really stand a new farm bill which would restore farm income and prevent us from spending the $3 billion-odd in this bill. We point out the fact that it gets costlier and costlier and costlier and costlier, and our friends on the Agriculture Committee seem to get wider and wider apart so far as bringing anything in the way of a sound farm bill before us. Today is the first time I have seen any unanimity among our friends on the legislative committee in a long time. It is about the first time I have heard of where they agreed on anything, and that was to agree to knock out our efforts to save $166 million in the future. That is all right but if our efforts have served to unite this committee, I hope they will continue to be united tomorrow, tomorrow, and tomorrow, and perhaps then we will get some new farm legislation which is so badly needed by the farmer and by the Nation. I hope you will read our report.

Mr. McDONOUGH. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from California.

Mr. McDONOUGH. The gentleman said the present board is occupied with other duties. He has not informed the committee how he can economize by picking people from the outside who are

not even part of the Department and know nothing about its operations.

Mr. WHITTEN. With all due deference, I think the gentleman would agree that the Commodity Credit Corporation was organized as a corporation so it could have the right to buy and sell, so it could be run on a business basis. The officers are sworn to protect the assets of the Corporation, because they in reality are protecting the people of the country. Let me list the regular duties of the Directors of the Corporation.

DIRECTORS OF CCC

Ezra Taft Benson, Secretary of Agriculture.

True D. Morse, Undersecretary of Agriculture.

Ervin L. Peterson, Assistant Secretary for Federal-States Relations—including research, extension, soil conservation, Farmer Cooperative Service, Forest Service, and ACP—56,000 people.

Clarence L. Miller, Assistant Secretary for Marketing—including marketing research and service, Commodity Exchange Authority, Foreign Agricultural Service—10,000 people.

Marvin L. McLain, Assistant Secretary for Agricultural Stabilization—including acreage controls, price supports, Sugar Act, conservation reserve, crop insurance, Commodity Credit Corporation—9,000 people.

General Counsel—in charge of all legal activities for the entire Department.

Oris V. Wells, Administrator, Agricultural Marketing Service—including marketing research, statistics, crop estimates, market regulation, market news service, school lunch program.

Take Mr. Peterson. How he has time for anything I do not know.

Mr. McDONOUGH. His judgment as a Director of the Corporation is better for these other things, because he decides what the prices shall be and what the warehouse costs shall be, and he is buying and selling these commodities.

Mr. WHITTEN. The Corporation is buying and selling and storing and incurring expenses and trying, I trust, to protect the assets of the Corporation. If you spend all your time dealing with forestry agents and county agents and ACP people I do not think it would particularly equip you to run a $14.5 billion corporation; and I do not mean to reflect on Mr. Peterson.

Mr. Chairman, we are going to lose this fight, as we did the other. To me it means the Congress is not going to change the present law, nor the present course. Too many groups are getting a cut, so to speak, in this overproduction. To me it is tragic that we must have a boom and bust before we will face up to the situation.

Mr. Chairman, members of our subcommittee will at least have the comfort of spelling out the facts in our report and of at least making an effort.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Georgia [Mr. BROWN].

The amendment was agreed to.

The Clerk concluded the reading of the bill.

Mr. GOODELL. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I will vote no emphatically on this appropriation bill in protest against the backbreaking and senseless farm program which Congress seems blindly committed to perpetuate. Our congressional experts do not like what Secretary Benson and President Eisenhower send up here, but they do not seem to have any disposition to face facts themselves. Under a program of high price supports without any relationship to the market price, the Congress—and no one else—has imposed this monstrous burden on the American people. If reports from the so-called farm belt in the Midwest are true, these congressional experts know their business in exploiting political issues. The rugged self-reliance of the big wheat farmers seems to have gone—smothered and stifled by the heavy hand of our Washington experts.

It may be that these owners of farm factories will vote for no one who does not promise them a handout, but there is still some spirit left in our other farmers in this country. In the long run you will strangle not only the big wheat farmers, but our whole system of free agriculture if you continue down the desolate road of political expediency. If I did not cry out in pain and anger at such a prospect, I could not face the people back home. Let us stop making political hay and stand up to the farm issue with some courage and honesty. The people need solutions, not issues.

Mr. JOHNSON of Maryland. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, in the debate today on the appropriation measure for the Department of Agriculture and Farm Credit Administration there was a point of order sustained striking the provision entitled "Marketing Services." In particular this deals with the Federal Poultry Inspection Act. I want the Members to know the great impact this will have on the poultry industry, especially on the Eastern Shore of Maryland. In my district this is considered a $200 million industry and a most important segment of our local economy. I wonder, therefore, if the Members realize just how far reaching the elimination of this section proves and the seriousness of its consequences.

As I understand this bill as now amended, we will continue with compulsory Federal inspection of poultry, but the Department of Agriculture will no longer make a contribution toward the expense of this inspection service. At the same time, the Government continues to defray the inspection costs for meats. This I consider to be discriminatory to our poultrymen and as long as I am in Congress I shall continue to protect their interest.

May I say, Mr. Chairman, that the poultry industry today is so highly competitive that unless some substantial appropriation is made available for Federal inspection of poultry, our plants may be financially jeopardized. When you place this additional expense on our poultrymen, which amounts to one-half cent or more per pound, it is just an added burden that I fear our people cannot absorb. It was Congress who required this mandatory inspection which began about a year ago and from all reports, it is working rather well and without too much criticism. I cannot justify my position in voting for this agricultural appropriation bill without the Government defraying its share of the expense of the mandatory inspection service. I sincerely hope, therefore, that this committee will work with the committee of the other body and in turn restore sufficient funds so that the Poultry Inspection Act may be continued without undue hardship to my people and the other poultry areas.

Mr. MARSHALL. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Maryland. I yield to the gentleman from Minnesota.

Mr. MARSHALL. I would like to assure the gentleman, and I am sure I am speaking the sentiments of other members of the committee as well, that we are interested in doing just what the gentleman and the Congressman from Delaware have recommended. We want these programs to continue in as economical and efficient a manner as possible just as the gentleman does. We are going to work in every way possible to see that we accomplish that purpose. The gentleman from Maryland has talked to me several times today about this. He is a dedicated Member of the Congress and looks out for the interest of his constituents. I think it is a real privilege for his constituents to have him here representing them.

Mr. JOHNSON of Maryland. I thank the gentleman from Minnesota. It is gratifying to hear that the committee will cooperate in the restoration of these funds.

Mr. McDOWELL. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Maryland. I yield to the gentleman from Delaware.

Mr. McDOWELL. I wish to commend the gentleman, my colleague from the Eastern Shore of Maryland, which is a part of the great Del-Mar-Va poultry producing area. I agree with him that this is a most unfortunate action in the House today that these poultry inspection funds have been stricken from the bill. I, too, hope that the committee of conference or the other body itself in their wisdom will restore these funds so that not only the industry may benefit from poultry inspection, but that the consumers may have this protection, the same protection that all other agriculture products have today under this act.

Mr. ROBISON. Mr. Chairman, I presume that in some quarters a vote against the 1961 Department of Agriculture and Farm Credit Administration appropriation bill—H.R.12117—will be considered an act of legislative irresponsibility. Maybe so, but, for so long as the present politically inspired congressional deadlock that prevents the passage of constructive legislation in the price-support field continues, I shall feel constrained to vote against any and all agricultural appropriations bills. It seems to me that to do otherwise would be an act of greater legislative irresponsibility.

I have studied the committee report that accompanies H.R. 12117 with interest. It is indicative of a great deal of hard work on the part of the members of the Committee on Appropriations who have struggled with this problem which is, in my opinion, the most difficult domestic economic issue that we face. At the same time, it is also indicative of the partisan philosophical split that prevents this Congress, as it has past Congresses, from finding the courage and common sense to accept the inevitable and to seek a radically new approach.

What is that approach? Mr. Chairman, I confess I do not know the specifics of the way we should take, but I do know that it was a sorry day for the American farmer when this body embarked upon a course of seeking to find political solutions for the problems of agriculture. The program that Congress put together a generation ago in the dark days of the great depression, and that subsequent Congresses have been embroidering upon ever since, goes way beyond the proper role that government, as I see it, should play in assisting in the orderly marketing of agricultural products by providing protection against inevitable seasonal changes in supply and demand, and in leading the way through research and development toward new markets and new marketplaces. It seeks instead to disregard self-restraint and to substitute the easy-seeming virtues of governmental guarantees. The results have been self-evident and all add up to such an overwhelming picture of disastrous failure that they can no longer be obscured by any amount of political buck-passing or finger pointing.

It has been a well-meaning effort by men of good will but it has hurt the most the little family farmer it was intended to help, and at the same time has enabled other natural opportunists to make fortunes out of his misery. It has left that same family farmer foundering in a confusing sea of political decisions over which he has less and less control, and improperly marked him, in the eyes of the consumer and the taxpayer, as a economic parasite they must somehow get off their backs.

By ignoring what would seem to be a basic precept that farm production can never be balanced with effective market demand by legislation so long as increased production is encouraged by guaranteed prices, that same program has produced for us virtual harvests of insanity that we can neither sell or give away and that cost us over a million and a half dollars a day, each and every day of the year including the extra day of this leap year, just to store.

Mr. Chairman, the committee report is replete with conclusions to the effect that, and I quote, "What we have been doing has not worked." I could not agree more. It is also replete with urgent demands to the effect that, and again I quote, "something has to be done." Once again, I could not agree more.

However, when it comes to the question of what must be done, outside of the statement that this Congress and the Secretary of Agriculture ought to "get together" without delay, one can search the report in vain without finding any specific suggestion for improving the situation worthy of grasping for as a drowning man might grasp for straws. Thus, that same student of this report must turn to the Committee on Agriculture itself in an effort to find what is in the wind; whereupon, if he reads the signs accurately, the only legislative proposal of the many before that committee that seems to have a chance is something called by the high-sounding name of The Family Farm Income Act of 1960. This sounds pretty good for the embattled farmer constituent. In fact, its sponsors call it an enlightened and new approach. That also sounds pretty good, but every study of this bill seems to indicate only that it is a dusted-off repackage of what used to be called the Brannan plan, which would bring the three-fifths part of American agriculture presently free of governmental controls under strict Federal regimentation, and go a little further toward making virtual serfs of all our farmer constituents. Mr. Chairman, I am positive that my farmers want no part of any such additional help. They want, instead, each a chance to stand on his own two feet again, without being dependent on Government or anybody else, striking out vigorously in organized ways to seek solutions for their own problems. They realize this might hurt for a while, because they are now well aware that someone always gets hurt during the course of an economic revolution such as American agriculture is now undergoing, but they think that the long-range benefits for them, as well as for America itself, will make that courage on their part well worth the cost and pain. If they can exhibit that sort of faith in the free enterprise system, I want to stand with them.

Mr. Chairman, does it make sense for the Congress to continue to prescribe massive doses of the same sort of medicine, namely, governmental tinkering with the operation of the natural laws of supply and demand, when it should already be evident to everyone here that such a prescription is only making our patient's condition more critical? I think not, and it is for that reason that I have introduced in this Congress a bill which would terminate the price-support program. My bill is known as H.R. 9781, and though I realize it would not go anywhere, it is there, along with several others like it, for anyone to hang their hat on who may care to do so. I also realize that Uncle Sam cannot and should not let go of both of the farmer's hands at once, as my bill would purport to do, and that, instead, there would have to be carefully worked out specific governmental aids to help him through the period of adjustment that would necessarily follow any gradual withdrawal. But, these things can and should be worked out, if we but have the wisdom and the desire to do now what we will inevitably have to do some day in the not-too-distant future.

Let me make clear that there are many provisions and programs in this appropriation bill that I fully support, including, I am happy to note, a partial funding of the much-needed National Soil and Water Research Center scheduled for construction at my alma mater, Cornell University, at Ithaca, N.Y. However, feeling as strongly as I do about the utter foolishness of continuing the present price-support program merely because we are unwilling to accept the handwriting on the wall with respect thereto that clearly says, "Failure, failure, failure," I must cast my vote against the whole measure.

Mr. ROGERS of Florida. Mr. Chairman, I notice in the committee report that $19 million is recommended for further work toward eradicating brucellosis during the 1961 fiscal year.

I certainly agree that the eradication of brucellosis in cattle is a worthwhile and highly desirable objective. It is a program of concern to both the State and Federal Governments. Over $3.5 million in State and Federal money has been spent in my own State of Florida since 1954 in an attempt to eradicate brucellosis on roughly a matching basis. As of June 30, 1960, it is estimated that 29 out of 67 Florida counties will have been certified modified-free from brucellosis. This means simply that in those counties which are so certified, infection has been reduced to the point where not more than 1 percent of the cattle and not more than 5 percent of the herds show evidence of the disease.

The complete cooperative brucellosis eradication program carried on under the auspices of the Animal Disease Eradication Division of the U.S. Department of Agriculture consists of two parts. The first part of the overall program involves calfhood vaccination and the other part involves testing of all herds and cattle on an area basis and elimination of infected animals. Federal funds are available only to those States, the counties of which are willing to accept the whole eradication program, that is, both calfhood vaccination and test and slaughter.

The counties in Florida which have accepted the complete program are located mostly in the north and northwestern part of the State where the herds are generally smaller and the conditions different in contrast to those which prevail in the vast range lands of central and southern Florida.

Because of this unique situation in some areas of central and south Florida, the Florida Cattlemen's Association has endorsed the calfhood vaccination approach to combating the disease. In a series of resolutions dating back to May 1958 this group has advocated a suspension of the test and slaughter phase of the program and has asked the Florida Livestock Board to initiate a program of compulsory calfhood vaccination.

At this point, Mr. Chairman, I would like to include in the body of my remarks portions of three resolutions adopted by the Florida Cattlemen's Association. The first of these, dated May 1958, reads:

Whereas the range cattlemen in many areas of Florida are not yet ready for a compulsory test and slaughter eradication program for brucellosis; and

Whereas, in any event, this program has not been proved to be 100 percent effective in other areas: Be it

Resolved, That the Florida Cattlemen's Association hereby requests the Livestock Board to concentrate its efforts in this field on an extensive calfhood vaccination program in lieu of its present county-by-county modified brucellosis-free program.

The second of these resolutions, adopted in May of 1959, reads as follows:

Be it resolved, That the brucellosis committee of the Florida Cattlemen's Association recommend to the Florida Livestock Board that the further extension of the test and slaughter program be temporarily suspended and that we request the cattle industry of Florida to endeavor to have passed a law permitting the Florida Livestock Board to inaugurate a compulsory calfhood vaccination program.

The third resolution, adopted in October of 1959, reads:

Whereas the brucellosis regulations of the several States relative to the entry of breeding animals from other States are quite varied; and

Whereas the Council of Southern Cattlemen's Association Presidents has agreed to seek approval from the livestock sanitary authorities of each southern State for a uniform regulation allowing calfhood vaccinates to move into each State without further tests, regardless of age and the brucellosis-free status of the county of origin: Be it

Resolved, That the Florida Cattlemen's Association, meeting in Silver Springs, Fla., on October 29, 1959, hereby endorses this effort and asks the Florida Livestock Board to take whatever steps are necessary to put into effect this simplified imports requirement for breeding animals entering Florida.

Also, I would like to quote a portion of a letter I received from Mr. J. O. Pearce, Jr., president of the Florida Cattlemen's Association. It reads, in part:

We have studied very thoroughly the effects and results of the brucellosis program on the cattle industry of our State and found that calfhood vaccination is the best way to control brucellosis in Florida. Therefore, these resolutions have been adopted.

Immediately after the adoption of the resolution in May of 1959, the USDA withdrew all money from the program except where the full test and slaughter program was in effect. We had spent years trying to get cattlemen in central and southern Florida on the calfhood vaccination program. Then suddenly it was withdrawn, leaving the cattlemen in the central and southern part of the State with no program at all. Any cattleman that vaccinated calves had to hire a veterinarian to do the work for him.

During the past year, of the calfhood vaccinates tested in Florida, less than 2 percent were reactors. We feel that any time you get over 98 percent protection by immunization you are on the road to eradication of that disease.

Mr. Chairman, I submit the position of the Florida Cattlemen's Association in the record to show that an honest difference of opinion exists as to the best way to eradicate brucellosis—at least, in a large portion of the State of Florida. The record will indicate a sincere desire on the part of our State officials and our cattlemen to rid Florida cattle of this disease. The Department of Agriculture is insistent on State acceptance of a complete program before Federal funds are forthcoming. I would simply like to point out that a program which is adaptable in one part of the country may not meet the needs of another section. I would ask that the Department reexamine the brucellosis program in Florida in an effort to arrive at a solution which will best meet the needs of our Florida cattlemen.

Mr. METCALF. Mr. Chairman, at his press conference on February 10, 1960, President Eisenhower was asked about the school support bill passed by the other body. His reply included these words:

I do not believe the Federal Government ought to be in the business of paying a local official.

During debate on the Interior Department appropriation bill, I pointed out that the measure under consideration provided money to help pay the salaries of at least 95,653 local officials. During debate on the appropriation bill for the Department of Health, Education, and Welfare and the Labor Department, I noted that Federal money would help pay the salaries of at least 562,000 State and local officials, including some 316,666 public elementary and secondary schoolteachers. The total of the State and local officials paid at least in part with Federal funds provided by those two bills is minimum of 657,653.

Under the bill before us today, Federal money would help pay the salaries of at least 71,665 State and local officials. They include 15,000 extension service employees, extension agents and extension service workers and 5,500 extension service clerical employees, in all 50 States; 9,165 members of State ASC committees and program staffs, and 22,000 ASC clerical employees, also in all 50 States; plus some 20,000 State experiment workers in those States which have land-grant colleges.

These three bills include a total of at least 729,308 State and local employees paid at least in part with Federal funds.

As I have said before, I favor the use of Federal tax funds for paying these local officials, including schoolteachers. Before action on this bill in the other body, I hope someone will ask the President to make his position clear. Does he want these local officials, including hundreds of thousands of teachers, to continue to be paid in part with Federal funds, or does he want Federal support withdrawn from these programs?

Mr. WHITTEN. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to, and that the bill, as amended, do pass.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. KILDAY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes, had directed him to report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to, and that the bill, as amended, do pass.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment?

Mr. WHITTEN. Mr. Speaker, I ask for a separate vote on the so-called Cooley amendment.

The SPEAKER. Is a separate vote demanded on any other amendment? If not, the Chair will put the remaining amendments en gross.

The amendments were agreed to.

The SPEAKER. The Clerk will report the amendment on which a separate vote has been demanded.

The Clerk read as follows:

Page 30, beginning on line 6, strike out "*Provided further,* That no part of these funds may be used to formulate or administer a program which provides for reclassing of Commodity Credit Corporation cotton after time of sale to private individuals or organizations:".

The SPEAKER. The question is on the amendment.

Mr. WHITTEN. Mr. Speaker, on that I ask for the yeas and nays.

The yeas and nays were refused.

The question was taken; and the amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. TABER. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. TABER. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. TABER moves to recommit the bill to the Committee on Appropriations.

By unanimous consent the previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. WHITTEN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

FLIGHT SAFETY FOUNDATION

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection?

Mr. McCORMACK. Mr. Speaker, the Flight Safety Foundation, whose opinions, I believe, carry considerable weight in the field of aeronautical research and survey, has stated that "the most critical problem in aviation today is the maintenance of separation between aircraft." For some time I have been forced to the same conclusion by the revolutionary changes that have come about in aviation, particularly the unparalleled congestion on our airways and the introduction of aircraft of fantastic speeds. These changes have placed an enormous responsibility upon our country's air traffic control service.

In a message to the national meeting of the Air Traffic Control Association, held in Oklahoma City, Okla., on October 9 of last year, I said:

The modernization and strengthening of this service, therefore, in order that it may be able to grapple successfully with the highly complex problems of this jet age, has become the primary aviation problem of our time. Since this problem affects the vital interests of our commerce, our national defense and the lives of the millions of men, women and children who travel by air, its sound solution should be the concern of all our citizens.

The air traffic control problem, as I see it, calls for modern control facilities, equipment and methods of control, all of which are essential to its sound solution. But the heart of the problem is the human element—the controller himself, the man on whose traffic separation decisions the lives of so many people are dependent. I was delighted to learn recently that the Air Traffic Control Association not only recognizes the need for a modernized control system, but also proposes that these dedicated men of the control towers and centers shall be given a sound, professional status with adequate compensation, retirement and other appropriate protections.

You of the Air Traffic Control Association have my best wishes for the success of your worthy and enlightened efforts to safeguard the air traffic problem, for that is of primary importance.

Now 2 years ago the Congress recognized the seriousness of this personnel problem by writing into the new Federal Aviation Act of 1958 section 302(g). That section directed the Administrator of the Federal Aviation Agency to make a study of this personnel problem, giving due consideration to the need for special qualifications and training, special provisions as to pay, retirement, and hours of service, and special provisions to insure the availability and responsiveness of the air traffic control personnel in fulfilling national defense requirements. The Administrator was directed to report the results of the study, with his recommendations, to Congress on or before January 1, 1960. The Administrator completed his study substantially in due time, but the report has not yet reached the Congress because it has been under study by the Bureau of the Budget.

The report of the Subcommittee on Aviation of the Senate Interstate Commerce Committee, which was submitted by its chairman, the able Senator from Oklahoma, Senator MONRONEY, emphasized the urgency of the problem with which section 302(g) is concerned. The report stated:

Aside from the question of unified service and provisions for war emergencies, a study is urgently required of special personnel problems affecting the present CAA air-traffic control operators. It is therefore the intention of your committee that the personnel study called for in section 302(g) include early consideration of ways and means for strengthening the present air traffic control service through special pay, retirement, and other incentive measures.

It seems to me, Mr. Speaker, that the note of urgency which runs through the Senate report—Report No. 1811—reflects the importance of this problem to the 50 million airline passengers and the many additional people using private, executive, and other-than-airline planes, who annually travel our airways. The dedicated men of air traffic control have maintained up to this time an amazingly high record of safety against midair collisions, despite the handicaps under which they have had to work; but the ravages of time and, more important still, the devastating effects of the stress and strain of their nerve-wracking task, are building up conditions that are certain to jeopardize safety unless corrective measures are taken.

The question of a realistic retirement policy, such as Congress provided a number of years ago for the men of the FBI, and the question of limitation of the hours of work which Congress provided in principle for the airline pilots 22 years ago, are perhaps the two most important issues involved and presumably dealt with in the Administrator's report which we have not yet received.

I bring this matter to the attention of the House because I believe it possesses urgency and importance to the members of the air-traveling public. I believe that we should act to avert possible future tragedies rather than wait for air disasters to provide a motive for action. I hope and urge, therefore, that the executive branch make available to the Congress the results of its study at the earliest possible moment.

TWENTY-FIFTH ANNIVERSARY OF THE RURAL ELECTRIFICATION ADMINISTRATION

Mr. AVERY. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. AVERY. Mr. Speaker, this is the 25th anniversary of the Rural Electrification Administration. The past 25 years have witnessed the building of electrical transmission lines throughout the country that have had the effect of completely revitalizing the rural areas of our Nation. Obviously, the greatest impact of the program occurred during the first few years after its authorization, but the services of the Rural Electrification Administration continue to expand.

One of the most significant aspects of the growth of the Rural Electrification Administration is the tremendous amount of work that has been donated by nonpaid but interested farmer-members throughout the United States, especially in the early days of this organization when there was considerable reluctance and apprehension on the part of some farmers to commit themselves to an added expense during a period of depressed prices that prevailed from 1932 until the advent of World War II. It was largely through the courage and conviction of these dedicated farmer-members that the practicability of distributing electricity through the rural areas was established.

After its acceptance and the reasonable cost had been established, its growth and expansion was very rapid. This growth and expansion was interrupted only by World War II.

I think it is especially appropriate to call the attention of the Members of the House to the fact that one of the most outstanding administrators of the Rural Electrification Administration is a Member of the House today from the great State of Minnesota, the Honorable ANCHER NELSEN. It was during his administration that most of the policy questions revolving around REA were resolved to the near satisfaction of all interested parties, both Government and nongovernment. There has been noticeably less conflict around this Agency since Mr. NELSEN's tenure as its Administrator.

In my State of Kansas a good friend of mine, Mr. Fred Yarrow, was a pioneer in the development of rural electric co-ops and I am glad that he is in Washington at this time to attend this anniversary.

It is of further interest to note the fine record made by the Rural Electrification Administration and the REA's telephone program last year.

During 1959, REA's electric borrowers connected 132,000 unserved rural establshments. Three-fourths of these were nonfarm consumers. At the same time, the average use of electricity continued to rise, and REA borrowers sold nearly 14 percent more electric power in fiscal 1959 than they did in 1958.

During the year, 250 electric loans were approved amounting to $177,292,100, bringing total loans since 1935 to more than $3.94 billion. Principal and interest payments to the Government rose to more than $1.1 billion, and over $146 million of this sum represented payments made in advance of due dates. Only two borrowers were delinquent in payments more than 30 days as of June 30, 1959. Net worth of borrowers amounted to 16.6 percent of their total assets at the end of calendar 1958.

REA telephone loans in 1959 set a new record of $99 million. A total of 223 loans were approved, including loans to 54 new borrowers. They brought the total number of telephone companies and cooperatives participating in the program to 665.

Loans since start of the telephone program in 1949 rose to $575 million by the end of 1959. When construction is completed, this money will provide modern telephone service for 1.2 million subscribers. More than 180,000 new subscribers were connected during 1959.

Telephone borrowers made payments to REA of more than $8.8 million dur-

ing 1959. At year-end, 95 borrowers had a balance with REA of nearly $1.6 million in advance payments, and the number of borrowers delinquent more than 30 days in their payments had been reduced to 13.

AWARD OF KOLLIGIAN TROPHY TO 1ST LT. RONALD L. WARNER

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, on the 11th of this month, today, 1st Lt. Ronald L. Warner was awarded the U.S. Air Force's Koren Kolligian, Jr., Trophy by Gen. Curtis E. LeMay, Air Force Vice Chief of Staff.

It is a source of great pride to me that the Kolligian family lives in my congressional district. This is the third award of that trophy I have been privileged to witness. I am so grateful to the young Kolligian pilot who gave his life for us and to his family for their appreciation of the heroism of other pilots.

Lieutenant Warner lives in the district of the gentleman from New York [Mr. GOODELL]. Mr. GOODELL also attended the award and I know he feels great pride in his constituent.

I set forth at this point the Air Force release from the Pentagon relating to this award:

AIR FORCE AWARDS KOLLIGIAN TROPHY TO TRANSPORT PILOT

The third annual award of the U.S. Air Force's Koren Kolligian, Jr., Trophy was made this morning to 1st Lt. Ronald L. Warner by Gen. Curtis E. LeMay, Air Force Vice Chief of Staff, in ceremonies held at the Pentagon.

The trophy, presented each year to the aircrewman who most successfully copes with an emergency situation in flight, was awarded to Lieutenant Warner for exercising unusual courage, airmanship, and judgment in landing a crippled C–119 during an overwater flight between Okinawa and Guam on September 4, 1959.

Lieutenant Warner, 25, of Cattaraugus, N.Y., was piloting the cargo-type aircraft with 27 passengers aboard when a malfunction occurred in the right propeller, causing the aircraft to lose altitude rapidly. The plane was midway between Okinawa and Guam, with insufficient fuel to reach a suitable landing area. With the aircraft operating at reduced speed due to the defective propeller, Lieutenant Warner managed to get it under control and maintain a flyable altitude.

Knowing he could not reach Guam, Okinawa, or Iwo Jima, Lieutenant Warner made radio contact with two escort aircraft, then jettisoned five 6-man life rafts and associated survival equipment and eventually landed the plane and passengers at Iwo Jima successfully with practically no fuel left in the tanks.

In citing Lieutenant Warner for this operation, the Air Force said "his courage and determination together with his superior knowledge, skill, and professional airmanship enabled him to cope successfully with an in-flight emergency situation and undoubtedly resulted in the saving of many lives, as well as preserving his aircraft."

Lieutenant Warner is assigned to the 6313th Air Base Wing of the 313th Air Division, Pacific Air Forces, Okinawa. He attended Alfred Agricultural and Technical Institute before entering the Air Force as a flying cadet in 1954. He is married and has one child, a baby boy a few days old, named Ronald L. Warner, Jr.

The Koren Kolligian, Jr., Trophy was donated to the Air Force by the Koren Kolligian family of Winchester, Mass., in the name and memory of 1st Lt. Koren Kolligian, Jr., USAF, who was declared missing in a T–33 jet aircraft off the Farallon Islands near San Francisco in 1955. He was assigned to McClellan, AFB, Calif., at the time. The Kolligian, Sr., family attended today's ceremony.

MRS. ANNE MORGAN

Mr. LANE. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 1607) for the relief of Mrs. Anne Morgan, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 2, line 2, strike out "Act" and insert "Act: *Provided, however,* That the passage of this Act shall not be construed as an inference of liability on the part of the United States Government".

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

TWENTY-FIFTH ANNIVERSARY OF THE RURAL ELECTRIFICATION ADMINISTRATION

The SPEAKER. Under previous order of the House, the gentleman from North Carolina [Mr. COOLEY] is recognized for 1 hour.

Mr. COOLEY. Mr. Speaker, I ask unanimous consent that all Members who desire to do so may extend their remarks following mine.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. COOLEY. Mr. Speaker, 25 years ago today was a great day in America. President Franklin D. Roosevelt ordered the lights turned on in rural America.

It was on May 11, 1935, that the President placed his signature upon an Executive order creating the Rural Electrification Administration. This was an historic day. It was a great and good day not only for farmers but for all Americans.

The Rural Electrification Act of 1936 gave REA permanent status.

I remind the House that it was our great Speaker, SAM RAYBURN, of Texas, then chairman of the Interstate and Foreign Commerce Committee, who led the fight in the House for this legislation. I am proud to have been at his side in this battle. The drive for REA in the Senate was sparked by that great Senator from Nebraska, George W. Norris.

Thus, in 1936, the Congress joined Franklin D. Roosevelt in directing that the modern miracles of electricity should be taken down the country roads and the lanes to the then remote rural homes of our country.

Those were the dark days of the Great Depression when, in our urgent necessities, the Nation was awakening to a new concept of its responsibility for the well-being, and the dignity, of all its citizens; and our Government boldly and courageously accepted the challenges of the times. It was in such times, along with other measures relating to the God-given rights and aspirations of all the people, that REA was born.

We have come a long way in this quarter of a century.

Many of you here can remember the day when we never saw an electric light except when we slicked up and went to a city. I can clearly recall the cleaning of the shades and the trimming of the wicks of the kerosene lamps in the days of my childhood, and well do I remember what a blessing it was when the lights were turned on at our house.

We can recall the rugged way of farm life, especially for the farm wife, when rural homes possessed none of the conveniences and comforts that electricity already had bestowed on homes in the cities. These were the days when our rural people aged ahead of their years, when farmers were set apart, because they were so poor; and other people pitied—or did not envy—them. Farming was deemed to be a hard way of life, filled with drudgery.

Some of you here were youngsters back on the farm in the 1930's.

Do you recall how young people wanted to get away from the country—how they longed for the lights and comforts of the glittering cities? They wanted a way of life and opportunities that the farm then did not seem to offer.

A quarter of a century ago America had entered the electrical age, and our farm people had been left behind.

Our free enterprise system has made America the greatest of all nations. We all know that this system will deliver to any man's door most any material thing that he is able and willing to pay for. The farmer was left behind when the Nation entered the electrical age because he was so poor. He simply did not have the money to bring to his home the conveniences and comforts enjoyed in the cities.

But in the 1930's the Nation installed in Washington a President and a Congress capable of meeting the challenge.

We established the Rural Electrification Administration to take the power line to the farmer's home.

We established a farm program which improved farm prices and incomes and enabled the farm family to enjoy the conveniences and comforts and the security of homes in the cities.

In this quarter of a century a miracle has been wrought, indeed.

In 1935, when REA was born, only one or two or three farms in a hundred, in some States, enjoyed the blessings of electricity. For the Nation as a whole only 1 farmstead in 10 was electrified.

Today there is hardly a farm in America without electricity, except in the remotest and most isolated areas. Some 97 percent of all farms have electricity.

Moreover, we have given the REA the job of taking telephone service to rural America and hundreds of thousands of farm homes now enjoy this convenience.

Looking back, Mr. Speaker, we must wonder how it was that any man could have stood then against such a program which not only has blessed our farm people but also has been a boon to our workers in the cities, for our farmers now provide a multi-billion-dollar market for the appliances, the devices, and the gadgets produced in the cities. But you will recall the battle here on this floor, as selfish influences were brought to bear, and some ruthless people sought to tie a tag of "socialism" on every forward-looking piece of legislation.

In this connection I would remind the House that it never was the intention of the sponsors of REA that it should replace established private power services, or duplicate such services. REA was brought into being to take powerlines down the country roads and lanes where private power, back in those days, did not venture such expansion. In my own State of North Carolina private power has also accomplished miracles in service to the people.

I am proud that now, 25 years since President Roosevelt signed the REA Executive order, the whole Nation—except, of course, for a few incorrigible dissidents—looks upon the REA as a boon and blessing within the framework of free enterprise—as American as fried chicken or apple pie. The accomplishments of REA have exceeded even our most hopeful expectations of a quarter of a century ago.

But, Mr. Speaker, on this occasion of celebration we are compelled to inject an ominous and foreboding note.

Agriculture, recently so hopeful of economic equality with the people in other pursuits, has been plunged into another crisis. The farm price support and production adjustment program, based upon the parity principle, has been virtually destroyed, and the Nation's agriculture again is in desperate straits.

For 11 consecutive years prior to 1953, during which major crops were supported at 90 percent of parity, the average prices for all farm output in the marketplaces were at 100 percent of parity or better, and farm program costs were negligible. This, indeed, was the golden era of agriculture—the most prosperous years for farmers in all our history.

Then, for reasons still unclear and unexplained, there was an abrupt change in the executive department's attitude toward farm policy and programs. We were shifted from a system of firm price supports to flexible or lower supports and freedom was urged for farmers to produce to the limit, irrespective of the piling of surplus upon surplus at great cost to the Government.

The tragic consequences are felt in virtually every farm home in America.

During the last 7 years the net income of all of agriculture has been $20 billion less than in the 7 previous years, in a time when income and prices in other areas of the economy have advanced spectacularly.

Farmers' net income in 1959 was at the lowest level, in relation to volume of their sales, of any year since the Department of Agriculture began keeping records in 1910.

Average farm prices in December 1959 reached their lowest, in terms of parity with other prices, for any December since 1933.

Per capita annual income of people living on farms in 1959—including subsidies and also their earnings from off-farm work—was less than one-half that of nonfarm people. The per capita income of farm people totaled $960, compared to $2,202 for nonfarm people.

In 1959 American consumers bought 16 percent more farm-produced food than in 1952, yet our farmers received $100 million less for that larger volume than for the most limited volume in 1952; and, in contrast, consumers paid food processors and marketing middlemen $10 billion more in 1959 than in 1952 for hauling, processing, and handling the food between the farm gate and the retail counter.

I have no intention of injecting on this occasion any controversy over specific farm program proposals, but I do feel it is appropriate, and that it is incumbent upon me as chairman of the House Committee on Agriculture, to direct the attention of the House and the Nation to the conditions of penury now settling again upon our farm people. It is my painful duty to admonish that the hopes of bringing agriculture into a parity position, in our economy and in our democratic society, are being shattered.

Mr. Speaker, the circumstances of our farm people are such that action is imperative. The day demands vision and dedication. These are the qualities that, in the mid-1930's, guided our Government to measure up to its responsibilities to the people who produce our food and fiber and who have made us the best-fed Nation on this earth.

I commend to this House, Mr. Speaker, the example you have set for us, where the well-being of the families on these broad lands of ours is concerned. We celebrate today the great achievements of the Rural Electrification Administration. In so doing, we salute you, and we pay tribute to Franklin D. Roosevelt and to such other great men as George W. Norris.

It is the prayer of the farm people of America, and of all who are devoted to their well-being, that our Government—guided by the same vision and dedication that brought light to the dark nights of our great American countryside a quarter of a century ago—may now proceed to reestablish the proposition and the principle that our farm people have a right and ought to share in the rewards and all the blessings of this free-enterprise capitalistic system, on a parity and in equal measure with all Americans.

In conclusion, Mr. Speaker, I want to congratulate and commend you and all of those who have worked with you in bringing this great program to the farm people of America, turning on the lights in the rural areas of our great Nation.

Mr. CHENOWETH. Mr. Speaker, I am happy to join my colleagues in the celebration of the 25th anniversary of the rural electrification program. I know of no other program authorized by Congress that has brought more happiness and comfort to rural America. I take this opportunity to congratulate all of those who conceived this program, and those who have developed the REA movement over the years. They have the eternal gratitude of millions of our citizens living on farms and ranches in this country, who are now enjoying the advantages of electricity in their homes and on their farms as a result of this legislation.

The State of Colorado takes unusual pride in this silver anniversary celebration because of the fact that the present Administrator, Mr. David A. Hamil, is a Colorado man. Mr. Hamil has had an outstanding record of public service, as well as being a successful farmer and stockman. Mr. Hamil served for many years in the Colorado State Legislature and was honored by being elected Speaker of the House. He has made a splendid record as REA Administrator, and enjoys the confidence of all groups, many of whom have passed resolutions expressing confidence in his administration. We are very proud over the record being made by Mr. Hamil, and I want to wish him continued success in all of his plans for future REA development in this country.

Since coming to Congress I have given the REA program my full support. I have been very pleased to see this program expand and develop, not alone in Colorado, but in the entire Nation, where 4,736,000 rural consumers now enjoy electric service.

I am proud to have three REA cooperatives in my district. These cooperatives have been well managed and have been very successful, although facing many problems over the years. I want to commend their directors and managers, both past and present, for their outstanding achievements.

I wish to mention Mr. James N. Myers, who is manager of the Southeast Colorado Power Association with headquarters at La Junta; Mr. Edward E. Gaither, manager of the San Isabel Electric Association with offices at Pueblo; and Mr. Ray W. Villyard, manager of the San Luis Valley Rural Electric Cooperative, Inc. at Monte Vista. All three are recognized as outstanding REA leaders in Colorado.

In addition to these three cooperatives, two others also serve patrons in my district, although their headquarters are located outside of the third district. I refer to the Mountain View Electric Association, Inc., of which Mr. Ralph E. McMillan of Limon is manager; and to the Sangre de Cristo Electric Association, Inc., of which Mr. Norman S. Knudsen of Salida is manager. All of these co-ops are doing a fine job in making electric service available to their customers.

I have also been happy to support the REA telephone program. These telephone loans have been made to REA cooperatives in Colorado, and some of these lines are located in my district. I understand that as of January 1, 1960, REA had loaned $5,378,000 to eight borrowers in the State of Colorado, four of which are commercial companies and four are cooperatives. I am sure that the telephone program will continue to grow and expand over the years, and will make telephone service available to thousands of farmers and stockmen who would otherwise be unable to enjoy this convenience.

I feel very proud over the record made by REA cooperatives in Colorado; 89.7 percent of Colorado farmers are now receiving electric service, either through REA cooperatives or private utilities. Colorado's 25 rural electric co-ops have built more than 31,500 miles of electric powerlines at an average cost of $2,000 per mile to bring modern electric convenience to over 70,000 rural homes, ranches, and farms, as well as business concerns and other installations.

At the beginning of this year the Rural Electrification Administrator had approved a total of $121,167,157 in loans to 25 electric cooperatives in the State of Colorado. These loans were authorized in order to enable these borrowers to construct some 34,495 miles of line and other electric facilities which will provide electric service for approximately 87,000 consumers.

These REA cooperatives have repaid more than $12 million on the principal of their loans, in addition to over $8 million in interest, and are now almost $5 million ahead of schedule in interest payments. At the first of the year there was no REA cooperative in Colorado which was overdue in its loan payments. I think this is an outstanding record, and all of those who have participated in the management of these cooperatives deserve great credit for what they have accomplished.

I wish to state that we have always had very harmonious and pleasant relations between the REA cooperatives and the private utilities in my district. Up until a few years ago all of the power distributed by the cooperatives was purchased from these private companies. In recent years public power from the Colorado Big Thompson and other Federal projects has been made available by the Bureau of Reclamation.

The Southeast Colorado Power Association, the San Isabel Electric Association, and the Sangre de Cristo Electric Association organized the Arkansas Valley G. & T., Inc. for the construction of a powerplant at Canon City, which is operated by the Southern Colorado Power Co., a private utility. This enables these three cooperatives to obtain power at a cheaper rate and has been a very satisfactory arrangment for everyone concerned. This plant has been a great success, and the construction of a second plant is under consideration at this time.

Colorado's rural electrics have a vital interest in the social and economic growth in the communities they serve. Rural electric lines reach Colorado's isolated mountains and plains, providing convenience as well as employment opportunities to Colorado's rural families. These associations are making a most important contribution to the economy of their respective areas.

I am confident the REA movement will continue to grow and prosper in the years ahead. I have greatly enjoyed my association and work with all of those connected with the REA program. I hope the time will come when every farm in America will be able to obtain electric service. I believe that this goal will eventually be reached. It is a distinct privilege and pleasure to extend these good wishes to REA on its 25th birthday. I want to wish everyone connected with the REA program success in their plans for the future and I pledge to them my continued cooperation and support.

Mr. DOWNING. Mr. Speaker, I would like to join my distinguished colleagues in praising rural electrification, one of the most democratic programs which this great Nation has had the good fortune to develop.

I personally was born and raised in an urban community but many of my friends in the First Congressional District of Virginia knew the darkness and drudgery that existed before the birth of the Rural Electrification Administration. Many of the families I know still can remember waiting for the lights to come on and the lighting of the countryside remains indelibly stamped on the memories of many rural families.

Electric energy is the lifeblood of a rural community and rural electrification has made this lifeblood flow abundantly. Its contributions to the economic progress of the Nation cannot be overemphasized. Many of these contributions are self-evident—farm efficiency has been substantially improved and rural education, health and recreational facilities have been expanded and the farm family has more leisure time to enjoy the fruits of its labors.

Electric power takes the place of increasingly scarce farm labor. There is a two-way benefit in increased electrical mechanization of the farm. On one side, managing the farm has become less laborious. On the other, young men and women have been freed to leave the farm if their personal inclinations lie in some other direction. The rich supply of manpower that was once tied to menial farm tasks has now been freed into the broader market of engineers, scientists, factory workers and teachers.

I would like to join REA cooperatives in Virginia and across the Nation in celebrating their 25th anniversary.

Mr. THOMPSON of Louisiana. Mr. Speaker, one of the great achievements of the Democratic administration has been the Rural Electrification Administration. Today is the silver anniversary of the REA. Just 25 years ago today, May 11, 1935, President Roosevelt, by executive order, established a temporary Rural Electrification Administration. This order was designed to carry out an authorization of the Congress contained in the Emergency Relief Appropriation Act of 1935, permitting $100 million of the emergency relief funds contained in the act to be used for rural electrification purposes. The skeptics thought it was just one of those temporary things which would disappear in a short time. However, in 1936, legislation which was introduced in the House by you, Mr. Speaker, and in the Senate by the late Senator George Norris of Nebraska was passed providing for the setting up of the Rural Electrification Administration as a permanent agency of the Federal Government and authorizing a 10-year rural electrification loan program. This legislation became known as the REA Act of May 20, 1936.

As I look around me today, I am very proud of my privilege to serve with those Members of this body who, along with our Speaker, played a part in the creation of this agency which has meant so much to millions of rural people. The gentleman from Tennessee [Mr. REECE] was a member of the Interstate and Foreign Commerce Committee which favorably reported this bill to the House. Some of the other Members of that history-making 74th Congress with whom it is my privilege to serve in this, the 86th Congress, are former Speaker of the House JOE MARTIN, our majority and minority leaders, Mr. MCCORMACK, of Massachusetts, and Mr. HALLECK, of Indiana; Mr. COOLEY, of North Carolina; Mr. VINSON, of Georgia; Mr. ARENDS, of Illinois; Mr. CANNON, of Missouri; Mr. MAHON, of Texas; Mr. TABER and Mr. CELLER, of New York; Mrs. ROGERS, of Massachusetts; Mr. SPENCE, of Kentucky; Mr. SMITH, of Virginia; Mr. COLMER, of Mississippi; Mr. ALLEN, of Illinois; Mr. BARDEN, of North Carolina; Mr. HOFFMAN, of Michigan; Mr. PATMAN, of Texas; and Mr. WALTER, of Pennsylvania. With such a distinguished list of godparents, there is little wonder that REA is held in such high prestige in the Congress today.

In reporting the REA bill to the House in 1936, no minority views were filed by the Interstate and Foreign Commerce Committee. Mr. RAYBURN, in submitting this bill to the House, filed a general statement on behalf of the committee. I quote a part of the Speaker RAYBURN'S statement:

> The widespread interest in rural communities for the rural electrification program indicates that few things will add more to the comfort, satisfaction, and happiness of the rural population than the electrification of farm homes. The farmer should become a much better consumer of electricity than the dweller in the city. The farmer has use for all the household electrical appliances which can be used by the city dweller, but, in addition, he is a large user of power in his business. Water pumps, feed grinders, milking machines, small motors for many uses, and refrigeration are among the many uses of electricity which mean a saving of money and a relief of the drudgery of farmwork.
>
> No grant or subsidy is provided for in the bill. It is the intention of the bill that all of the money loaned for any of the purposes specified shall be returned to the Government, with interest as provided. It is believed that these loans are perfectly safe. In the hearings before the committee, it appeared that of the 6,800,000 farms in the United States, about 6 million are not receiving central-station service. It was estimated that the funds made available by this bill might result in reaching about 1,900,000 of this number, and that this number of farms is well within the number than can

be served upon a self-liquidating basis. Experience of other agencies engaged in making loans for household appliances has demonstrated that such loans are promptly repaid. The value to the farm of electric service and the appliances for its use is such that the service obtained is continued as one of the basic necessities of farm life.

The bill has received the endorsement of the Secretary of Agriculture, the Secretary of the Interior, and the Administrator of the present Rural Electrification Administration. The bill has also received the endorsement of all of the leading farm organizations of the United States.

There is no reason why the farmers of America should not have the conveniences, economies, and comforts which are a part of the modern, electrified home. It is believed that the 10-year program provided for by this bill will aid greatly in establishing the much-needed balance between urban and rural standards of life.

In 1944 the REA program was extended indefinitely. From 1935 until 1939, REA was an independent agency of the Federal Government. Since 1939, it has been an agency of the U.S. Department of Agriculture. The Administrator of REA is appointed by the President, subject to Senate confirmation. The first Administrator of the REA was Mr. Morris L. Cooke. He was followed by Mr. John Carmody. The third Administrator was Mr. Harry Slattery; the fourth was Mr. Claude Wickard; the fifth was Mr. Ancher Nelsen; and the sixth and present Administrator is Mr. David A. Hamil, who has served since June 26, 1956.

The Rural Electrification Administration was authorized to make loans for rural electrification, to furnish elctricity to persons in rural areas who were not receiving central-station service. These loans would be made for a period of not exceeding 25 years, with interest at 3 percent, or less. The 1936 act provided that the Reconstruction Finance Corporation was authorized to advance $50 million for the fiscal year 1937, with interest at 3 percent, repayable in 25 years. In addition, $40 million was authorized annually as a direct appropriation from funds in the Treasury of the United States for each of the next 9 years, 1938 through 1946. Although under the 1936 act, REA was to be financed by the RFC for only 1 year, actually, this method was continued through the fiscal year 1947. A total of $931,500,000 was authorized to be borrowed from the RFC from 1936 through 1947. Since the Agriculture Appropriation Act of 1948, REA loan funds are derived directly from the Treasury of the United States. Loans made under the Agriculture Appropriation Act of 1948 and subsequent acts are made at an annual rate of interest as determined by the Secretary of the Treasury, but not to exceed 2 percent, repayable in 35 years. Since 1952, borrowings from the Treasury have been at 2 percent. A part of each consumer's monthly payment for electric or telephone service is used to repay the loan from the Government and all REA loans are repaid from the operating revenues of the borrowers who are financed.

After the Rural Electrification Act had been in effect a few years, the rural residents of our country wanted another type of service aid in the form of loans from the Federal Government, and that was modernization and extension of rural telephone service. Late in 1949, Congress amended the Rural Electrification Act and gave REA authority to make telephone, as well as electrification, loans to qualified borrowers. The act provides that preference shall be given to nonprofit and cooperative organizations in making loans. When REA was first established, there were few existing organizations to which loans could be made, so the farmers, acting under State laws, formed their own cooperative associations and applied for loans. REA has made more than 95 percent of its electrification loans and about half of its telephone loans to cooperatives organized by rural residents.

Before the establishment of REA, most of rural America was in kerosene darkness. In 1937, only 10 percent of all farms in the United States were receiving central-station electric service. The 1950 census listed 4,740,849 farms and on June 30, 1952, REA estimated that 88.1 percent of these were electrified.

In my State of Louisiana there were 170,216 rural homes and farms in 1937 and only 2,826 of these farm homes had electricity—1.7 percent—as compared with a national average of 10 percent. The first member-owned REA financed cooperative in Louisiana was organized in St. Mary Parish in 1937. It was called the Teche Electric Co-op. The Valley Electric Membership Corp. was organized in the Natchitoches Parish soon after, and shortly thereafter, the Southwest Louisiana Electric Membership Corp. was formed in Lafayette Parish. Today, 23 years later, there are 13 REA-financed cooperatives in Louisiana, providing 98-percent area coverage, as compared to 1.7 percent in 1937. This is a national record in total percentage of members served. They serve more than one-half million rural people, their farms, businesses, and small industries. The 13 cooperatives have more than 25,000 miles of rural lines, averaging around 4.5 members per mile for the State of Louisiana, whose kilowatt-hour consumption has jumped from about 45 kilowatt-hours per consumer in 1940 to an average of 245 kilowatt-hours per consumer in 1959. This increased consumption has required the rephasing and rebuilding of practically all the lines since 1950.

The REA cooperatives are controlled by member-elected boards of directors which are composed of outstanding local citizens and, contrary to the belief of many that member-owned cooperatives are government agencies which are existing on taxpayer handouts, they have a remarkable record of repaying REA loans. Since 1937 the 13 cooperatives in Louisiana have been advanced slightly over $55 million by REA, and as of December 31, 1959, they have repaid $19,983,256, of which $5,809,379 was interest on the Federal loans. In addition, and not included in the figure I just gave you, they had repaid $4,831,719 in advance of schedule.

Perhaps the greatest achievement of rural electrification is to be found in the improved standards of living of our farm families. REA loans were approved in the belief that farm people would apply electric power to a wide range of farm and home chores. To teach people to use their strange new servant effectively, county agents, home extension specialists and REA power-use representatives waged a ceaseless educational campaign. Not only has farming become more attractive and livable, with back-breaking drudgery gone, but it, also, has become more efficient and profitable. Electric service made possible running hot and cold water and plumbing in every farm home; it preserved food and provided better meals; eyes are protected by better lighting, and in many ways, the family's health has been improved. Probably the most popular appliance in rural America when homes were first served with electricity was the elecric iron. A close second in popularity was the radio, which helped end the feeling of isolation which had depressed countless farmers and their families. Now, I am sure, the television is one of the most popular appliances. Equally important to the rural family is the telephone, which enables the family to keep in touch with its neighbors, its community, and its Nation.

It is shortsighted to think of rural electrification as having helped only the farmers. The U.S. Department of Agriculture estimates that for each dollar invested by the cooperatives, their members have spent $6 for appliances alone. But this is only the beginning. Think of the great dairying industry, a direct contribution of rural electrification; the fishing industry, dependent upon modern refrigeration; and a host of small rural industries, along with many new main street businesses and industries which have been created by the new markets, methods, production, and so forth, made possible by rural electricity.

Besides altering life on the farm, the availability of electric power in rural areas has brought about profound changes in the character of rural America. Suburbs have been built on the fringes of towns and cities; retired people and commuters have been moving into rural areas; recreational sites, summer homes, camps and other facilities are enjoyed by urban as well as by rural people.

Another benefit of great importance to our whole Nation is that the development of all these small industries, and so forth, made possible by the Rural Electrification Administration, has given employment to many, many persons. I know that the REA has had a big part in bringing about the increased productivity and a stronger economy in my own State of Louisiana. And I feel that, truly, everyone has benefited.

Mr. HULL. Mr. Speaker, today marks the 25th anniversary of the establishment of the rural electrification program which in the past quarter century has brought the priceless asset of electricity to America's rural population.

Five rural electric cooperatives have their headquarters in the Sixth Congressional District of Missouri and each has

done an outstanding job in providing service to our farm people.

These electric cooperatives are the Northwest Missouri Electric Cooperative at Savannah, Mo.; the Farmers' Electric Cooperative, Inc., at Chillicothe, Mo.; the Nodaway-Worth Electric Cooperative, Inc., at Maryville, Mo.; the Atchison-Holt Electric Cooperative of Rock Port, Mo., and the Platte-Clay Electric Cooperative, Inc., at Platte City, Mo.

Under leave to extend my remarks, I include a fine statement regarding the activities of the Farmers' Electric Cooperative prepared by Ernest C. Wood, manager of that cooperative:

At the statewide level, rural electrification, as of May 11, 1935, is officially established at 6.4 percent. Present figures released by REA would reflect that Missouri is 96 percent electrified rurally, and I think that northwest Missouri would be between 98 and 99 percent. The rural electric cooperatives of the State deserve a pat on the back in that they have accomplished approximately 80 percent of the total job in the State.

It is a completely erroneous assumption for anyone to think that now that the job is nearly 100 percent completed that the REA program and its need for loan funds is ended. As an example, Farmers' Electric has had advanced, to date, from REA, $5,698,000 under its loan contract. These figures are as of January 1, 1960. With these loan funds, we have built 3,074 miles of line and have had a peak connected consumer count of 7,273.

To look into the future, we have had an engineering firm design on blueprint a system projected to deliver 1,500 kilowatt-hours per month per consumer. It is anticipated that this level will be reached in 20 to 25 years. The engineers have calculated that we will spend an additional $6,084,000. You can readily see that loan fund requirements will not diminish. In fact, we will just about double our investment in the equivalent period of time that we have been operating inasmuch as our cooperative first energized in April 1940.

The problems of the various cooperatives are different, and our cooperative, being more rural than many because of not being close to a major city, has suffered a net decline in consumers for the past 5 years. This decline has been more severe than average during the year 1959 and things to date in 1960 are still more drastic than in 1959. Two tables, both of which are self-explanatory are attached reflecting some average figures and also reflecting net consumer losses. The general farm situation and especially products farmers receive influence my thinking that the situation, so far as total connected consumers is concerned, will become steadily worse, in our cooperative, which is basically rural in its total service area.

On the optimistic side, there are several factors that add up on the optimistic side. Of course, the important thing is that rural electrification has transformed rural areas from darkness into light. This is literally true, so far as electric service is concerned and you can add to it the many other physical and cultural advantages which result from rural electrification to establish for the program a very satisfactory achievement.

Another big plus factor resulting from rural electrification is the tremendous contribution it has made financially and in the labor market. Research has developed that for each dollar spent by a rural electric cooperative, each of its consumers will spend approximately $4. Therefore, the nearly $5,700,000 spent by the cooperative would indicate that our consumers have spent approximately $22,800,000 for wiring, plumbing, and related fixtures and appliances.

Summed up, the cooperative and its consumers have spent approximately $28,500,000 which certainly has been a big boost in employment, manufacturing, construction activity, and related economy benefits.

Summed up, it would probably be impossible to put an evaluation on the REA program. Not only has it contributed in a major way to the economy of the country, but probably more outstanding is the social contribution to which the program has contributed. Prior to rural electrification, the rural areas of our country were certainly in the dark in every respect and the many advantages to rural people which have been made available with rural electrification has contributed immeasurably to the raising of the rural social standards.

Mr. NELSEN. Mr. Speaker, many of us have witnessed federally sponsored programs develop. Some have been outstandingly successful and some have failed.

The rural electrification program has been an excellent example of a program that has made great contributions to rural America and to the economic growth of the country.

Today, May 11, marks the silver anniversary of the Rural Electrification Administration—25 years old, and going strong.

Many times people take for granted the conveniences that modern technology has produced, but the farm families that carried the kerosene lantern around the barn at chore time; that cleaned the globe of the kerosene lamp on the dining room table—and if they were particularly fortunate the old handcrank telephone hung on the wall—this group of people are especially proud, happy and thankful for the rural electrification program which today has transformed rural America into a more pleasant place to live.

I can say these things with considerable feeling, having experienced all of the things that I cite, and I look back now to the early days of the organization of the system that serves my farm, look back to the hours spent with the board of directors, and later to the opportunity for service with the REA Administration itself.

All of these things I appreciate very much because this program has made contributions that we can all be proud of.

Let us look at people, first of all, because the Congress created REA in the first place to help people. The Rural Electrification Act was written to provide the long-term loans that groups of farmers and other rural people needed in order to bring electric power into their homes, their farm buildings, their schools, churches, rural industrial plants, and village shops.

In its 25th year, REA loans were directly responsible for dependable electric service to 4¾ million consumers and for modern dial telephone service to close to 1 million subscribers. An estimated 139,000 new consumers were added to the lines of REA electrification borrowers during 1959. Telephone borrowers connected approximately 200,000 subscribers during the year. The influence of the REA lending programs has stimulated other utility systems to extend service to additional millions of people over these 25 years, so that today we can take pride in stating that 97 percent of America's farms have electricity and better than 60 percent have telephones. This is a startling contrast to the record before REA, when only 11 percent of our farms had electric service and 38 percent had telephones. And let me point out, further, the measure of these last 7 years of REA progress under the Republican administration. In mid-1953, an estimated 90 percent of farms had electricity and an estimated 44 percent had telephones.

Another measure of growth in rural electrification and rural telephone service is the total dollars of investment. Under the present administration, REA has approved nearly $2 billion in electric and telephone loans. Of the total of $4 billion in electric loans approved since REA began its lending operations 25 years ago, almost $1½ billion, or about 35 percent, has been approved since the start of 1953. Telephone loans approved since January 1953 amount to nearly $575 million, or more than 87 percent of the total of $655 million approved during the life of the program. Electric loans during 1959 amounted to $172 million and telephone loans for this last calendar year came to a little over $107 million.

REA approved loans providing for more generating capacity during the last 7 years than was provided for in loans during the preceding 17½ years. Between mid-1935, when REA began, and the end of 1952, loans provided for a generating capacity of 1.14 million kilowatts. Since January 1, 1953, loans have been approved to provide for an additional 1.2 million kilowatts of capacity. Generation and transmission loans have accounted for around 32 percent of all REA electric loans under the last two Administrators, compared with 19 percent before 1953. In 1959, more than 27 percent of REA's electric loans were for these facilities.

In the telephone program, REA estimates that on January 1, 1960, a total of 2,259 modern dial telephone exchanges had been placed in service through REA financing. Less than 100 had been completed before 1953.

The repayment record on REA loans is a most important measurement of progress. Since January 1, 1953, the number of electrification borrowers delinquent in their loan payments dropped from 45 to 1. And in the telephone program, delinquencies dropped from 31 out of a total of 240 borrowers in December 1953 to 9 out of a total of 689 borrowers today. I think this is a truly outstanding achievement. It suggests to me two things: First, that the people at REA are on the ball; and, second, that the borrowers themselves are doing better today than they were a few years back.

Both of these points are in themselves measures of progress. I call to your attention the fact that REA today runs two loan programs—the electric and the telephone—with fewer employees than it used to take to run one program. In

fiscal year 1949, before the telephone loan program began, it took 1,076 man-years to operate the rural electrification loan program. In fiscal 1959, however, it required only 1,018 man-years to keep both programs humming along at peak efficiency. At a time when we are beset with requests for additional administrative funds to maintain our Federal programs, it is refreshing to find an agency that can do more with less.

Citing the progress of the program and the accomplishments of the REA Administration, I wish to make it very clear that I do not believe that you measure success by the number of dollars loaned or by the growth of the size of an agency.

Many of the REA systems are presently financing their expansion out of earnings. A sizable number have repaid the total Government loans that have been advanced and are on their own. This is a sign of maturity, and certainly a goal that we all hope to attain.

The utility business is not a static one as far as capital investment is concerned; it continually grows, and capital of expansion is always needed.

Looking to the future, it is my hope that the REA and RTA systems may develop programs where we will no longer be completely dependent on Government funds, but have a system of financing set up that can be managed by the rural people themselves. Under such circumstances we would not be subjected to the political winds that blow during election years.

Going back to the point of how the REA borrowers are getting along with their own operations as locally owned, independent business enterprises—substantial progress can be measured in the rural electrification program.

Operating revenues of approximately a thousand REA-financed electric systems last year climbed 9.8 percent over 1958 levels, reaching an estimated $618 million for the year. Revenues were about $297 million higher than they were in 1952. These same REA borrowers sold 15.5 percent more electric power to consumers in 1959 than they did in 1958. Sales last year totaled 25.3 billion kilowatt-hours, compared with 21.9 billion kilowatt-hours the year before.

Consumers on these rural systems continue to use more and more electric power for their farm, household, and other needs. The average for all consumers on REA-financed lines rose to 5,200 kilowatt-hours for 1959, up from 4,720 kilowatt-hours the year before.

While consumption of electricity was climbing, the average price was dropping. It fell from an average of 2.48 cents per kwh for all consumers on the lines of REA borrowers in 1958 to a record low of 2.36 cents per kwh in 1959.

Net worth is one of the most important indexes of the financial strength of REA borrowers. It has been rising steadily in recent years. Total net worth of REA-financed electric borrowers stood at $602 million—or 18.2 percent of total assets—on January 1, 1960. It was up from 16.6 percent a year earlier. As recently as January 1, 1953, the average net worth of REA electric borrowers was only 7.7 percent of assets.

Every yardstick we apply to the rural utility programs measures growth and improvement. And the trend of progress should continue, if enlightened leadership and supervision is maintained. REA statisticians predict a tremendous increase in power sales by rural electric systems during the next 15 years. The increase will come both from the power demand of new consumers and the greater use of power by existing consumers. REA estimates that by 1963, the average user on rural lines will be putting to work some 7,000 kwh a year, and the number of consumers served by REA-financed lines will swell to over 5 million by that time.

This is indeed an encouraging measurement of the rural electric and telephone programs on REA's 25th anniversary. All of us in the Congress can share with the rural people who own and operate these electric and telephone systems the satisfaction in a job that is being well done and continuing into a bright future.

Mr. HOEVEN. Mr. Speaker, I congratulate the REA on its 25th birthday. This agency of Government has a record of achievement and accomplishment of which we are all very proud. Its program has resulted in bringing rural electrification to the farm areas of this country, thus providing our rural people with the same farm benefits and conveniences afforded the people of our urban areas. Many rural sections of the country are now almost completely electrified and rapid progress is being made in even the most remote areas. When REA was created in 1935, only 10.9 percent of all farms in the United States had electric service. As of January 1, 1960, more than 96 percent of all farms were being served. The REA record of repaying its loans is also most commendable. Losses have been few and in many instances loans have been repaid before their maturity dates. This is somewhat unique in the history of Federal lending agencies. The present REA Administrator, David Hamil, as well as the REA cooperatives throughout the country are to be congratulated on a job well done.

Mr. BERRY. Mr. Speaker, the story of rural electrification in South Dakota is one of cooperation—cooperation among farm people, cooperation between farmer and villager, and cooperation between rural people and their Federal Government.

The job was not done overnight. Although the Rural Electrification Administration was established in May 1935, by 1940 there still were only five rural electric cooperatives in South Dakota, and four of these were in the southeastern part of the State.

During the war years—and immediately after—farmers in other parts of the East River country organized another group of cooperatives, but it was not until 1950 that the great goal of area coverage—of electric power for every farmer and rancher in South Dakota—came close to being realized. Then the giant rural electric systems were organized in the West River country. You can get some idea of the size of this undertaking when you realize that six REA-financed co-ops in the West serve about half of the area of our State with electricity. The job was done in true cooperative spirit. The new cooperatives in the West acquired all the small, crossroads utilities in their area, so that the people in these more densely settled villages helped to make feasible the extension of lines to the sparsely settled farm and ranch country.

Today—on this 25th anniversary of REA—more than 87 percent of all farms in South Dakota have central station electric service. Rural electric cooperatives serve 91.2 percent of these electrified farms, and practically all the power they distribute is purchased either from the Bureau of Reclamation or from REA-financed generating facilities. This is evidence of the progress achieved by electric cooperatives in bringing the benefits of electric power to our farmers and other people in rural areas.

REA LOANS IN SOUTH DAKOTA

Up to April 1, 1960, REA had approved a total of $103,977,856 in loans to 34 electric borrowers in South Dakota—all of them cooperatives. Of the loans approved, $92,353,628 has actually been advanced to the cooperatives and invested by these locally-owned and managed systems in the construction of 50,962 miles of line—and other electric facilities—to serve an ultimate 78,566 rural consumers.

PROGRAM IN SECOND DISTRICT

There are nine REA-financed electric cooperatives with headquarters in the Second Congressional District of South Dakota. They are West River Electric Association, Inc., Wall; Black Hills Electric Cooperative, Inc., Custer; Butte Electric Cooperative, Inc., Newell; Rosebud Electric Cooperative, Inc., Gregory; Lacreek Electric Association, Inc., Martin; Moreau-Grand Electric Cooperative, Inc., Timber Lake; Grand Electric Cooperative, Inc., Bison; Cherry-Todd Electric Cooperative, Inc., Mission; and West Central Electric Cooperative, Inc., Murdo.

REA loans approved to these borrowers had, by April 1, 1960, reached a total of $30,428,800. Together, the loans provide for the construction of 16,959 miles of line—and other electric facilities—to serve 22,723 rural consumers in 23 counties which make up the second district.

GROWTH IN CONSUMPTION

In 1950, farmers served by REA-financed cooperatives in South Dakota consumed an average of 153 kilowatt-hours of electricity per month. By 1959, this average monthly consumption per farmer had jumped to 426 kilowatt-hours per month—an increase of 273 kilowatt-hours in 9 years.

REPAYMENTS

REA-financed cooperatives in South Dakota, like those elsewhere, have achieved an outstanding record in repaying their REA loans. By January 1, 1960, South Dakota electric borrowers had made payments on their loans of $28,270,509. This included $14,840,729 repaid on principal, $9,617,056 paid in interest and $4,812,723 paid in advance

of due dates. No borrower in the State was behind in meeting its payments. Nationally, payments by REA borrowers on principal, in interest and ahead of schedule have surpassed the $1.2 billion mark.

Mr. BRAY. Mr. Speaker, it is a pleasure to add my views to those taking note of the 25th anniversary of the Rural Electrification Administration.

One of the most significant changes in this fast-moving 20th century has been the spread of electrification. Today's youth takes it for granted, but only silghtly more than a generation ago millions of American families, especially rural families, were still without the light and power of electricity.

Electricity has done much more than merely light the homes of farm families; it has revolutionized farm practices. It has been put to work to increase farm production and to help handle and store farm products.

The Rural Electrification Administration was created by Executive order on May 11, 1935. The problems of spreading the powerlines out from the cities to our farm areas were many. The costs involved were great, and the risks were such that utility companies preferred to avoid them in many areas. As it became more apparent that our farm families needed power the Government attempted to help them in achieving it.

The fledgling Rural Electrification Administration ran into many difficulties in its first year. The motivation behind it had been largely to create an additional economic stimulus during the depression. To effect something constructive in rural electrification could not be done in the same manner as public works projects undertaken to provide employment.

In 1936 legislation was provided to create a continuing program of loans for construction and operation of generating plants, transmission lines, and distribution lines. Cooperatives applying under this program began to make headway and have continued to do so, despite setbacks occasioned by World War II and the Korean war when materials were scarce. The success of the cooperatives showed the feasibility and desirability of this service to the utility companies, and they responded with much expansion into rural areas.

The 25-year total is impressive. In 1935 90 percent of America's farms were without electricity; today better than 90 percent have it. REA loans approved since the beginning of the program exceed $4 billion. Last year only one REA borrower was behind in its loan payments. All in all, 1,053 rural electric systems have been financed with funds borrowed from the REA.

I have had occasion to know well the officers and directors in REA cooperative activities, especially those in my home county and district. They are an outstanding group, and would be a credit to any business enterprise.

We know what this development has meant to rural family life—the great convenience of electric light; the comfort of heating regulated by electricity, water pumps, cooking, refrigeration, and laundry, and the entertainment of radios, record players, and television. Inside the farm, home life has certainly changed from the average of a generation ago.

Electricity has also become a new hired hand, entrusted with such jobs as milking cows, sawing wood, warming pigs, hatching eggs, brooding chicks, drilling holes, and sharpening tools. Farming is greatly mechanized today, and a machine shop is a necessity to maintain the tools of production.

In 1939, in Kentucky, a pullet in a newly lighted chickenhouse responded to its environment by laying an egg shaped like a miniature light bulb. It was the subject of many humorous news stories but it was also symbolic of the spread of electric power to the farms.

Today electricity is no novelty to rural America. This has largely been the accomplishment of the Rural Electrification Administration and its 25th birthday should indeed be a happy one.

Mr. HULL. Mr. Speaker, officials of rural electric cooperatives in northwest Missouri are justifiably proud of their part in bringing electric power to our farms under the rural electrification program which is 25 years old today, and under leave to extend my remarks I wish to include brief statements of their activities by two electric cooperatives in my district:

ATCHISON-HOLT ELECTRIC COOPERATIVE

As the Rural Electrification Administration celebrates its silver jubilee nationally, the Atchison-Holt Electric Cooperative of Rock Port, Mo., which serves seven counties in Missouri, Iowa, and Nebraska, has reached the 22d year of its service to more than 2,800 members. At Atchison-Holt headquarters, plans for the summer work program are under way, but the board of directors and Manager B. S. Gibbs have taken time to pay tribute to the 13 men who were incorporators of the cooperative, and who were directing the policies when the first Atchison-Holt office was opened in Rock Port in September 1938.

The incorporators were John E. Buck, Corning; Edmund J. Roup, Watson; M. H. Grubb, P. A. Oswald and W. C. Scamman, all of Rock Port; Mr. Gibbs, who lives on a Watson route; Benson Gaffney and Peter Blohm, both of Craig, and Erich Ernsting, who now lives in Springfield. Deceased incorporators are M. A. McNeal, Watson; T. G. Walker, Fairfax; E. H. Kimberling, Rock Port, and C. B. Lawrence, Craig.

It is interesting to note that five of the original incorporators are still active members of the board of directors. They are Mr. Buck, who has been president of the board for a number of years; Mr. Roup, Mr. Grubb, Mr. Gaffney, and Mr. Blohm. They have seen the cooperative grow from a relatively few miles of lines to an organization which furnishes power to more than 2,800 members on 1,211 miles of distribution lines.

It was just a year ago that Atchison-Holt Electric Cooperative moved into its new headquarters building at the northeast edge of Rock Port, where the business office, equipment, and supplies are housed.

On its 1,211 miles of distribution lines are more than 2,700 farms, as well as town members, commercial establishments, schools, churches, and utilities. The cooperative serves some of the most modern farms in the Middle West, as well as a country store east of Fairfax that has been in business 104 years.

Each month some members add electric house heating to their multiple uses of power. As the mechanization of agriculture increases, more electric motors are installed on farms, and more uses are found for the power supplied by Atchison-Holt.

Today the board of directors is composed of Mr. Buck, Mr. Roup, Mr. Grubb, Mr. Gaffney, Mr. Blohm, Ernest Nennemann of Hamburg, Iowa; Walter Muller of Clarinda, Iowa, and Charles Martin of Watson, Mo. One vacancy exists on the board.

PLATTE-CLAY ELECTRIC COOPERATIVE

The Platte-Clay Electric Cooperative at Platte City, Mo., was organized in August 1938 for the purpose of furnishing central station power to its members. The first lines were energized in May 1940. At that time, 425 members were served. For the first few months they had an average consumption of 45 kilowatt hours per member. Since that time, the membership has increased to 4,500 members who are consuming an average of 425 kilowatt hours per member.

The organization has been operated as a cooperative. All savings and margins accumulated have been allocated to the membership. As of January 1, 1960, the members had an equity of $640,000 in the cooperative. The total plant investment is $2,858,000. The lines and operating equipment have been financed with loans from the Rural Electrification Administration totaling $2,893,000. Of this amount, $650,000 has been repaid in regular payments and in advance payments.

The cooperative has been a very important factor in the development of the Sixth District of Missouri. Since its inception, we have seen coal oil lamps and the washboard replaced by electric lights and the electric washing machine. The electric motor is becoming a very important tool in the farm operation. It is used to pump water, convey feed and endless other tasks formerly done by human power on the farm.

As of this date, 120 rural homes are heated with electricity with several more in the process of converting to electric heat.

This cooperative is located within a few miles of the Kansas City industrial district and many of its members who live on these electrified farms have found employment in industry. Through a combination of earnings in industry and income from the farm, a healthy, stable economy has been developed in the area.

Howard Alexander is manager of the cooperative.

Mr. JOHNSON of Wisconsin. Mr. Speaker, today we are marking the silver jubilee of the rural electrification program, that economic and social miracle which has brought light and power to more than 16 million Americans who were literally living in darkness only a quarter of a century ago.

The electrification of our Nation's farms is one of the greatest blessings of our times—for farm families and city dwellers alike. Rural electricity has played a major role in making American farms the most productive in the world. During the past 25 years, electricity has helped to triple food production in the United States. Today's farmer produces food aplenty for 25 people. Our citizens are the best fed in the world, and we have food left over to help less fortunate people in other lands.

Actually, the REA program has proven of value to people far beyond the reaches of our farms. A recent survey by the National Rural Electric Co-op Association indicates that 1960 will see a billion-dollar market for major electrical appliances among the users of rural electricity. This survey shows that half-a-million farm folks anticipate buying an

electric refrigerator and as many expect to buy an electric water heater this year. Such expenditures create thousands of jobs for city people.

Without a doubt, the REA loan program has generated a tremendous market for American industry. Each dollar loaned under the REA program has led to the sale of about $4 worth of electrical equipment, appliances, and wiring.

An impressive record has been chalked up by the rural electric co-ops on prompt repayment of the money they have borrowed from the Rural Electrification Administration. As of January 1, 1960, electric co-op borrowers had paid to the Government a total of more than $1.2 billion on their REA loans. This includes $669 million repaid on principal, $397 million paid in interest, and $154 million paid ahead of schedule. Only one of REA's almost 1,000 electric borrowers is behind on scheduled payments of principal and interest, and that one isn't very far behind either.

In my home State of Wisconsin, 31 rural electric borrowers are serving 87,338 consumer-members on 30,710 miles of line. Of the $118,912,492 in REA loans advanced to these electric co-ops, $21,740,945 has been repaid on the principal and $14,267,982 has been paid in interest. In addition, advance payments on principal have been made to the tune of $3,458,718.

On March 28, 1960, I had the privilege of addressing the 24th annual meeting of Wisconsin Electric Cooperative, our statewide association of rural electric and telephone cooperatives. At this time, I would like to include that speech in the RECORD:

RURAL ELECTRIFICATION—WORTH HAVING, WORTH KEEPING

It was with a great deal of pleasure that I accepted the invitation to speak at this, the 24th annual meeting of Wisconsin Electric Cooperative. In the 25 years since President Franklin D. Roosevelt signed an Executive order which launched the REA program, the rural electrification movement has changed the face of rural America. No other federally sponsored program has done so much to help this country's farmers help themselves to achieve a higher standard of living and a more efficient way of farming.

You are all familiar with the figures which chart the progress of the REA program. You have lived with this program, and each statistic has a special meaning. The fact that only 10 percent of the Nation's farms had central station electricity in 1935 meant that you were struggling along with kerosene lamps or, at best, a bulky Delco plant. The fact that 95 percent of our farms are now electrified means that you are living better and farming better, thanks to a hundred and one electrical helpers.

Those of us who watch rural electrification closely can easily see the many intangible benefits it brings. Once a rural home has power, the standard of living for the family rises sharply. But how can you explain with statistics the human benefits of hot water, indoor plumbing, refrigeration, electric cooking, radio, television, and just light itself?

I am particularly proud that the congressional district which I represent has more electric and telephone cooperatives than any other congressional district in Wisconsin. The 11 counties of the Ninth District have 10 electric and 4 telephone cooperatives.

All 10 of those electric co-ops get their wholesale power from their own generation and transmission cooperative, Dairyland Power Co-op. Its organization was a monumental achievement. Dairyland Power stands as a living and growing symbol of the spirit of cooperation which is the prime ingredient in the REA success story.

When the REA bill became law, its backers assumed that the private utilities would take advantage of the REA loans to extend lines into rural areas. It didn't happen. The power companies were not interested in serving the so-called skim-milk areas when they already had the cream in the cities.

At this point, the REA program, which had been launched with such high hopes, was in danger of thudding to earth like a lead balloon. But you didn't let it happen. You wanted electricity, and you believed it was possible to have electricity. You worked together with your neighbors in the finest American tradition to organize your distribution cooperatives. And when the power companies refused to sell you wholesale electricity at a reasonable rate, you again applied the democratic principle of cooperation to the problem. You joined your neighboring cooperatives to organize what is now the largest generation and transmission co-op in the world.

Almost 200 years ago, Benjamin Franklin said: "We must all hang together or assuredly we will all hang separately." His words are as true today as they were then. The electric and telephone cooperatives of this State hang together and speak together through your statewide association, Wisconsin Electric Cooperative. Your joint efforts have made possible your excellent magazine, Wisconsin REA News, and many other important services. They range from engineering to public relations to transformer repair.

Nationally, you hang together and speak together with nearly 1,000 rural electric cooperatives across the country through your national organization, the National Rural Electric Co-op Association. During my 7 years on Capitol Hill, I have had the pleasure of working with NRECA's capable general manager, Clyde Ellis, and his dedicated staff. They are doing a fine job in representing you on the national level.

Ironically enough, the more successful the REA program becomes, the harder your enemies try to destroy it. I am reminded of the old saying that nobody throws stones at an apple tree unless it has apples on it. Thanks to years of painstaking work, the rural electrification tree has produced an abundant crop. Unfortunately, there are those who do not want to see you benefit from the harvest.

Today, the REA program is faced with an enemy within and an enemy without. The work of the latter is easy to see. You can find it in the slanderous propaganda ads which have been run by the power companies in the slick-paper magazines. Misleading, inaccurate, and filled with twisted half-truths, these advertisements are spread before the citizens of this country week in and week out in a gigantic brainwashing campaign.

I feel that the power companies hit a new low in their smear campaign with their ad which is headlined, "Will You Leave These Freedoms to Your Children?" In it, they implied that the rural electric cooperatives and the public power program were attempting to deprive Americans of your constitutional rights to freedom of religion and speech, freedom from unlawful search and seizure, and freedom to vote for elected officials of your choosing.

Have the rural electric and the Federal power programs ever done anything but strengthen these basic American rights? In fact, these programs have conferred upon the American people two very important additional rights. They have conferred upon millions of Americans the right to have electricity on their farms and in their homes, businesses, and factories. These programs have also conferred upon you the right to be free from the economic dictatorship prescribed by a monopoly-controlled, investor-owned utility industry.

The perversion of the Christian concept embodied in this advertisement transcends the bounds of all civilized decency. It is a disgrace to America and to American journalism.

The power company ads contain many references to "unnecessary tax spending" for Federal power projects. Phrases such as "a waste of taxes" are used. One of the power company ads is headlined "Would You Sign This $10 Billion IOU for Unnecessary Taxes?" Here is deliberately misleading propaganda. There is no "waste of taxes" when the Government invests money in water resources development projects.

According to the U.S. Army Corps of Engineers, flood control dams and projects have prevented damages which would have come to nearly $9 billion. The Bureau of Reclamation reports that the cumulative total value of crops produced in reclamation projects areas is $14.2 billion—or nearly five times the net Federal investment in reclamation.

The Federal investment in power is required by law to be repaid with interest, just as your electric co-ops repay with interest their REA loans. And even more fundamental, the Nation must make wise and effective use of its water resources for today's and tomorrow's needs. Electric power, which is the paying partner in these projects, often makes available added nonpower benefits that would not otherwise be available. These benefits come without cost to the taxpayer as a result of these multipurpose Federal power projects.

Taxes occupy much of the space in the power companies' ads. They made the claim that the private power companies function "without your tax money". This statement is open to serious question. Today, the private power companies are enjoying the benefits not only of rapid tax writeoffs but also of the "liberalized depreciation" provisions of the Internal Revenue Code. In other words, the private utilities scream that the rural electric and Federal power programs cost the taxpayers money * * * while at the same time, the private utilities themselves are accepting billions of dollars in Federal subsidies.

Another favorite line taken by the power companies is that the rural electric cooperatives do not pay taxes. Last year, the 30 electric cooperatives in Wisconsin paid a record tax bill estimated at better than a million dollars. Largest item in your tax bill was the $545,136 license-fee tax paid by your co-ops to the State government. Since this license-fee tax is based on the gross receipts of your cooperatives, it will continue to increase as your power sales increase.

The power companies defend their propaganda advertising on the basis of their right to freedom of speech. But freedom of speech does not mean license to brainwash the American public and, worst of all, make the American public foot the bill for the brainwash job.

During the last session of the 85th Congress, I introduced two bills to stop private power companies from charging ratepayers for the cost of propaganda advertising and to keep the companies from deducting such expenses from income before taxes. Although the House did not act on these bills, their introduction served to focus the spotlight on the propaganda advertising problem and prompted the Federal Power Commission and the Internal Revenue Service to launch investigations into the matter. I have followed these investigations closely and feel that they will accomplish the aims of my bills on the subject.

After examining the 27 slick-magazine ads run by the power companies in 1957, the Federal Power Commission found that 9 of those advertisements were political in nature

and would have to be paid for out of profits. At a hearing in January of last year, the power companies protested the FPC's stand and made it abundantly clear that they intended to drag the public versus private power controversy into the Commission's hearings on the proper accounting methods for the power companies' advertising program. The hearing examiner ruled that only bookkeeping questions would be considered. The power companies appealed this decision to the full Commission. It also ruled against them.

In addition, the Federal Power Commission dismissed power company charges that the ruling deprived them of freedom of speech. As the Commission pointed out, power companies are free to make such advertising expenditures, but the cost should come out of the pockets of stockholders, not ratepayers.

A final ruling by the full Commission on this matter is expected momentarily. Since the FPC staff has already ruled against the power companies which have participated in this propaganda advertising program, it seems almost certain that the full Commission will rule that propaganda ads must be paid for by the companies and not the consumers. The Federal Internal Revenue Service has already issued a similar ruling that the cost of the ads in question cannot be deducted as operating expense on the companies' income tax statements.

I am sure there is no doubt in anyone's mind as to how the present administration feels about the rural electrification program. Time and time again, you have seen this administration try to shackle and diminish and destroy your program.

You have seen your REA Administrator stripped of his authority to approve major loans without first getting the Secretary of Agriculture's blessing on each loan. You have seen the Comptroller General concoct a ruling on REA which would have prevented you from serving anybody a power company wanted to serve. This ruling would also have cast doubt on the legality of millions of dollars which you had borrowed and used in good faith.

During the 1st session of the 86th Congress, my good friend Senator HUBERT HUMPHREY of Minnesota and Congressman MELVIN PRICE of Illinois introduced bills to restore all loanmaking authority to the REA Administrator. At the time of the House debate on the Humphrey-Price measure, I observed that it was not the intent of Congress to have a well-paid and competent Administrator of the REA program sitting on the knees of the Secretary of Agriculture, taking his orders and mouthing his words like a well-trained Charlie McCarthy. Two hundred and fifty-three of my colleagues shared my opinion, and we passed the bill in a 254 to 131 vote.

The Senate had previously approved the measure by a 33-vote margin. However, we ran into an all-too-familiar stonewall of opposition from the administration, and Government by veto continued.

Happily, we were more successful in disposing of the Comptroller General's REA ruling. I joined Congressman JAMIE WHITTEN, of Mississippi, in introducing a resolution calling for an investigation of the Comptroller. Under the provisions of this resolution, a congressional committee would be appointed to look into all decisions rendered by the Comptroller which attempt to change the interpretations of existing laws after years of congressional acceptance of those interpretations. The committee would also check the extent to which the Comptroller's decisions are influenced by the policies and requests of the executive department.

On the Senate side, Senator GEORGE AIKEN of Vermont sponsored a resolution which stated that the REA program should be administered as it has been in the past rather than the way the Comptroller wants it done. The Senate passed an amended version of that resolution. And while the House has not yet acted on the Whitten-Johnson resolution, the very introduction of this resolution has served notice on the Comptroller to stop trying to alter basic points in the laws of the land. I might add that we haven't heard anything from him on the subject of REA since.

Unfortunately, we have been hearing plenty from the administration on the subject of raising the interest rate on REA loans. For months, the administration push has been on to impose the high-interest, tight-money policy on REA. Your program has been singled out for all this attention because REA stands as the last bulwark against the spiraling cost of money. One by one, the veterans, homeowners and farm credit groups have fallen victim to the administration's basically unsound policy of high interest and tight money.

In every segment of our economy, interest is very definitely a cost item, for interest is the price of money. The administration is attempting to sell its high-interest, tight-money policy on the basis that such a policy will check inflation. Actually, high interest is inflationary, for higher interest rates increase costs without increasing output.

In 1959, the high-interest, tight-money policy increased the cost of carrying the Federal debt by $1.4 billion over the previous year. This represents a $4 billion increase over 1952. Just think what could have been done with those extra billions if we could have used them for reducing taxes, starting new resource projects or improving the educational facilities of our children.

The total amount required in this year's Federal budget for interest on the debt has grown to $9 billion. This figure is greater than the entire Federal budget prior to World War II.

In today's budget, interest is the second largest item. It is larger than the combined total for aid to housing and business plus spending or investment on labor, welfare, education, dams, rivers and harbors. It is indeed startling to realize that in 1 year we are paying nearly three times as much in interest as we lent under the REA program in 25 years.

Higher interest hits each and every one of us. It has added the cost of an extra set of tires to your car. You don't get the tires, but you pay for them just the same. On a new 20-room school, the higher interest rate has added the cost of 6 classrooms which you pay for but you do not get.

Higher interest makes homes more costly. In 1952 a $10,000 Government mortgage at 4 percent interest would be paid off over 25 years at a total cost of $15,840. Today, the same mortgage at 6 percent interest will be paid off over 25 years at a total cost of $19,330. The increase of $3,490 would have been enough to pay for two more bedrooms and a bath.

Higher interest rates add to the cost of farmers and small businessmen and lead to more liquidations and bankruptcies. Higher interest makes home appliances more costly. It raises the cost of living and cuts the standard of living. If this is sound fiscal policy, as the administration claims, then I'd hate to see an unsound policy.

The enemy outside of the rural electrification program is relatively easy to identify. It is harder to put your finger on the enemy within the program. Probably this enemy could best be called indifference, or complacency, or the feeling that you have arrived at your destination. This year, as you celebrate the silver jubilee of the REA movement, you have every right to look back with pride at the achievements of the past 25 years. But you must remember to look ahead as well.

A program such as yours never stands still. It either advances or it starts downhill. You have invested too much of your time, your hopes and your dreams in the REA movement to allow it to dwindle away through unthinking neglect. Those of you who pioneered in this field know the effort that went into the organization of your electric cooperatives. You can still recapture the thrill of flicking the switch and lighting your home with electricity for the first time. But how are the young people to value the cooperative tradition they will inherit unless you tell them what it means?

It pleases me to see that many of your electric cooperatives work with your young people through high school essay contests and junior boards of directors in an effort to acquaint this new generation of cooperators with the whys and wherefores of the program. Your Minutemen are doing a good job of telling the REA story to their friends and neighbors.

The story of rural electrification is the story of a grassroots movement but some of its biggest battles have been, and always will be, fought in Washington. I cannot emphasize too strongly the need for you to keep informed on the current issues before Congress. Let your Representatives and Senators know how you feel about these matters.

Appropriately enough, your motto for this meeting reads: "What's Past Is Prologue." The same words are engraved on the Archives Building in our Nation's Capital. While sightseeing there, a visitor asked his taxi driver just what the motto meant. Glancing at his meter, the cabdriver replied: "It means you ain't seen nothing yet."

Like the Washington sightseer, you ain't seen nothing yet when it comes to what the rural electrification program can do in its next 25 years.

Mr. HULL. Mr. Speaker, one of the fine rural electric cooperatives in my district is the Nodaway Worth Electric Cooperative at Maryville, Mo.

Under leave to extend my remarks on this occasion of the 25th anniversary of the rural electrification program, I include a statement prepared by Curtis L. Funston, manager of this cooperative:

The Nodaway Worth Electric Cooperative, Inc., with headquarters in Maryville, Mo., has been in operation since 1939.

On this 25th anniversary of REA, it is fitting to pause and reflect on the achievements of this organization since its establishment.

From a humble beginning, this cooperative has grown in size until its 1,750 miles of line today serve nearly 4,000 farm members in Nodaway, Worth, and Gentry Counties in Missouri and parts of Taylor, Page, and Ringgold Counties in Iowa. The cooperative reached "area coverage" in 1954. It was during this year that service lines were made available to everyone within the cooperative area who wanted electricity.

Since the completion of "area coverage" the cooperative's principal activity has been a comprehensive program of improving and upgrading the quality of service to its members. While the farm membership has continued to decline the past few years with the consolidation of smaller farm units into larger ones due to a depressed agricultural economy, the electric demand has been steadily increasing on the system. In fact, the average farm usage of electricity has jumped from 124 kilowatt-hour-month per member in 1950 to an anticipated 375 kilowatt-hour for 1960, a threefold increase in 10 years.

While the progress of the Nodaway Worth Electric Cooperative can be described in statistics, the real progress can best be described in human terms. Our cooperative means lights to read by on a cold winter

night. It means radio and television to broadcast entertainment and weather reports. It means clean, economical heat for cooking and ironing on hot summer days. It means elimination of the drudgery of carrying water, milking cows by hand, scooping grain, and a host of other farm tasks.

This, we believe, is where the real meaning of this cooperative lies.

The Nodaway Worth Electric Cooperative looks forward to the next 25 years of operation with pride in its past accomplishments and confidence that the next quarter century will yield continued benefits to its member-owners.

Mr. POAGE. Mr. Speaker, 25 years ago today, President Franklin D. Roosevelt signed the Rayburn bill creating the Rural Electrification Administration. During your long and illustrious tenure I doubt if you have sponsored any legislation, Mr. Speaker, which has given you the satisfaction or which brought to the people of the United States the degree of pleasure that this legislation has brought. Twenty-five years ago today, only 3 rural homes out of 100 in our home State had the convenience of electricity. Only about 10 percent of the rural homes in the United States enjoyed this convenience, and practically all of them were really suburban and not truly rural homes. The privately owned electric power companies had before your own committee, Mr. Speaker, stated: "There are very few farms requiring electricity or very few major farm operations that are not now served." Remember the date—that was 1935.

At that time the private power companies of America felt there was no profit to be made serving rural areas. They frankly did not want the rural business. Of course, since that time they have found this business is good business and some of the companies have done everything they could to prevent the development of the local rural electric cooperatives which grasped the opportunity to borrow from the REA—an opportunity which was and still is wide open to the private companies but which very few of them have been willing to accept. Even today in our home State, Mr. Speaker, the power companies are seeking to eliminate the cooperatives which extended REA service to the "head of the creek" and back away from the highway. These same power companies are demanding, and in the past they have received considerable support from various official sources in Texas, that as soon as a territory is developed by a cooperative and is taken into a city the cooperative should give up its business and let the company that did not want to serve the territory when it was not an attractive market take over the newly developed urban area.

It is my understanding that an overwhelming majority of the members of the legislature who were nominated last Saturday have pledged themselves to correct this situation, but the last two sessions of the legislature have not corrected it. I trust that the men and women of the 57th legislature will be more considerate of the cooperatives providing services for our rural areas.

Obviously, if these cooperatives are to be continuously robbed of their most thickly settled areas and are never to enjoy any business except that which the private companies have publicly stated was not profitable, they cannot long continue. The situation is serious in Texas, but I believe that the people of our State and the people of the United States have seen enough of the fine work of these REA financed cooperatives to give them the opportunity to continue to serve.

Today there are probably not more than 3 percent of the rural homes of Texas, or of the United States, which are not served by central station electricity. Possibly two-thirds of them are served by cooperatives which are borrowing from the REA. About one-third of these rural homes are served by private power companies, but it should be remembered that they would never have had this service had it not been for the establishment of REA.

From these figures one might decide that the work of the REA was largely done; that there would be little or no need for further loans; but such is far from being the case. Each year the use of electricity increases. Where a few years ago many cooperatives had an average load of no more than 25 kilowatt-hours per customer, average loads of 250 to 500 kilowatt-hours are not now unusual. These loads will increase. To deliver this volume of electricity it is necessary to constantly replace both generating facilities and transmission lines. The need for REA is as great today as it was 25 years ago, and what of the future?

In 1985, just 25 years hence, I imagine every rural home may well receive its power from atomic or other solar sources. We may still be using wires to transmit power but I think it is entirely possible that our power needs will be delivered by some type of waves. I anticipate that many of our local cooperatives will have paid off their indebtedness to REA. Indeed many have already done so, but even then many will still be installing new equipment and I think the need for REA will still exist. Our people, rural as well as urban, will still need and will still use ever-increasing amounts of power. Our cooperatives and our private power companies will all be serving more people with more power and will be serving it more effectively and more cheaply than ever before.

Mr. Speaker, although there were few, 25 years ago, who envisioned the great steps that have already been taken by rural electrification, there are still fewer who can envision the tremendous role of REA on May 11, 1985. I am sure, Mr. Speaker, you are one of those few. I congratulate you for what you have already done and like all other friends of REA, I lean heavily on you for the development of our great program in the years to come.

Mr. ARENDS. Mr. Speaker, I join with my colleagues in congratulating the rural electrification program for the tremendous strides that have been made in the past 25 years. This program has enjoyed bipartisan support in the Congress. It has been one of the most successful programs we have undertaken. In 1935 about 10 percent of the farms of America had electric power. Today 97 percent enjoy the benefits of electricity. This indicates what the program has accomplished.

In addition, we should not forget the economic contribution that it has made for the well-being of the country as a whole. The farmers have been investing more and more for equipment and appliances. This means that factories have produced equipment, factories have produced jobs, and the dollars have moved in trade in our country, which of course has stimulated the economic growth of our country.

The success of this program has been outstanding. It is outstanding because of the efforts of a great agency of dedicated people and because of the ingenuity of the American farmers who have assumed the responsibility of the management of this great program. Already we find some of the REA systems have paid their entire loan obligations to the Government of the United States. Many of them are providing their own capital for the expansion of their systems. Practically all of them now assume the responsibility of engineering, management and auditing, which in the beginning of the program was necessarily provided by the Government.

My hearty congratulations to those who have handled this program. It is a job well done. It has my endorsement. It has bipartisan support. It is a great program.

Mr. SILER. Mr. Speaker, today, May 11, 1960, the Rural Electrification Administration celebrates its 25th anniversary of service to the rural communities of our Nation. My own congressional district is one of the most rural in the entire United States and as I have driven up and down its valleys and over its rugged hills these past few years, I have often seen electric lights shining in many humble homes where there were only candles or oil lamps flickering before the advent of REA.

One verse almost at the beginning of the Bible has these words: "Let there be light." So, on this 25th anniversary of REA, we are reminded that this organization said a quarter of a century ago that there should be electric light and power for America's rural homes and we are also reminded that since that time there have been both light and power in a tremendous number of those homes that needed such improvements very greatly.

I have been told that in my own State of Kentucky, at the time the Rural Electrification Administration was created on May 11, 1935, only 8,480 farms in our State, or 3 percent, were receiving central station electric service, while current REA estimates show that 188,900 farms in the State, or 97.6 percent of all farms recorded in the 1954 Census, were being served by June 30, 1959. I understand that REA borrowers serve about 80.2 percent of these electrified farms.

Also, I was informed that the first REA electrification loan in Kentucky was approved in October of 1935 and that the first REA-financed line was placed in operation on December 22, 1937, by the Henderson-Union Rural Electric Cooperative of Henderson.

From its humble beginning 25 years ago, REA service now extends into 112 of the 120 counties in the State and many rural homes, farms, churches, schools, and industries in 80 of these 112 counties receive their power from the East Kentucky generating plant near Winchester, Ky., which now produces at the rate of 430,767,000 kilowatt-hours of electricity per year. By 1970, it has been estimated that the monthly average use of power by Kentucky farm consumers served by the rural electric systems will have jumped from 116 kilowatt-hours in 1950, to 650 kilowatt-hours in 1970, while the average consumption per member, at the time of the energization of the REA-financed lines in the State, was only 40 kilowatt-hours per month, back in 1937.

Congratulations to REA because this organization said 25 years ago, "Let there be light." And since that time there has been much light in many rural homes of our country, including quite a great number of them in my own congressional district in southeastern Kentucky.

Mr. McGOVERN. Mr. Speaker, today we commemorate the signing of the Executive order creating the rural electrification program. On this occasion I want to express for myself and for the people of South Dakota whom I represent, appreciation to Members of this and earlier Congresses and to present and former administrators of Government agencies who, by their support, enabled rural America to make the REA program the dynamic success that it is today.

No State or Federal program has brought as many benefits to the people of South Dakota as rural electrification. In 1935, the year the program was launched, less than 4 percent of our rural people had central station electric service. Our wide-open spaces made the power companies shudder when they thought of bringing service to our sparse population over lines subjected to high winds, sleet, and snow. They said this kind of business would never pay. Had not REA come along, most of our State would still be waiting for electric service. The co-ops did not know whether it would pay but farmers needed light and power and REA provided the instrument whereby they could secure these blessings through cooperative action.

Today, nearly 90 percent of all our rural areas are served and they are paying their way. For the United States as a whole, 52 percent of all rural electrification has been done by nonprofit REA-financed systems. In South Dakota 91 percent of all electrified farms are served by REA cooperative systems. Only North Dakota has a higher percentage of REA service.

THE EARLY YEARS OF REA

The early days of rural electrification were difficult ones in South Dakota. We issued our first charter for an electric cooperative only 6 months after President Roosevelt signed the REA Executive order; but because of low population density our early cooperatives encountered staggering construction costs per connected consumer. Rates were high and as a result the use of power was held down. Interest rates were also high and the payout period was too short. Wholesale power was scarce, sometimes nonexistent, and always very expensive. The future of our small struggling systems was threatened.

Thanks to an understanding Congress and administration, the Pace Act was passed, reducing the interest rate from 2.6 percent to a realistic 2 percent and extending the payout period from 25 to 35 years. Then we started promoting the Missouri River dams—Fort Randall, Gavins Point, Oahe, Garrison in North Dakota, and now Big Bend. As power began to come from those projects rural electrification reached a turning point. Success of the program was assured.

WASTEFUL RELEASES OF MISSOURI RIVER WATER MUST BE STOPPED

The administration of those projects, however, is not the complete success Congress had envisaged. It is time for Congress to take a new look at the Interior Department's administration of those projects. It is time we seriously consider the slack water navigation proposal I made last August, for, as I said at that time, the REA cooperatives and the municipalities are being deprived of hundreds of thousands of kilowatts from our dams because the water is not permitted to flow through the generators during the wintertime when the power is needed, but is stored to be released during the navigation months to benefit certain shipping interests which do not contribute one cent toward the repayment of the project. But this is just one example of many that could be cited to show that eternal vigilance remains our duty, even with so successful a program as rural electrification. There are always those who because of selfish interest would destroy even our best time-tested programs.

We have held the line on the various proposals to raise REA interest rates. Secretary of Agriculture Benson proposed that rural electric co-ops go into the open money market for funds. Not one Member of Congress has dignified that proposal by drawing it up as a bill.

In these and other ways we have guided and protected this great program. It deserves our continued support.

BENEFITS OF REA TO SOUTH DAKOTA

The benefits of electrification to the farm and rural home are well known. Many of them will be reviewed here today. These are benefits that have meant the most to my State; but, others also are important.

In a State so predominantly rural as South Dakota it is easy to forget the benefits that REA has brought to our cities, towns, and other community centers. About 150 small towns and communities in the State are served by rural electric cooperatives. Each of these communities now has a modern, safe, and reliable distribution system in contrast with small, inadequate, and uneconomic generating systems which were used before REA came in.

But this is only the beginning of the story. Hundreds of our rural schools and churches now have electricity, few had before. Electric light and power in rural areas has made possible the establishment of dozens of new businesses. With the development of our new reservoirs, recreational activities have mushroomed, year-round and seasonal cottages have sprung up on every lake and stream. Most of them have electric service. These are some of the direct benefits.

The most significant indirect benefits arise from the fact that for every dollar spent to build the lines and the facilities to get electricity to our farms, the farmer has spent about $4 wiring his farm and buying farm equipment and home appliances. This means that over the years rural electric members in South Dakota, about 72,000 of them, have spent well over $300 million in improving their farms and homes. This has meant good business in the towns. It has meant good jobs in the cities. It means money in the bank for businesses that sell equipment and services. Most of this money has been spent at home. The rural electric cooperatives' annual payrolls are approximately $2 million; this money, too, is spent at home.

These co-op employees live and work in the State. Many of them own homes, all of them pay taxes and patronize local businesses.

SOUTH DAKOTANS GRATEFUL FOR REA

Rural electrification has brought a better life to rural people; but, all along the highways and byways of our State other people in all occupations benefit from the program. If all of our people could be here today they would express more eloquently than I their appreciation for those who set the program in motion 25 years ago and to those who have strengthened and defended it down the years. The farm housewives would express their gratitude for home appliances—refrigerators, washing machines, vacuum cleaners, electric irons—that remove much of the drudgery of earlier years on the farm. The farmer would express his appreciation for the labor-saving power equipment made possible through electrical energy. Farm families who remember the kerosene lantern would be especially grateful for electrical lighting. They would say "Thank you" to all Members of Congress and others who support their program. They would give special thanks to those who support rural electrification because they believe in its social and economic values rather than because it is politically expedient to do so. Rural electrification brought dignity and self-esteem to all rural people; its continuing stream of benefits make rural living more rewarding and our farms more productive.

REA has made a remarkable record of accomplishment in its first 25 years. Let's make the next 25 years even better.

Mr. COAD. Mr. Speaker, today marks the 25th anniversary of the establishment of the rural electrification program which made possible the electrification of rural America.

The need and acceptance of this great idea is best illustrated by the tremendous growth of rural electric systems since the inauguration for the REA program May 11, 1935. This social and economic miracle has made it possible for over 1,000 locally owned electric systems to provide

electric light and power to more than 16 million rural Americans. In 1935 only 11 percent of the farms had central station electricity, but then came the REA program and today 96 percent of all farms in the United States are electrified. What a wonderful record of accomplishment. What a wonderful change from darkness to light, from drudgery to joy.

Mr. Speaker, I would like to include with my remarks the following article from the Iowa Rural Electric News, a publication of the Iowa Electric Cooperative Association. This article tells the story of the first cooperatively electrified farm in Iowa.

I am indeed proud that the farm which holds this distinction is located in my congressional district. The article follows:

IOWA'S FIRST COOPERATIVELY ELECTRIFIED FARM—WRIGHT COUNTY FARM WAS FIRST IN IOWA TO GET POWER THROUGH AN REA-FINANCED COOPERATIVE

(By Keith Remy)

December 6, 1936, dawned just like any winter day in north central Iowa—cold, windy, and dreary. But that day became significant in the history of cooperative rural electrification in Iowa.

For on December 6, 1936, the first farm in Iowa to receive power from an REA-financed electric cooperative was energized.

Friends, power officials, and pioneer members of Boone Valley Electric Cooperative at Renwick gathered at the W. H. Helmke farm in Wright County to witness the actual connection.

At the end of the day, the Helmke's carbide lamps, the gasoline-powered milking machine, the scrubboard were antiquated. Electricity had come to the 325-acre Oakdale farm.

The day was a rewarding one for Helmke and his neighbors who had been instrumental in pioneering cooperative rural electrification in their area.

Nearly a decade before—in 1928—Helmke and 10 of his neighbors began negotiating with a profit power company for electric service. It would have cost them at least $300 each to get service. The high cost and the coming of the depression doomed this early attempt.

In 1935, when the Rural Electrification Administration (REA) was established, Helmke and his neighbors immediately went to work.

They contacted REA officials in Washington. They hired an attorney. Bylaws were drawn up. And Boone Valley Electric Cooperative was organized. Helmke was elected president, a position he held until 1954.

Application for an REA loan was made. It was granted, and during 1935 and 1936, contracts were let and construction started. By December 1936, 43 miles of lines were ready for service. And Oakdale became the first farm in Iowa to enjoy the power supplied by an REA-financed electric cooperative.

"When we energized, we bought our power from Renwick Municipal. Now the town buys its power from Corn Belt Power Cooperative through Boone Valley Electric Co-op," explains Helmke.

Helmke has retired from active farming and is living in Renwick. His son, Norman, has taken over the operation of Oakdale and specializes in raising purebred Duroc hogs.

He uses heat lamps and hover brooders exclusively for getting pigs off to a healthy start.

Because of the increased electrical demands of modern farming, the Helmkes replaced the original 60-ampere meter loop with 100-ampere service 2 years ago.

In the farm home at Oakdale, a full line of major electrical appliances helps with the household chores.

Farmstead applications of electricity include a fully equipped farm shop, complete with welder and power tools. A large granary has an inside elevator powered by a 3-horsepower electric motor.

A 5-horsepower motor operates a double-fan natural air dryer in the hay barn.

Helmke is gradually rebuilding the once-large dairy herd. A can cooler is used for milk storage.

The farm has three water systems. Two of them have one-half horsepower deep well jet pumps. A flowing well uses a small piston pump to deliver water to hogs on range.

Oakdale depends on electricity.

Another pioneer instrumental in organizing Boone Valley Electric Cooperative was Helmke's neighbor, C. M. Gillespie. Gillespie was elected secretary-treasurer of the cooperative in 1936 and still holds that position. His son, James Gillespie, is co-op bookkeeper.

"The growth of electric use on our farms has been phenomenal," reports James Gillespie.

"The first year after we energized, we averaged 60 kilowatt hours per farm per month. Last year (1959) our average was 634.7 kilowatt hours per farm per month with the high month averaging 991 kilowatt hours per farm," he continues.

Gillespie checked back in the early record books. He found that Helmke's Oakdale farm used a total of $124.15 worth of electricity the first 13 months after being energized.

In February 1959, with electric brooding at a peak at Oakdale, consumption hit an all-time high of 6,070 kilowatt hours for the month. Total cost for the single month was $111.

"Boone Valley may be one of the smallest electric co-ops in Iowa with its 172 members, but I'll bet those members are as enthusiastic and as active as any others. There's a lot of pride in our cooperative," say L. N. Henriksen, president of Boone Valley Electric Cooperative.

And now, 24 years after the first cooperative current flowed over the lines, Boone Valley and 54 other electric co-ops in Iowa serve more than 132,000 rural Iowa families.

The silver jubilee year is a tribute to these power pioneers and their foresight—a tribute to cooperative rural electrification—truly a private enterprise "good for all Americans."

Mr. ASPINALL. Mr. Speaker, May 11, 1960, marks a quarter century of progress in bringing the benefits of electric power to rural consumers throughout the Nation. Since the signing of the Rural Electrification Administration Act on May 11, 1935, farmers all across the United States have helped to make the rural electrification program an outstanding success.

My own State of Colorado provides an excellent example of the achievements of the REA program, which got under way in Colorado in June of 1936, when the first REA loan was approved. The first REA-financed line was placed in operation on September 17, 1937, by the Grand Valley Power Line of Grand Junction, in my congressional district.

When the REA was created in 1935, only 7,145 farms in Colorado—just 11.2 percent, were receiving central station electric service. Current REA estimates show that 36,550 farms in the State, or 89.7 percent of all farms recorded in the 1954 census, were being served as of June 30, 1959. REA borrowers serve about 60.2 percent of these electrified farms in Colorado.

Up to January 1, 1960, REA had approved a total of $121,167,157 in loans to 25 electric borrowers in Colorado, all of which are cooperatives. The loans were made to enable the borrowers to construct 34,495 miles of line and other electric facilities to serve 86,677 consumers.

REA electric borrowers in Colorado have repaid $12,405,643 on the principal of their Government loans. In addition, they have paid $8,244,778 in interest and $4,749,698 ahead of schedule. As of January 1, 1960, no borrowers in the State of Colorado were overdue in their loan payments.

Mr. Speaker, it is also significant to note that Colorado's electric co-ops are among the largest property taxpayers in the 61 counties in which they operate in the State of Colorado. In 12 counties, electric cooperatives are the only electric taxpayers. In 1958, more than $600,000 was paid in property taxes alone by Colorado rural electrics.

Mr. Speaker, I should like to include in my remarks the following statistics relative to the first 25 years of the REA program in Colorado:

DATA OF THE FIRST 25 YEARS OF THE REA RURAL ELECTRIFICATION PROGRAM IN COLORADO

Percent of farms electrified by all suppliers

Jan. 1, 1935	11.2
Jan. 1, 1940	28.8
Jan. 1, 1945	48.6
Jan. 1, 1950	72.0
Jan. 1, 1955	87.0
June 30, 1959	89.7

NOTE.—About 60.2 percent served by REA borrowers.

Cumulative REA loans and advances

	Number of borrowers who received loans	Net total loans	Net total advances
Dec. 31, 1935	1	$46,100	
Dec. 31, 1940	17	5,492,000	3,228,964
Dec. 31, 1945	19	13,329,551	9,157,296
Dec. 31, 1950	23	44,011,976	30,123,520
Dec. 31, 1955	24	90,001,158	65,811,076
Dec. 31, 1958	25	119,534,157	90,249,434
Oct. 1, 1959	25	121,167,157	96,091,562

Miles and consumers (REA borrowers)

	Miles energized	Consumers served
Dec. 31, 1935		
Dec. 31, 1940	3,055	6,337
Dec. 31, 1945	7,571	21,736
Dec. 31, 1950	16,528	44,566
Dec. 31, 1955	30,816	71,392
Dec. 31, 1958	32,517	78,109
June 30, 1959	32,825	79,189

Growth of sales and average annual kilowatt-hour consumption (REA borrowers)

Calendar year	Total kilowatt-hours sold [1]	Average annual kilowatt-hour consumption [2]
1941	16,814,442	2,007
1945	37,919,730	1,867
1950	121,438,960	2,820
1955	331,498,029	4,800
1958	426,542,600	5,496

[1] Excludes sales by generation and transmission borrowers.
[2] All classes of consumers.

Cumulative payments on electric loans in Colorado

	Principal	Interest	Balance	Advance payments, total
At June 30—				
1945	$438,095.02	$615,947.20	$1,054,042.22	$168,166.39
1950	1,892,398.00	1,784,640.79	3,677,038.79	140,232.92
1951	2,349,408.80	2,106,102.80	4,455,511.60	313,252.08
1952	2,90 ,925.48	2,488,894.87	5,390,820.35	532,528.35
1953	3,580,781.88	2,885,511.90	6,466,293.78	652,159.49
1954	4,341,981.21	3,351,581.10	7,693,562.31	1,122,094.02
1955	5,251,325.31	3,871,661.92	9,122,987.23	1,705,291.12
1956	6,658,508.75	4,549,926.18	11,208,434.93	2,146,639.34
1957	7,997,907.78	5,361,332.62	13,359,240.40	3,296,294.23
1958	9,611,557.08	6,411,246.48	16,022,803.56	4,083,170.95
1959	11,423,379.78	7,591,471.03	19,014,850.81	4,490,232.18

NOTE.—If payments for any one year are desired, subtract the cumulative balance of the prior year from the cumulative balance at the year desired.

Outstanding balances at June 30, 1959:

Principal	$83,334,785.51
Accumulated interest	3,632,220.12

Mr. LEVERING. Mr. Speaker, since the rural electrification program was launched 25 years ago today, 96 percent of the farms of America have been electrified, demonstrating how free enterprise and a sympathetic Government can work together to solve vexing and difficult problems for human beings. Those who have been active in the rural electrification movement, know from the history of REA that rural electrification has been a real fight all during its history and even before the Rural Electrification Administration was born. Leaders during the formative period of the program as well as those today also know that the REA program and the American farm family have a close relationship.

Mr. Speaker, I will never forget the joy and excitement which came into the farm home in Ohio, where my family and I still live, when the lights were turned on in the 1930's. A large percentage of the families who get their electricity from rural electric systems live and operate family-type farms. Because rural electrification has made possible a level of living comparable to urban living, the farm family has become more content with their environment and I feel electrification has been an important factor deterring the flight of young people from farms to other occupations. Farm boys and girls can now be proud of their homes and their way of life. Of course, many young people have left the farm in recent years, mainly because of relatively low farm incomes; but, I believe that had not electrification come to agriculture the movement would have been much more rapid. If the income of the family farm can be brought in line with other occupations the family farm will continue one of our proudest and most respected ways of life. Thus, the problems of the family farm and of the rural electric systems are intertwined; their fortunes go up and down together; policies affecting the well-being of one cannot help but affect the other.

The battles waged by our beloved and distinguished Speaker Rayburn, the late Senator George W. Norris, the great independent of Nebraska who for 25 years reigned supreme in the Senate as a man who worked for the future of his country and its resources, former Congressman John Rankin, of Mississippi, and others, were battles of no greater importance than those which have come before the 86th Congress and will come before succeeding Congresses.

Mr. Speaker, the success of the rural electrification program has been so overwhelming that many opponents no longer try to attack it openly, instead they are coming forth with proposals labeled "Improvements" of the program.

Here are a few examples of these improvements:

The REA has suffered a downgrading of its Administrator. The Secretary of Agriculture in 1957, instituted a procedure of having a political appointee in his office pass on all major loans before the Administrator is given permission to act on them. This action so aroused Congress that we mustered almost a two-thirds vote expressing disapproval of so flagrant an injection of politics into the program.

The rural electric systems suffered an attempted curtailment of the Administrator's loan-making authority by the Comptroller General in 1958; the Comptroller General issued a ruling that would have seriously limited the use of REA loan funds to finance lines to rural consumers which the power companies considered desirable. The Senate, however, by unanimous vote reversed this ruling.

Bills to impose the high-interest policy on REA have been offered and backed by the full force of the White House, the Budget Bureau and the Department of Agriculture. A concerted campaign to build up pressure in Congress for such legislation has been carried out by the Secretary of Agriculture and others. But the REA high-interest push is merely a part of a broader tight-money drive, and it has been a stubborn one.

Tight-money policies have already been successfully put across against the Veterans' programs, housing programs, Farmers Home Administration, Federal Land Banks, and the Production Credit Association, to mention a few. So far we have held the line where REA has been concerned.

Another example: The Secretary of Agriculture has argued for, and has drafted and sent to Congress, proposed legislation which would abandon the REA program of the past 25 years and substitute in its place a plan for sending the rural electric systems to Wall Street for their long-term financing. This proposal was so drastic, I might say fantastic, that no Member has been willing to fight for it, or for that matter, even to introduce it.

These are the problems rural electrification has been facing in recent days. I am proud to be included among those who have defended the rural electrification program against these damaging attacks; I am proud that I have supported legislation which strengthens the program and keeps REA on the same successful track that it has followed for 25 years. It behooves us, I believe, to remember the stalwarts who made this program possible and who by their stanch support defended it during its early period; we can gain strength from their struggles and their victories for present battles and those that may lie ahead. Today on the occasion of the 25th anniversary, we should here dedicate ourselves to the philosophy that the early legislators on rural electrification incorporated in the program—local leadership, responsibility, and control with Federal administration keyed to human needs of rural America rather than to the financial desires of vested interests.

As we honor rural electrification for the advantages it has brought to rural America, we should never lose sight of the benefits it has brought to the electrical manufacturing industry, to all other industries, in fact, to the country as a whole. An important result of the rural electrification program is the increased business it brings into rural communities; it stimulates private business both locally and nationally. Surveys indicate that for every dollar invested in rural power facilities farmers invest $3 to $4 in wiring, plumbing, and electrical appliances. Also when power is available, the establishment of industry in rural areas is encouraged.

Back in 1935, when the REA experiment was just beginning, it was argued that all farmers who wanted electricity had it and that there was no market for power out in the country. Experience in the past 25 years has demonstrated how wrong this contention was. At this point, I want to include a fine article by Virginia Cruikshank, contained in the March 26 edition of the Delaware (Ohio) Gazette in my district, which carries a graphic account of how REA has changed the face of America:

ELECTRICITY IS BOON TO FARMERS

(By Virginia Cruikshank)

Some of us may have forgotten just how rugged life was in the rural areas before we had electricity.

Remember the coal stoves, kerosene lamps, washboards, water buckets, hand milking, and all the other hand-powered chores that made the farmer and his wife old before their time?

No one would want to return to that kind of rural living, although we may sometimes wax sentimental about the old days. We are even digging around in the attic and cellar for some of those items mentioned above because our city neighbors who are moving to the country prize them as antiques.

Electric power has changed the face of all rural America. Not only has it brought an end to a lot of the drudgery, but it has changed the entire outlook of rural people. They are no longer country hicks. Their life has become the envy of many city people.

This year the Nation is paying tribute to its rural electric system on the 25th anniversary of REA. President Roosevelt signed the Executive order May 11, 1935, that brought the Rural Electrification Administration into being.

Use of electricity today has passed the wildest dreams of 1935. USDA researchers have found that there are 450 ways to use electricity on the farm and in the farm home.

And just wait until we get all those bulk tanks installed around here in the next year. Consumption of power will zoom.

Only about 4 percent of the farms in the United States are still without electric power. In the territory of the Delaware Rural Electric Cooperative, there are only two farms and two houses without power, but the company is willing to build the lines to them whenever the owners are ready.

Mr. BREEDING. Mr. Speaker, this week marks the 25th anniversary of the founding of the Rural Electrification Administration.

The Congress can be proud of the fact that it had the foresight and wisdom to create this agency 25 years ago. I can think of no other single piece of legislation that has meant more to millions of farm families throughout the Nation.

I personally can testify to just what REA has meant to farmers. I still live on a farm in southwest Kansas. We now enjoy electric and telephone service, both of which were made possible by the Rural Electrification Administration and its younger brother, Rural Telephone Administration. These two modern conveniences have made farm life much more pleasant and satisfying. They have, I am convinced, been a major factor in persuading many families to remain on the farm.

It is significant, I think, that very few if any Members of this or the other House would seriously consider a proposal to abandon our great rural electrification program. There may be disputes over the administration of the program or details as to its financing, but as to the program itself and the philosophy behind it, there is almost no dispute.

The program has worked. The fact that 95 percent of the farms are now electrified is proof of this. Farmers have been able to install many labor-saving devices and machines. Electricity has taken a lot of the drudgery out of farming. It has literally and figuratively brightened the lives of farm families.

Also, it is interesting to note that on this 25th anniversary not one loan made by the Government to finance a cooperative electric system is in default. In fact, repayments are ahead of schedule.

I am proud of the cooperatives which have been built to operate electrical and telephone systems. These cooperatives are member owned. They are in business to provide a service to farm families.

The success of these institutions is due in a large measure to the dedication of the men who serve on the boards of directors and make the actual decisions as to how they will operate. This is a labor of love on the part of these men and women. They want to provide their members with the best possible service at the lowest cost consistent with good and sound business practices.

Thanks to the REA and to the thousands of dedicated men and women throughout the Nation who devote many hours each year to running the locally owned cooperatives, the lives of our farm families have been greatly improved and enriched. The REA has helped make America a much better place in which to live for millions of our people, by bringing the American standard of living to the American farm.

I am happy to salute REA on its 25th anniversary.

Mr. HENDERSON. Mr. Speaker, the rural electric program of the Nation marks its 25th anniversary this week.

This program has developed over the years into a significant service bringing electrification to vast numbers of rural homes and communities. In my own district cooperatives have been formed to serve the needs of the families. I should like to point out the development which has occurred in the operation of one of the cooperatives with which I am familiar. Today the Guernsey-Muskingum Electric Cooperative is extending service not only in Guernsey and Muskingum Counties in Ohio but to members in Morgan, Noble, Coshocton, Licking, and Harrison Counties as well. The cooperatives 6,000 members consumed almost 28 million kilowatt-hours of electric power last year. Their average member during the year used 4,580 kilowatt-hours, an increase of 258 kilowatt-hours of power over the average utilized in 1958. For this service in 1959, the cooperative received $717,817.97, an increase in income of $37,258.51 over the previous year.

The first loan from REA was received by the Guernsey-Muskingum Electric Cooperative in 1938. During the intervening years, the organization has borrowed $2,909,714.23. Of this sum, it has repaid $965,054.11. With the funds at its disposal, over 1,800 miles of rural distribution lines have been constructed and 6,800 services have been installed. Last year 184 new services were connected and another 200 new services are expected in 1960. The expansion of new services requires approximately $200,000 in new capital each year.

The cooperative serving such a large portion of the 15th Congressional District has a staff of 36 regular employees with an annual payroll of more than $163,000.

Mr. METCALF. Mr. Speaker, I, too, wish to join in congratulating the Rural Electrification Administration on its 25th birthday. Its creators and administrators can look back on a brilliant record; they have lighted and powered rural America.

When the REA Act was passed in 1935 only 1 Montana farm in 20 had electricity. At that time, life on the farm meant pumping and carrying water by hand, chopping wood for the cookstove, bending over a washboard, and poor light for reading, and for farm jobs after dark.

Today, almost 9 out of 10 Montana farms have electricity and roughly 2 out of every 3 of them are served by one of Montana's REA-financed power systems. These systems were built by men and women who banded together to provide for themselves the electricity which commercial utilities either could not, or would not, make available. They borrowed money from the Federal Government, loans on which we taxpayers have made millions of dollars.

Their job is still far from being done. Experience shows that electric power consumption doubles every 5 years. So the REA program must continue. That is, it must continue if our co-ops are to "heavy up" their lines to meet the growing needs of their members. I know our colleagues will be interested in the following clippings from the May issue of the Montana Rural Electric News and the Great Falls (Mont.) Tribune. I also wish to call attention to the statement in support of the REA program by President George Meany of the AFL–CIO:

[From the Montana Rural Electric News, May 1960]

EIGHTY-NINE AND ONE-TENTH PERCENT OF MONTANA FARMS HAVE ELECTRICITY

At the time the Rural Electrification Administration was created on May 11, 1935, only 2,768 farms in Montana, or 5.5 percent, were receiving central station electric service. Current REA estimates show that 29,450 farms in the State, or 89.1 percent of all farms recorded in the 1954 census, were being served by June 30, 1959. REA borrowers serve about 64.7 percent of these electrified farms.

The first REA electrification loan in Montana was approved in May of 1936. The first REA-financed line was placed in operation on December 5, 1937 by the Lower Yellowstone Rural Electric Association of Sidney.

Up to January 1, 1960, the beginning of REA's 25th year, the agency had approved a total of $61,045,733 in loans to 25 electric borrowers in the State, of which all are cooperatives. The loans were made to enable the borrowers to construct 29,910 miles of line and other electric facilities to serve 44,401 consumers.

Loan funds actually advanced to these borrowers amounted to $53,465,147 by January 1, 1960. With the help of this financing, the locally owned and managed systems had already placed 29,671 miles of line in operation and were serving 44,100 farm and other rural consumer outlets. The average monthly consumption of electricity by these consumers had increased from 283 kilowatt-hours in 1950, to 547 kilowatt-hours in 1958.

REA electric borrowers in Montana have repaid $8,964,709 on the principal of their Government loans. In addition, they have paid $5,564,906 in interest and $3,891,578 ahead of schedule. As of January 1, 1960, no borrower in the State was overdue in its loan payments.

[From Montana Rural Electric News, May 1960]

TEN PHONE CO-OPS NOW IN MONTANA

In 1950, the year the first REA telephone loan was approved, 28.5 percent of the farms in Montana had telephones. By the end of June 1958, it was estimated that 21,000 farms or 60 percent of all farms in the State had telephone service.

The first REA telephone loan in this State was approved on March 14, 1952, to the Mid-Rivers Telephone Cooperative, Circle, Mont.

As of January 1, 1960, REA had approved a total of $16,256,000 in loans to 10 bor-

rowers in the State (one commercial company and 9 cooperative associations).

These loans will enable the borrowers to serve 13,682 new subscribers, and to provide improved service for 4,427 existing subscribers over 15,036 miles of line. Work is progressing rapidly on the new REA-financed facilities, and 9 borrowers report that a total of 73 exchanges have been cut over to dial.

Loan funds actually advanced to the borrowers on January 1, 1960, amounted to $11,289,934. On the same date loan applications on hand from telephone organizations in the State amounted to $1,060,000.

On January 1, 1960, the State's borrowers had paid $256,327 in interest and repaid $305,415 of principal on their Government loans. They had also paid an additional $68,673 ahead of schedule.

[From the Montana Rural Electric News, May 1960]

IN THE BEGINNING

(By Max Mathews, manager, Yellowstone Valley Electric Cooperative)

(EDITOR'S NOTE.—Max Mathews, veteran manager of the Yellowstone Valley Electric Cooperative of Huntley, was the project engineer on the first REA construction project in Montana in 1937. The Montana Rural Electric News is proud to print the following exclusive article about his experiences through the years.)

The 17 years following my discharge from the Army in September 1919, after 2½ years overseas in World War I, found me engaged in the retailing of building materials and then in various construction activities—then in July 1937, quite by accident, I got into the construction of rural electric cooperative powerlines in Montana—a pioneering project that was designed to bring the better things of life to all rural people and was to give me, personally, an opportunity to fulfill a lifelong ambition to superintend in the field of construction.

My first job was with the Manning & Noyes Construction Co., building the original lines for the Lower Yellowstone REA Cooperative at Sidney, Mont. Later building the second section for the Yellowstone Valley Electric Cooperative in Huntley. The first REA loan in Montana was made to the Yellowstone Valley Electric Cooperative in Huntley in May 1936, however the first lines constructed in the State were for the Lower Yellowstone at Sidney. Their first lines being energized just before Christmas in 1937. My job continued with construction of lines for the Park Electric Cooperative at Livingston and for Vigilante Electric at Dillon, finishing there in July of 1940. Many new cooperatives have been formed in Montana since, there being 24 active at this time.

The actual construction of electric cooperative lines in those early years was quite different than that of today. The poles were shipped unframed and unroofed, the holes had to be bored by hand and the gains and roof cut by hand as there was no power for power drills and electric saws. Most of the holes were dug by hand and in many instances the poles were raised by hand and the use of pikes and main strength. The hole digging machines at that time were not nearly as efficient as they are today and were of little use in most areas of Montana.

Experienced linemen were hard to come by and the general practice was to pick the most promising men from the crews and develop them into linemen. Many of these self-made linemen later became the backbone of the maintenance crews for the various cooperatives—men with a great deal of pride in their work and part they had played in this now most successful enterprise. There were plenty of laborers in those early days and sometimes so many wanted work that they would draw straws to see who would get the job.

The lines were completed and still there was a selling job to be done—farmers were not used to the idea of using electric power in so many ways and the main thought seemed to be that the current would be used just for lights and refrigeration and there were doubts in many minds as to whether they could possibly use 40 kilowatt-hours per month and if they really could afford to pay the $3 minimum monthly bill. Most of the transformers hung were 1½ kilovolt-amperes, some were 3 kilovolt-amperes, and once in a great while it seemed necessary to hang a 5 kilovolt-amperes for an exceptionally large load.

When I first became manager at Yellowstone Valley Electric Cooperative in 1940, there were 80 idle services where the potential consumers felt financially unable to have their premises wired so that they could use power. Strange as it may seem today, here was a situation that required some real encouragement and it probably fostered the original "power use" department in the State as we felt it necessary to send our employees out into the field to set up meetings to "sell ideas on how the use of power could save labor and time and in addition make more income on the farm."

With the onset of World War II the picture changed—manpower was scarce and electric power meant the difference between staying in business or having to quit in many cases. But here too came the problem of hard-to-get materials, appliances, and the shortage of manpower to construct and maintain lines—but as is always the case—it sharpened the determination and everyone pulled together to see the thing through.

The postwar boom in the use of electric power on the farm swept over the country until today we find the average farm consumption to be 700 kilowatt-hours per month and apparently we have only scratched the surface of the many uses for electric power—the most recent upswing being in house heating.

The pledge to see that all rural families have central station power is rapidly being fulfilled and on this 25th anniversary of the Rural Electric Administration we find 24 active electric cooperatives in Montana serving 43,556 consumers with an investment of approximately $53,208,000 in 29,180 miles of line.

Looking back on a successful program of this magnitude causes one to reflect on the human interest aspect and in so doing I find some of my greatest satisfactions have come from being in on the ground floor and being privileged to see the faces of proud and pleased families who eagerly watched the "lights come on" for the first time and then returning to these same homes a year or so later to see how they had grown up with their new servant and were continuing to enjoy their new standard of living—the look ahead seems of even greater magnitude as there is no end in sight—rural electric cooperatives are here to stay and serve rural families of America.

[From the Great Falls Tribune, May 8, 1960]

RURAL ELECTRIFICATION—AN END TO DARKNESS

REA PROGRAM TO BE 25 YEARS OLD MAY 11

It's hard to explain to a child of today that there was no television 25 years ago.

It's even harder to explain that a great many farm homes in Montana were lit by gasoline or kerosene lamps even less than 25 years ago, and that most farm and ranch families had nothing but battery-powered radios because there was no electrical power line near their homes.

All this began to change 25 years ago with the founding of the Rural Electrification Administration on May 11, 1935. It didn't change overnight, however. The first REA-financed powerline didn't go into operation in Montana, near Sidney, until 1937.

Since then, 29,910 miles of REA line have been erected in Montana to serve 44,401 consumers of 25 electrical cooperatives. The number of farms served by electricity in this State has risen from 2,768 to nearly 30,000, which is almost 90 percent of all farms recorded in the 1954 census. About 65 percent of these electrified farms are served by REA borrowers.

This was still a dark land when REA began in 1935. Only 1 American farm in 10 had electric service. Now nearly 97 percent of all U.S. farms and ranches are electrified, with more than half served by 1,053 rural utilities financed by REA.

REA, an agency of the Department of Agriculture, is one of the most successful cooperative efforts in the history of the Nation. Its loan program builds electric systems, not only for farms and ranches, but for hundreds of thousands of other rural establishments.

REA has only two representatives in Montana. Harry Reising of Livingston is operations field representative and Ben Wallace, Lewistown, is field engineer.

REA has not only made farm and ranch homes more comfortable and convenient, it has provided power to take over hundreds of farm chores, especially in dairying, poultry and egg production and in feeding meat animals.

While it has provided more leisure for farmers and ranchers, it has given them the means of enjoying that leisure. While part of the family watches television, others may be working in the basement with power tools or photographic darkroom equipment, or in the garage with electric welders and metal lathes.

That's why it's hard to explain to a child of today that the dark ages didn't end too long ago.

REA PHONE PROGRAM NOW IN 11TH YEAR

REA's telephone program was established by Congress in October 1949, and the first telephone cooperative loan was approved in 1950.

Two years later Montana's first REA phone loan was approved to the Mid-Rivers Cooperative at Circle. Since then one commercial company and eight other cooperatives in the State have received loans.

These loans will enable the borrowers to serve 13,682 new subscribers and to provide improved service for 4,427 existing subscribers over 15,036 miles of line. Nine of these borrowers report that 73 exchanges have been cut over to dial service.

To help provide the best possible rural telephone service, REA has a small staff of telephone engineers in Washington, D.C.

Among other things, these engineers developed construction assembly units for all telephone plant items, permitting contractors to bid competitively on construction of borrowers' telephone plants.

The staff also developed standard technical specifications for automatic dial switching equipment. This also enabled equipment makers to bid on central office equipment on a truly competitive basis.

REA has played a key role in developing plastic-insulated cable for rural use and a new plastic cable and wire suitable for burial in the ground.

Some of the engineers' most successful work has been in the field of subscriber carriers. The typical rural telephone subscriber line will carry only one conversation at a time. Since start of the telephone program, REA engineers have worked closely with makers of electronic equipment to perfect the use of "carrier current techniques" so that as many as 8 or 10 conversations can

take place simultaneously over one subscriber line. The voice is transmitted by radio and the signal travels along the same pair of wires used for an ordinary telephone conversation.

R. J. Justice of Lewistown is operational field representative for REA phone service in Montana. Road Peterson, Great Falls, is field engineer and Peter Schwan, Havre, is field accountant.

AFL–CIO President George Meany today (May 11, 1960) issued the following statement hailing the 25th anniversary of the Rural Electric Cooperatives:

"America's workers join with the farmers and the public in general in hailing the Silver Jubilee of our country's rural electric cooperatives.

"Since May 11, 1935, when President Roosevelt signed the Executive order creating the Government's rural electric program, the benefits to every segment of the population have been obvious. Today, thanks in large part to the rural electric co-op program, more than 95 percent of America's farms are served by electric powerlines. That availability of low-cost electric power has meant a lifting of some of the work burdens for farm families, a great increase in the productivity of the farms, and a tremendous rise in the buying power of the people of rural America. Much of that buying power is used to purchase the products which union members manufacture and the services they provide.

"America's prosperity must always be based on the economic well-being of both its industrial workers and its agricultural producers. The rural electric cooperatives have achieved great success in their first 25 years of helping extend the benefits of America's economic growth to all the people of our country. In the years ahead, they carry our best wishes for continued service to the national community."

Mr. PRICE. Mr. Speaker, last week, on May 11, 1960, the Rural Electrification Administration observed its 25th anniversary throughout the Nation. Many news publishers have been paying tribute to the effective work of the REA over its quarter century of operation.

It is my pleasure to call to the attention of the House membership a fine editorial, which appeared on Thursday, May 12, 1960, in the Collinsville (Ill.) Herald. The publisher of this newspaper is the Honorable James O. Monroe, who was among the dedicated group of men throughout the Nation who gave life and support to the program of the New Deal back in the days when REA and many other helpful agencies of the Government were created—agencies that rescued the people of the country from the depth of the Nation's most serious depression.

REA is not the only successful Government agency created by the New Deal in the interest of all of the people of the country. We can recall the very successful operations of the Home Owners Loan Corporation, the Federal Deposit Insurance Corporation, the Securities and Exchange Commission, and many others. These were the days when the Government acted in the interest of the people.

It has been conceded by even the most bitter opponents of this type of social legislation that was enacted 25 years ago that such programs as REA, social security, and the others which I have mentioned has formed a cushion to protect our country against repetitions of the crises that existed when the people of the Nation turned to the Democratic Party in November of 1932.

I well remember editor Monroe as being in the forefront of those who assisted in the successful campaign of 1932. He remained a crusader in the interest of the people and vigorously supported the strong legislative program of Franklin D. Roosevelt.

The editorial follows:

TWENTY-FIVE-YEAR SOCIAL REVOLUTION: REA

The Rural Electrification Administration observed its 25th anniversary on May 11, 1960, with nearly 97 percent of all U.S. farms and ranches electrified. A little more than half of these farms, together with hundreds of thousands of other rural establishments, are served by 1,053 rural utilities financed by REA.

This was still a dark land when REA began in 1935, with only one American farm in ten receiving electric service. During the years that followed, the lights were turned on in one farm after another through one of the most successful cooperative efforts in the history of the Nation. REA, an agency of the Department of Agriculture, made loans to build electric systems and offered technical advice. In most cases, farmers organized their own cooperatives to construct the systems and distribute the power. Today these rural utilities, financed by the Government and owned and operated by local people, served more than 4.7 million consumers in 46 States, Puerto Rico, and the Virgin Islands.

Southwestern Electric Cooperative, Inc., with headquarters at Greenville, Ill., is one of the borrowers of REA. Southwestern Electric serves approximately 7,500 rural members in Madison, Bond, and Fayette Counties.

As 1960 began REA has approved loans of more than $4 billion for rural electrification, including all kinds of facilities. For their part, the rural utilities which obtained the loans have proved financially responsible and good credit risks. So far, they have made payment to the Government in excess of $1.1 billion, including a balance of $154 million pair ahead of schedule. On January 1, 1960, only one borrower was behind in its payments more than 30 days.

As borrowers have gained in strength, the technical and management assistance rendered by REA has gradually diminished. This is in line with REA's guiding policy toward its borrowers, which is to encourage rural utilities to look after their own affairs as soon as they are able.

History has proved that farmers and other rural people use as much or more electricity than their neighbors in the city. This fact, more than any other, accounts for the tremendous success of the REA program. The first REA-financed lines were built on the assumption that farmers might use as much as 100 kilowatt-hours of electricity a month. Today farm consumers use an average of 350 kilowatt-hours per month, and the monthly average for all consumers on REA financed lines is up to 433 kilowatt-hours per month.

Much of the electricity is used to operate household appliances and equipment, such as washers, ranges, and vacuum cleaners. In recent years, a number of rural people have started heating their homes electrically. But electric power also has been harnessed to perform hundreds of farm chores. The greatest changes have been wrought in dairying, poultry and egg production, and in feeding meat animals. Electricity is revolutionizing these fields, permitting one man to care for many more birds or animals. By 1975, REA estimates that each consumer on rural lines will be using an average of 14,400 kilowatt-hours of electricity a year.

Besides altering life on the farm, the availability of electric power in rural areas has brought about profound changes in the character of rural America. New business firms and industries have appeared in the country. Suburbs have been built on the fringes of towns and cities. Retired people and commuters have been moving into rural areas. In some places, resort booms are under way. In 1959, 139,000 consumers were added to REA-financed lines.

These two trends—more consumers and greater average use of power—mean that REA borrowers will have to increase greatly the capacity of their systems in future years. They will need increasing amounts of new capital to do the job. Rural utilities already are making both financial and engineering plans for the years ahead.

The member-owned systems have proved themselves efficient organizations. They have proven themselves capable of distributing electric power on an areawide basis to even the most thinly populated parts of our country. They have proven their right to serve. If all REA-financed systems continue to concentrate on service in the future as well as they have in the past, there appears to be no reason why they should not be a permanent part of the utility industry of the United States.

Private, free enterprise power companies have fought REA at times, pointing out with considerable truth that it smacks of socialism and urging that it gives them unfair competition. They may be able to prove their premises, but it would be difficult to convince millions of Americans that REA is a bad thing.

A rather obvious proof that it is beneficial is that the private power companies have managed to thrive and expand. Competition hasn't hurt them and in fact some of them sell large amounts of power to the REA companies. The socialism argument is countered by the obvious fact that no matter how socialistic the power in their lines may be, our rural population does not feel like the REA is overturning the free enterprise system. Our rural population still feels and votes ruggedly capitalist even though their life is shot through with governmental action.

SILVER ANNIVERSARY OF RURAL ELECTRIFICATION

The SPEAKER. Under previous order of the House, the gentleman from Oklahoma [Mr. ALBERT] is recognized for 30 minutes.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent to revise and extend my remarks, to include newspaper articles, editorials, and other extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ALBERT. Mr. Speaker, on this occasion of the silver anniversary of rural electrification, I join the distinguished gentlemen who have preceded me in saluting this great program. Twenty-five years ago today President Franklin Delano Roosevelt signed Executive Order 7037 creating the Rural Electrification Administration. This action of the President set in motion a movement which has literally transformed American rural life. Of all the things that the Government has done in the field of agriculture, in my judgment, rural electrification has been the most

important. It has brought the 20th century to the American farm.

Following the creation of the Rural Electrification Administration by Executive order, the Congress in 1936 in one of the most important acts in its history, broadened the agency's scope and gave it permanent legislative sanction. We, who are privileged to serve in the House today, are entitled to take great pride in the fact that the guiding genius of the first Rural Electrification Act passed by this body was the distinguished American who now presides over it. Speaker RAYBURN was the joint author of the Norris-Rayburn Act, the first and most auspicious rural electrification bill ever to pass the Congress. So, Mr. Speaker, this occasion commemorates not only a milestone in the life of rural America, but also a significant milestone in the legislative career of the most eminent and illustrious legislator in American history—Speaker SAM RAYBURN. The Speaker has broken so many records and has set so many records in this House—he has been associated with so many important events over the past half century—his name has been connected with so many major bills that it is all but impossible to single out one piece of legislation as being among his most significant achievements. I do believe this, however, Mr. Speaker, that had your service in this House been limited to the joint authorship and sponsorship of the first rural electrification bill, that alone would have been sufficient to give immortality to your name.

The Rural Electrification Act of 1936 could not have been passed without the exercise of the Speaker's special talent for winning acceptance of a controversial measure by reconciling the judgments of men of strong conviction but of opposite views. The passage of this bill demanded his very special combination of commonsense and uncommon judgment—of practical politician and far-seeing statesman.

Mr. Speaker, your footprints are in every American countryside. We see them in every household where the magic of electricity has lifted the burdens and drudgery that were typical of American farm life. We see them in the thousands of miles of lines carrying electricity to more than 96 percent of American farms, as compared to 10 percent 25 years ago. We see them in the farmer-operated cooperatives found in every section of the country. We see them in the success of a program that many had doomed to failure before it was started.

Mr. Speaker, you have literally created a new society in rural America. You have given rural life a new dimension. You have made a spacious future for farm people in which they can share equally, work in dignity, and live in peace.

The rural electric cooperatives of Oklahoma are justly proud of the record which they have made. A fitting tribute has been paid to the leadership of the rural electrification movement in my State in the silver jubilee edition of the Oklahoma Rural News for May 1960 in an editorial entitled "A Most Favorable Impression." Under leave to extend my remarks, I include a copy of this editorial at this point:

A MOST FAVORABLE IMPRESSION

What kind of people are behind your electric cooperative?

After 6 months of association with local directors, managers and employees, some conclusions can be drawn.

First, let us review for a minute the men cooperative members elect as directors. Without exception, these men are sincere, honest, dedicated and loyal to the program that has erased the darkness that prevailed so long in rural America. With no previous experience in utility direction they accepted a challenge that the commercial companies termed "uneconomical or impossible."

Serving without pay, they have neglected their own farm operations to serve their neighbors and community. Area members have made wise decisions in selecting good, responsible, and loyal leadership.

Managers in all instances approach their daily responsibilities enthusiastically as well as cautiously. They realize that to serve every customer no matter how large they may be or how far they are from the nearest line is a great task. Meeting present requirements as well as planni_g for future demands requires constant review of their operations. A great portion of the success of the rural electrification program in Oklahoma can be credited to good management.

Office as well as field employees are eager to do a full day's work for a day's pay. From the time the member is received at the information desk until he is greeted by the meter and service personnel they are made to feel they are the most important person in the cooperative.

Cooperation and a recognition of individual responsibility is found in every 1 of the 26 distribution and 2 G. & T. operations.

With about $150 million invested in 64,000 miles of line and equipment, approximately 96 percent of the farms in the State now have electricity. Every Oklahoma electric cooperative is on a sound financial basis. Many have made advance payment on their loans. Reserves for tornadoes and ice storms have been developed. Capital credits are being determined and in some cases paid to the membership.

A combination of sincere direction, informed management and cooperative employees supported by loyal members, a capable REA staff and an understanding congressional delegation have achieved objectives beyond one's greatest expectation.

All Oklahomans can be proud of those who have led the way to 25 years of success in the rural electric program in this State. C.D.L.

The same edition shows that what is past is only prologue in the rural electrification movement. In this connection, I include under leave to extend my remarks another editorial from the same paper entitled "Rural Electrification Is On the Move." The editorial is as follows:

RURAL ELECTRIFICATION IS ON THE MOVE

With plans for capital improvement during the next 5 years totaling $47 million, Oklahoma's rural electric cooperative leaders are optimistic about the future.

Oklahoma is on the move. We have great confidence in the rural people. They have displayed their outstanding ability during periods of war and peace. With electricity, they are better prepared to meet future crises.

Examples of the need for this continued growth are Electric Cooperatives to extend service to 2,126 farms the recent approvals for loans to Kay, Indian, and Caddo that do not have electricity at the present time. Several thousand more farms in Oklahoma are still without electricity.

As farmers find that electricity can save hours of time in performing numerous chores around the farm, they are adding new equipment. New timesaving appliances are also being installed. All of this adds to the load on the line.

Early estimates by engineers on the power needs of the rural areas were too low. New lines, transformers and other equipment must be installed to insure adequate voltage. This will require several million dollars to accomplish.

These extensions and improvements will also create new markets for over $200 million in appliances and equipment. Every city and town in Oklahoma will be benefited by this additional business. C. D. L.

Most of the Members of the House are aware of the great benefits that electricity has brought to the farms of this country. I doubt that many realize what a gigantic new industry this program has added to the business community of our country today. I am pleased to quote another editorial from the Oklahoma Rural News entitled "Rural Cooperatives Are a Big Business Today":

RURAL COOPERATIVES ARE A BIG BUSINESS TODAY

A $150 million industrial plant employing 1,099 persons with an annual payroll of $4,613,156 would be an accomplishment of great acclaim for the State of Oklahoma.

Add to this a business stimulant that created a market for electrical equipment and appliances valued at over $675 million and everyone would celebrate a great victory.

A firm that has paid out over $47 million in payroll in less than 25 years would be highly honored and praised.

These are only a few of the contributions the rural electric cooperatives have made toward the economic growth of Oklahoma. Yet many Oklahomans have not stopped to think of this program in this regard.

This group was responsible for a sizable portion of the extra push in business following World War II that resulted in an expanding economy instead of a depression. C.D.L.

Along the same line is an article in the same paper showing the tremendous volume of business rural electric cooperatives have brought to appliance dealers. This article from the Oklahoma Rural News is as follows:

COOPERATIVES HAVE BROUGHT TRADE TO APPLIANCE DEALERS

One of the most important generating forces in the appliance business in Oklahoma during the past 15 years has been the rural electric cooperative program.

Records reveal that Oklahomans living in areas served by the rural electric cooperatives have bought over 416,000 major appliances. These include such major items as ranges, freezers, electric water heaters, dryers, washers, refrigerators, TV sets, and water systems.

It is conservatively estimated that this $200 million in business would keep 2,312 appliance dealers in business for 1 year. To reduce this down it would be good business for 462 appliance dealers for a 5 year period.

These fantastic figures do not include such common household appliances as irons, toasters, percolators, sewing machines, electric blankets, heaters, mixers, waffle irons, radios, electric clocks, skillets, sweepers, and numerous appliances operated electrically.

Oklahoma appliance distributors advise that this program has been the primary source of customers for hundreds of their dealers throughout the rural areas of the State. We are expecting a continuation of this for many years to come, they reveal.

A breakdown of more common heavy electrical appliances found in the home of the members of 25 electric cooperatives is as follows:

Televisions	82,000
Refrigerators	98,000
Ranges	28,089
Freezers	42,826
Water heaters	11,556
Dryers	9,830
Washers	71,999
Water systems	71,795
Electric heating	1,915
Total electric homes	246

For all its obvious success, the rural electrification program has not been a burden upon the taxpayers. Quite the reverse is true as is shown in the following article from the same paper which reports that the 28 rural electric cooperatives of Oklahoma have paid more than $6.333 million in taxes since the inception of the program:

OKLAHOMA COOPERATIVES HAVE PAID $6 MILLION TAXES

A tax bill of over $6,333,000 has been paid by the 28 rural electric cooperatives in Oklahoma. The current rate of taxes paid by this same group is over $700,000 annually, a recent survey by the organization's State association office reveals.

Based on the present rate of growth these same cooperatives will pay about $10 million in taxes during the next 10 years. The major portion of the gross sales and a large portion of the motor vehicle taxes go to school districts in all 77 counties.

This certainly contradicts the usual misunderstanding by most people about the rural electric cooperatives paying no taxes.

Tying this figure of almost $6½ million to something tangible, it would build Oklahoma City's Northwest Classen and John Marshall High Schools and Taft Junior High School. These are three of the largest schools in the Southwest.

The recent park development program of the Oklahoma Planning and Resources Board was only slightly more than this amount. It included the beautiful lodges at Sequoyah State Park, Lake Texhoma, Lake Murray Lodge, Quartz Mountain Lodge, Roman Nose Park, and many other projects that received nationwide praise.

This amount of taxes paid by Oklahoma's rural electric cooperatives would have constructed the massive Student Union Building and the outstanding library on the campus of Oklahoma State University.

These taxes would have built the buildings on the Cameron College campus and the beautiful new high school in Lawton.

Still another article from the Oklahoma Rural News describes the fine repayment record which rural electric cooperatives have made in Oklahoma and the impact of the program upon the economy in general:

THE REA PROGRAM IN OKLAHOMA

REA electric borrowers in Oklahoma have repaid $21,022,869 of the principal of their Government loans. In addition, they have paid $14,796,791 in interest and $5,915,482 ahead of schedule. As of January 1, 1960, no borrower in the State was overdue in its loan payments.

At the time the Rural Electrification Administration was created on May 11, 1935, only 5,648 farms in Oklahoma, or 2.6 percent, were receiving central station electric service. Current REA estimates show that 110,800 farms in the State, or 93.1 percent of all farms recorded in the 1954 census, were being served by June 30, 1959. REA borrowers serve about 77.3 percent of these electrified farms.

The first REA electrification loan in Oklahoma was approved in November of 1935. The first REA-financed line was placed in operation on May 4, 1936, by the Earl W. Baker Utilities Co. of Bethany.

Up to January 1, 1960, the beginning of REA's 25th year, the agency had approved a total of $154,296,919 in loans to 28 electric borrowers in the State, of which 27 are cooperatives. The loans were made to enable the borrowers to construct 65,439 miles of line and other electric facilities to serve 167,302 consumers.

Loan funds actually advanced to these borrowers amounted to $139,981,277 by January 1, 1960. With the help of this financing, the locally owned and managed systems had already placed 62,917 miles of line in operation and were serving 142,184 farm and other rural consumer outlets. The average monthly consumption of electricity by these consumers had increased from 98 kilowatt-hours in 1950, to 189 kilowatt-hours in 1958.

Mr. Speaker, rural electrification has spelled progress to Oklahoma as is well demonstrated in the following article from the silver jubilee edition of the Oklahoma Rural News:

ELECTRIFICATION HAS SPELLED PROGRESS TO OKLAHOMA

How would the rural areas of Oklahoma look today if electricity had not been provided by the rural electric cooperatives? What would be the population of the State?

How much taxes would be lost annually if thousands of the now occupied farms had been vacated? What would the price of land be if all of these farms had been put up for sale?

Definite answers of course cannot be obtained; however, one can use good judgment and imagination.

Dozens of the small towns would have completely disappeared. Instead of living in rural areas, those now commuting 25 to 150 miles a day to work, would have moved to the point of employment. Others would have ended up in California with many of their former neighbors. This would have had an extremely adverse effect on the economy of the entire State.

Millions of dollars in taxes would have been lost in the rural counties and the price of land could be down considerably below depression prices.

It could have meant the losing of many industries, another Congressman, and thousands of Oklahoma's most valuable resources—its people.

Hundreds of millions of dollars from the sale of agricultural products would have hurt every person in every city, town, and village in the State.

The rural electric cooperatives have had a far greater effect on the overall economy of Oklahoma than the average citizen can possibly imagine.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Kentucky [Mr. STUBBLEFIELD] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. STUBBLEFIELD. Mr. Speaker, 25 years ago this week, May 11, 1935, President Roosevelt issued the Executive order creating the Rural Electrification Administration. At that time, only 8,480 farms in Kentucky or 3 percent were receiving regular electric service. Currently, 188,900 farms or 97.6 percent of all farms in Kentucky are being served with electricity. More than 80 percent of the electrified farms in Kentucky are served by rural electric cooperatives organized under the REA program. The first rural electrification loan in Kentucky was approved in October 1935. From that date to the present, REA loans totaling over $154 million have been made to 28 electric borrowers in the State, of which 27 are rural electric cooperatives.

The loans enabled borrowers to construct 53,000 miles of lines and to serve 263,000 consumers. As of January 1, 1960, no borrower in the State of Kentucky was overdue in its loan payments. In fact, Mr. Speaker, the borrowers were $4,875,000 ahead of schedule. The REA program with its combination of technical assistance and loan funds has not only brought tremendous benefits in the way of better living conditions and a better way of life to our farm people, but it has greatly benefited the economy of the Nation as a whole.

We know, for example, how serious is the plight of our coal miners and the coal industry generally, but it is hard to visualize how much more difficult and tragic the circumstances in the coal mining areas would be were it not for the tremendous amount of coal which is mined and used to produce the electric power which supplies the farm homes to which the REA program has brought electricity. Rural electric service extends into 112 of Kentucky's 120 counties, but to present fully the picture of the increased use of electricity, let us compare for a moment the amount of power used by the individual farm family with the amount used when this program began. The average farm home used only 40 kilowatt-hours per month in 1937. By 1950, this rate had jumped to 116 kilowatt-hours per month, and the projected 1970 rate is 650 kilowatt-hours.

The 332,000 member users of rural electric service in Kentucky have a tremendous interest in the welfare of all of Kentucky. They want to see Kentucky prosper and grow and are interested in bringing industry to Kentucky for a more balanced economy. They are working with other organizations to that end. They are working with the high schools throughout the State in connection with the home economics program. Under this program, equipment is loaned to the school home economics departments for instructional purposes at no cost, and is replaced annually with new equipment.

The rural electric cooperatives with only one exception, own modern, up-to-date office buildings and headquarters facilities with attractive auditoriums which are made available to the people as a community center. Cooperatives employ personnel and staff who work with the member users on ways to make more effective use of electric service.

The rural electric cooperatives in Kentucky are operating as successful business organizations—meeting their loans and providing low-cost, dependable electric service to their member users. They also make a big contribution toward the general economic welfare of the State. It is estimated that for each dollar invested in line facilities, approximately

$7 is now being invested in equipment for use of this electrical service. This is helping the merchants on main street and is helping factory workers who produce the electrical appliances and other equipment which go along with electrical power.

The rural electric program in Kentucky has grown from nothing 25 years ago to where it now represents $175 million investment. Five of the twenty-seven rural electric cooperatives in Kentucky serve families in the First District, which I have the honor to represent. These five are: Jackson Purchase Cooperative, Paducah; Hickman-Fulton, Hickman; West Kentucky, Mayfield; Pennyrile, Hopkinsville; and Warren County, Bowling Green. We are proud of these cooperatives, proud of the quality of their management and of the high type of leadership reflected in their boards of directors. The REA program and its success is a living monument to their ability and their leadership. I pledge my continued support to this great program and am honored to join with my colleagues in saluting REA on this 25th birthday.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri [Mr. CARNAHAN] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. CARNAHAN. Mr. Speaker, I am pleased to participate in this observance of the 25th anniversary of the founding of the rural electrification program. During the third year of the first term of President Franklin D. Roosevelt, the President was presented with the results of a survey of the number of electrified farms in rural America. This survey revealed that only 10 percent of the farms in America had electricity. Thereupon President Roosevelt on May 11, 1935, by Executive order established the Rural Electrification Administration and handed it the responsibility of electrifying the farm homes in America. This was a significant day not only for rural America but for all the Nation. Within the 25 years immediately following, America found itself engaged in a global war, in a war in Korea, and in a prolonged cold-war siege which combined to make it mandatory that America's farms produce not only for its own people and in the interest of national defense but equally as important to help in feeding millions of peoples across the length and breadth of the globe whose lives and fortunes had been destroyed by war and the subsequent dislocation which took place. In this mammoth effort, REA has played a significant and tremendously important role.

It is to be noted that the distinguished Speaker of the House of Representatives was instrumental in sparking the interest in this body which resulted in the year that followed, in the passage of the REA Act which made rural electrification a long-range program. REA is just another of the major accomplishments of Speaker Rayburn during his years of rich service.

This was just a quarter of a century ago and as REA celebrates its silver anniversary we find that approximately 97 percent of all the farms in America enjoy the benefits of modern electric service. From 10 percent to 97 percent is a tremendous stride in just 25 years. The farmer of America owes all of this to the REA which has financed around 1,000 rural electric distribution systems. The result has been that from this program established 25 years ago by a group of farsighted men, has come the electric power which has made America the greatest agricultural nation the world has ever known.

It would be next to impossible to enumerate in these moments the many benefits which have ensued as this program has grown. It has, for example, meant more jobs. Farmers are buying television sets, water heaters, refrigerators, electric motors, and other electrical appliances. This represents millions of dollars of sales each year and creates new jobs as the market for these services increases. Thus our cities have profited by the program set into operation 25 years ago by President Roosevelt and continued each year since then by the Congress.

Not only have the people of the cities benefited but the whole face of rural America has changed as power has been brought to the farms. Electricity has made great changes in their way of living. The first REA loan was approved in July 1935, and since that date, gone are the days of much drudgery and backbreaking toil of pitching hay with a fork, carrying water by the pail, and firewood by the armful. Kerosene lamps, lanterns, pump handles and sadirons have lost their meaning to most youngsters in high school today. The woman on the farm now has a more liveable life. Her husband formerly had to use only musclepower to accomplish numerous tasks of farm life. Now we are told that there are over 400 different tasks that electricity can perform on the farm that formerly farm folk did the hard way.

Mr. Speaker, there are within my own congressional district six electric co-ops—the Black River Electric Co-op, Ironton; the Intercounty Electric Co-op, Licking; the Howell-Oregon Electric Co-op, West Plains; the Gascosage Electric Co-op, Dixon; the Crawford Electric Co-op; Bourbon; and the Citizens Electric Corporation, Ste. Genevieve. I give some statistics on two of these operations only just to save time. They are typical of the other four within the district.

The Citizens Electric Corporation in Ste. Genevieve is an REA-financed utility operating under the jurisdiction of the Missouri Public Service Commission. The area served comprises all of Ste. Genevieve and Perry Counties, and the northern part of Cape Girardeau County. The unusual organizational character of the corporation was brought about by the fact that it serves two cities of more than 1,500 population. In all other respects, the corporation is identical to the typical REA cooperative. It is owned and directed by those it serves. Under a capital credit contract with all consumers, it is obligated to allocate any margins or earnings back to the credit of the consumer.

The amount of loans to the Citizens Electric Corporation under note from the Rural Electrification Administration stands at $7,551,228.10. This facility has 1,963 miles of transmission and distribution lines which is an effective part of the overall task of bringing electric service to all our people in the rural areas as well as the towns and villages. This corporation supplies 9,963 consumers of which approximately 50 percent are farms and other classes of rural service. The rates charged by the corporation are the lowest possible, consistent with the rendering of a high quality and adequate electrical service. This facility, Mr. Speaker, is continuing to make a tremendous contribution to this rural area of America and has paid dividends to the Nation as a whole.

It is of interest also to note one of the other six cooperatives within my district—the Crawford Electric Cooperative, Bourbon, Mo. This facility now serves some 6,500 members on approximately 2,130 miles of line in six Missouri counties. In 1949 the kilowatt usage was approximately 4 million. By 1959 this had risen to the total of over 17 million. It is of significance to note that one of the most important loads within this cooperative is the U.S. Army Nike Base at Catawissa, Mo.—another defense contribution of REA to the welfare of the whole Nation.

What has held true for my own Eighth Missouri District is equally as true for the State of Missouri. In 1935 there were just 17,893 farms electrified within the State of Missouri. This was approximately 6.4 percent of the farms in the State. By 1959 there were 193,950 farms electrified or a total of approximately 96.2 percent. Of these 79.3 percent are served by an REA cooperative.

It is to be stressed, Mr. Speaker, that these co-ops are voluntary, democratic organizations set up to perform a service for their members. They are owned by the members they serve. These rural services would not have been likely had it not been for the REA and its empowerment by the Congress 1 year after its creation by Executive order to make loans for the construction of these facilities. These REA-financed loans have been repaid at a record that is nothing short of fantastic. Over $4 billion has been loaned in the past 25 years. To date over $1.1 billion has been repaid. This includes $628 million repaid on principal, $375 million on interest, and $146 million paid ahead of schedule. Only one REA borrower out of a thousand across the Nation and that not in Missouri, has been delinquent in repaying its loan. This is a record of fiscal responsibility hard to match elsewhere.

A 25th anniversary is necessarily a time for looking backward but equally so a time to look forward. There are, Mr. Speaker, those who would have us terminate the REA and render the accolade, "Well done." The present Administrator of the REA has summed up the future for REA in three phases: First, more people; second, increased consumption of electricity; third, heavier plant

facilities. He predicts that these trends seem certain to continue for at least 20 years more.

And so it is Mr. Speaker, that we might say that the first goal of REA has been met—rural America has had electricity brought to its doors. Now as we enter a phase of change and redevelopment in rural America, REA looks confidently to the future with the assurance that it can continue to meet the challenge of furnishing a constantly high quality of service to all rural consumers in whatever amounts they may require and at the lowest possible cost consistent with sound management.

Truly, Mr. Speaker, 25 years of experience with REA leads all of us to say that rural electrification is good for all Americans.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Oregon [Mr. ULLMAN] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ULLMAN. Mr. Speaker, it is with a real sense of pride—pride as a Member of this body, as a Representative of a great rural area, and as an American—that I rise to add my voice to the others being raised here this afternoon in tribute to the rural electrification program which is this year celebrating its silver jubilee. We pay tribute today to the vision of those who wrote and enacted the basic legislation which established this program. There are, as it happens, 25 Members of this body today who were also Members of this body when the Rural Electrification Act was passed and I know that, high on the list of his many accomplishments, our beloved Speaker ranks his sponsorship of that historic piece of legislation.

We also pay tribute to the dedicated men and women who have served in the Rural Electrification Administration. The names are of course legion, from the late Morris L. Cooke and his successor, John Carmody, down through the years and through the ranks of the Agency, from the Administrator to the newest stenographers and typists.

But, most of all, we pay tribute to the farmers of America whose program it really is, and whose efforts have made it a major and continuing achievement. In the words of the song which they sing each year at their annual meeting, these people from the real grassroots of America have worked to help each other, and in so doing they have shown the world what happens when the farmer takes a hand.

The record of the rural electrification program is written in the statistics with which we are all familiar—the nearly 1½ million miles of distribution lines that now carry the benefits of electrical power to more than 4½ million farms, homes and other rural establishments, the increase in the proportion of American farms electrified from only 10 percent in 1935 to more than 96 percent today. In my own State of Oregon the story is equally one of accomplishment for which we can be proud—more than 11,000 miles of distribution lines serving almost 35,000 consumers with better than 97 percent of Oregon farms now electrified. In my own District, there are currently about 11,000 farms being served by some nine rural electric systems.

But more important than these statistics, impressive as they are, is the record which the rural electrification program has written in terms of what my good friend, the gentleman from Wisconsin [Mr. JOHNSON], has called "the quiet revolution that has changed the face of rural America." It is in terms of increased productivity, lightened work loads for farmers and their families, and that immeasurable intangible of a "better life" which has replaced so much of the traditional drudgery of life for farm families that the record of the rural electrification program is really written.

As I have said, this is a record of which all of us are justifiably proud. But it is a record that has not been established in a vacuum and I want to take a few moments to talk about an aspect of the rural electrification program of which we in the Pacific Northwest are particularly conscious. The rural electrification program and its outstanding achievements must be seen in the context of the whole program of full resource development which is so vital to our Nation.

The rural electrification program is bringing the benefits of low-cost electric power to rural America. It is doing so through the use of the people's own credit, made available by the REA—a fundamental example of using public credit for public purposes. The great success of this program has been made possible, in large measure, by a parallel program of developing the people's resource heritage in the interest of the public good—through the Federal power program.

I call your attention to two aspects of the rural electrification program in our own State of Oregon. Oregon rural electric consumers have the second highest per member consumption of electricity in the Nation. Rural electric systems in Oregon also have the second-lowest per-kilowatt cost for wholesale power purchases in the Nation. In both instances, the top-ranking State is our sister State of Washington and the key to this ranking for our two States is, of course, the tremendous resources of the Columbia River Basin which are being harnessed for all the people through the multiple-purpose development program of the Federal Government.

The vital importance of the Federal power programs to the rural electrification program is not characteristic only of the Pacific Northwest. Across the entire country, 450 rural electric systems purchase all or part of their electric energy from Federal power marketing agencies. In fiscal 1958, these purchases totaled about 9.1 billion kilowatt-hours at a cost of some $45 million. This was roughly 40 percent of the total cost of power to all rural electric systems. A similar amount of power was purchased in that year from investor-owned private power companies, at a cost of some $72.5 million. This means that rural electric systems got about 60 percent more power per dollar of expenditure from Federal power marketing agencies than from investor-owned private power companies. In addition to this direct benefit to the rural electrification program, there is the substantial saving which has come in their purchases from private power sources as a result of the competitive yardstick effects which are such an important aspect of the Federal power program.

The evidence that our program of full resource development is essential to the success of the rural electrification program is not confined to the figures I have just cited. Between 1958 and 1959, sales of electricity by rural electric systems increased by 15½ percent—a rate that means their power loads are roughly doubling every 4 to 5 years. In contrast, sales of electricity by the industry as a whole are increasing at a rate which represents a doubling of loads in about every 7 to 10 years. Not only can rural electric systems better carry out their mission of bringing low-cost power to rural America if they are independent from high-cost private power supplies, but private sources of supply are not adequate to the expanding needs of the electric cooperatives. I would remind those who might take exception to this point that 25 years ago representatives of private power companies were saying that all the farmers who wanted electricity were already receiving it from their firms. The record of the rural electrification program since that time furnishes a complete rebuttal to their contention.

In conclusion, Mr. Speaker, I want to point out that if the rural electrification program is to continue to build on the record of the past 25 years which we are honoring today, it can do so only if we here continue to keep faith with the people of America and with their and our great resource heritage—only if we continue the job of developing that heritage in the proud tradition of full multiple-use for the greatest good for the greatest number. We are justifiably proud of the past 25 years of achievement, but we must continue to write the record in the years ahead along the lines that have been established in law and practice—in the spirit of those principles enunciated and adhered to by Theodore Roosevelt and Gifford Pinchot, by George Norris and Franklin D. Roosevelt, and by all the people, famous and unknown, who have created the context of resource development which has made the proud record of the rural electrification program possible.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Kentucky [Mr. PERKINS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. PERKINS. Mr. Speaker, I want to state at the outset that the people of the Seventh Congressional District of Kentucky are proud of the good work of the rural electric cooperatives. Since 1935 most of the farms in eastern Kentucky have been able to receive central station electric service.

The district that I am privileged to represent is served by the Big Sandy RECC at Paintsville; Grayson RECC, Grayson; Clark RECC, Winchester; Jackson County RECC at McKee; Cumberland Valley RECC, Corbin, and Licking Valley RECC at West Liberty. Some of these co-ops do not reach too far into the Seventh District. For instance, Cumberland Valley Co-op in Corbin serves a part of Letcher County, Clark RECC at Winchester serves parts of Bath and Menifee Counties. All, however, have a fairly heavy saturation of rural electric service; some counties are served extensively by the rural electric co-op lines—for example, Morgan County serves 2,300 rural electric consumers, Wolfe County, 1,700; Magoffin County, 1,252; Elliott County, 1,850, and Greenup County, 1,625, and so forth.

The people in the district appreciate the amount of money that has been loaned to the co-ops in order that they could provide this service. As of the end of the year 1959, Big Sandy Co-op loans amounted to $2,488,466.92; Clark RECC, $3,947,429.15; Grayson Co-op, $3,799,729.61; Licking Valley, $3,318,424.44; Jackson County RECC, $6,972,772.10; Cumberland Valley at Corbin, $3,602,432.37. All these co-ops, with the exception of Grayson and Big Sandy Co-ops buy their wholesale power from east Kentucky Rural Electric Cooperative at Winchester—this is the generation and transmission cooperative in the State. Big Sandy and Grayson Co-ops purchase their power on a wholesale basis from the Kentucky Power Co.

The district that I represent has the unique distinction of having the youngest rural cooperative in the State—the Grayson RECC whose manager is Hobert Adams, and this co-op is the last to be established in Kentucky, making the 26th in the State. This area was served by the Fleming-Mason RECC at Flemingsburg until about 10 years ago when it was decided that the territory was then large enough to be operated as an independent cooperative; as a result, the Grayson Rural Electric Co-op was established, bringing the total distribution cooperatives in Kentucky to 26.

It has been my observation that all of the rural electric cooperatives in the Seventh Congressional District are trying to do everything possible to aid the areas in which they operate. For example, they now have a school equipment plan in operation where equipment is loaned to the high schools in the areas served by the cooperatives for use of their home economics departments for instructional purposes. This equipment is changed out at the end of each year and new, up-to-date equipment installed so the teachers and the children will have new equipment available for their use. This equipment is loaned at no cost to the school—the co-ops feel that this is a worthwhile contribution to the welfare of the school program and will benefit the children of the respective areas.

Then again, each rural electric cooperative owns and operates its own office building—each building has an auditorium that is available for all types of meetings—this is a community enterprise and has been carried on for many years.

Each of the co-ops provide a financial program for its members for the purchase of electrical equipment—this enables the members to stretch their dollars a little bit in order to improve their standard of living and to enjoy the benefits of their electric service.

I do want to state on this 25th anniversary that each co-op in the Seventh Congressional District is meeting its obligation on loans from REA, and at the same time, providing adequate low-cost electric service to the members. In conclusion, I want to state that I have always observed that each of the co-ops is dedicated to the objective of providing low-cost dependable electric service to the people throughout the respective areas of the State, and this service has improved the standard of living of hundreds of thousands of families.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Arkansas [Mr. TRIMBLE] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. TRIMBLE. Mr. Speaker, this is a notable day in the history of our country. A day when we celebrate the 25th anniversary of the initiation of the Rural Electrification Administration and salute our devoted Speaker for his part in its beginning.

I know of no domestic program which has done more for rural America and the country as a whole than rural electrification. I know firsthand what it means to a mother and a housewife to care for her family without running water in the home, either hot or cold, to have no washing machine, no electric stove, no refrigerator, no freezer, and no electric lights. I know, too, how she worked from early in the morning until late at night and died early in life from overwork.

Now the rural mother and housewife has in her home all the conveniences which electricity brings. She has the same labor-saving devices which her sister in the cities knew earlier, and life for her on the farm is not the same any more.

There are those who would hinder and hamper this great program. It is my hope that they are few in number, and my prayer is that they will not succeed in their efforts.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Minnesota [Mr. MARSHALL] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. MARSHALL. Mr. Speaker, the American agricultural revolution is surely one of the great advances in human history. Living in the midst of it, as we do, we are sometimes unaware of its existence or overwhelmed by its problems.

Today, in observance of the 25th anniversary of the Rural Electrification Administration, we pay tribute to the home-owned rural electric systems which played so important a role in this continuing revolution. Like the development of the gasoline engine, the use of electricity on the farm set the stage for another great advance in efficient production of the food and fiber so necessary to national growth.

The modest beginning on May 11, 1935, did not foretell the technological advances REA would bring to farm operations. Nor did we realize the tremendous contribution electric service would make toward meeting the production demands of World War II with limited manpower resources.

We have good cause to be grateful for the foresight of President Roosevelt when he signed Executive Order 7037 on May 11, 1935, to inaugurate this program. A share of this gratitude goes, too, to our great Speaker, the gentleman from Texas, SAM RAYBURN, and to the late Senator Norris for their contribution in carrying forward a long-range program.

The tremendous impact of dependable, low-cost electric power on farming is in evidence everywhere in our country. Its impetus to mechanization has tripled the output per farmworker in just 25 years. The record of American agriculture does not need to be recounted here nor need we belabor the contribution of electricity to that record.

The revolution in production was inevitably accompanied by great changes in rural living. It is hard to realize that just a quarter century ago, 16 million Americans were without light. Many young Americans and many young farm families barely recall the days of kerosene lamps, coal stoves, lanterns, pump handles, and flatirons.

Most of us, however, remember the back-breaking work and the drudgery in even the simplest jobs around a farm—pitching hay with a fork, carrying water by the pail and firewood by the armful.

The life of a farm wife was one of long hours and hard work. Her sisters in the city were using the new appliances but she washed with a washboard and heated her flatiron on the wood or coal stove. She sewed and mended in the dim light of the lamp that smoked up.

Preserving food meant many hours in preparation for canning—hauling water and wood, and standing over a hot stove to attend to every step.

With almost all of our farms electrified today, farm families themselves sometimes forget how much they depend upon electric power—until the power goes off. Things are easier today, everyone agrees, because the use of electricity is so commonplace that we take it for granted.

The pioneers in our rural electric system who fought to bring light and power to farms and farm homes may well regard this commonplace acceptance as a high tribute to their successful work. They have changed the face of rural America and brought to farms a steadily improved standard of living which was denied to rural people simply because of distances that are a part of agriculture.

As so often happens, when farmers benefited, the whole rural community and finally the national economy shared in the benefits. We need only consider what a great boon rural electrification has been and continues to be for business and industry. It has opened almost unlimited markets for machinery and appliances that are no longer considered luxuries but as necessities of everyday work.

The rural electric program is one of the finest examples of cooperation between people and their Government. It helped farmers help themselves to accomplish what they were unable to do by single efforts alone. An entire Nation has benefited.

This should be a reminder to us that there are still opportunities for people to work with and through their Government to do together the jobs we cannot do alone.

When we pay tribute to REA today, we pay tribute to the millions of farm families who made it work. They are properly the ones to be commended on this anniversary and I am happy to join in offering my congratulations on a job well done.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Louisiana [Mr. PASSMAN] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. PASSMAN. Mr. Speaker, I do not recall just when electrical energy became available for light and power and heat and refrigeration in our factories and on our farms and in our homes; but, as a practical matter, in rural America that time was only a quarter of a century ago. That was when, in 1935, the Rural Electrification Administration was established. And during the 25 intervening years, the program of REA has been of tremendous importance to our rural people and to the economy of the entire Nation.

Only 23 years ago in my own great State of Louisiana merely 2,826 of a total of 170,216 rural homes and farms had electrical service of any type. The national average of rural farms and homes with electricity at that same time was only 10 percent of the total number.

That was the year 1937, when the first member-owned, REA-financed electric cooperative was organized in Louisiana. Today there are 13 of these cooperatives in our State, and they provide 98 percent area coverage; which, I have been told, is a national record in total percentage of members served.

Louisiana's REA-financed electric co-ops now serve more than half a million people, their homes, businesses, and small industries. These 13 co-ops have more than 25,000 miles of rural electric lines, averaging about 4.5 members per mile for the State.

The average electrical consumption on these lines has jumped from about 45 kilowatt-hours for each consumer 20 years ago to an average of 245 kilowatt-hours per consumer last year. It is readily understandable, of course, that this increased electrical usage in these systems in Louisiana has necessitated the rephasing and rebuilding of practically all of the lines during the past 10 years.

Mr. Speaker, the Members of this body certainly understand that, contrary to erroneous claims made by some interests, the member-owned electric cooperatives are not Government agencies, and they do not exist on taxpayers' handouts. They were organized by leading rural citizens who, to state it simply, desperately wanted electricity. They are controlled by member-elected boards of directors.

Nationwide, these co-ops have a remarkable record for repaying REA loans. Let me cite the record for my own State: Since 1937, the 13 cooperatives in Louisiana have been advanced $55 million, in round figures, by the Rural Electrification Administration. As of December 31, 1959, they had repaid, in round figures, $20 million on these loans, nearly $6 million of which was interest to the Federal lending agency. But there is more: In addition to those payments, Louisiana's co-ops had paid nearly another $5 million to the REA in advance of schedule.

Rural electrification has certainly helped farmers, but it has indeed done very much more than that. The U.S. Department of Agriculture estimates that for each dollar invested by the rural electric cooperatives the members of those co-ops spend $6 for appliances alone. And that is merely the beginning. Think, for example, of the vast dairying industry and its dependence upon rural electricity; the great fishing industry, dependent upon modern refrigeration; and of innumerable small rural industries, along with countless new main-street businesses, all created as a result of the new markets, methods, production, and related factors of rural electricity. Think of the rural development, the recreational sites, the summer homes and camps, and other facilities enjoyed by urban as well as rural people. And think, surely, of all the jobs, the increased productivity and stronger economy of my State, of your State, and of all our States. Everyone has benefited from rural electricity.

It is pertinent, I believe, Mr. Speaker, for me to add to my remarks here today that I am a strong believer in our free enterprise system, and I have no quarrel with our privately owned public utilities. But I think it is well that the public should understand that not only the co-ops, but private businesses, municipalities, and other public bodies also borrow REA funds for rural electrification and rural telephones, at the same interest rates charged the cooperatives. I shall not proceed further with this point other than to state emphatically that the rural electric co-ops are not Government agencies, any more than are the other utilities which borrow REA money; and they, of course, are not Government agencies in any sense of the meaning.

The rural electric cooperative is a service organization. It must deal with problems such as building and maintaining lines stretching for miles through woods, swamps, hills, and other isolated areas, with no thought of commercial profits. Yet, as has been so abundantly demonstrated during the past 25 years, the electric co-op certainly does a wonderful job of bringing the practically limitless benefits of electricity to our fine rural people.

I feel sure that one of the most important reasons for the success of our rural electric co-ops is the democratic, American-type cooperation among the owners, who are the rural folks who use the electric power provided to them by the co-op. They are surely much more than customers for, or consumers of, electricity. The owners are the members of the co-op, the stockholders in a modern enterprise which has perhaps done more than any other one thing to lift the face of our country.

Let me say, Mr. Speaker, it should be remembered—by the public and by both the executive and legislative branches of our Government—that REA is a business enterprise, not an old-line Government activity. It needs business, and not political administration.

Unless the business management of the REA is to be impaired every time a hostile political administration comes into power in the executive branch, the agency must have consistently nonpolitical direction. REA, it should be remembered, can lend only as much money as Congress says it can lend, and then only when the loan meets the conditions specified by Congress.

In my opinion, Congress cannot too soon get REA back in the hands of administrators who are dedicated to the progress of rural electrification. We must restore REA loan authority to the place where it belongs—the management of the agency—where it was prior to 1953, and take it away from political domination by any administration.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Kentucky [Mr. WATTS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. WATTS. Mr. Speaker, today we observe the 25th anniversary of one of the most successful programs ever undertaken by the Federal Government in cooperation with the rural people of this country. It was on May 11, 1935, that President Franklin D. Roosevelt signed the Executive order creating the Rural Electrification Administration. This was an event of tremendous significance for the rural people of Kentucky and for the people of 45 other States, Puerto Rico, and the Virgin Islands.

In 1935 thousands of farmers and their families had given up hope of receiving central station electric service during their lifetimes. Despite the fact that our towns and cities had taken electricity for granted for several decades, only 11 of every 100 farms in the United States were electrified 25 years ago. Farmers literally were living in the dark ages. They read by kerosene lamps; they cooked over wood or coal; they had no refrigeration; they were denied the use of the radio.

When REA was created, only 3 percent of the farms in the State of Kentucky were electrified. These few were located, by and large, close enough to towns to obtain municipal service.

Today, on REA's silver anniversary, it is estimated that nearly 98 percent of all Kentucky farms have electricity, and more than 80 percent of these farms are served by 28 REA borrowers. Nationally, about 1,000 REA borrowers serve more than 4½ million consumers, and 97 percent of U.S. farms are electrified.

This tremendous achievement in a single generation was accomplished without a single grant or handout. The Rural Electrification Act of 1936, which was introduced in the House of Representatives by Speaker SAM RAYBURN, established REA as a lending agency. The dollars which have gone into rural electrification are being repaid to the Government, with interest.

Of the 28 REA borrowers in Kentucky, 27 are cooperatives, organized and owned and operated by the rural people they serve. It was no small task for farmers who were inexperienced in the electric power business to form their own organizations to get that power. But Kentucky farmers proved that they were good businessmen in the power business, as well as in the business of agriculture. They not only built the co-ops, but they built them on a sound financial basis. Anyone who has had the privilege of living on a co-op power line knows that there is no better, no more reliable, electric service delivered anywhere in the Nation than over REA-financed lines.

The first REA electrification loan in Kentucky was approved in October of 1935. The first REA-financed line in my State was energized on December 22, 1937, by the Henderson-Union Rural Electric Cooperative, of Henderson, Ky.

As 1960 began, REA had approved more than $174 million in electrification loans to our 28 borrowers. In turn, these local cooperatives have built more than 52,000 miles of line and other facilities to serve 263,487 rural consumers.

So far, Kentucky borrowers have repaid $23,688,279 on the principal of their REA loans. In addition, they have paid $14,367,500 in interest and $4,874,944 ahead of schedule. No borrower in Kentucky is overdue in its loan payments to REA.

To those of you who lived on farms before electrification, there is little need to describe the changes that power has brought to rural America. Those of you from towns and cities will have difficulty in imagining what life was like in those dark days. Electricity has brought so many changes to Kentucky that it would take me all day to recount them.

To name but a few:

Electricity meant that the farmer and his family could have running water, indoor plumbing.

It meant an end to his isolation, as first the radio, and then television, brought him in touch with the world.

It brought electric lights. A single 100-watt bulb today is 100 times as bright as an old kerosene lamp.

For the farmer's wife, electricity meant a washing machine, an electric iron that didn't have to be heated on a stove. It meant an electric range. Electricity improved the farmers' diet, by making refrigeration possible.

As electricity took over many farm chores, it was possible for rural children to complete their schooling. The schools themselves were greatly improved after electric power came along.

A number of agricultural pursuits have been revolutionized by rural electrification. Milk production and poultry raising have been mechanized. Stock feeding has been electrified. These changes, and the savings in human labor which accompanied them, have enabled many farmers to diversify or intensify their operations, for greater production and profit.

In recent years, the availability of electricity in rural areas has sparked new changes in rural America. These changes are just beginning, but they hold new promise for all rural people.

Large numbers of nonfarm rural people are moving to the country. New kinds of enterprise are developing in the country, too. Business firms, industries, processing plants, professional people, are discovering that you can do anything in the country today that you can do in the city—and you can frequently do it better. These new enterprises hold out the hope of more off-the-farm employment, which is needed so vitally in many low income rural areas.

Hastening this rural development is a newer REA program: the rural telephone loan program. Started in 1949, it already has assisted 18 borrowers in Kentucky to provide rural people with modern dial telephone service. Since the program began, the percentage of Kentucky farms with telephones has risen from 21 percent to 41 percent. This modern communication service also is helping to attract new enterprise to our rural areas.

As REA celebrates its 25th anniversary today, I want to congratulate all those men and women in Kentucky who have given so generously of their time and energy to develop our fine rural electric and telephone systems. There are many of them, and all rural people owe them a debt which can never be repaid. My congratulations also go to the employees of the Rural Electrification Administration, who have worked closely with the cooperatives over the years and who have seen to it that the program was operated to benefit rural people. I feel sure that future historians will record the REA programs as two of the most significant things that ever happened in rural America.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Indiana [Mr. BRADEMAS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. BRADEMAS. Mr. Speaker, I am proud to join my colleagues in paying tribute to the 25th anniversary of the rural electrification program, a social and economic achievement which by 1960 has brought electricity and power to more than 16 million Americans.

It was on May 11, 1935, that the President of the United States signed the Executive order that created the Rural Electrification Administration.

In August 1938 a group of rural Americans heard the warm, familiar voice of their President dedicating the Lamar Electric Membership Corp. at Barnesville, Ga. The President explained the events that led to his signing the Executive order, the silver anniversary of which we are celebrating this month, and concluded with these words:

> So it can be said that a little cottage at Warm Springs, Ga., was the birthplace of the Rural Electrification Administration.

With these simple words President Franklin Delano Roosevelt described what has come to be recognized as one of the principal accomplishments of his administration.

REA ONE OF SAM RAYBURN'S GREAT CONTRIBUTIONS

The rural electrification program must also be regarded as one of the greatest of the many contributions to the American people of our beloved Speaker, the Honorable SAM RAYBURN, of Texas, for the Rural Electrification Act of 1936 was introduced by the then Chairman RAYBURN of the House Interstate and Foreign Commerce Committee, and the late Senator George Norris, of Nebraska.

We in Indiana are particularly proud that the Honorable Claude Wickard of our State, Secretary of Agriculture under President Roosevelt, was Administrator of the REA program for 8 years. Mr. Wickard was selected as the principal speaker at the silver anniversary observances held on May 11 this year at Warm Springs, Ga.

Mr. Speaker, many citizens of the State of Indiana and of the Third Congressional District, which I have the honor to represent, are today receiving the benefits of REMC-financed electricity.

REMC'S SERVE THE PEOPLE OF LAPORTE AND MARSHALL COUNTIES

For example, there is the REA-financed electric system with headquarters in Plymouth, Ind., the Marshall County Rural Electric Membership Corp. The president of the cooperative is Gordon Smith and the manager is Clayton E. Robinson.

The first REA loan to the Marshall County REMC was made on October 12, 1936. Since then REA has approved a total of $1,195,000 in loans to this borrower of which about $850,000 has been advanced. The loans were made to finance the construction of 738 miles of distribution line to serve 3,014 rural consumers in Marshall and St. Joseph Counties.

Portions of LaPorte County, also in my district, are included in areas served by the Kankakee Valley REMC of Wanatah, Ind.

REA'S FINE RECORD IN INDIANA

Mr. Speaker, at the time the Rural Electrification Administration was created on May 11, 1935, only 23,476 farms in Indiana, or 11.7 percent, were receiving central station electric service.

Current REA estimates show that 152,850 farms in the State, or 99.5 percent of all farms recorded in the 1954 census, were being served by June 30, 1959. REA-financed rural electric systems serve about 64 percent of these electrified farms.

Through April 1, 1960, REA had approved a cumulative total of $69,989,393 in loans to 47 electric borrowers in Indiana, of which 46 are cooperatives.

The REA loans were made to enable the borrowers to construct 37,726 miles of line, and other electric facilities, to serve 164,584 consumers. Loan funds actually advanced to the borrowers amounted to $62,565,284 by April 1, 1960. With the help of this financing, the locally owned and managed systems had already placed 38,151 miles of line in operation and were serving 170,513 farms and other rural consumer outlets. The average monthly consumption of electricity by these consumers had increased from 200 kilowatt-hours in 1950, to 427 kilowatt-hours in 1959.

REA electric borrowers in Indiana have repaid $26,487,077 on the principal of their Government loans. In addition, they have paid $10,366,710 in interest and $3,033,659 ahead of schedule. No borrower in the State is overdue in its loan payments.

In 1950, the year the first REA telephone loan was approved, 61.8 percent of the farms in Indiana had telephones. By the end of 1958, it was estimated that 122,000 farms, or 81 percent of all farms in the State had telephone service.

RURAL ELECTRIFICATION HAS HELPED BOTH RURAL AMERICA AND MAIN STREET

Mr. Speaker, rural electrification has meant greatly improved standards of rural living, health, and sanitation and a new and undreamed of efficiency in farm production. The REA loan program has, moreover, generated billions of dollars of business for people who do not live in rural areas. This includes the billions of dollars invested in electric lines and facilities as well as the lengthy list of appliances and equipment for farms and homes.

These purchases and the labor required to build the lines and do the wiring have made jobs for millions, and profits for merchants up and down every main street in America.

Mr. Speaker, the REA program has helped change the face of rural America, and change it for the better. I am proud to be a supporter of the REMC's of my State and I take this opportunity to salute you, Mr. Speaker, for your historic role in bringing locally owned REA to the American people, and to salute as well the members of the REMC's of Indiana for their fine demonstration of democracy in action at the grassroots level.

Mr. WOLF. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include an address of Claude R. Wickard at the REA silver anniversary in Warm Springs, Ga.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. WOLF. Mr. Speaker, this is an important day for rural America. Rural electric cooperatives in nearly a thousand crossroad towns in 46 of our 50 States are proudly commemorating the establishment of the Rural Electrification Administration in 1935.

Americans take pride in success. As we honor the REA today we honor a program that is successful. In 25 years there has never been a hint of scandal or impropriety raised about the REA program. It was a program destined for progress because it was conceived by dedicated Americans, nurtured and strengthened by dedicated Congresses and put into operation by dedicated men and women willing to work to bring a better life to every rural resident in the country. There is no place for payola in a locally owned and operated business where good service at cost is the only aim.

It is good that from time to time in our busy schedule we pause as we have today for a moment of reflection. As we review the past we refresh our memory of farm life that was always hard and often unrewarding. Only by such backward looks are we aware of the progress we have made. When we realize the magnitude of change brought about in rural living by the introduction of electricity we become aware that the REA program was built on the soundest of foundations. The great leaders who laid those foundations will go down in the history of our country as devoted statesmen who placed the welfare of our American people above the sometimes selfish motives of any individual or group.

The names of our great Speaker, SAM RAYBURN, and the late George W. Norris which appear on the Rural Electrification Act of 1936 will always be synonymous with good government and the development of human and natural resources.

Today as I looked over the rosters of the Senate and the House of Representatives, I found there are 5 Senators and 25 Congressmen sitting in these Chambers today who were here at the time the rural electrification program was launched. The REA has developed into the success it is today because of the support of these stalwart, long-suffering Members and others who have left these halls. May the RECORD show that these public servants share the honors being paid the rural electrification program today.

With your indulgence I would like to read a brief address by the Honorable Claude R. Wickard, former Secretary of Agriculture and long an able Administrator of REA, who at this very time is speaking at the REA silver anniversary observance in Warm Springs, Ga., the home of the rural electrification idea:

ADDRESS OF CLAUDE R. WICKARD AT REA SILVER ANNIVERSARY OBSERVANCE, WARM SPRINGS, GA., MAY 11, 1960

Thirty-six years ago—to use some of his own words—"a Democratic Yankee came here to Warm Springs in search of a pool of warm water wherein he might swim his way back to health." Twenty-one years later this man died in this cottage he loved so much. In that interim his name and fame had spread to all corners of the world as no other man's has ever done.

More people throughout the world mourned his passing than that of any other man. A high official of the Canadian Government told me at the time that there was more mourning in his country than he had ever witnessed.

A man who was in a South American city when the news of this great man's death came described to me how people stood in the streets stunned with grief, many weeping silently.

Our men and women in the Armed Forces all over the world were impressed by the way their grief was shared by the people of other nations.

I shall never forget the unrestrained weeping of the thousands of people who lined the streets in Washington as his body was being taken to the White House to lie in state.

There are many reasons why Franklin Roosevelt's death was so widely and deeply mourned. In overcoming the handicaps of crippling disease he became dedicated to the objective of helping others avoid its effects. He gave the Nation courage and leadership when our people had almost lost faith in our democratic institutions, and even in themselves.

As a war leader, he was foremost in the fight against tyranny. In peace or war he was a crusader against bigotry, greed and oppression.

To me the underlying reason why so many people admired and loved Franklin Roosevelt was their realization that he was so deeply concerned with the welfare of people and that he tirelessly and endlessly strove to aid people who needed help. People instinctively knew that no opposition was ever strong enough to deter him in his efforts to give them more opportunity and security.

It was my great privilege to serve in varying capacities for almost 12 years in Franklin Roosevelt's administration. In all of those years the guiding principle for determining policy or making administrative decisions was simply this: Would the proposal contribute to the welfare of the people? If it met that test, no opposition was too great to prevent its adoption and execution. That test and that standard was established by the man in the White House. In these later years that fact has become all the more significant to me.

Today we commemorate the 25th anniversary of the birth of one of the greatest programs ever created for the purpose of bringing people opportunity and security. The REA program has enjoyed the greatest of popularity at home and abroad because it has so effectively achieved its objective. Most Americans—unfortunately not all—have become aware of what has been accomplished despite the handicaps and the ever present opposition. This REA program has become what might be termed a classic example of the Government helping people helping themselves attain something essential to their welfare by giving them aid that was not otherwise available.

When I attended a World Power Conference in New Delhi, India, 10 years ago, I was surprised to find how the fame of REA had spread to other nations, throughout the world. I was impressed by the number of inquiries I received from representatives of other governments as to why and how so much had been accomplished. I am not unmindful of the difficulty of its attainment, but I am sure that if every nation had an effective REA, there would be much less discontent and misunderstanding among the people of the world.

When Franklin Roosevelt came to Warm Springs in search of health, he became acutely aware of the need of rural people for adequate low cost electric service. That was the kind of need to which he responded quickly and positively. He said and here are his words: "So it can be said that a little cottage at Warm Springs, Ga., was the birthplace of the Rural Electrification Administration."

Twenty-five years ago today Franklin Roosevelt signed the order creating REA. Almost immediately the program met with strong and determined opposition. But he knew the source of the opposition was greed and selfishness, and it did not daunt him in his efforts to promote the program. Neither did it deter him in his plans to give people adequate low-cost electric power through the development of the Nation's hydroelectric sites.

President Roosevelt never lost sight of his objective of giving people more opportunity and security even during the stress of the war years. In his mind so much remained to be done. This realization led him to include the following paragraphs in his state of the Union message delivered to the Congress on January 11, 1944—I am quoting them because they should have a deeply significant meaning for us in light of today's events:

"We have accepted, so to speak, a second Bill of Rights, under which a new basis of security and prosperity can be established for all, regardless of station, race, or creed.

"Among these are:

"The right to a useful and remunerative job in the industries or shops or farms or mines of the Nation.

"The right to earn enough to provide adequate food and clothing and recreation.

"The right of every farmer to raise and sell his products at a return which will give him and his family a decent living.

"The right of every businessman, large and small, to trade in an atmosphere of freedom from unfair competition and domination by monopolies, at home or abroad.

"The right of every family to a decent home.

"The right to adequate medical care and the opportunity to achieve and enjoy good health.

"The right to adequate protection from the economic fears of old age, sickness, accident, and unemployment.

"The right to a good education.

"All these rights spell security; and after this war is won we must be prepared to move forward in the implementation of these rights to new goals of human happiness and well-being."

High on President Roosevelt's list of postwar projects for making the second Bill of Rights effective was the rapid development of the rural electrification program. He asked me as Secretary of Agriculture to see to it that plans were formulated for the rapid expansion of the REA program as soon as the war ended.

Plans were made and legislation was introduced in the Congress to further these plans. Hearings before congressional committees on this legislation were held months before the end of the war.

As in the beginning of REA, 10 years before, organized opposition became active. Misleading testimony was given. I distinctly remember how a leading representative of the opposition testified that a study had been made, which showed that not more than $35 million was needed by REA, to finish the job of rural electrification. This ridiculously low estimate is only overshadowed by the opposition's blindness to the fact that the job of rural electrification will never be finished. The struggle for adequate low cost electric power for rural people will never end.

It is fitting that we have come here to this shrine at Warm Springs, to commemorate the 25th anniversary of REA and to pay homage to Franklin Roosevelt who did so much to help people everywhere. As noble and desirable as this commemoration and this paying of homage is, it is not enough. Each of us in our own capacity have the obligation and the duty of carrying on the never ending fight for more opportunity and more security for all people.

Mr. MORRIS of Oklahoma. Mr. Speaker, will the gentleman yield?

Mr. ALBERT. I yield to the gentleman from Oklahoma.

Mr. MORRIS of Oklahoma. Mr. Speaker, I would like to read just a paragraph from the Fact Book that has been published by the National Rural Electric Cooperative Association, and then make a very brief comment. I would like to read this paragraph of one of the basic facts as set out in this publication.

Electric systems financed by the Rural Electrification Administration connected 139,000 new consumers during 1959, now serve 4,736,000 homes, farms, and other rural establishments.

REA has 987 active electric borrowers; 983 of them are consumer owned. REA has made electric loans to 24 profit power companies, totaling $20,067,200. Four of the power companies are active borrowers at this time.

Rural electric systems serve consumers in every State except Connecticut, Massachusetts, Rhode Island, and Hawaii.

More than 96 percent of America's farms are now electrified, compared with 10 percent when REA was established in 1935. More than half are served by REA borrowers.

I just wish to comment that in my judgment the Rural Electrification Administration is one of the greatest and most beneficial agencies that has ever been established in this great and glorious country of ours.

In connection with this publication that was sent to me may I say that I have received a newspaper published recently which on its front page bears a big headline, "Rural Electrics Celebrate First 25 Years."

There is a picture of the great President, Franklin D. Roosevelt, of our great and beloved Speaker, Sam Rayburn, and of the late great and beloved U.S. Senator, George W. Norris, of Nebraska.

Below this picture is the statement:

Above: Rural electrification is born as President Franklin D. Roosevelt signs Executive order creating REA, May 11, 1935. Champions for rural people, Congressman SAM RAYBURN (left above) and Senator George W. Norris sparked REA Act of 1936, making rural electrification a long range program.

May I say in conclusion that this paper I have mentioned has a picture of three immortals in our Nation. There is no question in the world in my mind but that these three distinguished Americans, Franklin D. Roosevelt, Sam Rayburn, and George W. Norris, will live in the history of our great country as three of the very greatest men America has ever produced.

It is certainly a pleasure for me to make these comments about this great facility among us. I am very grateful to my distinguished colleague from Oklahoma for yielding to me to make these comments.

Mr. STEED. Mr. Speaker, will the gentleman yield?

Mr. ALBERT. I yield to the gentleman from Oklahoma.

Mr. STEED. I should like to associate myself with the remarks of the gentleman from Oklahoma and congratulate him on the fine service he has rendered today to the cause of REA.

Within this year—the 25th anniversary of the founding of the rural electrification program—we will hear many speeches about the great wonders it has wrought in our country. Perhaps no program ever designed by the Congress, embodying as it does the best of all social and economic precepts, has met with greater success.

In this silver anniversary year we will hear many statistics bandied back and forth which attempt to tell the story of the great success of rural electrification. For example, in 1935 only about 11 percent of our farms were electrified. Now that figure is more than 96 percent. In Oklahoma, when the first REA loan was made in November 1935, only 2.6 percent of the farms, about 5,600, had electricity. Today we find that over 93 percent of the farms in Oklahoma have electricity and, of these, 77 percent are served by rural electric cooperatives.

But pure statistical rendition is dull, dry, and uninteresting. Recitation of figures means little. What counts is the way of life that they illustrate. And the transformation of our countryside by the magic of electricity defies description.

How can one justly describe the drudgery spared the rural housewife through the help of electricity in her household chores? How can one tell of the effect of bringing news and entertainment instantly into rural America over the airways, which could not have been done without electricity? How do we measure the impact of the betterment of the health of our rural people, which has come in large part because electricity is now available to them? On and on we could go, setting forth specific instances of new activities which have come about because of the increased intellectual and technical skills that rural America has acquired—all as the result of bringing one of the wonders of the world—electricity—into our countryside homes, farms, schools, and churches.

No Federal program has a better repayment record than the rural electrification. The REA borrowers have been repaying their loans on time and with interest throughout their history. Many of them have made advance payments to the Government. The rural electrification program stands not only in the forefront of Federal activities in regard to repayment of its loans with interest, but it is also one of the best examples we have in this country of being a completely unsubsidized program.

The introduction and continued use of electricity in farm operations have substantially reduced the cost of production of farming activities, which has been of great benefit to the entire Nation.

The tax base of State, local, and Federal governments has been vastly increased as a result of the rural electrification program. It has been conservatively estimated that in the past 25 years at least a billion dollars in income and excise taxes have been paid to the Federal Treasury alone by manufacturers and retailers on approximately $14 billion of appliances and electrical equipment which consumers served by REA borrowers have purchased. This is

quite an accomplishment when we realize that the Federal Government has invested only $3.5 billion in the rural electric systems. And remember, too, that this is a loan—an investment—which is being paid back to the Government with interest by the borrowers.

The rural electric cooperatives throughout the United States have created a billion dollar a year market in the electrical appliance industry. A recent survey shows that in 1960 members of rural electric cooperatives will purchase over $1 billion worth of these electrical appliances. Just think what this means to employment in our urban areas which manufacture such goods and equipment. The extent and economic potency of this market have been recognized even by the President of the United States. Many of you will recall that during the recent recession the President made a special plea to members of rural electric cooperatives to purchase electrical appliances in order to help snuff out depression in the electric appliance industry.

But all I have said so far speaks of the past. Certainly the past proclaims the future. But let us not make the same mistake as Lot's wife. Let us not yield to the temptation to look back at the wrong time, and by so doing lose what the future holds for us.

One of the most effective things we can do to assure the continuing health of the rural electrification program is to enact the Trimble bill. In the last 7 years administrative agencies have been juggling the cost allocation figures of multipurpose dams so that power facilities are paying far more than their share. This was a major factor in the 27½-percent rate increase of the Southwestern Power Administration in 1956 against which we in the Oklahoma Democratic delegation fought so hard. The Trimble bill, H.R. 8, would correct this. It would reassert the right and responsibility of the Congress to set these allocations, thereby aiding to assure availability of future power facilities so vital to the development of the Southwest.

One need only look at the record to see that the primary support—one could almost say the sole support except for some significant individual exceptions—for this great program has come from those Members of Congress who represent the Democratic Party, which was in power when it was founded. One need only check, as far as my State of Oklahoma is concerned, the voting records of the Democratic Members to see that we have given this program 100 percent support.

Over the past several years, we have seen many serious attempts to enact legislation which would spell the death knell for the rural electrification program. We have seen many suggestions made to force the interest rate up for REA borrowers and send them to the private money markets for their source of funds. We know that if this ever occurs, the rural electrification program will be spoken of in the past tense.

We have seen attempts made on the floor of this House to ridicule the REA cooperatives and spread propaganda against them. We have heard many unfounded statements made that the cooperatives are borrowing money from the Federal Government and turning around and investing it. I say unfounded statements because even the REA Administrator—a member of the current party in power—has said this is not true.

We have seen legislation introduced which would preclude the cooperatives from operating in a businesslike way. I make reference to legislation which says that if the cooperatives invest their funds in Government securities which yield a rate of return greater than the interest rate they pay on the funds they borrow from the Federal Government, they will no longer be able to borrow such funds. Such proposed legislation would only hamper and cut back the progress being made by the rural electric cooperatives. Indeed, if it were passed, just as in the case of private financing type legislation, those who have consistently opposed the rural electrification program would have won their battle, because this would herald the beginning of the end of the program.

In speaking of the crisis now facing the rural electrification program one must also mention the drastic effects of the tight-money, high-interest rate policy. To be sure this contrived policy affects all farmers, consumers, and small businessmen and laborers. But speaking of its effect on the rural electrification program, we can say that this policy of jacking up your interest rates and at the same time, making it harder and harder for you to borrow, lies at the base of the various attempts that have been made to increase the REA interest rate and send you to Wall Street for your funds. If we were to take the bold steps needed to change this situation and introduce a sane and equitable monetary and fiscal program in our National Government, much of the rationalization that is being used to support legislation to seriously hurt the rural electrification program would be removed.

I do not believe that the time will ever come when the people who make up the rural electrification program will be able to say, "We now do not have to worry about anyone trying to eliminate our program. We may devote all of our energies and resources exclusively toward finding ways to bring lower cost power to our member-consumers." Rural electrification people must continually be aware and on guard against those who would do harm to their program. Each time you add a consumer, each time the program attempts to erect another generation and transmission facility, indeed, each time the strength of every individual rural electric cooperative is increased by that degree, the opposition increases.

It is mandatory, therefore, that the leaders in the rural electrification program and each and every member of every rural electric cooperative continually be aware of the problems they face and the great job ahead that still remains to be done. It is a full-time job—one which does not pay off possibly in monetary terms, but one which certainly gives each individual including every Member of Congress who has supported the program a deep sense of pride in knowing that we have been a part—small though it might be—of truly, the greatest social and economic program which the Congress has ever designed.

I can think of no better advice than that voiced by the Speaker of the House, Honorable SAM RAYBURN, cosponsor of the act of 1936 which established the Rural Electrification Administration. In setting the cornerstone of the national headquarters building of the rural electric cooperatives here in Washington, Mr. RAYBURN gave this counsel:

> It is well to reflect on your achievements, but it is no time to sit; now is the time to go forward and further forward.

Mr. EDMONDSON. Mr. Speaker, will the gentleman yield?

Mr. ALBERT. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. I appreciate this opportunity to join my distinguished colleague from the Third District in this tribute to the Rural Electrification Administration.

Mr. Speaker, every citizen of Oklahoma is proud of the great contribution which our REA cooperatives have made to the progress of our State.

Under the Rural Electrification Act of 1936, the Oklahoma countryside has literally been transformed, and a new way of life has been brought to our rural people.

The contribution which the rural cooperative has made to the comfort, convenience, and safety of farm life has been almost incalculable.

The increase in farm efficiency, and in the productivity of the average farmer and dairyman, is beyond estimation.

Today we can truthfully say that the great advantage which the American farmer enjoys over his world competitors is due in greater measure to rural electrification, than it is to any other fact or factor.

This is not only a tribute to the program, but also to the men and women who make up the membership and official leadership of the REA cooperatives in America.

In almost every farm community, people point with pride to their REA cooperative and its leaders, and look to these same leaders for assistance and leadership in every worthwhile civic project.

It is a further tribute to our REA cooperatives that they are always ready to help in the advancement of their communities, their State, and their Nation.

Both our Nation and our State are stronger because of REA, and this a glorious day for that great program.

I welcome this opportunity to join in a most well earned tribute to REA.

Mr. SCHWENGEL. Mr. Speaker, will the gentleman yield?

Mr. ALBERT. I yield to the gentleman from Iowa.

Mr. SCHWENGEL. I should like to associate myself with the remarks made here with regard to the Rural Electrification Administration. I should like

especially to associate myself with the remarks made about the great Americans connected with the formation of REA, especially the officer who has presided over this body longer than any other Speaker in the history of our country. He has not only led in bringing about this great program but he has shown us in many other ways his service to this country.

I am delighted to have this opportunity to speak on the subject of the REA on the 25th anniversary of its service.

I grew up with cooperatives. I have had the privilege of working for and with several of them. I am a co-op booster—always have been—and I am proud of it. Sound co-ops have long ago and many times over proven their place in the free enterprise system. They have received the repeated endorsement and encouragement of the Federal Government.

The accomplishments of the rural electric cooperatives are very impressive. I remember so well, as a youngster on a farm in Iowa several years ago, milking cows by hand, carrying water by the bucket, and studying my lessons by the light of a kerosene lamp. We had no radio or television, no refrigerator or freezer, no milking machine or water pump, no electric lights or telephone.

And I remember how enthusiastically the people of my neighborhood in Franklin County, Iowa, hailed electric power when it came. I know what it meant to many mothers to have electric power at their fingertips. I know what it means to farm boys and girls to have enough light to read or study by at night. I have seen the faces of farm men and women glow with new life at the mere prospect that electric power would soon be available.

I have been a firm believer in the objectives of REA from its very inception. I take great pride in the progress of REA during the past 6 years. This administration has been very much in sympathy with the REA program. Yes, I am especially proud to have been associated with what REA has done in the past 6 years under the leadership of ANCHER NELSEN, now a Member of this body, and Dave Hamil, the present Administrator.

The REA has been in existence for about 25 years. Almost one-third of all its electric loans have been made in the past 6 years.

The telephone program has been in existence 10 years. Four-fifths of all telephone loans have been made in the past 6 years.

On January 1, 1953, 45 electric borrowers were delinquent in payments; on June 30, 1959, just two were delinquent.

The net worth of REA electric borrowers has more than tripled in the past 6 years.

The authority of REA to make generation and transmission loans is a vital part of the rural electrification program. Since January 1, 1953, these loans have accounted for about 30 percent of the total loaned for rural electrification, compared with 19 percent before that date.

We can all be proud of that record of accomplishment.

The rural electric cooperatives are pledged to one of the highest ideals of neighborliness. I am talking about the principle of area coverage. That principle obligates these REA systems to try to find a way to serve everyone who wants electricity within their service area. When it was first proposed this area coverage idea sounded to many people like the wildest kind of dreaming. Today area coverage is an accomplished fact, and all of us can stand a little taller because REA leaders set their service goal so high.

It pays to aim high. If the service goals had been lower we might not have built such successful cooperatives. A cooperative is in business to give service; and the better it serves, the more successful the cooperative will be.

Dedication to service is the source of REA strength in the electric utility industry. I remember very well, as many here do, how some people at first ridiculed the idea of a Rural Electrification Administration. They said that the utility business calls for specialists and trained administrators—and that seemed logical. They said that farmers were amateurs in the utility business—and that, too, seemed logical. How could amateurs, they asked, accomplish a job that the experts said could not be done?

Well, looking back, we readily see how it was done. It was done by farm men and women of this country so intent on their goals that they overrode the obstacles. It was done by a combination of self-reliance and cooperation. Government helped—but Government did not do the job.

Yes, there are many factors that explain the success of rural electric cooperatives. In addition to the fact that the American farmer comes from a long line of self-reliant cooperators, we can point to the overwhelming demand for electricity on the farm. The consumption of electricity on the farm today far exceeds original expectations. Many good farm families in the late 1930's were wondering how on earth they were going to use 40 kilowatt-hours a month. Now farm families on systems financed by REA use an average of more than 300 kilowatt-hours a month, and the figure climbs every year.

But most of all, the cooperatives owe their success to a high standard of service. The members of REA—the rural men and women they serve—are practical people, and if their rural electric cooperatives had not proved a good reliable way to get electricity they would have turned to some other method. Let us never forget that.

The basic strength of a cooperative is its membership. I hope that every REA cooperative will maintain a strong program aimed at keeping its members well informed and active in its affairs. Many of the younger members and perhaps many who have moved into your service areas from cities do not know the REA story. At all times, members need to be assured that their ownership rights in the cooperative have been properly safeguarded and that their individual investment and equities are adequately recorded.

Let us examine a few assets on this the 25th anniversary that have come to us.

First, let us note that our hardest trials are behind us. The legal difficulties, the early trial-and-error days of cooperative management, the endless meetings, collecting signatures on easements, the strange new language of utility engineering—all these are history. That is REA's first asset.

Second, the REA has a tremendous physical plant. They have built more than 1.4 million miles of line to serve nearly 4.6 million consumers in 46 States, the Virgin Islands, and Puerto Rico. Loans have been approved to bring the total consumers served to almost 5.2 million. They are increasing the capacity of their plant each year and improving the quality of their service. More than 70 REA borrowers presently generate all or part of their power requirements. This is more than a big plant; it is a good plant. There is no better electric service anywhere than that delivered over REA-financed lines.

Third, they now employ thousands of skilled and loyal people in their cooperatives. In the early years, all will remember, systems were plagued by an almost chronic shortage of the many skills needed by a modern utility. REA was not slow in recognizing the need for vigorous action. National, State, and local training programs have done much to assure the systems the trained manpower they need to meet the growing demand for electricity.

A fourth asset is the quality of their direction and management. They may have been amateurs at first, but they are professionals today. I know that directors give many hours away from their farms and businesses, not only to direct the affairs of the cooperative, but also to train themselves better for that task. And let me pay tribute also to the ability and skill of the REA staff in Washington. I am confident that the future of the REA systems is in good hands.

Fifth, the rising demand for electricity in rural areas is a great asset. Everything I hear, see, and read leads me to agree with those who forecast a growing need for electric power. New industries and businesses are springing up in the country. City workers are moving into rural areas to provide their families with more living space. At the same time, farmers are making greater use of electric power to help them increase production, improve the quality of their products, and cut labor costs. Everywhere, among all groups, one can see signs of that typically American determination to move with the times and to share in the new advances of rural living.

Just in passing, let me point out that this determination to share in American progress is the driving force behind the rural development program, which already has received the enthusiastic support of thousands of rural families. The people who manage and direct rural utilities are old hands in this business of community development. They have

been instrumental in building much nonfarm load, which in turn has created substantial off-farm employment in rural areas. They have the experience, the organization, the physical resources, and the contacts throughout their service areas to improve still more the economic and social life of our communities.

Administrator Dave Hamil and his staff have supported the rural development program from its start. The Washington staff devotes much time to the program. Electric cooperatives in various States have generously used their publications to show rural development progress and to give leadership to the program.

A sixth asset is the credit record. REA electric borrowers have made payments to the Federal Government of more than $1.1 billion in principal and interest, and this includes nearly $146 million paid in advance of due dates. I repeat that, as fiscal year 1959 ended, only two rural electric systems were behind in payments. This record is proof of the fine sense of financial responsibility and of the wisdom of those who had faith in the REA.

They have a seventh asset—The tremendous reservoir of good will—the good will of their members and the good will of the American people generally. In most companies, goodwill is calculated on the books at $1, but the goodwill for rural electrification is worth millions. One can judge it from the willingness with which the members respond to any call for help. One can estimate it by the unswerving support through the years which the REA program has received from both political parties. REA was never intended to be, is not now, and must never become a political organization.

This asset of goodwill is not based on sentiment. REA has earned it, through service to its customers.

When one looks at these assets during the 25th anniversary of this program, the liabilities appear small by comparison. They will have a sizable debt to retire to the Government. Many of them face the challenge of keeping new customers happy, consumers with town and city backgrounds. But, in perspective, the liabilities are small.

Now, what about the future?

I do not doubt for a moment, nor does any Member of Congress, that they will continue to increase their assets and whittle down their liabilities. The REA will continue to write one of the most amazing success stories of the 20th century. All of us should say, good luck to all who have the interest and destiny of the REA in their hands.

Mr. SMITH of Iowa. Mr. Speaker, will the gentleman yield?

Mr. ALBERT. I yield.

Mr. SMITH of Iowa. I commend the gentleman for the remarks he has made. I am certain he knows from his personal experience of the great changes the Rural Electrification Administration has brought to this country. Twenty-five years ago I was one of those young men in their teens who were living on farms that did not have electricity. I well remember that at that time the electric light company would say to many farmers, "You will never get electricity. You might just as well forget about electricity ever coming to the farms. You can never possibly profitably supply the farms with electricity."

Along came the REA and through the reasonable interest rates that the REA has it is possible to take this unprofitable lower segment of electrical business and provide them with electricity and pay for the equipment over a period of years. I think a lot of people forget this today when some are trying to promote higher interest rates for the REA. REA is limited primarily to the unprofitable end of the electric industry, and certainly they cannot pay the going investment rates and still pay for the investment. I, certainly, am one who will never be able to fully express my appreciation for what the REA has meant to the people in my part of the country and to the people who grew up during my time.

Mr. BURDICK. Mr. Speaker, will the gentleman yield?

Mr. ALBERT. I yield to the gentleman from North Dakota.

Mr. BURDICK. Mr. Speaker, I want to compliment the gentleman for his fine address this afternoon. I would like to associate myself with his remarks and also advise the Members of the House what a wonderful job the REA has done for North Dakota. The REA has revolutionized the whole field of agriculture. It has made farm living wholesome and worthwhile in my State. I cannot think of one single farm program other than, perhaps, the price support programs that has done more for agriculture in North Dakota. This is a great day that we mark here today, the 25th anniversary of this addition to wholesome farm life in America.

RURAL ELECTRIFICATION

The SPEAKER. Under previous order of the House, the gentleman from Tennessee [Mr. BASS] is recognized for 60 minutes.

Mr. BASS of Tennessee. Mr. Speaker, 25 years ago, farm life in America was the epitome of hardship and strife. The 1930's found the rural areas lagging far behind the urban centers in modern conveniences and laborsaving devices—and farm income had declined drastically. In the urban centers, there were many unemployed who were living off the surplus farm products, but this did not enhance the income of the farmer. Yet, in the past quarter of a century, farm life has undergone one of the most complete and far-reaching revolutions which it has been our good fortune to witness. We have seen amazing and rapid progress in those years through a workable program of rural electrification—a much needed stimulant to the mechanization of the Nation's farms.

No doubt the benefits of the industrial revolution would have eventually reached into our rich suburban lands, but progress does not wait for eventuality.

Our late and beloved President Franklin D. Roosevelt had the infinite wisdom to recognize the dire need for progress on the farm and, in his annual message to Congress on January 4, 1935, he made clear his intentions to include rural electrification among proposed emergency relief projects. He described the objectives of rural electrification as follows, "to bring the economic benefits and the living comforts of electricity to farms and farmers; to promote national recovery by creating new and profitable industry for producers of electrical supplies and appliances; and to provide jobs on these projects for the largest number of workers."

Thus, rural electrification was first envisioned as a relief measure, which would provide markets for electric goods and work for the thousands of unemployed. One fact was eminently clear to President Roosevelt and the others who worked so diligently to remedy the abuses, inequities, and instabilities plaguing our economic system in the 1930's—widespread rural electrification could only be achieved through Federal assistance and leadership.

In support of his belief, the President issued an Executive order—No. 7037—on May 11, 1935, which brought into being the Rural Electrification Administration. This Executive order proposed the electrification of rural America by experienced private utilities. This was a logical plan, since no other type of organization existed which could assume the responsibility.

Commercial utilities professed an interest in rural electrification but claimed that costs were prohibitive. By the end of 1935 it was clearly evident that the commercial electric companies were not the least bit inclined to avail themselves of the REA loans. But rural electrification was not to be stymied by lack of interest on the part of commercial power interests. Farmers and farm organizations began to press for a program which would effectuate the extension of electric lines into those rural areas which commercial utilities had refused to serve for the primary reason that it was not economically feasible. In recognition of the interest and support of the farm groups and the need to raise the standard of living of rural families, our speaker—Mr. SAM RAYBURN—and Senator George Norris, of Nebraska, simultaneously introduced bills which would provide appropriate legislative authority for granting loans to properly organized farmer cooperatives and public bodies.

Speaker RAYBURN labored long and hard in support of the Rural Electrification Act of 1936. There were cries of socialism on the one hand; and, on the other, there was strong opposition to granting loans to the private companies which had refused to use their own funds to extend rural lines. It was through his effective leadership that the final legislation gave preference to nonprofit organizations and municipalities, but also permitted loans to private power companies. The foresight of Mr. SAM, in fighting the efforts to exclude private utilities from the benefits of the REA loans, had proved wise, indeed; for, the job of rural electrification has proceeded

at a much more rapid pace, with all segments of the industry taking part. Few private utilities availed themselves of REA loans. This was not surprising for, clearly, it was the sense of the act that widespread, low-cost electricity would only be possible through the cooperative efforts of nonprofit groups. Nevertheless, history records that, during the first 2 years following the establishment of the Rural Electrification Administration, the private electric companies built rural lines faster than ever before. Realizing that cooperatives and public bodies were rapidly equipping themselves to bring electricity to the farms of the Nation, the private electric power industry had a sudden change in attitude. Actions of private utility companies, which included skimming off the cream of rural areas and driving spite lines through proposed co-op areas, were less than creditable and hardly bears observing; nevertheless, a substantial portion of the progress made during the early years of federally supported rural electrification can be attributed to the efforts of the private utility companies.

The honorable SAM RAYBURN sensed that no avenue to rural electrification should be left unpaved if the farmers of America were to raise their standard of living. His thinking is well summed up in a statement made in 1936 in support of passage of the REA bill:

> Electricity at a proper price is cheaper than oil and lamps. We want to make the farmer and his wife and family believe and know that they are no longer the forgotten people, but make them know that they are remembered as part of—yea, they are the bulwark of the Government.

I pause to salute that great lawmaker who has presided over this Chamber longer than any other man in the history of the country and who has so consistently acted to promote the welfare of all Americans and whose able leadership helped set in motion a program which was to completely revolutionize agricultural society in the United States—rural electrification.

Bringing electric power to rural America was a laborious but rewarding task. Most farm cooperatives had no previous experience in borrowing and accounting for funds secured from the Government, and the REA personnel in the Washington offices had much to learn before they could render expert and efficient supervision and consultation. Then, too, there was the practical matter of cost.

Before REA, rural lines cost anywhere from $1,500 to $3,000 per mile of line. Few rural communities could afford such high costs, and many areas had to postpone electrification until cost-reducing methods had been discovered. But the pioneering spirit upon which this Nation was founded had prospered on the farm, and it was this basic characteristic, combined with ingenious innovations, which rose to the fore to foster the self-help cooperative, and eventually led to bringing the cost of rural construction down to a level which would permit the enjoyment of electricity by the greatest possible number of rural communities.

The progress made in my home State of Tennessee is illustrative of the achievements of REA borrowers throughout the country. In 1935, the U.S. Bureau of the Census reported that less than 4 percent of Tennessee's rural homes were wired for electricity, yet, across the Nation, 11 percent of all farms had electricity available. By 1940, the percentage of electrified farms in Tennessee approached the national average; but now, just two decades later, 97 percent of Tennessee's farms are blessed with central-station electric service. It is our hope that the next few years will see 100-percent coverage of the farms in Tennessee, and the rest of the Nation. The job of rural electrification cannot be completely successful, gentlemen, until all farms, regardless of how remotely located, enjoy the convenience and efficiency of electric power. It is not a finished task until all farms have enough available power to meet all of the needs of the farmer and the farm housewife.

I am particularly proud of the progress made by the cooperative which serves my district. The Meriwether-Lewis Electric Cooperative at Centerville did not receive its first loan until 1939. Yet, today, it has 1,760 miles of line, serving 13,382 rural consumers. My district is predominantly a farm area, and electric power distribution plays an important part in stabilizing the incomes of the district. The Meriwether-Lewis Cooperative has helped to raise farm income and has made possible modern schools and churches, productive rural industries, profitable crossroads businesses, and a high standard of living for the rural families in my district.

The State of Tennessee ranks high in both industry and agriculture. We are, indeed, fortunate to be served by the low-cost electric power generated by the vast TVA system of dams and steamplants. The rural electrification system of Tennessee carries power to every remote area of the State. The rate of economic progress which we have experienced in recent years was only possible because of the network of electric power systems, both public and private, which blankets the State.

The history of rural electrification in this country is truly one which reflects the basic principles undergirding our dynamically progressive economy. It is a saga of pioneering, hardship, cooperation, ingenuity and all of the other characteristics which have helped to build our great Nation. It is a story of the lightening of physical labor and the illumination of areas long resigned to continued darkness. It is the story of high and efficient agricultural productivity which has fed and clothed an ever-expanding population.

The dawn of the 20th century, which brought such distinct transformations to the way of life of the city folks, had practically no effect on the U.S. farmer. While the city dweller had his refrigerator for storing his food, his electric washer, and other conveniences, few farm homes could boast of electric current unless the farm income was high enough to afford the purchase of a diesel engine to generate current, or the farm was in close proximity to an urban utility company. Yet it is hard to believe that such backward conditions were the lot of American farmers when history records that the first electric fan was invented in the late 1800's, the first electric flat iron was invented in 1882, and the first electric sewing machine was manufactured as early as 1889.

Of course, not all of the city folks had every available electrical appliance, but the choice was there. Until the establishment of the REA, few farm housewives had any choice of methods for cooking, sewing, washing, or ironing. Without electricity, you pumped the water by hand, you carried the water from the well to the woodstove for heating; and you stood over the washboard scrubbing each piece of clothing separately. You built a roaring fire, regardless of how hot the day, and heated your flat irons to iron the family wash.

Before REA, the farm housewife preserved the family's food by storing it in a cold, dark cellar. In the winter, the fare was limited to those food items which could withstand the longest periods without refrigeration, such as eggs in waterglass, cooked pork, and lard.

Under these circumstances it is utterly astounding that, in July 1935, a committee of experienced but shortsighted commercial company representatives advanced the conclusion that:

> There are very few farms requiring electricity for major operations that are not now served.

In retrospect, this becomes one of the most ridiculously shortsighted, selfish conclusions ever reached by a respectable group of businessmen who were presumed to be competent in their field. Just 1 year later, Rural Electrification Administration technicians composed a list of 200 possible uses for farm and home use of electric current and today there are more than 400 ways in which the farmer and the farm housewife can utilize that powerful hired hand—the electric kilowatt. It is, therefore, extremely doubtful that these major utility executives had the best interest of the Nation's economy at heart. We should be very thankful for the Rayburns, the Norrises, and others who were genuinely interested in promoting the welfare of the farm population, in recognition of the indisputable importance of the agricultural industry to our social and economic well-being.

The creation of a sound program for rural electrification has had a telling effect on every city, every town, and every individual in the United States. It continues to enlarge the market for wholesale power; it has fostered the invention of varied appliances and highly mechanized farm equipment and has made possible unlimited expansion and relocation of industries. Words of commendation and praise are not adequate to express appreciation for our achievements under the Rural Electrification Administration's program. Continued support of this program will represent a

concrete expression of our cognizance of the benefits which have emanated from this democratic project—and I, for one, wish to go on record as opposing any attempts to decrease the program's effectiveness. We cannot afford to resort to primitive conditions on our farms. Supplying the remaining 4 percent of our farms with central-station service, and assisting in the task of "heavying up" the lines of some of the REA borrowers whose systems are becoming overtaxed, is small enough a chore for us in comparison with the obvious returns we will reap in both human and economic terms.

Thank you.

Mr. BASS of Tennessee. Mr. Speaker, I ask unanimous consent that the gentleman from Tennessee [Mr. EVERETT] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. EVERETT. Mr. Speaker, I think it is very appropriate that today we pay tribute to the Rural Electrification Administration on its 25th anniversary.

Although I have been in this body a short period of time I know firsthand of the great work the Rural Electrification Administration has done for the Eighth Congressional District of Tennessee which I have the honor to represent.

The great development of our congressional district has been through the efforts of the church, the homes, and the schools, and next in line, I would say, was the Rural Electrification Administration. Had it not been for this great organization we could have never kept the young men and women on the farms that are there today enjoying, as all the people on the farms of our district are enjoying, the modern conveniences of city life.

Those great leaders of the past and Members of this body and of the other body who had the foresight and vision for the establishing of this great agency, I want to commend for their great work.

To you, my colleague, Mr. BASS, I want to express my appreciation for your giving me an opportunity to say a few words on this occasion.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Vermont [Mr. MEYER] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

REA POINTS A WAY TO PROGRESS

Mr. MEYER. Mr. Speaker, in these years of opposition to public action in national efforts to conserve and to more wisely use our natural resources, the REA silver anniversary serves as a reminder of the common sense of such long-range programs.

When we try to take action in the fields of power, water pollution control, and flood control, to make more effective use of our natural and human resources, our efforts are attacked. The prevailing philosophy is that if it is worth doing, then private enterprise should do it for private profit or if there is no profit, then let local governments do it. This philosophy too often fails to acknowledge that there are national problems that even the best local efforts cannot solve. Such situations are viewed through the wrong end of the telescope by those who would have us save pennies today and waste dollars tomorrow.

Think of the loss that we would have suffered as a nation if REA had been sidetracked by such a philosophy 25 years ago. Suppose our farms were not 97 percent electrified as they are today. Think of the drudgery that would be involved to turn out an adequate amount of food for our growing population. Never could we have produced the food needed to feed ourselves and much of the world during World War II, no matter what financial supports or incentives we had offered.

There are certain things that private enterprise will not do. Electrifying the rural areas was one of them. They called it an impossible job. Apparently it was an unprofitable job. But this is the short-range view of profit. Rural cooperatives, public utility districts, and even private power companies have, altogether, borrowed $3.5 billion from REA, of which more than $1 billion has been repaid in principal and interest and uncounted billions more regained in production. Think of the market for electrical equipment that rural electrification has made possible—everything from lights in the barns to radio and TV sets. Today, electricity is used in more than 400 different ways in the farm home, barnyard, and field.

The tremendous job which the REA has done for America is a beacon light to guide our course in similar fields of natural resource development. The lesson which this courageous experiment taught us is that the shortrun view is a longrun defeat for America—as well as for the world that looks to us for leadership in development of natural resources. It must not be forgotten, in our deserved praise of the American free enterprise system, that some of our strength today came from just such long-range public development of our natural wealth as the REA program represents. It is obvious that public initiative frequently spurs private enterprise to expand its activities and thus helps the latter as well as the national economy and well-being.

We must not forget that most of the world today faces what we faced 25 or more years ago. They are looking for solutions to their problems in resource development to provide a good life for their people. Should it be said that our solution to the rural electrification problem is not good enough to extend to other areas?

If we are to truly commemorate this occasion, it should be by renewing our effort to seek long-range solutions to national problems involving our natural and human resources in such fields as power, water pollution control, flood control, slum clearance, education, and health.

What better commemoration than to initiate programs now, of which it may be said 25 years hence, "We could not have done without them," as we say today of rural electrification.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Tennessee [Mr. EVINS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. EVINS. Mr. Speaker, I want to join my colleagues in commemorating this silver anniversary of the Rural Electrification Act. In my State of Tennessee, as in the other parts of the Nation, the passage of the REA Act in 1953 has made possible a new and better way of life for thousands of our rural families.

Today more than 4,700,000 families are being served through our extensive REA cooperative systems and their enjoyment of the many benefits and services provided by electrical power are indeed a tribute to the Congress which passed the REA Act and in particular to the leaders of that Congress. Mr. Speaker, we in the Congress and the Nation as a whole are fortunate to find the father of the REA Act still serving the people of this Nation through his leadership in the Congress. Our esteemed Speaker of the House, the Honorable SAM RAYBURN, deserves much of the credit for making the REA Act and program a reality. Today in paying tribute to this great system which has served our Nation for 25 years we also pay tribute to our distinguished Speaker.

We cannot celebrate the birthday of the REA without paying tribute to the REA cooperatives who have translated the ideals and the principles of the REA Act into a practical and workable program of service for the people and the Nation.

We all recall that at the time the REA Act went into effect the private utility industry had insisted that it was economically impractical and even impossible to serve rural areas of our Nation. They were so thoroughly convinced of this that, although the REA Act provided that loans could be made to private utilities as well as to co-ops, very few private power companies availed themselves of the opportunity to borrow funds to extend their services to the rural areas. Today, 25 years later, the record confounds these pessimistic predictions. The REA's have been financially successful. They have not only been able to operate in the black but, particularly in our area, they have been so efficient that they have been able to reduce their rates.

Mr. Speaker, today we pay tribute to the leaders who made possible the passage of the REA Act, and to the many people whose work and dedicated service have assisted in the carrying out of the provisions of the REA Act, and also to the leaders and managers of our rural

electric cooperatives whose dedication to proficiency and service have made possible the successful functioning of this vast program. The REA stands as a living monument to the service a democratic government can provide its citizens in the public interest and on this 25th anniversary we say, Congratulations.

RURAL ELECTRIFICATION

The SPEAKER. Under previous order of the House, the gentleman from Missouri [Mr. RANDALL] is recognized for 10 minutes.

Mr. RANDALL. Mr. Speaker, it is a pleasure for me to join with my colleagues in honoring the rural electrification program on the occasion of its creation 25 years ago today. At that time, only 1 farm in 10 enjoyed the benefits of electricity. REA, through loans to locally owned electric cooperatives under the excellent management of local owners and officers, today provides electricity to approximately 96 percent of our rural people.

In Missouri, 96.2 percent of our farms and rural establishments have central station service, in contrast with only 6.4 percent when the program was inaugurated. The REA program has been especially important to the State of Missouri. With 48 rural electric borrowers, Missouri ranks fourth in the United States. Our 251,000 consumers also put us in fourth position in the country. We feel justifiably proud of these statistics and of the 85,000 miles of line that our rural people through their own effort have installed to serve themselves.

Because our people have done this themselves, I am sure they would agree with me in calling rural electrification in Missouri, and in the United States as a whole, our most successful do-it-yourself program. In pointing out these statistics of accomplishment we must not overlook the record our Missouri cooperatives are making in the repayment of loans they have received. They have repaid $36 million in principal, $25 million in interest, and more than $7.5 million in principal in addition in the form of advance repayments. Two of our rural electric systems have paid off their loan in full, and at this time not one borrower in our State is delinquent on payments due the Government.

Although the Federal Government, through REA's loans to cooperatives and other nonprofit associations, plays a key role in the development of this program, the facilities of these cooperatives are owned by the persons whose homes and farms are benefited.

Besides the reputation that Missouri people have acquired, to the effect that they have to be shown, our rural people have many other sterling qualities. In many ways they are an independent group—frugal in nature and with an ability to manage their business so as to secure from it the most at the least possible cost. The ownership of rural electrification facilities by individuals and groups like this has led to a vigorous program—one that has met the national goal for REA, that of providing rural people with abundant and reliable power at the lowest possible cost.

Sometimes, however, conditions beyond the control of the management make it impossible for them to maintain fair and equitable rates. In Missouri many of our cooperatives receive Federal power from the Southwestern Power Administration which for a time provided this power at a reasonable rate. But in 1957, the Department of the Interior arbitrarily raised the cost of wholesale power to cooperatives by 28 percent. Interior's only justification for this drastic change sprang from the fact that Interior had changed the allocation of reimbursable costs of the SPA project. Under the new allocation the power features of the project were forced to assume new and greater responsibilities for paying the costs of the project.

Thus an administrative agency of Government by an out-of-hand resource development decision worked extreme hardship on thousands of rural families in the States served by SPA and thereby thwarted the intent of the Congress.

Representative TRIMBLE, my esteemed colleague from the State of Arkansas, has introduced legislation that would reduce the opportunity for administrative agencies of Government to arbitrarily change the cost allocations on Federal water resource projects. Our fine words and sentiments about rural electrification should be backed up with action. As a first step, I urge all Members of Congress to support early consideration and enactment of the Trimble bill, or similar legislation.

To the people of Missouri, and I think to all rural people in this country, the REA program stands as one of the greatest accomplishments in modern times. It is particularly important in that it stands as a monument to genuine cooperation between the people and their government. It is a model of a successful working alliance between a government and its people.

We in Congress must not tolerate a tampering with this system which is working so well. Yet in recent years we have seen attempt after attempt to change, yes, weaken this program. I take pride in having supported all legislation defending and strengthening the rural electrification program and of all public works authorizations which directly influence its success or failure.

There are still some rural families and rural establishments in the Nation who as yet do not have electric light and power. When power is brought to these people the work of electrifying rural America will only have been partially completed. New uses of electricity are doubling its consumption every 5 or 6 years and the cooperatives have a responsibility to meet this growing new demand. The men and women who have devoted their lives to the rural electrification program and the consumer-members of our electric cooperatives deserve all of the support we can give the program to insure that it will grow as the need for its service will increase. We must continue to provide the assistance that is necessary to insure that the program will retain its vigor.

Many complex problems lie ahead; we should guarantee the territorial integrity of our rural electric systems, and we can and must provide loan funds at reasonable rates to enable this great program to continue its mission.

A SALUTE TO REA

Mr. NATCHER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. NATCHER. Mr. Speaker, 25 years of REA have caused a revolutionary change in American farm life, and unless you have actually watched that momentous change take place you do not have any deep realization of what it has meant to millions of American farmers. With constantly increased consumption of electricity, life on the farms throughout our land has become more pleasant as electricity takes over chores which were once drudgery. Farm isolation has been defeated by the use of farm telephones, radio, and television.

On May 11, 1935, the Rural Electrification Administration was established pursuant to Executive Order 7037, and at this time only 10 percent of our farms had electricity. Our REA loan program began on June 30, 1936, and today we have 4,590,000 consumers on REA financed lines. About 95½ percent of the farms, ranches, and rural establishments of this country have the advantage of central station electric power. More than $1 billion in principal and interest has been repaid to REA and this includes some $139 million paid in ahead of schedule.

The first REA loan in Kentucky was made to the Henderson Union Rural Electric Cooperative which is located in the Second Congressional District. Today, in the Commonwealth of Kentucky, we have over 220,000 consumers in 110 of the State's 120 counties. No State in the Union has benefited more from REA than my home State of Kentucky.

The rural electrification program is one of the great achievements of our present-day Government. It is imperative that we keep in mind that REA serves a national territory, and the average number of consumers per mile is only about 3.1. In considering the number of customers per mile along the 1,426,000 miles of line throughout 47 of the States, we must also remember that in many instances a large number of cooperatives have on the average less than two consumers to the mile and in some cases less than one consumer to the mile. Due to the fact that these REA cooperatives are operating in such thin territory the amount of reserve that the borrowers have accumulated is very small, and, according to a recent survey, 50 percent of the rural electric systems have less than

20 percent equity in their systems. In planning our REA program for the future, we must keep these facts and figures in mind.

When the cooperatives accepted the responsibility of providing electric service to rural America, they themselves did not realize the magnitude of this job. In the beginning of REA many projects were constructed to provide a capacity of less than 100 kilowatt-hours monthly to its members. Use of electricity is doubling every 5 years, and REA borrowers must meet this growing service responsibility. Electric service, if it is to mean anything, must be a continuing service and a dependable service. Our REA program is one of the most successful economic programs ever initiated by the Federal Government.

Mr. Speaker, our REA program has brought rural America out of the darkness into the light of American prosperity. It is indeed a pleasure to extend my best wishes to all persons connected with the rural electrification program on the occasion of its 25th anniversary.

REA ANNIVERSARY

Mr. ABBITT. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. ABBITT. Mr. Speaker, 25 years go today—May 11, 1935—President Franklin D. Roosevelt signed an Executive order which created the Rural Electrification Administration. This was a momentous day in the lives of farm families throughout our Nation, but the importance of the day is even more significant now, as we look in retrospect upon the achievements of the past quarter century.

The concept of rural electrification grew out of a great need in our rural areas—a need for power to bring them into closer association with the urban areas, and, indeed, with the world at large. It is difficult for many of us to remember that just 25 years ago, many of our farmers were living in the kerosene age. Electric companies, by and large, did not have the resources or were not willing to extend their service into rural areas because they did not see the possibilities of an adequate return on their investment.

As a result, only 11 percent of the farms in America had electricity in 1935. In my State of Virginia, the percentage was even less. At the time REA was created, only 7.6 percent, or 14,934 farms in Virginia were electrified.

By contrast, today 97 percent of the farms in America have electricity and 95.2 percent of the farms in Virginia are electrified.

The figures alone tell the story of achievement, but behind the cold statistics there is a warmth of human endeavor. Many people from all walks of life have shared in making this progress possible. It is an achievement which has far bigger meaning than the mere serving of conveniences to the farm families of the Nation—although this has been a dramatic story in itself. In many respects, this has been a revitalizing force for the entire Nation.

Without the great progress which has been achieved in the past 25 years in providing electricity to the great rural areas of America, there would have been no market for the home conveniences which have been sold by the millions in recent years. To millions of rural people, REA meant electric lights, modern refrigeration, running water, radio, television, indoor plumbing, and a host of home appliances which might never have been theirs had it not been for the coming of this new force in America.

One needs only to sit in his home and gaze around the room to realize the tremendous impact of electricity. Without it, our whole mode of life would be changed—and, turning the clock back, we get a better picture of what the coming of REA meant to those who directly benefited by it.

The Presidential Executive order brought REA into being, but a year later legislation was introduced in both the House and Senate to create the Rural Electrification Administration as it exists today. The late Senator George Norris, in the Senate, and our own Speaker RAYBURN, in the House, led the forces which legislated REA into a permanent status, and the President signed the bill on May 20, 1936.

I have long been vitally interested in the work of the electric cooperatives, which work through the REA program. By personal observation over the years, I have watched the great progress which has been made in Virginia. From a meager beginning, they have branched out into a great force for the betterment of our State. Today, we have 16 electric cooperatives in Virginia, with a total membership of 104,000. These co-ops serve our rural people by 26,335 miles of line.

The first cooperative in Virginia was the Virginia Electric Cooperative, at Bowling Green, which started in January 1936. In my own district we have some of the finest cooperatives in the country. The excellent leadership which these co-ops have enjoyed over the years has been an important factor in their development. These cooperatives are sound business undertakings and through wise administration they have enabled our rural families to enjoy the benefits of electric service while at the same time protecting the interest of the co-ops and the interest of the Government funds invested therein. In 1958 the cooperatives in Virginia paid a total of $729,344 in taxes.

It has been my pleasure over the years to be associated with the fine leadership of these organizations and I commend them highly for the excellent work they have done in our State. Since 1944 the Virginia Association of Electric Cooperatives has been functioning as a statewide organization in behalf of the individual co-ops. Associated with this organization also are the two co-ops in Maryland and one in Delaware.

I join in the anniversary salute to the REA, both in memory of the fine work it has done over the years and in the hope that through wise and effective management, it will continue to merit the admiration of our Nation.

RURAL ELECTRIFICATION ANNIVERSARY

Mr. DIXON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Utah?

There was no objection.

Mr. DIXON. Mr. Speaker, on behalf of thousands of my constituents in rural areas especially I congratulate the REA upon its 25 years of most effective work in providing light and electricity for power.

The program has made these much needed facilities available in areas where private industry could not go with profit and helped to build up the economy where such a lift is needed most.

RURAL ELECTRIFICATION ANNIVERSARY

Mr. SHORT. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from North Dakota?

There was no objection.

Mr. SHORT. Mr. Speaker, on this 25th anniversary of the inauguration of the REA program, I think it highly fitting and proper that we here in Congress point with pride to the accomplishments of REA. I doubt that any program ever conceived by Congress for the benefit of farmers has ever been more successful in achieving its purpose.

Today some 96 percent of the farms of this Nation enjoy electrification. It is difficult to conceive of any facility that has contributed more to the comfort and efficiency of farm life than the availability of electric power. No longer are those living in rural areas subjected to second-class living conditions. A farm or ranch home can, with the availability of electric power, now be equal in comfort and efficiency to any home to be found anywhere. This is as it should be since people who desire to live in rural areas should have the same opportunity for modern comforts as those who live in urban areas.

Not only has electricity contributed to the comforts of rural living, but it has increased immeasurably the efficiency of the American farms and ranches. Jobs that without electric energy were long and arduous are now performed by electric motors and free farm people for more productive tasks or for the enjoyment of more well-deserved leisure time.

I believe that we should on this day also commend those who have managed and directed the REA program during these past 25 years to its present high degree of fulfillment of the original objective of bringing electric power to rural areas.

MEDICAL CARE FOR THE AGED

Mr. CURTIS of Missouri. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CURTIS of Missouri. Mr. Speaker, a great deal has already been said, and a great deal more will be said before the end of this session of Congress, about medical care for the aged. Hardly a day goes by that a new plan is not offered by one group or another, within or without the Congress. Some plans would be financed by increasing the social security tax on employees and employers, and some would be financed out of general revenues of the Federal and State Governments.

All of these plans have two things in common. First, they are all designed to take care of a genuine human need. That is, to defray in whole or in part the cost of medical service for elderly people. This is the segment of the population that generally has the highest medical bills and generally the lowest income with which to meet them.

The second factor that the plans have in common is that they are all tremendously costly. Just last week Secretary Flemming estimated that the administration's proposal would cost the States and the Federal Government approximately $1,200 million annually. The estimated cost of the Forand proposal is even higher at $1,600 million annually. Under present law the total social security tax will increase 1 percent every 2 years until it reaches 9 percent in 1969, or 9½ percent if medical care for the aged is superimposed on the social security system at the rates contained in the Forand bill. This would raise the annual social security cost per employee from the present level of $288 per year to $456 per year in 1969.

If the Congress were to adopt a medical care program financed by social security payments, employers and those persons working, and their children, would have to pay the entire cost for the estimated 12 million people who would be eligible for these benefits today. Even though the Social Security Act has been in effect for 25 years, a person who paid the maximum tax from 1937 through 1958 would have contributed only $1,026 in taxes—$1,335 at 3-percent compound interest. If he retired in 1958 his expected benefits for himself and his wife would have been $30,406—or $23,941 when discounted at 3-percent interest. The younger people now working and their employers already have to make up this difference of more than $22,500 for each individual who retired in 1958 and the cost to them would, of course, be increased by any plan financed by social security taxes.

Perhaps after the Congress has considered all of the evidence it will determine that the benefits of one of these plans outweighs its cost. Before it reaches this determination, however, I hope it will look carefully at what has been accomplished in the last few years voluntarily. Just a week ago Congressman WOLF, of Iowa, on the floor of the House congratulated the Communications Workers of America and the Northwestern Bell Telephone Co. for adopting, through collective bargaining, a contract providing for major medical insurance covering the employees of the Northwestern Bell Telephone Co. and their dependents. At the same time the company announced that a comparable program would be extended to persons who are retired from company service.

These remarks aroused my curiosity because the Northwestern Bell Telephone Co. is a part of the Bell System which employs approximately 725,000 persons and pays pensions to 60,000 persons who are retired. In the Northwestern Bell Telephone Co., like the other companies which comprise the Bell System, basic hospitalization and surgical insurance are available to the employees and pensioners. The premiums and the benefits generally are the same for active employees and pensioners.

Both the employee and the pensioner of Northwestern Bell pay the cost of this basic medical insurance which takes care of usual hospital and surgical costs. The plan to which the CWA and the Northwestern Bell agreed on April 30 takes care of emergency or catastrophic medical expenses which can wipe out the savings of a lifetime. This major medical insurance is paid for by the company for both active employees and for pensioners. It will not cost the Federal or State treasuries a thin dime for medical costs. It will not increase the social security tax. It will not require additional Federal or State employees.

At the end of my remarks I should like to insert in the RECORD a 3-column comparison showing the basic details of the Northwestern Bell plan, the medicare program and the Forand proposal. The Northwestern Bell proposal certainly does not provide all of the benefits we might find in Utopia, but neither do the other programs. I recommend it for particular attention as the product of a number of years of study. This major medical plan, like many which have been adopted in industry—it has been estimated that 80 percent of the aged would have some form of hospital insurance within the next 5 years without Government intervention—will not apply to an individual until he has exhausted all Government benefits which may be provided under laws adopted by the Congress or the several States. In short, it appears that Federal legislation in this field will have the effect of undermining the tremendous efforts that have been made without Government intervention in the last few years.

I think that almost all of the Members on both sides of the aisle are in agreement that medical care for the aged is a very real problem which we must face. I hope that we can do the job thoroughly and not in a spirit of partisanship or shortsighted political gain. Let us look briefly at a few of the more serious determinations that we have to make. The first, it seems to me, is the question, Who will be covered by the program? The Forand proposal would cover everyone entitled to social security whether they needed this coverage or not. The Medicare program would cover individuals over 65 with an income of less than $2,500 and husband and wife with an income of less than $3,800. Both the Forand and Medicare programs would leave without protection roughly 4 million people although the two groups, of course, are not composed of the same individuals. In his testimony before the Ways and Means Committee, Secretary Flemming said that at a conservative estimate the medical expenditures for a person who was continuously ill for an entire year would amount to $6,000. We might ask would this not constitute a catastrophe for an individual over 65 years of age with an annual income of $2,600? Or, indeed, would it be any less of a catastrophe for an aged person with $1,000 annual income who is not eligible for social security and therefore outside the Forand bill? Private insurance programs, like the Northwestern Bell plan, did not come into existence on any broad scale until 1957, and yet they have grown tremendously because of their ability to cope with catastrophic costs for anyone who chooses to subscribe.

The second major problem to which we should address ourselves is that of cost. The sponsors of the Forand program have estimated that it could be financed by an increase of one-fourth of 1 percent in the social security tax on employers and employees. Others have estimated the total cost to be closer to a 1 percent increase in the social security tax. If this prediction should be accurate, the total social security levy for each individual covered would amount to $480 a year in 1969 without any increase in the tax base or any increase in rates for other benefits.

The Medicare program has been promoted on the basis that it is voluntary whereas the Forand approach calls for a compulsory increase in the social security tax. To me this argument has little substance when Secretary Flemming testifies that the annual cost will be $1.2 billion in Federal and State tax revenue. The Medicare program is voluntary in the sense that any elderly person does not have to pay the enrollment charge of $24 a year if he does not want to be covered but there is not much freedom of choice for the Federal and State taxpayers who have to raise an additional $1.2 billion to pay the bill.

I have no panacea to suggest—I wish I had. I do, however, urge the membership of the House to give serious consideration to the real need before us and not play politics with this issue. In my opinion, the older citizens of the country are not looking for a handout. They expect to pay the normal cost of a usual illness. The real need, as I see it, is to assure to them through private insurance or otherwise protection against the catastrophic illness which can wipe out in a few short months the savings of a lifetime.

Comparison of extraordinary medical expense plans

ELIGIBILITY

Northwestern Bell Telephone plan	Medicare program for the aged	H.R. 4700 (Forand bill)
All employees having 6 months' service; all pensioners; relatives, as broadly defined, of either; no income limitation; no fees charged.	Persons over 65 with gross income including social security and railroad retirement below $2,500 ($3,800 per couple) upon payment of enrollment charge of $24 per year (no charge for public assistance recipients) no separate coverage for relatives.	Individuals entitled to benefits under the Social Security Act. (In general men on reaching age 65, their spouses at age 62 and children under 18.)
METHOD OF PAYMENT		
Insurance policy—no cost to employee	Cost above enrollment charge paid by matching Federal and State funds.	¼ of 1 percent increase in social security taxes (matched by employer). Payments made from F.O.A. & S.I. direct to hospital, physician, or nursing home furnishing services.
DEDUCTIBLE AMOUNT		
In any 12-month expense period amounts payable under designated basic plan (e.g., Blue Cross and Blue Shield) plus 4 percent of annual pay or pension (at least $100 but not over $500).	$250 ($400 for couple) in any year—none for public assistance recipients.	None. However, payments only as per schedule of cost for specified services as set forth in agreement between trust fund and hospital or nursing home furnishing services.
PAYMENTS ABOVE DEDUCTIBLE AMOUNT		
Northwestern Bell Telephone plan	Medicare program for the aged	H.R. 4700 (Forand bill)
80 percent of covered medical expenses (50 percent for mental care outside institutions) up to $15,000 lifetime limit for active employees or relatives under 65, and $2,500 for pensioners or their relatives. Limit for active employees subject to reinstatement on showing of insurability or 13 weeks' full-time telephone company employment.	80 percent (100 percent for public assistance recipients) of expenses listed (e.g., 180 days in hospital, 365 days in nursing home, unlimited medical, dental and surgical, drugs up to $350, laboratory and X-ray up to $200) in any year.	60 days of hospitalization per each 12 months' period; up to 120 days of nursing home care (less number of days of paid-for hospitalization) for each 12 months' period; surgical benefits.
EXCLUSIONS		
As listed in policy, such as nursing home care, payments under all government programs, payments under other insurance arrangements contributed by employers or subject to payroll deduction, dental care and cosmetic surgery other than due to injury, etc.	Payments only as per schedule without specific exclusions.	Surgical services of an elective nature; care in tuberculosis sanitariums or mental hospitals; injuries or conditions covered by workmen's compensation. Services required by law to be provided at public expense.
OPTIONAL INSURANCE		
Not covered by plan—commercial insurance available at employee cost.	Eligible individuals may elect private major medical insurance under standards to be fixed by States—half premium up to $60 by Federal-State matching funds.	No provision for optional insurance.

CONGRATULATIONS TO REA ON QUARTER CENTURY OF PROGRESS

Mr. QUIE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. QUIE. Mr. Speaker, I would surely like to extend my congratulations to the REA cooperatives of the First District, the State of Minnesota, and the Nation on the 25th anniversary of the creation of the Rural Electrification Administration. The accomplishments of this vital Government agency are of a national scope, but it is only natural, Mr. Speaker, that I point out that the participation on the part of cooperatives of the First District are in the finest traditions of the program. First District people are proud that the cooperatives have rendered great service to our farm families, and have at the same time discharged their obligations to the Federal agency in the highest possible degree.

This anniversary carries with it great meaning for rural America. The Rural Electrification Administration has enabled farmers not only to provide electric service for widespread areas of our country—but to light the way to an impressive future. And, Mr. Speaker, this is a future exemplified in Minnesota by the first atomic powerplant built on an REA-financed system at Elk River.

The achievements of the REA program can be a source of great satisfaction to our country. Ninety-seven percent of all farms and ranches are electrified and REA-financed farms are responsible for more than half of these electrified farms.

Statistics have a reputation for being dull, but they have great meaning especially when they refer to the people, Mr. Speaker. During 1959, approximately 139,000 new consumers were added to the list of REA users. Nearly 200,000 telephone subscribers enjoyed the benefits of modern communication as result of the REA rural telephone program.

Behind the statistics of service stands the framework of sound administration. REA has streamlined its procedures to speed processing of loans, to give improved service to borrowers and to reduce administrative costs. And astonishing but true is the fact that REA is administering much greater electric and telephone programs with approximately 11 percent fewer employees than in 1952.

Such is just a portion of the record—but this is representative of the program. Because of this record, rural America's confidence in an REA-powered future is justified.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. VANIK, for 15 minutes, tomorrow, and to revise and extend his remarks.

Mr. KASEM, for 1 hour, tomorrow.

Mr. MOORE (at the request of Mr. SMITH of California), for 1 hour, on May 25.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. LENNON and include a speech by Mr. WHITENER.

Mr. DAGUE.

Mr. WHITTEN, to revise and extend his remarks made in the Committee of the Whole and to include extraneous matter.

(At the request of Mr. ALBERT, and to include extraneous matter, the following:)

Mr. CELLER in two instances.

(At the request of Mr. SMITH of California, and to include extraneous matter, the following:)

Mr. WIDNALL in two instances, in one to include tables.

ENROLLED BILL SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 11713. An act to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes.

BILLS AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills and a joint resolution of the House of the following titles:

H.R. 1217. An act to suspend for 2 years the import duty on certain amorphous graphite;

H.R. 1456. An act for the relief of Universal Trades, Inc.;

H.R. 1752. An act for the relief of Wilhelmina Ordoñez;

H.R. 2082. An act for the relief of James Demetrios Chrysanthes, also known as James Demetrios Chrysanthacopoulos;

H.R. 3786. An act for the relief of Chan Kit Ying and James George Bainter;

H.R. 3934. An act for the relief of Mrs. E. Christine Williams;

H.R. 4562. An act for the relief of Stanislaw Grzelewski;

H.R. 4825. An act for the relief of Jean K. Simmons;

H.R. 5349. An act to provide for the conveyance to Orange County, California, of all right, title, and interest of the United States in and to certain real property situated in Orange County, Calif.;

H.R. 6083. An act for the relief of Mary V. Jones;

H.R. 6493. An act for the relief of Robert Dolton;

H.R. 6843. An act for the relief of Daniel Wilging;

H.R. 7226. An act for the relief of Mr. Hughie D. Martin and Ione Martin;

H.R. 7254. An act for the relief of Simeen Helena Chaghaghi;

H.R. 7363. An act for the relief of Chester A. Spindler;

H.R. 8280. An act for the relief of Clarence T. Tolpo;

H.R. 8383. An act for the relief of Maj. Jack E. Hudson;

H.R. 8456. An act for the relief of Capt. Jack Rubley;

H.R. 8672. An act for the relief of Dr. Deh Chang Tao;

H.R. 8868. An act for the relief of the Albertson Water District, Nassau County, N.Y.;

H.R. 8941. An act for the relief of Mrs. Alice Anderson;

H.R. 9084. An act to repeal certain retirement promotion authority of the Coast and Geodetic Survey;

H.R. 9216. An act for the relief of Daniel C. Turner;

H.R. 9464. An act to remove the requirement that of the Chief and Deputy Chief of the Bureau of Ships, one must be specially qualified and experienced in naval engineering and the other must be specially qualified and experienced in naval architecture;

H.R. 9476. An act for the relief of George E. Williams and William L. Johnson;

H.R. 9760. An act for the relief of Sam Doolittle;

H.R. 9861. An act to continue for a temporary period the existing suspension of duty on certain istle or Tampico fiber;

H.R. 10045. An act to amend the act entitled "An act to provide better facilities for the enforcement of the customs and immigration laws" to increase the amounts authorized to be expended;

H.R. 10164. An act to change the name of the locks and dam No. 41 on the Ohio River at Louisville, Ky.;

H.R. 10401. An act making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1961;

H.R. 10550. An act to extend the Export Control Act of 1949 for 2 additional years;

H.R. 11415. An act to provide for the designation of a portion of the District of Columbia as the "Plaza of the Americas";

H.R. 11713. An act to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes; and

H.J. Res. 598. Joint resolution to extend the time for filing the final report of the Lincoln Sesquicentennial Commission.

ADJOURNMENT

Mr. ALBERT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

Accordingly (at 5 o'clock and 42 minutes p.m.) the House adjourned until tomorrow, Thursday, May 12, 1960, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2140. A letter from the Under Secretary of the Navy, relative to a proposal by the Department of the Navy to transfer *Sandpiper* (MHC–38) to the Miami Power Squadron, Inc., Miami, Fla., pursuant to title 10, United States Code, section 7308; to the Committee on Armed Services.

2141. A letter from the Director, Office of Civil and Defense Mobilization, Executive Office of the President, transmitting the quarterly report of Federal contributions for the quarter ending March 31, 1960, pursuant to subsection 201(i) of the Federal Civil Defense Act of 1950, as amended; to the Committee on Armed Services.

2142. A letter from the Secretary of Defense, transmitting a draft of proposed legislation entitled "a bill to amend title VIII of the National Housing Act, as amended, and for other purposes"; to the Committee on Banking and Currency.

2143. A letter from the President of the Board of Commissioners of the District of Columbia, transmitting a draft of proposed legislation entitled "a bill to amend the District of Columbia Traffic Act, 1925, as amended, and the Motor Vehicle Safety Responsibility Act of the District of Columbia, as amended, so as to bring within the provisions of such acts any person operating a motor vehicle while under the influence of a drug rendering such person incapable of operating the motor vehicle safely"; to the Committee on the District of Columbia.

2144. A letter from the Comptroller General of the United States, transmitting a report on examination of the pricing of fuel booster pump repair kits under Department of the Air Force negotiated contract AF 01(601)–20268 with Thompson Ramo Wooldridge, Inc., Cleveland, Ohio; to the Committee on Government Operations.

2145. A letter from the Administrator, Housing and Home Finance Agency, transmitting a draft of proposed legislation entitled "a bill to amend the National Housing Act to remove certain limitations on the aggregate amount of outstanding mortgage insurance"; to the Committee on Banking and Currency.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. GARMATZ: Committee of conference. H.R. 8042. A bill to authorize the Secretary of Commerce to resell four C1–SAY–1 type vessels to the Government of the Republic of China for use in Chinese trade in Far East and Near East waters exclusively (Rept. No. 1600). Ordered to be printed.

Mr. MURRAY: Committee on Post Office and Civil Service. H.R. 9890. A bill to make permanent the temporary increases in rates of basic salary provided for employees in the postal field service, and for other purposes; without amendment (Rept. No. 1601). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADDONIZIO:

H.R. 12161. A bill to promote homeownership and achieve high-level stability in residential construction, and for other purposes; to the Committee on Banking and Currency.

H.R. 12162. A bill to relieve hardship for displaced families and businesses by assisting in their relocation and by providing them with mortgage financing under a new low-rent private housing program, and for other purposes; to the Committee on Banking and Currency.

By Mr. AYRES:

H.R. 12163. A bill to amend chapter 37 of title 38, United States Code, to improve the effectiveness of the Veterans' Administration loan guaranty program; to the Committee on Veterans' Affairs.

By Mr. BARRETT:

H.R. 12164. A bill to relieve hardship for displaced families and businesses by assisting in their relocation and by providing them with mortgage financing under a new low-rent private housing program, and for other purposes; to the Committee on Banking and Currency.

By Mr. BOWLES:

H.R. 12165. A bill to provide for the construction of a shellfisheries research center at Milford, Conn.; to the Committee on Merchant Marine and Fisheries.

By Mr. CHENOWETH:

H.R. 12166. A bill to repeal the tax on transportation of persons; to the Committee on Ways and Means.

By Mr. FULTON:

H.R. 12167. A bill to establish a national wilderness preservation systems for the permanent good of the whole people, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. GOODELL:

H.R. 12168. A bill to amend title II of the Social Security Act to provide coverage for housekeepers and other individuals performing domestic service who are compensated for such service in media other than

cash; to the Committee on Ways and Means.

H.R. 12169. A bill to amend title II of the Social Security Act to provide coverage for an individual performing service (other than domestic or casual service) in the employ of his or her son, daughter, or spouse; to the Committee on Ways and Means.

By Mr. HIESTAND:

H.R. 12170. A bill to amend the Fair Labor Standards Act of 1938 to eliminate the conflict and duplication between that act and the several labor standards acts applicable to persons doing business with, or engaged in activities assisted by, the Federal Government; to the Committee on Education and Labor.

By Mr. KARTH:

H.R. 12171. A bill to assist in the promotion of economic stabilization by requiring the disclosure of finance charges in connection with extensions of credit; to the Committee on Banking and Currency.

By Mr. McDONOUGH:

H.R. 12172. A bill to amend title I of the National Housing Act; to the Committee on Banking and Currency.

H.R. 12173. A bill to authorize use of additional funds, to the extent specified in appropriation acts, for public facility loans; to the Committee on Banking and Currency.

H.R. 12174. A bill to authorize the use of additional funds, to the extent specified in appropriations acts, for the purchase of mortgages by the Federal National Mortgage Association under its special assistance program; to the Committee on Banking and Currency.

By Mr. McINTIRE:

H.R. 12175. A bill to amend title V of the Agricultural Act of 1949, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. GATHINGS:

H.R. 12176. A bill to amend title V of the Agricultural Act of 1949, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. DIXON:

H.R. 12177. A bill to amend title V of the Agricultural Act of 1949, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. MERROW:

H.R. 12178. A bill to authorize the Administrator of General Services to convey all lands comprising Fort Dearborn, Rye, N.H., and Rye Air Force Base, Rye, N.H., to certain former owners of such lands; to the Committee on Government Operations.

By Mr. MONAGAN:

H.R. 12179. A bill to provide for the construction of a shell fisheries research center at Milford, Conn.; to the Committee on Merchant Marine and Fisheries.

By Mr. MOORHEAD:

H.R. 12180. A bill to amend certain laws relating to the conservation and improvement of private housing and the renewal of urban communities, and for other purposes; to the Committee on Banking and Currency.

By Mr. NIX:

H.R. 12181. A bill to amend section 701 of the Housing Act of 1954 (relating to urban planning grants), and title II of the Housing Amendments of 1955 (relating to public facility loans), to assist State and local governments and their public instrumentalities in improving mass transportation services in metropolitan areas; to the Committee on Banking and Currency.

By Mr. POAGE:

H.R. 12182. A bill to protect farm and ranch operators making certain land use changes under the Great Plains conservation program against loss of acreage allotments; to the Committee on Agriculture.

By Mr. SHORT:

H.R. 12183. A bill directing the Secretary of the Interior to convey certain property in the State of North Dakota to the city of Bismarck, N. Dak.; to the Committee on Interior and Insular Affairs.

H.R. 12184. A bill to protect farm and ranch operators making certain land use changes under the Great Plains conservation program against loss of acreage allotments; to the Committee on Agriculture.

By Mr. TEAGUE of Texas (by request):

H.R. 12185. A bill to amend chapter 37 of title 38, United States Code, to improve the effectiveness of the Veterans' Administration loan guarantee program; to the Committee on Veterans' Affairs.

By Mr. ZELENKO:

H.R. 12186. A bill to amend title XII of the Merchant Marine Act, 1936, as amended; to the Committee on Merchant Marine and Fisheries.

By Mr. FLYNN:

H.R. 12187. A bill to extend the veterans' home loan program to February 1, 1965; to provide for direct loans to veterans in areas where housing credit is otherwise not generally available; and for other purposes; to the Committee on Veterans' Affairs.

By Mr. LINDSAY:

H.R. 12188. A bill to authorize the Attorney General to maintain records of fraudulent and other unethical business practices; to the Committee on the Judiciary.

By Mr. JONES of Missouri:

H.R. 12189. A bill to provide minimum acreage allotment and price support levels for the 1961 crop of upland cotton; to the Committee on Agriculture.

By Mr. PELLY:

H.J. Res. 706. Joint resolution to promote the conservation of ocean fish and shellfish; to the Committee on Foreign Affairs.

By Mr. STAGGERS:

H. Con. Res. 690. Concurrent resolution to establish a Joint Committee on a National Fuels Policy; to the Committee on Rules.

By Mr. LESINSKI:

H. Res. 524. Resolution authorizing the printing as a House document the biography of Taras Shevchenko; to the Committee on House Administration.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CELLER:

H.R. 12190. A bill for the relief of Isidoro G. Montiel; to the Committee on the Judiciary.

By Mr. INOUYE:

H.R. 12191. A bill for the relief of Utanosuke Fujishiro; to the Committee on the Judiciary.

H.R. 12192. A bill for the relief of Kyozo Tanimoto; to the Committee on the Judiciary.

By Mr. LANE:

H.R. 12193. A bill for the relief of Amelia Andreoli D'Attorre; to the Committee on the Judiciary.

By Mr. LINDSAY:

H.R. 12194. A bill for the relief of North American Manufacturers Export Associates, Inc.; to the Committee on the Judiciary.

By Mr. RODINO:

H.R. 12195. A bill for the relief of Danica Canjar; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

459. By Mr. MARTIN: Petition of Cecelia Ramos and sundry residents of Massachusetts favoring H.R. 4488, to amend the Fair Labor Standards Act; to the Committee on Education and Labor.

460. By Mr. SCHENCK: Petition of Townsend Club No. 3, of Dayton, Ohio, Josephine Siebenthaler, secretary, and 57 others, urging favorable consideration of H.R. 4000, the Townsend bill; to the Committee on Ways and Means.

461. By Mr. ULLMAN: Petition of the East Oregon Tri-County Building Trades Council favoring issuance of a postage stamp in commemoration of the nucleus of craftsmanship—apprenticeship; to the Committee on Post Office and Civil Service.

EXTENSIONS OF REMARKS

Figures Don't Lie (?)

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. WIDNALL. Mr. Speaker, this morning I received the May 9, 1960, political memo from COPE, published by the Committee on Political Education of the AFL–CIO. In the first paragraph under a title "Living Costs Hit Alltime Record," it is stated that the cost of living in March reached an alltime record "just as it has almost month after month after month since the Eisenhower-Nixon administration has been in office."

It further states that in March "the average family was forced to pay $12.57 for the same goods and services which cost only $10 in 1947–49, according to Government figures." Once again we see the deliberate omission of unfavorable figures that would be attributed to a previous administration.

I contacted the Bureau of Labor Statistics and obtained the following unreported figures for the last 3 years of the Truman administration.

In 1950 the same goods and services cost $10.38.

In 1951 the same goods and services cost $11.10.

In 1952 the same goods and services cost $11.35.

These figures show that at the time the Eisenhower administration took office the figure of $11.35 was the figure to be compared with the present cost of $12.57. The American people are entitled to the whole truth. In 7½ years of the Eisenhower administration there was a rise from $11.33 to $12.57 or $1.22 for 7½ years. In comparison, the rise during the last 3 years of the Truman administration was from $10 to $11.35 or $1.35.

The same type of omission of full data took place in the Report of the

Majority of the Joint Economic Committee and this was violently objected to at the time by the republican minority members.

Since the Committee on Political Education of the AFL-CIO appears to be watching economic figures rather closely, we should expect that the next political memo from COPE will include the following important information disclosed by the President today in Washington. In April 1960:

First. Gross national product tops $500 billion.

This figure is 2 billion larger than the President's economic advisers estimated earlier in the year.

Second. Consumer Price Index varied only one-fourth of 1 percent in 6 months.

Third. Employment reached 66,159,000, a phenomonal increase of 1,892,000 over March 1960.

MOST IMPORTANT

Fourth. Unemployment lowered to 3,660,000—a decline of 546,000 from March.

The above facts and figures from the record speak for themselves.

Sanford H. Bolz

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include statements made at the farewell luncheon for Mr. and Mrs. Sanford H. Bolz, Tuesday, May 3, 1960, at the National Press Club, under the auspices of the Jewish Community Council of Greater Washington. This luncheon was given on the occasion of the departure of Mr. and Mrs. Bolz for Salinas, Calf., where Mr. Bolz will enter a law partnership, after having served as Washington counsel for the American Jewish Congress. The statements follow:

STATEMENT OF REPRESENTATIVE EMANUEL CELLER

Mr. Chairman, honored guests, friends of Sandy, Sandy and Joy, it is a distinct pleasure to have this opportunity to express publicly my affection and regard for Sanford Bolz, known, of course, to all of us as Sandy.

Sandy is not a "nice" guy, Sandy never agrees for the sake of being agreeable. Sandy never lets the dust lie lest he be called impolite. In short, Sandy is a fighter—a fighter for all of those causes which are an integral part of his being. I've seen Sandy light up with the flames of indignation at the knowledge of any injustice done. He has taken time out from his practice of law to represent the interests of all minority groups—the preservation and extension of the Bill of Rights is a personal passion with him. I have known Sandy, as a representative of the American Jewish Congress, since 1948, but I also have known Sandy, in his own person, as a man of the keenest integrity and untarnished ideals.

Today, Sandy is 45 years old, and it is a happy coincidence, indeed, that this luncheon, in his honor, take place on his birthday. These 45 years of his are rich with friendships, are rich with doing battle for the oppressed and needy. Few men of 45 can say as he can, that the world is a better place for his having covered that span of years.

I shall sorely miss the good counsel and judgment of Sandy Bolz—more particularly when the issue of civil rights legislation arises again as it inevitably must, and, indeed on all legislation dealing with human rights and needs.

I wish you Godspeed, much happiness, and much success in your new venture, Sandy. I am sure, however, that this is not goodby and that you will continue, if not in person, then by any other means at your disposal, to continue to give us the support and the encouragement whenever the good fight is being fought.

STATEMENT BY ISAAC FRANCK, EXECUTIVE DIRECTOR, JEWISH COMMUNITY COUNCIL OF GREATER WASHINGTON

Mr. Chairman, Sandy and Joy, Congressman CELLER, ladies and gentlemen, for whatever the reasons may be, the chairman advises me that, unlike the speakers who preceded me, I am not bound by the 2-minute rule, and it is therefore my privilege to make some more extended remarks as part of our saying farewell to Sandy and Joy. I shall not utilize this occasion to unloose upon Sandy an avalanche of encomiums, for two reasons. First, this is no time for a eulogy. Eulogies will be in order many, many years from now, when Sandy will have been gathered to his forefathers, at a ripe old age, sated with years, and having bequeathed to posterity a lifetime of accomplishments. Secondly, I am aware of the admonition given by the 10th century Biblical commentator, Rashi, to the effect that one is supposed to tell only part of man's praise in his presence, and full praise only in his absence.

It seems to me more appropriate, on this occasion, to reflect together upon the issues and causes which Sandy espoused, and upon which he lavished his talents and his energy. This seems to me worth doing, not so much because he was active in these areas, and on behalf of these causes, not in order to highlight what he did, but rather for the purpose of reviewing for ourselves Sandy's impact upon us, his influence on our community's thinking, the stamp he has left on our community's policies.

Sandy has been a champion of civil rights, civil rights not only for Jews, but for all human beings. He was one of the chief architects of the amicus curiae briefs in the Thompson Restaurant case, as the case progressed from the lowest court to the U.S. Supreme Court, and thus helped make a signal contribution to the desegregation of restaurants in Washington. He was also one of the architects of the amicus curiae brief submitted to the Supreme Court in the District of Columbia public school segregation case. When we recall that one of these briefs was signed by 18 community organizations of all descriptions, and the other brief had on it the names of 22 religious, civic, and community organizations, the extent of Sandy's impact on our collective thought is made abundantly clear.

Sandy has been a defender of religious freedom and of the American principle of the separation of church and state. This has meant dealing with problems of religion and the public school, and other manifestations of the threatened erosion of the separation principle. In this complex and sensitive area, Sandy's leadership has provided clarity, diplomatic persuasiveness, and steadfast courage and good judgment. I remember very clearly our appearance before one of the suburban boards of education, about 9 years ago, in opposition to a proposal that public school machinery be utilized for the distribution of Bibles to public school pupils. A Congregationalist, Methodist, and a Seventh Day Adventist leader were among those in the delegation, and Sandy Bolz was our spokesman. The quiet dignity, the persuasiveness, and the legal scholarship displayed by Sandy on that occasion, brought honor not only upon him, but upon all of us.

Civil liberties, personal freedoms, freedom of ideas and freedom of speech, are among the ideals espoused by Sandy, and their safeguarding has been among the objectives pursued by our Jewish community council under his stimulation and guidance. And Sandy has been as concerned about the freedom of ideas repugnant to us, as he has about freedom for the ideas we hold dear. He has drummed into us the understanding that the surest way of safeguarding freedom for the ideas we are committed to is the safeguarding of freedom for the ideas which in our view are most reprehensible.

Outstanding in the council's work has been Sandy's devotion to the needs of Israel, and to the interpretation of Israel's great significance in the life Judaism. For in the rebirth of Israel Sandy sees not only the establishment of a home for the driven and persecuted of our people, not only a means of restoring freedom and dignity to human beings, but also the erection of a laboratory for Jewish ideals of social justice and cooperative living, and a citadel of Jewish spiritual and intellectual creativity which can help enrich the spiritual life of Jewish communities everywhere.

And finally, Sandy has been a champion of democracy in the Jewish community. And let me assure you that this is not an easy or unhazardous task. It is much easier to espouse democracy in and for the political organization of a state. which has the authority to govern people's lives. In a voluntary association, which is what the Jewish community is, the champion of democracy faces many dangers from the powers that be and that would be inclined to perpetuate their dominance and control.

Sandy has done these things, and pursued these goals in our midst, for three reasons. First, because he is the kind of person he is. Second, because he takes seriously his citizen responsibility, and wishes to lead others toward similar seriousness about their citizen responsibilities. However, it seems to me that there is a third reason, and this is Sandy's taking seriously the matter of his being a Jew. Sandy has been trying to work out for himself, and to help all of us think through and work out what it means to be a Jew in mid-20th century America. He echoes the question of the ancient Hebrew prophet, "What does God require of you?" What does it mean to be a Jew, not only in the sanctuary, but out in the community, in the marketplace, in the give-and-take of our daily relations with people. Of course, he has not been indifferent to the ritual requirements of Judaism, or to the Judaism of the sanctuary. I recall a minor episode some 4 or 5 years ago, when Sandy lost his father. Sandy and someone else were at my house, probably for a meeting on some Jewish community council matters. During a break in the discussion, Sandy asked us whether we would suspend the meeting for a few moments and recite with him the memorial prayer for the dead, the Kaddish. Having been raised in a home where traditional Jewish observances were the norm, and in which it was assumed that the mourner's Kaddish is recited only by the actual mourner, and only as part of the regular religious service in which at least a quorum of 10 men participate, I found this a strange experience. None the less we rose, faced the east and together with Sandy recited the mourner's Kaddish. I remember this minor episode because that moment was an experience in holiness, and my home became truly a miniature sanctuary.

In espousing these causes, and in furnishing leadership on their behalf in our midst, Sandy succeeded in teaching us an important lesson in the strategies of community relations, and of his type of social engineering generally. He taught us that most often the best strategy is adherence to principle. At least he taught me that. If we adhere to principle, then, in any negotiations which may require compromise, our compromises would be a retreat from principle, but a retreat of only a certain distance. Contrariwise, if we do not adhere to principle, but negotiate in terms of compromises, then much more compromising is bound to be forced upon us than should be the case either ideally or pragmatically.

Let me add one final comment. I think I should say, in all candor, that in working in our midst on all these issues and principles, Sandy has not always been easy to live with. Indeed, he has often been quite difficult to live with. He has often been inflexible, obstinate. And this brings to mind an interesting linguistic observation made by Bertrand Russell in one of his philosophical papers. Russell points out that the verb "to be firm" has a rather unusual conjugation. In the English language the verb "to be firm" is conjugated as follows: "I am firm. You are stubborn. He is pig-headed." Now, I would not go to the extreme of saying that Sandy has been pigheaded, but he has been obstinate, rigid, inflexible, difficult. However, I must confess, in equal candor, that there is another being, another entity, in my life that displays these same irritating qualities, and that is my conscience, my moral conscience. My conscience too is obstinate, rigid, inflexible, and often very difficult to live with. But I would find it much more difficult to live without my conscience than to live with it. Similarly, I am sure that we shall all find it much more difficult to live without Sandy than we have to live with him. For, Sandy has been part of our collective moral conscience, and in his going to California part of our conscience is being wrenched away from us.

It seems to me that the best farewell gift we can offer to Sandy and Joy is our solemn promise that, after they leave our community, we shall not settle down to a smug, comfortable, self-satisfied existence; that we shall find in our midst new resources, new forces of conscience, which will keep us restless and unhappy unless we diligently continue the pursuit of those social and religious ideals to which he so unselfishly dedicated himself in our midst.

RESPONSE OF SANFORD H. BOLZ

Mr. Chairman, distinguished guests, all my good friends, my heart is full to overflowing—much too full to let me say all that I would like to say on this occasion. But I know that you would never believe me if I told you I was at a loss for words—so I shall try to respond, but briefly, as I would not for the world want to spoil the shining image that has been drawn of me today.

First, let me thank you from the bottom of my heart for this marvelous and memorable occasion. You have done me—and my family—great honor, and we shall remember this day as long as we live. I must say it is the most wonderful antidote any man could have to becoming 45. You know, as I sat here listening to these tributes, with what I hope was becoming modesty—even if you may have noticed now and then a shameless flash of agreement steal across my face—I could not help thinking of two remarks. One is attributed to a famous British diplomat, but I first learned it from a famous Israeli diplomat, my good friend Mike Arnon, who used it on an occasion when he was introduced to an audience in very glowing terms. It goes like this: "Compliments are like perfume—pleasant to inhale but dangerous to swallow." So you may have noticed that during the speeches I was inhaling mightily, but swallowing very little.

The second remark relates to the fact that this is a most unaccustomed position for me to be in. You know, I never thought I'd ever have a testimonial—I always thought I was much too young for that. You usually get them when you are either old or rich—and I was sure I would never be either. But I have attended many of these affairs, and usually I have sat out where you are, watching some other poor devil undergo this ordeal by tribute. (But I have loved every bit of it—and I would have it no other way). And it reminded me of the fellow who was being tarred and feathered and ridden out of town on a rail, who remarked that "If it weren't for the honor of the thing, I think I'd rather walk."

So much for jest. As I stand here, I can't help reflecting on how very much I owe to Cornell. If Albany gave me birth, surely Cornell nurtured the seeds which I hope have grown to maturity here in Washington. For Cornell gave me, first of all, a friend like Al Arent, whose leadership and dedication to good causes I always admired, and in whose footsteps in those causes I have somehow managed to follow pretty well, ever since the days when I was a lowly freshman and he was the most respected senior on the campus.

Second, it gave me during law school the friendship of Jack Abramson, whose warm and generous call to me to share his fine practice in California is one of the rare things that would ever lead us to leave this wonderful town and all the warm hearts and good heads that we number among our friends here.

Third, it gave me, first as teacher and then as friend, a very great man, who has been an ideal and an inspiration to me throughout my career—and ever will be—and who has come to be with us today to do me honor. I mean, of course, my warm good friend, Judge Henry Edgerton.

And finally, Cornell gave me the greatest treasure that any man could have—my wife—for her price is far above rubies. She has been my constant companion, support, help, and balance wheel now for almost 20 years—and I think God never made a more wonderful woman. All of you who have worked with me in community affairs I am sure must know that I could never have done whatever I have been able to do without her steady support and understanding and willingness to accept whatever adversity—as well as honor—might come to us out of my dedication to such causes. And I would be less than deserving of the tributes you have paid me today if I were not sensible of the fact that this tribute is intended as much for her as it is for me. And I think I speak for you as well as for myself when I say that this community will miss her sweetness, her beauty, her never-failing good nature, and her deep, true goodness. And thank God, I shall have all of them with me, because I don't know what I would ever do without them.

There is much more that I would like to say, but there are neither words nor time. We shall never forget this moment—this day. To leave Washington, as you have shown us today we do, with the respect and affection of this community is reward enough for any man. I shall ask for no greater riches. And if there is one thought that I could leave with you by which you might, perhaps, remember me, I would make this my valedictory: That it matters little what vaulting temples and structure you may build in this community. And it matters little what riches you may contribute to our fellow Jews and our fellow men. It matters only that, through dedication to the finest tradition of Judaism, you keep burning always at white heat the living fire of fortitude and the bright flame of justice. For if they go out, the rest shall be without meaning and as if it had never been.

If you will remember this of me at times when there may be temptation to fail or flag in keeping these fires constantly rekindled, then I know that I shall not be forgotten here. Thank you all again from the bottom of our hearts—come see us in California—goodby and God bless you all.

Areas Eligible Under the Depressed Areas Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1960

Mr. WIDNALL. Mr. Speaker, last Wednesday when the House passed the Depressed Areas bill, an amendment was offered by the gentleman from Pennsylvania [Mr. FLOOD], making it necessary that an area have 6 percent or more unemployment at the time an application for assistance was made. The author of the amendment, as his sole explanation of the amendment, stated, "Mr. Chairman, this is merely a perfecting amendment. I do not want to make a speech about it. I submit it to the Chairman and I hope he will accept it." The amendment was adopted. I endeavored to obtain an explanation of the effect of the amendment, by seeking recognition, but did not receive it until after action was taken. I then stated, "Mr. Chairman, I should like to find out what this amendment does to the bill. I presume from what was said by the majority leader, he fully approved the original Spence bill as it applied to many areas throughout the United States. As I understand this amendment, it would materially curtail the number of eligible areas. I think it ought to be so understood." Mr. Speaker, I asked the Department of Labor to prepare a new list of the areas that would appear to qualify under the bill as it passed the House and the Senate and was sent to the President. In order that Members may have the benefit of this information, I will insert the new list at the conclusion of these remarks. The bill, as it came from the committee, made 192 industrial areas eligible. The bill as it passed the House with the Flood amendment, reduces that number to 143 areas. On that basis, if we had had three or four more "perfecting" amendments, we would have done away with the problem entirely.

I am sure Members will be interested in noting that included among the areas that must be declared to be depressed areas are Philadelphia, Pittsburgh, Detroit, Louisville, Kentucky, and Atlantic City. Inclusion of Philadelphia as a depressed area is of particular importance. That area's unemployed total of 119,300 persons exceeds the unemployed total—approximately 100,000—in all 12 of the

areas in Pennsylvania on which there is general agreement that they are areas suffering from chronic unemployment. In other words, the hard hit areas now must share with Philadelphia dollar for dollar the assistance that was supposed to go to the truly depressed areas. On a straight pro rata basis, Philadelphia would be entitled to slightly more dollars of assistance than all the depressed areas in the whole State of Pennsylvania.

The list follows:

Tentative list of urban areas that may qualify for Federal assistance as areas with substantial and persistent unemployment under various legislative proposals [1]

[Revised May 1960]

MAJOR AREAS [2]

Administration (Kilburn) bill H.R. 4278	Area redevelopment bill (as passed by Congress)
(16 major areas)	(40 major areas)
Connecticut:	Connecticut:
	Bridgeport.
	New Britain.
Indiana:	Indiana:
Evansville.	Evansville.
Terre Haute.	Terre Haute.
Kentucky:	Kentucky:
	Louisville.
Maine:	Maine:
	Portland.
Massachusetts:	Massachusetts:
	Brockton.
Fall River.	Fall River.
Lawrence.	Lawrence.
Lowell.	Lowell.
New Bedford.	New Bedford.
	Springfield-Holyoke.
	Worcester.
Michigan:	Michigan:
Detroit.	Detroit.
	Flint.
Minnesota:	Minnesota:
	Duluth-Superior.
New Jersey:	New Jersey:

	York.
Rhode Island:	Rhode Island:
Providence.	Providence.
Tennessee:	Tennessee:
	Chattanooga.
Texas:	Texas:
	Beaumont-Port Arthur.
	Corpus Christi.
Virginia:	Virginia:
	Roanoke.
West Virginia:	West Virginia:
Charleston.	Charleston.
Huntington-Ashland.[3]	Huntington-Ashland.
	Wheeling.

[1] This listing is preliminary and tentative, and is based largely on bimonthly or semiannual data compiled from area labor market reports prepared in connection with the Bureau of Employment Security's program for the classification of areas according to relative adequacy of labor supply. Data used cover a 2- to 5-year period, generally extending through March 1960. Later data, now becoming available for some areas, could result in several changes in the above listing. A more comprehensive review of area data on a monthly—rather than bimonthly or semiannual—basis, and in the light of whatever criteria may be included in the bill finally enacted, would be required to determine which areas are eligible for assistance as areas with substantial and persistent unemployment.

[2] Major areas are areas included in the Bureau of Employment Security's regular area labor market reporting and classification program. This program covers 149 of the country's leading employment centers. Unemployment and labor force data for these areas are generally available on a bimonthly basis.

ATTACHMENT TO MAY 1960 TENTATIVE LIST OF ELIGIBLE URBAN AREAS UNDER PROPOSED AREA ASSISTANCE LEGISLATION

Summary of eligibility criteria used

The administration (Kilburn) bill (H.R. 4278):

1. Unemployment is now 6 percent or more of the labor force discounting seasonal or temporary factors.

2. The annual average unemployment rate in the area has been:

(a) At least 50 percent above the national average for 4 of the preceding 5 calendar years.

(b) At least 75 percent above the national average for 3 of the preceding 4 calendar years.

(c) At least 100 percent above the national average for 2 of the preceding 3 calendar years.

Area redevelopment bill (as passed by Congress):

1. Unemployment in the area is now 6 percent or more of the labor force.

2. Local unemployment rates have been:

(a) At least 6 percent during 18 of the preceding 24 months.

(b) At least 9 percent during 15 of the preceding 18 months.

(c) At least 12 percent during the preceding 12 months.

Col. Albert E. Herrmann

EXTENSION OF REMARKS
OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. DAGUE. Mr. Speaker, it is an honor and a privilege for me to take this occasion to pay tribute to an outstanding citizen and veteran leader of my home State of Pennsylvania—a stanch American who has given much of his energies and devoted service to the betterment of our Nation and its veterans.

This distinguished citizen is Col. Albert E. Herrmann of Philadelphia, Pa., and it seems particularly appropriate to recognize his outstanding contributions to the general welfare on this occasion since tomorrow is his natal day when he will celebrate the 61st anniversary of his birth.

Pennsylvanians are indeed proud of Al Herrmann's record of service in veteran circles. Starting with yeoman service as post commander of the George H. Imhof Post No. 153, the American Legion, of Philadelphia, in 1921 and again in 1926, he has steadily broadened his sphere to include service in Philadelphia County Committee of the Legion—on which he has served as a delegate for 40 years—in the capacity of county adjutant, county treasurer, and culminating in county commander in 1945–46. For the past several years he has been chairman of the county committee's rehabilitation and hospital visitation committees and in addition has found time to serve as executive secretary of the Post County Commanders Association of the Legion in Philadelphia.

In 1930–31 Colonel Herrmann served as national commander of the U.S. Army Ambulance Service Association and at present is serving as national service and hospital welfare officer of the U.S.A.A.C.'s. In World War I he served with section 567 and Headquarters Company 650 of the U.S. Army Ambulance Service with the Medical Corps, in which he was wounded, and because of those wounds is today listed as a totally disabled veteran. During World War II he served with Draft Board No. 27 in Philadelphia. He has been active in the DAV of World War I, the Military Order of the Purple Heart, and the Philadelphia Municipal Employees War Veterans Association.

In the Historical Old Guard, city of Philadelphia, he served as colonel commanding from 1938 to March 1955, and since then he has served as executive officer of that organization. As a member of the Centennial Legion of Historic Military Commands of the Thirteen Original States, he has served as the delegate to this historic military organization, and in 1956 was elected national director of the C.L.H.M.C. and has been reelected each year by the centennial legion.

Colonel Herrmann has been an active member of the West Philadelphia Republican Club of the 27th ward of Philadelphia, and served the city of Philadelphia as its deputy city controller. Under Mayor S. Davis Wilson, he served a term as assistant director of supplies and purchases, and while serving in that office, Colonel Herrmann was honored by many civic organizations of Philadelphia for his work in charge of the upper Pennsylvania flood relief work, and his management of the Philadelphia flood relief force in Louisville, Ky.

In his community of the 27th ward of Philadelphia, he has served on many community welfare service agencies as ward chairman of the Red Cross, Salvation Army, and Community Chest drives.

On Colonel Herrmann's birthday in 1935, Hon. Marcel De Verneuil presented to Colonel Herrmann the decoration of Officer d'Academie by the French Government at the Penn Athletic Club.

Throughout his very active life, Colonel Herrmann's accomplishments have been many, but I would like to call particular attention to one endeavor that might well be emulated in other areas of our Nation.

During World War II and the conflict in Korea, right down to the present, he has been mailing magazine subscriptions to our Armed Forces hospitals overseas, as well as to U.S. Veterans' Administration and Armed Forces hospitals in this country, thereby bringing sunshine and get well greetings throughout the year to our disabled and hospitalized service people. This work of bringing sunshine to our disabled veterans is a service embracing all Government hospitals, and includes stamps so that the hospitalized veteran can keep in touch with his loved ones.

On behalf, therefore, of his many friends and admirers I would like to extend to him, his lovely wife, and his charming daughter our best wishes for an abundance of good health and continued opportunities for fruitful service in the years ahead.

A Tribute to John Taber on the Occasion of His 80th Birthday

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. CELLER. Mr. Speaker, JOHN TABER is dear to all of us. His years of service have inspired us with greater affection for him.

Here is a man who, in the words of Grover Cleveland, regards "public office is a public trust"; hence our uttermost confidence in all he says, all he does.

You know, I particularly like JOHN because he is unafraid—unafraid at times even if he is all alone. He knows ofttimes one man with courage is a majority. He does not care, even if it is unorthodox, so long as he feels it is right.

They say JOHN is old. Nonsense, he is young at 80.

What is the secret of JOHN's longevity? Does the clock stop for him? What vitamins does he take? From what fountain of youth does he drink? He has no "tired blood" and no need for Geritol. What is his secret? Did he make a pledge to Mephistopheles as did Goethe's Faust? Of course not. What is the answer? Well, he allows each additional day to help him grow more like himself—JOHN TABER.

When I first knew him 38 years ago—when we were freshman Congressmen—he seemed to me then to be rather hard-boiled, as though he could break but not bend, but gradually I recognized that the toughness was but a facade. Underneath he was kind and amiable.

He never seems to suffer from combat fatigue. His unflagging spirit is ever present to conserve our financial strength. He is the Cerberus of the Treasury.

His is the best example of the process of a congressional career. It is an endless process. You continually turn the last page of a chapter of an assignment only to be confronted with another chapter of tasks to be completed. A congressional career is not a mere course to be finished or a prize to be achieved. It is continuous and involves blood, toil, tears, and sweat.

Viewing JOHN's character, I find it good. Does not the psalmist say: "Better is the fragrance of a good name than the perfume of precious oils." JOHN has a good name. And you know, character is what you are when no one is looking. JOHN is indeed worthy, when unattended, when alone.

He has wondrous capacity for work—despite the weight of years. I am sure he says, "While the candle burns, there is so much to be done."

And he still cares, still dares. He knows, too, that "even the oldest tree some fruit will bear."

He has drunk fully of the wine of life. He follows what Mark Twain said:

> So live your life that when you go, even the undertaker will be sorry.

I have observed his wise practicality. He knows that if you want the rose you must put up with the thorns.

Charles de Gaulle stated:

> We may well go to the moon, soon, but that's not very far. The greatest distance we have to cover still lies within us.

In other words, one must know oneself. JOHN does. He knows the long, arduous, spiritual road to travel within himself.

JOHN just grows, learning something new every day. He knows that to be 80 years young is more cheerful and hopeful than to be 40 years old. JOHN is cautious and wise. He knows that the fool often crosses the stream while the sage ponders.

Growing old is as individual and as personal as the kind of woman you marry or the wine you drink. There are those old at 30 and others young at 90. The old, at whatever age, say, "It's too late"; the young, at whatever age, say, "It's never too late."

Cato learned Greek at 80. Sophocles wrote his immortal "Oedipus" when he had numbered more than his fourscore

years. Theophrastus began his book, "Characters of Men," at 90. Goethe completed "Faust" when he was 80. Chaucer, that mighty youngster at 60, composed his "Canterbury Tales."

So to you, John, at 80, I say you have the youth, the enthusiasm, the convictions to carry you through in triumph—at the very least—another score.

How do I know this? Because we youngsters, members of the same club, have drunk from the same spring—the waters of work, of purpose, and of faith.

Address by Hon. Basil L. Whitener Before Gaston County Democratic Convention, Gastonia, N.C., May 7, 1960

EXTENSION OF REMARKS
OF

HON. ALTON LENNON

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. LENNON. Mr. Speaker, on Saturday, May 7, 1960, our colleague, Hon. BASIL L. WHITENER, Representative from the 11th Congressional District of North Carolina, delivered the keynote address at the Gaston County Democratic convention held in Gastonia, N.C.

As one who has had the privilege on numerous occasions to visit Gaston County, one of North Carolina's banner Democratic counties, I can say that my only regret is that I was not able to be present with my many friends there at their convention. I know it must have been an outstanding affair, and I compliment our colleague upon the address which he made.

Since I feel that many of the facts contained in Congressman WHITENER'S speech will be of interest to Members of the House, I request unanimous consent that it be printed in the RECORD:

ADDRESS BY BASIL L. WHITENER, MEMBER OF CONGRESS, 11TH CONGRESSIONAL DISTRICT, NORTH CAROLINA

Mr. Chairman, fellow Democrats, and ladies and gentlemen, I consider it a high honor and a distinct pleasure to have the privilege to address this convention.

As a Gaston County Democrat, I know of no greater honor that could come to me than to have the opportunity to discuss our great party with you.

My friends, I share your great pride in being a Democrat. For being a Democrat is more than being a member of a political party. We Democrats share a unity of desire, a common purpose, and a zeal for a better America to which no other political party can lay claim.

We are truly the party of the great idealistic and humanitarian Jefferson. We are also of the party of that fighting American who spent his life in the service of the common, everyday American—our own indomitable North Carolinian, the great Andrew Jackson.

As believers in the ideals and principles of the party of Jefferson and Jackson, we have roots in the common heritage of our Nation that stretch back into history much further than any other political party existing today.

It is no accident of history that North Carolina Democrats have, since the very beginning of the United States, adhered to the philosophy and ideals of government exemplified by Jefferson and Jackson. In their desire to be of service to all of the people of our country these two great Americans were immune to the prejudices of sectionalism and the bitterness of class hatred.

Now, my friends, the Republican Party cannot lay claim to the type of heritage enjoyed by us. It came into being as a sectional party, a party born out of the strife and bitterness of a great internal conflict in American history. It has always been a sectional party, and the evidence of the past few years serves only too well to dramatize this fact in our minds.

My Democratic friends, there may be some in this audience who remember all too vividly what Republican sectional rule did to North Carolina and the South during the last century. Republicanism in North Carolina is a legend of misrule and outside intervention that must never again be repeated in the history of our proud State.

Now I want to talk a few minutes about the Republican Party and its lackluster record of service to the American people. History offers very little encouragement for those who search for a dynamic, progressive national administration within the Republican Party. The reason is very simple.

The Republican Party historically has been a party of complacency. The carefree administration of Taft, the corrupt regime of Harding, the do-as-you-please administration of Coolidge, and the "who cares for the common man" philosophy of Herbert Hoover's ill-fated term as President are historical facts.

Complacency has always been the policy of the Republican Party when it has been in control of the destiny of our Nation. It was true in 1906, 1925, and it is true today.

I was amazed last year when I read in the February 14 edition of the New York Mirror a statement by Republican Senator AIKEN of Vermont. He seemed to express the general feeling of disenchantment shared today by many Republicans within their party.

Senator AIKEN said: "Unless the Republican Party demonstrates greater faith in the future of America than it has been doing recently, we cannot expect the voters to have faith in the Republican Party, and we cannot expect to win elections."

My friends, I think Senator AIKEN very ably summed up the basic weakness of the Republican Party in his statement. We don't have to be a U.S. Senator to know that the Republican Party has no faith in the future of America. This wait and see—this policy of drift and wish for a miracle in Government—of the present administration, has cost the American people billions of dollars during the past 8 years and has seriously impaired the security of our country. The Republican Party has consistently said that we are the party of the do-gooders, the party of the spenders, and the party of fiscal irresponsibility. On the other hand, the Republicans have never lost an opportunity to proclaim that they are the businessman's party and the party of financial integrity and economy in Government operations.

Well, as Al Smith used to say, "Let's look at the record." Let us take a look at what our Republican financial wizards have done to our country.

From 1789 through 1952—a period of 163 years—the cost of operating our Government, including all of our great wars and our bitter depression, amounted to $808,517,385,381. From 1953 through 1959, however, the present administration spent the staggering sum of $495,222,848,970. Thus, the last 6 years of national Republican rule has cost this Nation more than half the amount of money it took to operate our Government for the first 163 years of our history.

Can you call that fiscal responsibility? Is that an example of a businessman's government?

Let us examine the record again. The cost of carrying the national debt is the second highest expenditure of the Federal Government, exceeded only by our expenditures for national defense. You will be amazed to know that the interest charges on the national debt have increased from $6,240 million under Mr. Truman in 1952 to $8,456 million under the present Republican administration in 1959. This is an increase of 36 percent in 7 years.

At the same time, there has been a steady increase in our national debt. In 1952 our national debt was $267,400 million. In December 1959 the gross public debt of the United States stood at $290,900 million.

We hear our Republican friends talk about a balanced budget, and well they might talk about such a budget. The fact is that a balanced budget is something unknown to the present Republican administration. It has set an alltime high of budget deficits in peacetime. In 1959 the deficit was $12,500 million. By contrast, President Truman achieved a net surplus of over $4 billion during 4 peacetime years of his administration.

The truth about the matter is that although the Republican Party has proclaimed to the world that it is the party of fiscal stability, it is actually the party of bankruptcies and business failures.

Let us look at the record again. The 70,049 bankruptcies under Mr. Hoover in 1932 made a 56-year record. This record was not broken until 1957 when 73,761 bankruptcies occurred. Bankruptcies in the fiscal year which ended June 30, 1959, totaled 100,672. This is the record for all time. The previous alltime high came in 1958 when there were 91,668 bankruptcies.

Our Nation has been allowed to drift dangerously near the brink of economic disaster under the present national administration. With business failures and Federal taxes at an alltime high, we are witnessing a steady increase in inflationary pressures. As the value of the dollar decreases, the cost of living continues to rise.

Since 1952 the cost of living has increased 10 percent. Consumer debt in our Nation is up 83 percent. Installment debt is up 100 percent, and personal loans have increased by an alarming 136 percent.

To the American farmer, Republican control of the National Government has meant economic hardship. Farm income is down 25 percent since 1952. The purchasing power of the farmer is at its lowest point since the 1930's.

The rural depression of the 1950's has spread to many small businessmen, professional people, and workers in service trades and industries whose economic base is agricultural income. Six Republican vetoes of Democratic farm bills have thrown the American farmer and his family into deep economic distress.

In just 6 years Agriculture Secretary Benson has spent more than $31 billion. You will be astounded to learn that in this short period of time he has spent more than all of his predecessors in that office have spent since the Department of Agriculture was created 97 years ago. The size of surplus commodities in Government hands has been multiplied over seven times to almost $8 billion. And, in passing, I might add that the payroll of his Department has been increased from 65,000 employees in 1952 to over 85,000 in 1959.

The American farmer deserves a better deal than that which he has secured under the present national administration. Unless there is a radical change in our farm policies the future is indeed gloomy for this great segment of our population.

The domestic economic picture is certainly not a pleasant one under this Republican administration.

There is another area wherein this administration has failed to keep faith with the American people. I refer to our foreign policy and our efforts to have a strong national defense against foreign aggression.

When Mr. Truman left the White House, the United States was the strongest nation in the world. Our military power was not questioned. During the past 8 years, however, we have drifted dangerously close to the point where our national security is threatened.

Gen. Thomas D. White, Chief of Staff of the U.S. Air Force, says: "The United States is behind the Russians in developing intercontinental missiles." And Dr. Von Braun, Chief of the Army Ballistic Missile Agency's Development Operations, has stated, in speaking of the Russians: "The frightening thing is their rate of progress. It will take 5 years to catch the Russians." I give you these statements, not to alarm you, but because I feel you should know what these great leaders have said about the state of our national defense.

Mr. T. G. Lanphier, Jr., who was Special Assistant to the Secretary of the Air Force from 1949 to 1950 and Special Assistant to the Chairman of the National Security Resources Board from 1950 to 1951, made a speech on March 29, 1960, to the National Press Club in Washington, D.C., in which he made this significant statement:

"We are not sufficiently armed in any one of these categories: an invulnerable deterrent; a limited war deterrent; or a Home Guard—let alone all three. The fault for this lies basically with all of us. Yet the person who represents us, and who is responsible to us for our defense, is the President. Over the past years, with the best intentions in the world, he has led us to a point where we are in jeopardy of our national life."

Mr. Lanphier's statement takes on added significance when we consider a recent statement by Khrushchev. The Soviet leader said: "The people of the United States have never fought in their own territory. They must understand that the next war will not be fought in Africa, or Europe, or Asia, but from the very outset it will be fought on United States soil."

This statement by Khrushchev carries a threat that can only be met by a strong and well-armed America. If for no other reason than to protect our very security, the American people should overwhelmingly support a change in our present national administration.

The foreign policy of the United States has also followed a complacent "wait and see" course. We have attempted to buy friends overseas through billions of dollars in foreign aid. During the present administration over $41 billion of the American taxpayers' money has been spent overseas in connection with various foreign aid programs.

This has proven to be an unwise and unrealistic policy. We have only to look at what has happened recently in Korea and Turkey to realize the truth of this statement.

We need a strong firm hand at the helm of our State Department. Unless the American people bring about a change at the next general election in the national administration, I can only see a continuation of our present rapidly deteriorating influence in world affairs.

Vice President NIXON indicated recently that he differs with the administration's policies on some national issues, but he says that he will not spell out the differences until he has been named the Republican candidate for President. "Only when I become the nominee can I appropriately express individual views that I might have," said Mr. NIXON.

I might add that Mr. NIXON's position is shared by many prominent officials in the national Republican administration. They know that the course of their administration is not in keeping with the best interest of the American people. Through lack of leadership at the highest level, however, these Republicans are powerless to reverse the trend of events.

We Democrats, however, have it within our power to reverse the present unhappy course of events in our Nation's history. United as a party we can go to the polls this November and elect a national administration that will express the will of all of our people. We can, by our efforts, place in power an administration that will again make the United States the strongest and richest Nation on earth.

The time is growing short. Unless the present course of events is altered I fear that in the near future we will find ourselves in the position of a second-rate power among the nations of the world. If that unhappy event should ever occur, our security and our liberty will be at an end.

We can secure a great victory this fall. We must secure a great victory for the preservation of our American way of life. Let us all exert our maximum effort toward success in November.

I thank you.

SENATE

THURSDAY, MAY 12, 1960

The Senate met at 10 o'clock a.m., and was called to order by the President pro tempore.

Rev. K. K. Haddaway, minister, Wesley Methodist Church, Washington, D.C., offered the following prayer:

Almighty God, we praise Thee for the creation of this wonderful world and for life which is resplendent with Thy glory. We do not understand the mysteries of life, but we rejoice in the great possibilities of knowledge as the vast unknown unfolds itself to all who seek.

We thank Thee for faith which enables us to march breast forward, for love which bears all things, for purity and goodness which are the strength of character, and for justice and truth which are the foundation of all human relations.

We pray for our beloved land and for all the children of the earth, for the sharing of the benefits of life, for the alleviation of suffering, and for a sure and lasting peace.

We pray for the Members of this assembly, that, realizing the privilege and opportunity which is theirs, they may go forward, believing in Thee. God grant that they may hold aloft the ideals of our great Nation and lead the world to a better day. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Wednesday, May 11, 1960, was dispensed with.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had agreed to the amendment of the Senate to the bill (H.R. 1607) for the relief of Mrs. Anne Morgan.

The message also announced that the House had passed a bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour; and I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the following committees and subcommittees were authorized to meet during the session of the Senate today:

The Housing Subcommittee of the Committee on Banking and Currency.

The Committee on Post Office and Civil Service.

The Special Investigating Subcommittee of the Committee on Agriculture and Forestry.

The Judiciary Subcommittee of the Committee on the District of Columbia.

PROTESTATIONS OF PREMIER KHRUSHCHEV

Mr. JOHNSON of Texas. Mr. President, it would seem to me that Premier Khrushchev is overplaying his hand. It is somewhat ridiculous for him to be making such pious protestations of outraged innocence when the whole world knows what the Soviet Union has been doing for years.

It is time that he stopped being sanctimonious and prepared to discuss the real issues that divide the world.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

AMENDMENT OF TITLE 10, UNITED STATES CODE, RELATING TO ADMINISTRATION OF OATHS BY CERTAIN PERSONS

A letter from the Secretary of Defense, transmitting a draft of proposed legislation to amend title 10, United States Code, to authorize certain persons to administer oaths and to perform notarial acts for persons serving with, employed by, or accompanying the Armed Forces outside the United States (with an accompanying paper); to the Committee on Armed Services.

PROPOSED TRANSFER BY NAVY DEPARTMENT OF MINESWEEPER TO MIAMI POWER SQUADRON, INC.

A letter from the Under Secretary of the Navy, reporting, pursuant to law, that the Department of the Navy proposes to transfer *Sandpiper* (MHC–38) to the Miami Power Squadron, Inc., Miami, Fla., for use as a training ship; to the Committee on Armed Services.

AMENDMENT OF DISTRICT OF COLUMBIA TRAFFIC ACT, 1925, RELATING TO OPERATION OF A MOTOR VEHICLE WHILE UNDER THE INFLUENCE OF A DRUG

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to amend the District of Columbia Traffic Act, 1925, as amended, and the Motor Vehicle Safety Responsibility Act of the District of Columbia, as amended, so as to bring within the provisions of such acts any person operating a motor vehicle while under the influence of a drug rendering such person incapable of operating the motor vehicle safely (with an accompanying paper); to the Committee on the District of Columbia.

REPORT ON EXAMINATION OF AIR FORCE CONTRACT WITH THOMPSON RAMO-WOOLDRIDGE, INC., CLEVELAND, OHIO

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the examination of the pricing of fuel booster pump repair kits under Department of the Air Force negotiated contract AF 01(601)–20268, with Thompson Ramo-Wooldridge, Inc., Cleveland, Ohio, dated May 1960 (with an accompanying report); to the Committee on Government Operations.

PERMISSION FOR SECRETARY OF INTERIOR TO REVOKE THE SCHOOL AND AGENCY FARM RESERVE ON LAC DU FLAMBEAU RESERVATION

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to permit the Secretary of the Interior to revoke in whole or in part the school and agency farm reserve on the Lac du Flambeau Reservation (with an accompanying paper); to the Committee on Interior and Insular Affairs.

ADDITIONAL APPROPRIATIONS FOR CHANNEL IMPROVEMENT OF THE MISSISSIPPI RIVER AND TRIBUTARIES

A letter from the Secretary of the Army, transmitting a draft of proposed legislation authorizing additional appropriations for prosecution of the channel improvement feature of the authorized project for the Mississippi River and tributaries (with an accompanying paper); to the Committee on Public Works.

MEMORIALS

Memorials were laid before the Senate and referred as indicated:

By the PRESIDENT pro tempore:

Memorials signed by Mrs. James King and sundry other citizens of the State of Wisconsin, remonstrating against the adoption of the resolution (S. Res. 94) relating to the recognition of the jurisdiction of the International Court of Justice in certain disputes hereafter arising; to the Committee on Foreign Relations.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. MAGNUSON, from the Committee on Interstate and Foreign Commerce, without amendment:

H.R. 9449. An act to amend certain sections of title 14, United States Code, relating to personnel matters in the U.S. Coast Guard, and for other purposes (Rept. No. 1345).

By Mr. MAGNUSON, from the Committee on Interstate and Foreign Commerce, with an amendment:

S. 1545. A bill to amend the Federal Aviation Act of 1958 so as to authorize elimination of a hearing in certain cases under section 408 (Rept. No. 1344);

S. 2375. A bill to amend part II of the Interstate Commerce Act in order to provide an exemption from the provisions of such part for the emergency transportation of any motor vehicle in interstate or foreign commerce by towing (Rept. No. 1343); and

S. 2867. A bill to give effect to the convention between the United States of America and Cuba for the conservation of shrimp, signed at Habana, August 15, 1958 (Rept. No. 1346).

AMENDMENT OF NATIONAL DEFENSE EDUCATION ACT, RELATING TO ELIMINATION OF CERTAIN AFFIDAVITS

Mr. CLARK. Mr. President, from the Committee on Labor and Public Welfare, on behalf of the Senator from Massachusetts [Mr. KENNEDY], I report favorably, without amendment, the bill (S. 2929) to amend the National Defense Education Act of 1958 in order to repeal certain provisions requiring affidavits of belief, and I submit a report (No. 1347) thereon. I ask unanimous consent that the report be printed, together with minority views of Senators GOLDWATER, DIRKSEN, and BRUNSDALE, and the individual views of the Senator from Vermont [Mr. PROUTY].

The PRESIDENT pro tempore. The report will be received and the bill will be placed on the calendar, and the report will be printed, as requested by the Senator from Pennsylvania.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HOLLAND:

S. 3535. A bill to amend the Internal Revenue Code of 1954 so as to permit certain ministers who have heretofore elected coverage as self-employed individuals for social security purposes to have their election for such coverage made effective with respect to their first taxable year after 1955; to the Committee on Finance.

By Mr. HAYDEN:

S. 3536. A bill for the relief of Yee Mee Hong; to the Committee on the Judiciary.

By Mr. CARROLL:

S. 3537. A bill to revise the boundaries of Dinosaur National Monument and provide an entrance road or roads thereto, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. FONG:

S. 3538. A bill for the relief of Aurelia Viernes; to the Committee on the Judiciary.

By Mr. MAGNUSON (by request):

S. 3539. A bill to authorize the Secretary of Commerce to utilize funds received from State and local governments and private organizations and individuals for special meteorological services; and

S. 3540. A bill to provide for exceptions to the rules of navigation in certain cases; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bills, which appear under separate headings.)

By Mr. SPARKMAN (for himself and Mr. CAPEHART) (by request):

S. 3541. A bill to provide additional financial facilities in the Federal National Mortgage Association, to provide for the incorporation of Federal mortgage investment companies, and for other purposes; to the Committee on Banking and Currency.

(See the remarks of Mr. SPARKMAN when he introduced the above bill, which appear under a separate heading.)

By Mr. SMATHERS:

S. 3542. A bill to amend part I of the Interstate Commerce Act by excluding express companies from the provisions of the fourth section; to the Committee on Interstate and Foreign Commerce.

RESOLUTION

STUDY FOR DETERMINATION OF POLICY ON NATIONAL CEMETERIES

Mr. SCOTT (for himself, Mr. CLARK, Mr. MOSS, Mrs. SMITH, Mr. RANDOLPH, and Mr. MCGEE) submitted the following resolution (S. Res. 321), which was referred to the Committee on Interior and Insular Affairs:

Resolved, That the Senate Committee on Interior and Insular Affairs, or any duly authorized subcommittee thereof, is authorized under sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, and in accordance with its jurisdiction specified by rule XXV of the Standing Rules of the Senate, to examine, investigate, and make a complete study of any and all matters pertaining to national cemeteries with a view to establishing and effectuating a uniform national policy with respect to the establishing and maintaining of such national cemeteries.

SEC. 2. For the purposes of this resolution the committee, from the date on which this resolution is agreed to until January 31, 1961, inclusive, is authorized (1) to make such expenditures as it deems advisable; (2) to employ upon a temporary basis, technical, clerical, and other assistants and consultants: *Provided,* That the minority is authorized to select one person for appointment, and the person so selected shall be appointed and his compensation shall be so fixed that his gross rate shall not be less by more than $1,200 than the highest gross rate paid to any other employee; and (3) with the prior consent of the heads of the departments or agencies concerned, and the Committee on Rules and Administration, to utilize the reimbursable services, information, facilities and personnel of any of the departments or agencies of the Government.

SEC. 3. The committee shall report its findings, together with its recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than January 31, 1961.

SEC. 4. Expenses of the committee, under this resolution, which shall not exceed $50,000, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

UTILIZATION BY SECRETARY OF COMMERCE OF CERTAIN FUNDS FOR METEOROLOGICAL SERVICES

Mr. MAGNUSON. Mr. President, by request, I introduce, for appropriate reference, a bill to authorize the Secretary of Commerce to utilize funds received from State and local governments and private organizations and individuals for special meteorological services. I ask unanimous consent that a letter from the Under Secretary of Commerce, requesting the proposed legislation, be printed in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 3539) to authorize the Secretary of Commerce to utilize funds received from State and local governments and private organizations and individuals for special meteorological services, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

THE SECRETARY OF COMMERCE,
Washington, D.C., May 9, 1960.

Hon. RICHARD M. NIXON,
President of the Senate,
U.S. Senate, Washington, D.C.

DEAR MR. PRESIDENT: There are attached four copies of a proposed bill "to authorize the Secretary of Commerce to utilize funds received from State and local governments and private organizations and individuals for special meteorological services."

There are also attached four copies of a statement of purpose and need in support thereof.

We are advised by the Bureau of the Budget that it would interpose no objection to the submission of this proposed legislation.

Sincerely yours,

PHILIP A. RAY,
Under Secretary of Commerce.

STATEMENT OF PURPOSE AND NEED FOR LEGISLATION TO AUTHORIZE THE SECRETARY OF COMMERCE TO UTILIZE FUNDS RECEIVED FROM STATE AND LOCAL GOVERNMENTS AND PRIVATE ORGANIZATIONS AND INDIVIDUALS FOR SPECIAL METEOROLOGICAL SERVICES

The Weather Bureau has often been requested by various State and local governments as well as private organizations and individuals to provide or undertake special meteorological investigations, tests, services, development projects, technical evaluations and other similar activities which the personnel and facilities of the Weather Bureau are specially capable of carrying out. It has become increasingly difficult for the Weather Bureau to perform such functions, which ordinarily cannot be effectively undertaken by any other organizations, because of the lack of adequate statutory authorization to utilize funds for these purposes which the requesting public or private agency would be willing to provide. The purpose of this proposed legislation is to enable the Weather Bureau to accept and use funds provided by State and local governments and private organizations and individuals for special services required by them which cannot be financed from available Weather Bureau resources.

Some instances in which the authorization herein proposed could be utilized for the benefit of local needs are as follows:

1. The State of California is embarking on a large-scale water resources program (headed by its new department of water resources) for which it requires a large increase in precipitation stations, in reporting, in maintenance, and inspection of stations, and in processing of data. The Weather Bureau's responsibility is national, with its available funds actually insufficient to cover the local needs of California. The State is willing to pay for the increase required to meet its needs. The necessary funds cannot be accepted and utilized by the Bureau unless the proposed legislation is enacted.

2. In 1955 the Kansas Water Resources Factfinding and Research Committee recommended to the Governor and legislature a "cooperative program with the U.S. Agricultural Research Service, U.S. Geological Survey, U.S. Weather Bureau, and U.S. Soil Conservation Service for comprehensive research in hydrology of small watersheds, requiring detailed data on all aspects of the water cycle and effects of man's operation. Estimated State funds, $150,000 per year for 20 years to be matched by Federal funds." But of the four Federal agencies mentioned, only the Weather Bureau cannot now accept and utilize the State funds.

3. Many thousands of communities on lesser tributaries and in headwater areas suffer devastating flash floods. With the support of the Weather Bureau's national main stem and tributary flood forecasting system and its developing radar network, these communities could be warned effectively in many cases after establishment of special local observational and reporting networks and communications, development of localized forecast and warning procedures, and educational liaison in planning actions based on warnings. The costs may average only a few thousand dollars per community per year. There are thousands of such communities, and the Bureau is able to serve only a token few with its available funds. The job could be done wherever the community felt it was sufficiently needed to pay for it—if the Bureau could accept and use funds made available by the community.

4. Fire-Weather Service of the Weather Bureau is another service which operates on a cost-sharing basis in many instances and which is handicapped in its operation by lack of adequate legislative authority. The service provides day-to-day forecasts and advices during the fire season and issues detailed localized operational forecasts for going fires. The Bureau is subject to a heavy demand from forest protection agencies for an expansion of this service to new areas. In most cases it is unable to provide the needed assistance. Enactment of the proposed legislation would greatly facilitate arrangements to provide additional badly needed services of this nature where Federal funds are not available but State or local governments are willing to help.

5. Agricultural weather services, particularly those requiring highly localized and detailed forecasts and special instrumentation, would be greatly benefited by enactment of the proposed legislation. This type of service cannot be adequately handled through the general forecast service and as a rule it is of direct benefit to a relatively small segment of the population. Accordingly, such services are often arranged on a cost-sharing basis where the recipients of the service assume a share of the costs involved.

The Horticultural Protection Service which operates in Florida, California, Washington, Oregon, and a few other States is a good example of a specialized weather service that often uses cost-sharing procedures. Under present law the cooperating agency is limited to furnishing such items as communication expenses and office quarters while the full salary of the employee must be paid by the Federal Government. This seriously limits the number of points where such service can be provided since the major expense must continue to be handled by the Federal Government. The Bureau has had many requests from all parts of the country for more agricultural weather service of the abovementioned type. Although cost sharing is one good way of furnishing more service of this kind, the Bureau is seriously handicapped by the present inability to utilize funds which the localities would be willing to furnish.

6. The Weather Bureau has, in the past few years, received several requests for special observations and assistance in the field of air pollution. Two specific examples of recent origin are the reques^ from the Los Angeles County Air Pollution Control District for the reinstitution of intermediate upper air soundings at Santa Monica, Calif., and the request from the San Diego County Air Pollution District for additional wind installations and additional upper air soundings in the vicinity of San Diego. There have been other similar requests in the past. The Bureau has generally met such requests either by declining on the basis of inadequate funds or, where consultation work and a minimum of observations would suffice, arranging for support through other agencies such as the Public Health Service or the Atomic Energy Commission. In light of the increased interest in air pollution, it can be expected that the number of these requests will increase, particularly for specialized observational data such as low-level radiosondes and additional wind measurements. The Bureau will be unable to accommodate most of these requests unless it can accept reimbursement.

On December 22, 1955, the Presidential Advisory Committee on Water Resources Policy recommended "continued cooperation with States and municipalities should be encouraged. Such cooperation serves to supplement the basic data programs of the Federal Government in fields in which there is substantial joint interest. State and local participation contributes to the fundamental programs for interpretation, analysis, and research which are primarily national in character and extent beyond the interests of any single geographical area. Federal matching of State financial support for data programs on a 50–50 basis has been mutually satisfactory and should continue to be a sound basis for such cooperation. Authorization for cooperative participation should be provided if necessary authorization is lacking."

The Bureau cannot provide the cooperation proposed unless legislation is enacted authorizing it to utilize State funds.

Harvey O. Banks, director of water resources, State of California, in supporting legislation such as here proposed, said: "In many areas, there is need to supplement the basic information now gathered in order that more detailed evaluation may be made of the nature and occurrence of water supplies. California is most vitally interested in the most efficient and complete control and utilization of its water resources to meet the needs of all beneficial uses.

"Therefore, it is the recommendation of the State of California that legislation be enacted by the Congress which would per-

mit agreements permitting cooperative financing between the Weather Bureau and non-Federal agencies under which the trained personnel of the Weather Bureau might be assigned to these cooperative endeavors to obtain and develop information and to make analyses thereof, in addition to that gathered under the Bureau's present basic responsibilities. If this legislation is enacted, we expect to take advantage of it, by entering into such a cooperative agreement at an early date."

Enactment of the bill transmitted herewith will make it possible for the Weather Bureau to provide more effective service to our localities and industry. We urge its prompt, favorable consideration by Congress.

EXCEPTIONS TO RULES OF NAVIGATION IN CERTAIN CASES

Mr. MAGNUSON. Mr. President, at the request of the Under Secretary of Commerce, I introduce, for appropriate reference, a bill to provide for exceptions to the rules of navigation in certain cases. I ask unanimous consent that the letter from the Under Secretary of Commerce, requesting the proposed legislation, be printed in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 3540) to provide for exceptions to the rules of navigation in certain cases, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

THE SECRETARY OF COMMERCE,
Washington, D.C., May 5, 1960.

The Honorable RICHARD M. NIXON,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: The Department of Commerce has prepared and submits herewith, as a part of the legislative program for the 86th Congress, 2d session, a draft of proposed bill to provide for exceptions to the rules of navigation in certain cases.

The proposed legislation is intended to permit the relatively few vessels having lights and day signals which extend vertically above the understructure of a bridge to depart from the rules of navigation that are ordinarily applicable on the particular waterway. It is proposed that the Secretary of the Department in which the Coast Guard is operating be authorized to prescribe such special rules, to be observed by vessels navigating under or near certain bridges, as in his judgment the public safety may require for the prevention of collisions.

The need for legislation along the lines of the proposed bill is established in the Department of Commerce report on "Navigational Clearance Requirements for Highway and Railroad Bridges," published in February 1955. The Bureau of Public Roads of this Department has been striving during recent years to obtain reasonable reductions in the navigational clearances required for highway bridges constructed with Federal-aid highway funds, with the objective of reducing the cost of the navigational increment of highway bridges whenever and wherever it is feasible without unduly affecting the reasonable requirements of waterway transportation. One of the problems involved is the need for relatively high navigational clearances to permit vessels engaged in coastal trade to operate on inland waters with navigational lights that conform to the international rules of the road. The international rules necessitate the carrying of navigational lights at an elevation substantially higher than that required under the rules applicable on inland waters and navigational lights which conform to the international rules are in some cases permissible and in some cases required on seagoing vessels operating on inland waterways. On the other hand, navigational lights which conform to the rules generally applicable to inland waterways, do not meet the requirements of the international rules.

Studies of bridge costs indicate that substantial amounts of additional funds are required to construct bridges with vertical clearances sufficient to pass vessels equipped with the navigational lights required under international rules over that which is required to pass vessels equipped with the navigational lights required under the rules applicable on inland waters. The matter is also pertinent with respect to movable bridges. In many instances, vessels operating with navigational lights required under the rules applicable on inland waters can pass under existing movable bridges in closed position, but it is necessary to open these bridges for the same or similar vessels if they are equipped with navigational lights required under the international rules. This is particularly important in urban areas where the large volume of highway traffic delayed by the bridge opening results in a substantial economic loss to the community.

It is believed that the enactment of the proposed legislation would result in savings in bridge construction and operation costs which would benefit principally the Federal aid, State, and local highway programs. The proposed legislation, and the special rules that would be issued thereto, would provide official recognition for effective treatment of a rapidly growing problem in surface transportation relationships.

The enclosed draft bill is based upon section 4 of a draft bill submitted to the Congress on February 18, 1959, which, among other things, would amend section 502 of the General Bridge Act of 1946. S. 1126 and H.R. 7153, 86th Congress, 1st session, are identical to this earlier draft bill. It is now believed desirable and appropriate that the matters presented herein be considered as separate legislation.

The Department of Commerce recommends this proposed legislation for favorable consideration of the Congress.

Sincerely yours,

PHILIP A. RAY,
Under Secretary of Commerce.

RESERVE FORCES FACILITIES ACT OF 1960—AMENDMENTS

Mr. BYRD of Virginia submitted amendments, intended to be proposed by him, to the bill (H.R. 10777) to authorize certain construction at military installations, and for other purposes, which were ordered to lie on the table and to be printed.

INDEPENDENT OFFICES APPROPRIATION BILL, 1961—AMENDMENT

Mr. JAVITS. Mr. President, I am today submitting, for printing and appropriate reference, an amendment to the independent offices appropriations bill which would prevent Federal funds from being used to help construct airport terminals which will contain racially segregated facilities, including segregated waiting rooms, restaurant facilities and restrooms.

A 1955 regulation bans the use of funds under the Federal-aid airport program for "the development of separate facilities of space in airport buildings when such facilities or space are designed for use now or in the future for separate racial groups." However, I have learned that approximately $600,000 under this program has been spent on plant construction in five airports to contain segregated facilities located in Birmingham and Montgomery, Ala.; in Meridian and Natchez, Miss.; and Tallahassee, Fla. In each case, local authorities complied with the FAA requirement in using Federal Government money but local funds were used to construct the particular facilities which were segregated. Nearly half a million dollars in the pending Federal-aid airport appropriations request is earmarked, according to the Federal Aviation Agency, for terminal construction grants to the Birmingham and Tallahassee airports which currently maintain segregated facilities.

I was surprised to learn from an exchange of letters with the FAA that the Agency permits Federal funds to aid in the construction of airport administration buildings including passenger terminals which contain facilities constructed with local funds which are segregated—like waiting rooms, eating facilities and restrooms. The fact that local funds and not Federal funds are actually used to build such segregated facilities within the federally aided airport building is absolutely no reason for avoiding our national policy against segregation.

The very existence of such segregated public facilities has been ruled as illegal repeatedly by the U.S. courts on the grounds that they violate rights guaranteed under the 14th amendment of the Constitution. Therefore, allowing local authorities in Southern States to build what amounts to segregated "oases" inside buildings constructed with hundreds of thousands of dollars of Federal Government aid looks like tacit approval of a procedure we would not countenance directly. Surely to the average air traveler, the impression is created that the Federal Government has been a partner in the undertaking.

General Quesada states in his letter to me of April 15:

> The Federal Aviation Agency does not require any local airport owner or operator to placard or otherwise designate segregated facilities as having been built solely with local funds, or that the Federal Government does not support such indices of segregation.

I believe that the Federal Aviation Agency and General Quesada are just as opposed as I am to segregated facilities in airports, but I regret to say that to my mind whatever may be its construction of its mandate, there can be no such thing as the Agency's position that it is not responsible if local authorities choose to sidestep the Federal law; this position seems to me to contradict established policy and vigorous efforts of the Eisenhower administration to condemn and end segregation practices in

all programs in which the Federal Government is directly involved as I have described.

It was President Eisenhower who saw to it that previous Executive orders banning segregation in the armed services were fully implemented. He established both a Government Employment Policies Committee and a Committee on Government Contracts to help end discrimination in employment. He saw to it there was prompt compliance in the District of Columbia with the Supreme Court's order for desegregation of the public schools. And in 1957, the administration proposed broad-scale civil rights legislation which led to the enactment of the first major bill in that field in some 80 years and again this year, a voting rights bill was passed to strengthen the Attorney General's hand in cases brought under the 1957 act.

Also, in the FAA's own field, transportation, the Interstate Commerce Commission under this administration ended "Jim Crowism" in interstate bus and train travel, and has sought to end segregated facilities in passenger terminals despite the fact that no Federal funds were involved in their construction.

That stacks up as a good record and should be further buttressed with action to prevent segregated facilities in airline terminals.

It should be clearly understood that facilities or equipment which contribute to air safety are not involved; as they can be established separately from airport terminal construction. The funds which my amendment would affect pertain solely to administration buildings including passenger terminals, and there the expenditure of these funds should be authorized in such a way as to promote—not to tend to frustrate—national policy which clearly does not condone segregated facilities for use by interstate travelers. Commitments already made are a problem but I cannot see that we can avoid scrutiny of the whole matter on that account, if we did we might never catch up with the situation if appropriations succeeded instead of preceding commitments.

Hearings are scheduled to begin next Monday, May 16, before the Senate Appropriations Committee on the independent offices bill which contains the Federal aid airport program including the request for nearly $500,000 to help pay for the completion of terminal construction for the airports in Birmingham and Tallahassee which will contain segregated facilities. I hope that the committee will have an opportunity to delve thoroughly into this contemplated expenditure and look with favor on my amendment.

I ask unanimous consent that the amendment may be printed in the RECORD, together with my exchange of correspondence with the Administrator of the Federal Aviation Agency, and a copy of the 1956 memorandum setting forth the airport building policy followed by the FAA in dealing with localities which desire to build segregated facilities within the federally aided airport buildings.

The PRESIDENT pro tempore. The amendment will be received, printed, and appropriately referred; and, without objection, the amendment, correspondence and memorandum will be printed in the RECORD.

The amendment was referred to the Committee on Appropriations, as follows:

On page 10, line 9, strike out the period, insert a colon and the following:

"*Provided*, That no payments shall be made out of appropriations for the liquidation of contract obligations entered into under such authority, which provide for the construction of airport terminal buildings containing racially segregated dining or other facilities, whether or not the portions of such buildings containing such segregated facilities have been constructed without Federal contributions."

The correspondence and memorandum presented by Mr. JAVITS are as follows:

FEDERAL AVIATION AGENCY,
Washington, D.C., April 15, 1960.

Hon. JACOB K. JAVITS,
U.S. Senate, Washington, D.C.

DEAR SENATOR JAVITS: I am pleased to answer the questions you asked me in your letter of March 30, 1960, pertaining to the Montgomery, Ala., airport.

For your convenience, I shall restate your questions in the order in which you asked them.

1. Would the Agency have approved a project which omitted dining and restroom facilities completely if the State refused to permit the inclusion of desegregated facilities in an integral project?

The Federal Aviation Agency would approve a project which omitted dining and restroom facilities under such circumstances. The Federal Aviation Agency does not presently participate in the costs of constructing dining facilities. In numerous instances, we have approved projects which omitted dining facilities and we do so now. Because of the need of funds for high priority safety facilities such as runways, lighting, taxiways, proper approaches, etc., there are no allocations of funds in 1960 for terminal building construction. Additionally, our 1961 program contains only one allocation of funds for terminal construction and that building is on the Butte, Mont., airport. In almost all circumstances, we would require restrooms to be provided. However, if a sponsor proposed to provide such facilities on a segregated basis, we would deny to that sponsor any Federal funds for application to that purpose.

2. Is there any requirement of physical separation of the facilities paid for by local government and those in which the Federal Government shared other than the computation of costs for those areas (including allocated cost of shared foundations, heating facilities, and other common services) determined on a computed basis?

There is no requirement that such facilities be physically separated from those which are built in part with Federal funds.

3. Is there any indication to the public using these facilities, which I assume are commonly known as being federally assisted, to make clear to them that the Federal Government is not supporting these indices of segregation?

The Federal Aviation Agency does not require any local airport owner or operator to placard or otherwise designate segregated facilities as having been built solely with local funds, or that the Federal Government does not support such indices of segregation.

4. Is it a proper Federal policy to encourage, or even permit, any effort to circumvent the Federal Government's policy against discrimination in such facilities as clearly and repeatedly interpreted by the Supreme Court?

As we stated to Mr. LeFlore in our correspondence, a copy of which we sent to you, our policy does not, in our opinion, encourage segregation. In fact, our experience indicates that our policy has the opposite effect.

The Federal Airport Act has been amended numerous times by the Congress. It has always been informed as to the administration of the act and has not seen fit to require local sponsors of Federally aided airport projects to desegregate facilities constructed solely with local funds in order to obtain Federal funds for construction of needed facilities. The Federal Airport Act requires the Administrator of the Federal Aviation Agency to consider projects which are necessary to provide a system of public airports adequate to anticipate and meet the needs of civil aeronautics. We believe our policy has served effectively to enable the Federal Aviation Agency to meet and carry out its responsibilities to promote needed airport development and, at the same time, to deny financial assistance for construction of facilities for use by separate racial groups.

If I can be of further service to you, please let me know.

Sincerely,

E. R. QUESADA,
Administrator.

MARCH 30, 1960.

Hon. E. R. QUESADA,
Administrator, Federal Aviation Agency, Washington, D.C.

DEAR GENERAL QUESADA: I have read with great interest the letter to me of March 14 of Mr. Daggett H. Howard, General Counsel of the FAA respecting a situation which was called to my attention by citizens of Mobile, Ala., which involves a discrimination in facilities constructed through the use of Federal funds. I am seriously concerned that the expression of the FAA's policy in this letter permits the use of Federal funds for a facility while continuing racially discriminatory policies in violation of the 14th amendment. This apparent policy of permitting the use of Federal funds for the construction of all terminal facilities except some arbitrarily separated sections which the State wishes to segregate appears to be not only frustrating of a proper national policy, but also tends to encourage denial of the constitutional rights of American citizens.

For example, the file forwarded to me by Mr. Howard indicates that the terminal at Mobile, Ala., was financed in part by Federal funds, except that the restrooms, waiting rooms, dining rooms and kitchen areas, comprising 5,405 square feet of space, were paid for entirely by the locality apparently so that they could be segregated.

In view of this situation, I would very much appreciate your comments on the following questions:

1. Would the Agency have approved a project which omitted dining and restroom facilities completely if the State refused to permit the inclusion of desegregated facilities in an integral project?

2. Is there any requirement of physical separation of the facilities paid for by local government and those in which the Federal Government shared other than the computation of costs for those areas (including allocated cost of shared foundations, heating facilities, and other common services) determined on a computed basis?

3. Is there any indication to the public using these facilities, which I assume are commonly known as being Federally assisted, to make clear to them that the Federal

Government is not supporting these indices of segregation?

4. Is it a proper Federal policy to encourage, or even permit, any effort to circumvent the Federal Government's policy against discrimination in such facilities as clearly and repeatedly interpreted by the Supreme Court?

Your comments on this most disturbing matter will be very much appreciated.

Sincerely,

JACOB K. JAVITS.

FEDERAL AVIATION AGENCY,
Washington, D.C., March 24, 1960.

HON. JACOB K. JAVITS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JAVITS: Your memorandum of February 12, 1960, pertaining to Mr. LeFlore's letter of February 2, 1960, has been referred to this office for reply.

We have had several exchanges of correspondence with Mr. LeFlore relating to the terminal building at the Montgomery, Ala., airport. We are enclosing copies of Mr. LeFlore's letters to the Agency and the replies thereto.

We believe that our letters to Mr. LeFlore explain that no violation of the Agency policy in connection with construction of the terminal building in question has occurred.

We are also returning the copy of Mr. LeFlore's letter transmitted with your memorandum.

Sincerely yours,

DAGGETT H. HOWARD,
General Counsel.

JANUARY 22, 1960.

MR. J. L. LEFLORE,
Mobile, Ala.

DEAR MR. LEFLORE: We conclude from reading your letter of January 7, 1960, that you apparently have misinterpreted our letter to you dated December 4, 1959. We are glad to further explain our policy pertaining to segregation of the races at those public airports where Federal-aid airport funds have been expended.

Since the inception of our policy, which we quoted in our preceding letter, no Federal-aid airport funds have been expended for the development of facilities or space in the terminal building at Dannelly Field for use by separate racial groups. The terminal building in question was constructed in part with Federal funds. However, that portion of the terminal building intended for use by separate racial groups was financed wholly by the city of Montgomery. This portion includes the rest rooms, waiting rooms, dining rooms, and kitchen area comprising 5,405 square feet of space for which, in accordance with our policy, no Federal funds were spent.

Sincerely yours,

ROBERT P. BOYLE,
(For Daggett H. Howard, General Counsel.)

THE CITIZENS' COMMITTEE,
Mobile, Ala., January 7, 1960.

MR. DAGGETT H. HOWARD,
General Counsel, Federal Aviation Agency,
Washington, D.C.

DEAR MR. HOWARD: This is to acknowledge your letter of December 4, 1959, with regard to segregation complaints made in certain communications of ours to the Federal Aviation Agency relative to separate waiting rooms at the Montgomery Airport and train and bus stations or depots at Biloxi, Miss., and Selma and Montgomery, Ala.

The opinion stated by you with regard to the Montgomery Airport waiting room segregation question has perturbed several competent attorneys who have studied the matter since your December 4 letter was received.

In connection with the Biloxi waiting room segregation policy, enforced by police power, the matter was brought to the attention of the Federal Aviation Agency in view of a suggestion offered in a letter from the Department of Justice. Biloxi is the location of the Keesler Air Force Base.

The Montgomery situation, where a new airport was constructed with the aid of Federal funds and where separate waiting rooms are maintained for white and colored Americans, with segregation enforced by the city, is confusing to us because of the opinion expressed by you which, we feel, negates the general policy of the Federal Aviation Agency on the racial proscription question.

You quoted the Aviation Agency's policy for administering the Federal aid airport program, Code of Federal Regulations, title 14, part 550.23, .24 and .25, subsection 24(i)(5), to read as follows:

"No Federal aid airport program funds will be made available for the development of separate facilities or space in an airport building when such facilities or space are designed for use now or in the future for separate racial groups."

Your assertion that this policy was complied with fully seeks to ignore the fact that segregation of the races is now being practiced at the Montgomery Airport which, in our opinion, stultifies the purposes of the said subsection 24(i)(5).

May we respectfully inquire of you as to whether the word "future" in the said subsection 24(i)(5) has any significance whatever relative to the present segregation policy at the Montgomery Airport?

With every good wish, I am,

Very sincerely yours,

J. L. LEFLORE,
Director, Civil Rights Casework.

DECEMBER 4, 1959.

MR. JOHN L. LEFLORE,
Mobile, Ala.

DEAR MR. LEFLORE: We have several letters from you, two dated November 9, 1959, and two others dated respectively November 14 and November 20, 1959, with reference to discrimination at the municipal airport in Montgomery and at railroad and bus stations serving airfields on military installations at Biloxi, Selma, and Montgomery.

This agency has no jurisdiction or authority to take action with reference to any military installations or any railroad or bus terminals.

Your letter of November 14 referred to the use of Federal funds in the construction of the Montgomery airport. The general policy of this agency for administering the Federal aid airport program is published in the Code of Federal Regulations, title 14, part 550.23, .24, and .25.

Subsection 24(i)(5) of the part contains the following statement:

"No Federal aid airport program funds will be made available for the development of separate facilities or space in an airport building when such facilities or space are designed for use now or in the future for separate racial groups."

This policy was complied with fully in the construction of the terminal at the Montgomery airport.

Apart from the stated policy, you realize, of course, that the Federal Government does not certificate airports and that the airport in Montgomery is owned and operated by the city of Montgomery and is subject to its sole control.

The authority of this Agency with reference to the matters described in your letters is confined to the administration of the grant program within the limitations of the approved policies referred to above.

Sincerely yours,

DAGGETT H. HOWARD,
General Counsel.

AIRPORTS POLICY AND PROCEDURE MEMORANDUM NO. 41

DEPARTMENT OF COMMERCE,
CIVIL AERONAUTICS ADMINISTRATION,
Washington, D.C., April 6, 1955.

To: All holders of the Office of Airports Field Operations Manual.

From: Administrator of Civil Aeronautics.

Subject: Airport building policy—segregation.

Programing Standard G(3), as stated in the "Policies and Procedures" booklet, dated October 1, 1955, reads as follows:

"(3) No Federal-aid airport program funds will be made available for the development of separate facilities or space in an airport building when such facilities or space are designed for use now or in the future for separate racial groups."

The purpose and intent of the policy expressed in this programing standard is to prevent the use of Federal funds to further or to increase racial segregation in airport buildings. Under this policy, Federal-aid airport program funds will not be used in the construction or reconstruction of any areas of a building which are intended for use by separate racial groups.

It will, therefore, be required, prior to the issuance of a grant offer for any project involving a building, that the chief executive officer of the sponsor of each building project clearly state, in writing, whether or not it is the intent of the sponsor that all of the areas and facilities in the building will be available without regard to race, creed, or color, and are intended to be operated on a nonsegregated basis.

If not, it will be necessary that the written statement describe those areas and facilities within the building which are intended for segregated use.

If so, a simple written statement to this effect will suffice, unless the building will, upon completion, contain separate facilities, such as two or more waiting rooms, two or more dining areas, or two or more sets of sanitary facilities (a set consisting of one rest room for men and one rest room for women), etc. In this event, the sponsor's written statement shall, in addition, specifically point out the reason for providing such duplicate facilities and the intent of the sponsor in providing them.

If the written statement of the sponsor describes areas within the building that are intended for segregated use, such areas will not be eligible for, and will be excluded from, Federal-aid airport program participation. This will be accomplished by a special provision in the grant offer clearly specifying the ineligible space.

Where single facilities (one waiting room, one dining area or one set of sanitary facilities) are provided, from which it is intended that any person will be excluded on the basis of race, creed or color, such segregated areas will be excluded from the project.

Where duplicate facilities are provided, intended for segregated use, the areas involved in such duplicate facilities will be excluded from the project. For example:

(a) If separate waiting rooms for segregated use are provided, all waiting room areas will be excluded.

(b) If separate dining areas are provided for segregated use, all dining, kitchen and related areas will be excluded.

(c) If separate sanitary facilities are provided for segregated use, all areas involving sanitary facilities will be excluded.

This policy will apply to all types of building construction work, including the construction of new buildings, the construction of additions to existing buildings, and the remodeling, alteration or repair of existing buildings, and will apply whether the work

consists of the completion of a facility or its partial completion, such as the roughing-in of utilities.

The allowable costs of a building project, which include space and/or facilities excluded from Federal participation in the grant agreement, will be determined on the basis of an equitable distribution of the costs of the eligible and ineligible space and/or facilities. This, of course, should be taken into consideration in computing the maximum obligation of the Government as stated in the grant offer.

Any unusual cases which are not clearly covered by this policy will be presented to the Administrator for final determination.

C. J. LOWE.

AMENDMENT AND EXTENSION OF SUGAR ACT OF 1948—ADDITIONAL COSPONSOR OF BILL

Mr. ELLENDER. Mr. President, I ask unanimous consent that the name of the Senator from Hawaii [Mr. FONG] be added as a cosponsor of Senate bill 3361, to amend and extend the provisions of the Sugar Act of 1948, introduced by me on April 14, 1960.

The PRESIDENT pro tempore. Without objection, it is so ordered.

NOTICE OF PUBLIC HEARINGS ON GOVERNMENT PATENT POLICY

Mr. O'MAHONEY. Mr. President, as chairman of the Standing Subcommittee on Patents, Trademarks, and Copyrights of the Committee on the Judiciary, I wish to announce that the subcommittee has scheduled public hearings on Government patent policy, to commence on Tuesday, Mav 17, 1960.

The hearing is set for 10:30 a.m., in room 2228, New Senate Office Building.

The following is the general order for appearances of witnesses: U.S. Senators; the heads of the following departments and agencies: General Accounting Office; Health, Education, and Welfare; Veterans' Administration; General Services Administration; Post Office Department; Tennessee Valley Authority; National Science Foundation; Department of Agriculture, and the Department of the Treasury.

Anyone wishing to file a statement for the record should communicate immediately with the office of the Senate Patents, Trademarks, and Copyrights Subcommittee, room 349A, Senate Office Building, Washington 25, D.C,, telephone Capitol 4–3121 or Government Code 180, extension 2268.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. GOLDWATER:

Address by him delivered before the U.S. Chamber of Commerce on May 4, 1960.

TRIBUTE TO VERNON L. TALBERTT

Mr. JOHNSON of Texas. Mr. President, today we are celebrating an anniversary which is of great sentimental value to all Members of the Senate. This is the 50th anniversary of the day that Vernon L. Talbertt entered on his long career of Senate employment.

I am sure every Senator knows and respects Vernon Talbertt. He is the Chief Messenger in the office of the Secretary of the Senate, and, Mr. President, he has already become part of the history of the Senate.

He has served for half a century, and under Secretaries going all the way back to Charles G. Bennett of New York.

History has been written before his eyes, and his calm approach and his always judicious temperament have made an important contribution to the smooth operation of the Senate. I believe that every Senator considers Vernon L. Talbertt to be a personal friend, and we want him to know that we wish him a very happy anniversary, with many more to come.

One of the fine things about service in this great deliberative body is the loyalty, the efficiency, the dedication of so many faithful employees. I doubt that there is any institution in this country that, over the years, has produced men and women who serve more faithfully, more competently, and more loyally than do the employees of the U.S. Senate; and Vernon Talbertt is one of the examples of those who possess those attributes.

Mr. DIRKSEN. Mr. President——

The PRESIDING OFFICER (Mr. HOLLAND in the chair). The Senator from Illinois.

Mr. DIRKSEN. Mr. President, how well and true it was said long ago that they also serve who only stand and wait. In this connection I think of Vernon Talbertt, who for 50 years, with the exception of a short period of military service, has served the Senate and the office of the Secretary of the Senate under both Republican and Democrat administrations and has done it in such a gracious and efficient manner as to evoke the praise and the respect of all who came to know him.

When he came into the service of the Secretary of the Senate as a messenger on May 12, 1910, the 61st Congress was in session, and to me it is always interesting to go back and pick up the historical stitches to get a better idea of what is implied by 50 years of continuous service.

In the Senate of the United States when Vernon Talbertt first came to duty in the Secretary's office, the Senate roll, among others, included such history-making names as Oscar Underwood, of Alabama, William E. Borah, of Idaho, Shelby Cullom, of Illinois, and Albert Beveridge, of Indiana. It included Charles Curtis, of Kansas, who later became Vice President. It included Henry Cabot Lodge, and the celebrated wit, Chauncey Depew, of New York. It included Elihu Root, who became Secretary of State. It included Boies Penrose, of Pennsylvania, Robert M. La-Follette, of Wisconsin, Nelson Aldrich, of Rhode Island, whom we always remember in connection with the tariff. It included Benjamin R. Tillman, who, I think, was known as "Pitchfork Ben." It included Reed Smoot, of Utah. All these men made history, and their names became familiar to several generations of Americans. They were here when Vernon Talbertt entered service in the Senate.

In the House of Representatives, in the 61st Congress, was Joseph Knowland, of California, the father of my distinguished predecessor, the former minority leader, Senator Knowland.

The House roll also included James Mann, of Illinois, regarded as probably one of the outstanding parliamentarians who ever came to Congress. It included also Frank O. Lowden, of Illinois, who married the daughter of Mr. Pullman, of Pullman car fame, and who later became Governor of Illinois. It included the very colorful Joseph G. Cannon, the Speaker, of Danville, Ill. It included William Fordney, of tariff fame, from Michigan, and Cordell Hull, of Tennessee, who later came to the Senate, and then became a distinguished Secretary of State. It included James Tawney, of Minnesota, who became the chairman of the Appropriations Committee, and whose son is a part of the staff of the minority leader. It included Andrew Volstead, whose name for generations was associated with all things dry and, shall I say, ultratemperate. It included George Norris, of Nebraska, who later came to the Senate, and also Nicholas Longworth, son-in-law of Theodore Roosevelt, who was to become the Speaker of the House. It included Carter Glass, of Virginia, who told me once he never made a speech in the House in 13 years, which indicates how guarded he was, and yet what distinguished service he rendered, not only in the House of Representatives, but in the Senate of the United States. It also included Frank Mondell, of Wyoming, who became the Republican leader in the House.

They were all here in the House and in the Senate when Vernon Talbertt began his services with the Secretary of the Senate on May 12, 1910, as a messenger; and when Vernon Talbertt entered Senate service, Alaska, Arizona, Hawaii, and New Mexico were all territories; they were not States. So he has seen four stars added to the flag in the time of his service in the Senate.

I think it makes a person conscious of the fact that the life of the Republic is just an endless stream and that this Republic is still young, for it takes less than four periods of service such as that of Vernon Talbertt to span the whole life of this Republic. It is not time that marches on, but it is men who march through time, and as they do, they make history, in one way or another.

So Vernon Talbertt, in his quiet and gentle and gracious way, has also made history by his outstanding service, and when I say outstanding service, I include humble service to others who have served here with him.

So today, after 50 years of service, I salute a kindly man, one with a kindly face. I have frequently said to Mr. Johnston, Secretary of the Senate, that I have never encountered a man upon whose countenance there was chiseled the grace and the sweetness that must be a reflection of the inner life of the man.

Today we salute Vernon Talbertt. I am delighted to have an opportunity to do so.

Mr. MANSFIELD. Mr. President, I wish to join the leadership in their commendation of Vernon Talbertt, and their congratulations to him on the 50th anniversary of the start of his service in the Senate of the United States. I agree with everything which has already been said by both the distinguished majority leader, the Senator from Texas [Mr. JOHNSON], and the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN].

Vernon Talbertt has served eight Secretaries of the Senate, both Republican and Democrat. Possibly the figure should be nine, because of the fact that Leslie Biffle served in that office on two occasions.

Vernon's service to the Senate outdates the service of any Member of the Senate or of the House of Representatives. It has been a service of love on the part of Vernon Talbertt. It has been recognized with respect and affection by the membership of this body. In his way he is truly a great man. He is kind. He is gentle. He is understanding. While the contributions he has made may not go down in the history books of our Nation, nevertheless they will be remembered with affection and respect by all of us who have had the honor to know him, to call him friend, and to see him as the occasion demanded.

Mr. HUMPHREY. Mr. President, I wish to join with the leadership and my colleagues in the Senate in paying much deserved and I believe long overdue tribute to Vernon Talbertt, who is the invaluable aid to the Senate Secretary, and who has been the chief messenger of the Senate Secretary's office for these many years.

Vernon is more than a Senate aid. He is a neighbor. He is a friend. He is a companion. I for one wish to thank him for the many kindnesses he has extended to me personally. I thank him for the friendly and happy countenance which is always his, which gives Members of the Senate who, on occasion, become a little brittle, sometimes discouraged and sometimes even distressed, a note of encouragement and a feeling of happiness and contentment.

Vernon Talbertt has served the Senate of the United States for 50 years. The majority leader indicated to me a moment ago that Vernon Talbertt was here when the majority leader was less than 2 years old. Even with the great qualities our majority leader possesses he could hardly have been a Senate leader at that tender age, when Vernon Talbertt was helping U.S. Senators be better Senators and giving them comfort, guidance and helpfulness in those early days.

Vernon Talbertt was here when the senior Senator from Minnesota was yet unknown—unborn. He was here 1 year before my birth. It goes without saying that I should look to him for guidance, since he is my elder and has had so many more years of experience.

What I like best about this man are his genuine qualities of integrity, faithfulness, fidelity, and loyalty not only to his work but also to those with whom he associates.

I say, most respectfully, that certain officers of the Government could take from Vernon Talbertt a good lesson in what we call honorable public service. I suppose there is no man in the U.S. Government who has heard more of the intimacies and more of the problems of Government than has Vernon Talbertt. He listens to Senators talk among themselves, as we say, when they are "with their hair down," talking frankly and candidly. Never a word of what he so hears is ever revealed; never a word is ever spoken. The State Department could well exemplify some of these qualities. When I think of the number of leaks from Federal agencies which seem to find their way into newspaper columns, I suggest that the good qualities of trustworthiness and faithfulness which are exemplified by Vernon Talbertt should be the standard for all good public servants to follow.

I conclude, Mr. President, by saying to our good friend Vernon, he makes our experience in the Senate a little more enjoyable. He makes Senators who occasionally have a tendency to think they are public figures become human beings, simply men, simply people. He has a capacity for soothing the nerves and sort of cleansing the soul and enlightening the mind.

To Vernon Talbertt I express my profound gratitude and appreciation for his personal friendship, for his kindnesses, and for his constant courtesy each and every day.

Mr. KUCHEL. Mr. President, this is a unique milestone in the life of a loyal and sweet-tempered American who now concludes a half century of service for the U.S. Senate. Vernon Talbertt began his labors in the year in which I was born, and in the swiftly passing intervening years he has seen history unfold in all her allure and her splendor as humankind has falteringly advanced, and, on too many occasions, has encountered her repeating tragedies.

During all that period of time Vernon has had literally a front seat on the center aisle in this free parliamentary body to see the events of the period from 1910 to now unfold. He has seen, on moving occasions, the Congress of our country declare war. He has seen, in equally thrilling moments, the Congress determine to pass legislation in the interest of our people and, if I may say so, in the interest of all mankind.

From time to time I have heard Vernon reminisce, as I have asked him to do so, and speak of some of our predecessors of whom so eloquently our minority leader spoke. I was interested in those who had the honor to represent my State in the days gone by. I have heard Vernon describe some of the outstanding Members of the Senate from California in bygone times. They have been thrilling recollections for me to listen to.

I join my friends on both sides of the aisle in wishing Vernon Talbertt godspeed for many years ahead, and many years of continuing happy service in the Senate, as one who each day has been of invaluable assistance to some of us in easing our way along our pathway in the Senate.

Mr. BUSH. Mr. President, it has not been my privilege to visit the office of the Secretary of the Senate in recent years as much as I would have liked, although in my first 2 years of service I did most enjoyably frequent that office. Why there has been this change in the last 6 years I suppose is best known to the voters, who have returned a Democratic majority to the Senate of the United States. Nevertheless, I am occasionally the guest of my good friend, the Secretary of the Senate, and it is always a pleasure then to refresh my friendship with and my original impressions of Vernon Talbertt formed in 1953 and 1954.

I remember the impression this very kindly man made upon me. In this day, when people are rather careless about their manners and conduct, I have the impression that Vernon Talbertt's conduct presents what I would call the ultimate in courtesy. He is a kindly and a gentle man in his relationships with all of us, and I presume with everybody. We lay great stress in this body upon senatorial courtesy, which I believe is a very fortunate practice. It makes for restraint. It makes for good feeling when bad feeling might prevail. But in this able friend who has now served 50 years in the Senate, we have one of the outstanding examples of senatorial courtesy, and it is most agreeable to have people work with us who have this concept of courtesy. By their example they inspire all of us perhaps to be more courteous in our relationships with others. So I am very happy to join today in congratulating Vernon Talbertt upon the splendid accomplishment of 50 years of service to the Senate.

Mr. ENGLE. Mr. President, I wish to join in the tributes which have been paid to 50 years of courteous, patient and wonderful service in the Senate by Vernon Talbertt. In a unique way he has reflected the dignity, the tradition and the history of the Senate. We compliment him upon a half century of faithful and wonderful service to the greatest legislative body in the world.

The Senate, perhaps foremost among governmental institutions, honors stability, continuity and tradition. It is especially fitting, therefore, that this tribute should be paid to Vernon Talbertt on the completion of a half century with the office of the Secretary of the Senate. I have had the personal opportunity since I came to the Senate to learn of Vernon Talbertt's efficiency, his constant good humor, and his devotion to duty; and it is an especially happy occasion for me to join in the congratulations on this golden anniversary and to wish Vernon many more years of happiness, good health and service to the Senate.

Mr. TALMADGE. Mr. President, I desire to join the distinguished majority leader, the minority leader, and other Senators in paying justly deserved tribute to the long and faithful service of Vernon Talbertt as assistant to the Secretary of the Senate. Service in the

Senate for a period of 50 years is truly of historical significance. Vernon has seen through the eyes of the Senate, World War I, World War II, the Korean war, and now the extreme difficulties in which we are engaged in the cold war with the Communist world. I have found Vernon to be efficient, able, dedicated, courteous, polite, ever cooperative, faithful in all of his endeavors. I congratulate him on his long, honorable, and efficient service.

Mr. MUSKIE. Mr. President, I should like to join my many colleagues in the Senate in honoring Vernon Talbertt on his 50th anniversary as a Senate employee. His long record of loyal service should be a source of great pride to him, as I am sure it is an inspiration to all of us who are dedicated to the Senate as an institution. I can well imagine what a deep sense of satisfaction it must be for him to reflect on the many historic moments he has witnessed during his half century of service.

To him go my heartiest congratulations for a job well done and many good wishes for the years to come.

Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished junior Senator from Wyoming [Mr. MCGEE].

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MCGEE

Today marks the 50th anniversary of service performed by Vernon Talbertt. Vernon, as he is affectionately known to us in the Senate, has served with dignity and distinction. He has been especially helpful to new Members and their staffs as they assume their duties in the Senate; and I am pleased to join my colleagues in paying tribute to this outstanding employee. I wish him well, and trust he will be able to serve the Senate for another 50 years.

Mr. MOSS. Mr. President, it is hard for those of us who have recently come to the Senate to contemplate the full import of 50 years of service to this body. Vernon L. Talbertt, the Chief Messenger in the office of the Secretary of the Senate, who today celebrates his golden anniversary as a Senate employee, was going about his tasks before many of us were born.

There is little one can say that compensates for so many years of steady and devoted service. If his satisfaction in a job well done is half as great as that of the Senate, this should indeed be a gratifying day for him.

From the first time I met Vernon, and on every subsequent occasion, he has been pleasant, courteous, devoted, and efficient. I am sure the many men in public life whom he has served could say the same. We all wish him well.

Mr. CANNON. Mr. President, I feel genuinely privileged to have the opportunity of joining with my colleagues today in honoring a man who has given unselfishly of his confidence, service, and ability to the Senate of the United States for half a century.

To me, Vernon Talbertt, the Chief Messenger of the office of the Secretary, a man who has served eight Secretaries of the Senate, typifies the high purpose and genuine loyalty that pervades this great institution and which motivates all of the employees and staff that serve in making our Government work.

His devotion to duty and quiet efficiency attracted my attention when I first came to the Senate, and the high opinion of this man that I formed then remains to this day.

I look forward to his continued employment in the Senate and hope he will be with us for many more years.

RETIREMENT OF SENATOR JOSEPH C. O'MAHONEY

Mr. MURRAY. Mr. President, I was saddened to learn that my good friend, the senior Senator from Wyoming, has decided to retire. Having made a similar decision last month, I realize how difficult it is to weigh conflicting personal, family, and political desires. JOE O'MAHONEY has richly earned the right to lay aside the duties and demands of office, but the Senate will suffer a great loss from his absence.

JOE O'MAHONEY was one of four Members now in the Senate serving when I came here 26 years ago. Then already with years of prior experience on Capitol Hill as secretary to the late Senator Kendrick, JOE O'MAHONEY was highly trained in the technicalities of government; and his counsel to me and other incoming Senators was invaluable, as it has been through the years.

I recall with pleasure and was proud of my years of service with him when he was chairman of the Committee on Interior and Insular Affairs, which accomplished so much for our country. Subsequently, I became chairman, and when JOE O'MAHONEY returned to the Senate I was pleased that he also returned to the Interior Committee, to which he contributed so much in wise counsel and sound judgment.

Mr. President, I wish to mention two great endeavors of Senator O'MAHONEY which illustrate the foresight that has characterized his legislative endeavors. He was coauthor of the O'Mahoney-Milliken amendment, which reserves to upper basin States the use of waters arising in those States prior to use for navigation. Rural electric cooperative leaders in the upper Missouri basin have an ever-deepening appreciation of this provision of law, enacted 16 years ago, and now being cited in protection of our rights.

Perhaps JOE O'MAHONEY's greatest contribution to this Nation was his brilliant leadership as chairman of the Temporary National Economic Committee. I think it is fair to state that the TNEC study, conducted by JOE O'MAHONEY, was the first exhaustive, thorough and workmanlike evaluation of this Nation's economy. The TNEC study laid some of the groundwork for the Employment Act of 1946, and JOE O'MAHONEY properly served, with distinction, as first chairman of the Joint Committee established by the Employment Act of 1946.

I wish you good health, JOE, and many pleasant years of retirement for you and Mrs. O'Mahoney.

PROSPECTIVE RETIREMENT OF SENATOR O'MAHONEY

Mr. WILEY. Mr. President, when I heard that my dear friend, Senator O'MAHONEY, had made up his mind not to be a candidate for reelection, that announcement brought back memories of my association with him, through the years, on subcommittees of the Judiciary Committee. At this same time, I should like to pay a brief tribute to this distinguished and outstanding Member of the Senate.

Mr. President, in the last 2 days several Members of this body have expressed their regrets because of the announcement of the very able senior Senator from Wyoming that he will not be a candidate for reelection. My good colleague from Texas, the majority leader, appropriately commented that few men who have served in this body have rendered more dedicated or more patriotic service than has the Senator from Wyoming, Senator JOSEPH O'MAHONEY.

The senior Senator from New York, who was acting minority leader during the Tuesday session, paid his tribute as a Republican to Senator O'MAHONEY and to his unusual abilities as a lawyer.

I should like to add a few comments relating to the dedicated work and accomplishments of Senator O'MAHONEY, with whom I have had the pleasure of serving in the U.S. Senate and on its committees for more than 20 years.

Senator O'MAHONEY has always been a fighter. He has fought for economic freedom, for the little man, and for American economic and political success. One of his basic beliefs is that "political liberty cannot exist without economic freedom."

In fact, from early childhood, Senator O'MAHONEY learned to be a fighter. After his father died, he studied at night, while he worked in the daytime for a publishing house. He held many odd jobs, and wrote many freelance articles. One of them was entitled "A Hundred Years Hence," and predicted television, nuclear science, and other modern-day marvels.

In 1916, Senator O'MAHONEY went to Cheyenne, Wyo., to make his permanent home there. Ever since, he has stood out as a vocal proponent of the American West. He first came to Washington as secretary to Senator John B. Kendrick, of Wyoming. Later, he served as First Assistant Postmaster General; and in 1934 he was appointed to fill the seat of Senator Kendrick, who died in office. Senator O'MAHONEY has held this seat ever since, with the exception of the years 1952–54.

Senator O'MAHONEY first served on the Judiciary Committee in 1936. When he was reelected to the Senate in 1954, he was again named to the Judiciary Committee; and since then he has played a very vigorous role on that committee and on its Antitrust and Monopoly Subcommittee—on both of which I have had the privilege of serving with him.

Senator O'MAHONEY has been known for his independence of thought. Although I have not always agreed with his political or his economic thinking, I have

always appreciated his candor, his forthrightness, and his courage.

In the retirement of Senator O'MAHONEY, the U.S. Senate and the American people will lose a devoted servant, a fighting representative, and a constitutional scholar. As a Republican, I naturally must hope that the one who will replace him will be a member of my own party. Yet, as an American, I certainly pray that the stature of the man who will replace him in this body will be equal to that of my dear friend, Senator JOSEPH O'MAHONEY.

THE SPY BUSINESS

Mr. ENGLE. Mr. President, I wish to call the attention of the Senate to the article in the Washington Post this morning by Mr. Walter Lippmann in which he discusses the present situation resulting from the flight of the U.S. U–2 airplane over the territory of Soviet Russia. As so often is the case, Mr. Lippmann hits the nail squarely on the head. He said:

> Our position now seems to be that because it is so difficult to collect information inside the Soviet Union, it will henceforth be our avowed policy to fly over Soviet territory, using the territory of our allies as bases.

He goes on:

> To avow that we intend to violate Soviet sovereignty is to put everybody on the spot. It makes it impossible for the Soviet Government to play down this particular incident, because now it is challenged openly in the face of the whole world. It is compelled to react because no nation can remain passive when it is the avowed policy of another nation to intrude upon its territory. The avowal of such a policy is an open invitation to the Soviet Government to take the case to the United Nations, where our best friends will be grievously embarrassed.

Mr. President, I was very unhappy and dubious about the announcement of this policy which seems to me to be insupportable throughout the world.

Mr. Lippmann goes on to say in analyzing the situation as to what should or should not have been done:

> The administration should have said that it was investigating the charge and would then take suitable action. We should then have maintained a cool silence.

I have heard it suggested that certain of the committees—the Armed Services Committees—investigate this untimely effort just before the summit conference to secure some information about the Soviet Union. I think it would be just as well to let that effort wait until it can be pursued without further embarrassment to our country and to our present position overseas. However, I suggest that the Foreign Relations Committee should, as quietly and as discreetly as possible, talk with our Secretary of State and see what can be done to get us out of the fix we are in. I am convinced Mr. Lippmann is right. We cannot stand on an avowed policy of violating Soviet airspace and sovereignty. World opinion, our allies, and the United Nations will repudiate that policy.

Mr. President, I ask unanimous consent that the entire article by Mr. Lippmann be made a part of the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SPY BUSINESS

(By Walter Lippmann)

In the whirl of incidents following the capture of the spy plane the administration has ventured, perhaps the right word for it would be stumbled, into an untenable policy which is entirely unprecedented in international affairs. Our position now seems to be that because it is so difficult to collect information inside the Soviet Union, it will henceforth be our avowed policy to fly over Soviet territory, using the territory of our allies as bases.

Although the intention here is to be candid and honest and also to make the best of a piece of very bad luck, the new policy—which seems to have been improvised between Saturday and Monday—is quite unworkable.

To avow that we intend to violate Soviet sovereignty is to put everybody on the spot. It makes it impossible for the Soviet Government to play down this particular incident because now it is challenged openly in the face of the whole world. It is compelled to react because no nation can remain passive when it is the avowed policy of another nation to intrude upon its territory. The avowal of such a policy is an open invitation to the Soviet Government to take the case to the United Nations, where our best friends will be grievously embarrassed. The avowal is also a challenge to the Soviet Union to put pressure on Pakistan, Turkey, Norway, Japan, and any other country which has usable bases. Our allies are put on the spot because they must either violate international law or disavow the United States.

Because the challenge has been made openly, it is almost impossible to deal with this particular incident by quiet diplomacy.

The reader will, I hope, have noticed that my criticism is that we have made these overflights an avowed policy. What is unprecedented about the avowal is not the spying as such but the claim that spying, when we do it, should be accepted by the world as righteous. This is an amateurish and naive view of the nature of spying.

Spying between nations is, of course, the universal practice. Everybody does it as best he can. But it is illegal in all countries, and the spy if caught is subject to the severest punishment. When the spying involves intrusion across frontiers by military aircraft, it is also against international law. Because spying is illegal, its methods are often immoral and criminal. Its methods include bribery, blackmail, perjury, forgery, murder, and suicide.

The spy business cannot be conducted without illegal, immoral, and criminal activities. But all great powers are engaged in the spy business, and as long as the world is as warlike as it has been in all recorded history there is no way of doing without spying.

All the powers know this and all have accepted the situation as one of the hard facts of life. Around this situation there has developed over many generations a code of behavior. The spying is never avowed and therefore the Government never acknowledges responsibility for its own clandestine activities. If its agent is caught, the agent is expected to kill himself. In any event, he is abandoned to the mercies of the government that he has spied upon.

The spying is never admitted. If it can be covered successfully by a lie, the lie is told.

All this is not a pretty business, and there is no way of prettifying it or transforming it into something highly moral and wonderful. The cardinal rule, which makes spying tolerable in international relations, is that it is never avowed. For that reason it is never defended, and therefore the aggrieved country makes only as much of a fuss about a particular incident as it can make or as it chooses to make.

We should have abided by that rule. When Mr. K. made his first announcement about the plane, no lies should have been told. The administration should have said that it was investigating the charge and would then take suitable action. We should then have maintained a cool silence.

This would have left us, of course, with the unpleasant fact that our spy plane had been caught. What really compounded our trouble, and was such a humiliation to us, is that before we knew how much Mr. K. knew we published the official lie about its being a weather plane. Then, finding ourselves trapped in this blatant and gratuitous lie, we have tried to extricate ourselves by rushing into the declaration of a new and unprecedented policy.

JOHN D. ROCKEFELLER, JR.

Mr. BUSH. Mr. President, the morning newspapers contain news of the death of Mr. John D. Rockefeller, Jr. I had the very great privilege of his friendship since 1942, and I regard him as one of the greatest philanthropists and one of the most charitable and Christian gentlemen whom I have ever known. His record of philanthropic and charitable activities speaks for itself to a large extent.

In addition to the great contributions which he made to the church and to the Nation—such as the restoration at Williamsburg—he has done a great deal in private philanthropy and charitable giving which has been not only useful, but inspirational.

I have particularly in mind the occasion in 1942 when I became chairman of the national campaign organization to raise funds for the USO, which was then in its second year. We were given a goal of $32 million to raise for the USO for service to the Armed Forces at that time, shortly after Pearl Harbor. This seemed like a staggering sum to me, but Mr. John D. Rockefeller, Jr., felt that the task was not insurmountable, and that, on the contrary, the amount was probably not nearly so much as we ought to be trying to raise.

I recall that in those days and all through the war he was the principal inspiration to the efforts of that great organization, the United Service Organization, in which the three faiths combined, through their six service organizations, to render assistance and to provide a home away from home to all the men in the Armed Forces.

I recall that as we were about to start our big drive, in the spring of 1942, going to the office of our organization one morning and finding a letter addressed to me from Mr. Rockefeller. I opened it, and out of it fell a check for $1 million. I had never seen anything like it before. I wanted to be sure that what I was seeing was actually so. Therefore I took the letter to my assistant in the next room and asked him if that is what he read too. He said, yes, Mr. Rockefeller had talked to him about it and had decided recently that that was the least he could do.

That is the kind of thing one actually never forgets. However, that was just

the first million dollars he gave to help servicemen during the days of World War II.

I remember calling on him, 2 or 3 years later, at his office, possibly in the late 1940's. I went up on the elevator in Rockefeller Center to the floor on which his offices were located. I said to the attendant who met me as I got off the elevator, "I would like to see Mr. Rockefeller."

He said, "You mean Mr. Junior?"

I said, "I presume so. I should like to see Mr. John D. Rockefeller, Jr."

He said, "Yes; we call him 'Mr. Junior.'"

Apparently this was a man, like our Vernon Talbertt here in the Senate, who had been in the service of the Rockefeller family for many years. Although Mr. John D. Rockefeller Jr., was then in his seventies, because of the earlier associations these associates of his referred to him as "Mr. Junior."

They always had a very warm affection and respect for him. That is what he inspired in other people.

So I am glad to pay tribute to this great American. Men like him do not come along very often, and when they go, unfortunately, there are no others who take their places.

THE ISSUE IS THE IRON CURTAIN

Mr. WILEY. Mr. President, the world is now waiting to see just how far Mr. Khrushchev will go in his political "propaganda tantrum" over the flight of the U–2 plane over Soviet territory.

Frankly, I believe Mr. Khrushchev's blasts are primarily for home consumption. His country's "economic pains" and the growing awareness of the intellectuals of his denial of their political freedom have required this diversionary tactic. The downing of the plane provided a launching pad for a blastoff into orbit, propagandawise. The world can only guess how far he will go.

The wild foray of Khrushchev's blasts and accusations—many of which, if carefully analyzed, are found to be reiterations of old themes—raise this question: Will he jeopardize the summit conference? Will he carry through his suggestion of calling off the President's visit to the Soviet Union? Will he create greater world tensions and furor?

These questions are unanswered in the world's mind.

In addition to a condition of "less than harmony" at home, I believe that Khrushchev's suggested efforts to withdraw the invitation to President Eisenhower to visit the Soviet Union may well be because of his fear of the impact such a visit might have upon the people of Russia.

At a summit conference—if held—we must recognize also that the goals of the East and the West may be at cross purposes. The West is striving to establish a firm foundation upon which to build a lasting peace.

As yet, it has not been possible to conclude that the Soviets want anything else except to finds way and means to further their still avowed goal of world domination. In effect, Khrushchev does not want peace. Rather, he wants to take the world, "piece by piece." His furor demonstrates that the issue of the Iron Curtain is one of the major causes of tension. Khrushchev will be lucky indeed if the furor he is creating does not backlash, by disclosure of the chain of spying, espionage, and subversion which the Communists are carrying out in countries all around the globe.

Wisely, President Eisenhower and Secretary of State Herter, are keeping their eyes on the fundamental goals.

The New York Times today published a constructive editorial entitled "The Issue Is the Iron Curtain." The editorial sheds new light upon this situation, now clouded by Soviet propaganda. Therefore, I request unanimous consent that the editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ISSUE IS THE IRON CURTAIN

In the face of Premier Khrushchev's campaign to heat up the cold war atmosphere over an incident in rival espionage, President Eisenhower is making a valiant effort to keep world attention focused on the real issues of the day so that the work of safeguarding peace may proceed. These issues, as he again outlined them in his press conference yesterday, are controlled disarmament, Germany and Berlin, and, as a problem suddenly most pressing, East-West relations, in which the Iron Curtain plays a decisive role.

To cope with these issues the President announced that he is going to the East-West summit meeting, beginning in Paris next Monday, and that he still plans to visit Soviet Russia, Japan and Korea. This dispels any doubts about his attendance at the summit. Moreover, far from shirking the issue of the downed American reconnaissance plane, the President proposes to use this very incident to challenge the Soviets to abolish the Iron Curtain as a major cause of suspicion and world tension.

To this end he will again propose his "open skies" plan, which would open up Soviet Russia to the same kind of aerial inspection which the West itself is willing to accept and thereby eliminate fear of a surprise attack. Until this is done, he warned, the United States will continue its intelligence work as a distasteful but essential work, both to safeguard this Nation against an atomic Pearl Harbor and to deter any Soviet attack on the free world.

Somewhat along the same line the President also announced that Soviet observers will be invited to attend the new underground explosions planned by the United States. These explosions are to be part of the joint research program to which the Soviets have agreed, in order to find adequate means of detecting underground tests.

Unfortunately, even as the President spoke, Foreign Minister Gromyko announced in Moscow that the Soviets will again reject the "open skies" plan, as they did in 1955, and that Soviet skies "will remain closed." Premier Khrushchev's latest contribution was to cast such doubt on the wisdom of President Eisenhower's visit to Moscow as in effect to qualify the invitation. As for the feigned Soviet indignation over the American plane, its real character is exposed by the American photographs of Soviet planes reconnoitering over Western bases and by the arrest as spies of two Soviet Embassy members in Switzerland.

COMMEMORATIVE STAMP IN RECOGNITION OF 40TH ANNIVERSARY OF THE UNITED STATES JUNIOR CHAMBER OF COMMERCE

Mr. WILEY. Mr. President, on June 21, the United States Junior Chamber of Commerce will hold its annual convention in St. Louis, Mo. That event will mark the 40th anniversary of the Jaycees.

Since its inception, the movement has grown to include 200,000 young men in 3,700 communities in the United States. Internationally, it is estimated that there are now 350,000 in 92 countries and territories.

As we know, the primary purpose of the U.S. Junior Chamber of Commerce is to develop leadership and ability of its individual members. Under the slogan "Leadership Training Through Service to our Communities," the Jaycees have made a tremendous contribution to creating the high-quality leadership that is needed in these challenging times.

Dedicated to preservation of our free enterprise system and the American way of life, the Jaycees also have spearheaded efforts to further strengthen our system at local, State, and National levels.

In recognition of its 40th anniversary, a proposal for a special postage stamp has been submitted to the Postmaster General. As we know, special stamps are issued to depict our country's famous men and women, great events, outstanding organizations, industries, and natural wonders.

During its brief 40-year lifetime, the Jaycees have indeed become a significant organization in our civic, cultural, educational, and economic life.

I am aware, of course, that the decision on the issuance of such stamps is the responsibility of the Citizens Stamp Advisory Committee, which selects the subjects and advises the Post Office Department on their issuance.

Because of the significant role which the Jaycees are playing in the community life in all our States, I join the people of America in congratulating the organization upon its 40th anniversary.

In addition, I shall be happy to add my voice in support of the recommendations which the Post Office Department has already received for the issuance of a special stamp in recognition of the fine role which this organization is playing in American life.

MRS. MAY CRAIG

Mr. MUSKIE. Mr. President, I desire to pay special tribute to one of the great ladies of our time and a distinguished member of the Washington press corps, Mrs. May Craig.

After 35 years of covering the Washington scene, May Craig is a national figure. Her daily column, entitled "Inside in Washington," is eagerly read and discussed in thousands of Maine homes. Her warm human interest in people and her persistent drive to get to the heart of every important event are well-known and deeply appreciated by those who

read the Maine newspapers published by the Guy Gannett Publishing Co.

Interestingly enough, although Mrs. Craig is a Maine and, indeed, a New England institution, she was born in Coosaw, S.C., and has lived most of her life in the Nation's Capital. In addition to a brilliant career in the field of journalism, Mrs. Craig has two children. They both now have children of their own. Her friends all know of her justifiable pride in this fine family.

I am sure that I speak for all who have served in Congress from the State of Maine, during Mrs. Craig's long career in Washington, in saying that she is at once fair, straightforward, extremely conscientious, and an infallible judge of that which is most important in the news.

May Craig has performed an invaluable service over the years, in keeping the people of Maine informed on great national issues, and she is also, by her periodic travels on foreign continents, giving us a broader perspective of the vast problems now being faced by the peoples in other lands who are emerging from colonial rule.

I ask unanimous consent to have printed in the RECORD a tribute to Mrs. Craig which was published in Good Housekeeping magazine for February 1958, and an article entitled "Meet May Craig," written by Patricia Schroth, for the August 1959 issue of Downeast magazine, which is published in Camden, Maine.

At a subsequent date, I shall ask unanimous consent to have printed in the RECORD a series of articles which Mrs. Craig wrote for her Maine newspapers in February, March, and April of this year, when she was visiting the African Continent and talked with the leaders and people in all walks of life, from Ethiopia to South Africa. This series constitutes responsible and accurate reporting at its best and should be of interest to many thoughtful Americans who may not ordinarily have access to Mrs. Craig's daily columns.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Good Housekeeping magazine, February 1958]

AS MAY GOES

"As May goes, so goes Maine" might not be an improbable paraphrase of an old saying, for May Craig's incisive "Inside Washington" column in a chain of Maine newspapers has been a must on the breakfast menu of myriad down-Easters for almost 30 years. And she is known to the Nation as an incandescent panelist on the television program "Meet the Press," where her charming smile usually precedes an acute verbal thrust. Southern-born, with bright, bituminous blue eyes, "Miss May" was an accredited war correspondent, and covered bombings in London, the Normandy invasion, the liberation of Paris, the German campaign and occupation, and the Korean war. She has been a Washington radio commentator, is a veteran of Presidential press conferences and campaigns. Famous among women for her 40 almost identical hats, she's also renowned among her male colleagues—for her journalistic prowess and for her suffragist success in such matters as a Senate appropriation for a ladies' restroom in the Press Gallery. Not impertinent, it seems, is a Senate page boy's recent remark to a fellow autograph hound: "I'll give you two Senators for one May Craig."

[From Downeast magazine, August 1959]

MEET MAY CRAIG: NEWS HEN EXTRAORDINARY

(By Patricia Schroth)

"Where * * * do you get the right to thwart the will of Congress?"

The scene was a crowded White House press conference. Congressional complaints about defense budget cuts were hot and heavy, and President Eisenhower's reaction to them was just about as steaming.

The unflinching questioner was May Craig, columnist for the Guy Gannett newspapers of Maine, and former president of the Women's National Press Club.

Called everything from "dynamite in a blue dress" to a "feminine Simon Legree," and, by Franklin D. Roosevelt, a "cheerful little Pollyanna," Mrs. Craig doesn't change her rules for mere Presidents or mere television shows. For one and all she devises questions she thinks are "escapeproof."

Many react to them as Adlai E. Stevenson once did before one "Meet the Press" television show, where she has been a panelist for 12 years. Stevenson wrote:

"DEAR MAY: I shudder at the prospect of facing you again. Please be merciful."

After 35 years of covering the Washington scene, her reputation is formidable for her blunt questions and competent reporting. She does her homework. She also has chalked up a tradition-shattering record on a corollary front: winning for women reporters the same rights as those enjoyed by men in the trade.

A suffragette marcher during Woodrow Wilson's administration, she states the case succinctly: "I believe women are people and, for God's sake, why not."

In one of her first assaults on the once all-male journalism wall, she demanded and got a hearing by the Senate Rules Committee on a petition for a ladies' room in the Senate Press Gallery. The hearing was jammed. Mrs. Craig and three colleagues who made up her "ladies comfort committee," testified. So did a string of opposing male reporters. The ladies won, and one of the mementos in her mountain of scrapbooks is an architect's blueprint of the ladies' room, signed by all members of the powerful Rules Committee.

Mrs. Craig followed that victory with a similar one after a fight before the House Appropriations Committee for a ladies' room in the Press Gallery on that side of the Capitol. As final proof that women were in the Capitol to stay, Mrs. Craig later was elected the first woman member of the standing committee of correspondents that governs the Press Gallery.

One battle which ended in temporary defeat came when she was the lone woman reporter accompanying President Harry S. Truman to a 1947 conference in Brazil. After flying down to Rio, the President and the White House press entourage that followed him were scheduled to return on the battleship *Missouri*—all of them, that is, but May. She was told there were no facilities for ladies on board, a claim that was especially irksome since Mrs. Truman and daughter Margaret were to be on board. Mrs. Craig was flown home instead, at White House expense.

But 2 years later she overcame Navy tradition when assigned as the first woman newspaper correspondent to live aboard a combat ship at sea to cover air-sea maneuvers on the aircraft carrier *Midway*.

Decorated by the War Department for her World War II correspondent stint, Mrs. Craig also covered such things as the V-bomb raids in London ("I was scared stiff"); the Normandy campaign; the liberation of Paris; the German campaign. Later she covered the Korean war by helicopter, jet plane, and jeep; the troubled Middle East and almost any other place in the world where news was happening, be it Venezuela just before Jiminez was ousted or Cuba just after Castro took over. She also was the only woman along on the first flight by reporters over the North Pole.

Hot "scoops" are not her forte, but that doesn't keep spice out of Mrs. Craig's column. Here's how one column began after she interviewed Cuban Prime Minister Fidel Castro: "Pistol-packin' Fidel Castro will have to lay that pistol down if he is going to do the administrative job that lies before him. He is apt to find being a statesman is more difficult than fighting * * *"

As White House Press Secretary James C. Hagerty sees it, "She's a feminist, God knows. But I would rank her equal to any reporter there is, man or woman." Hagerty frankly says some of her questions "may have needles." But, he says, "They're news questions and invariably elicit something that makes news." He said he has "great respect" for her and added that it was "pretty obvious" that his boss shared his opinion.

The bulk of Washington's news corps and officialdom also share the opinion. U.N. Ambassador Henry Cabot Lodge recently broke ranks at a formal White House social function to rush over, hand outstretched, to say hello to "Miss May."

Mrs. Craig, though she sounds like New England personified, was born in Coosaw, S.C., one of nine children of Alexander and Elisabeth Adams. When she was 12 years old, she came to Washington to live with an aunt, and, between travels, she's called the Capital home ever since. Mrs. Craig, who tries to keep her private life private, gives only minimum details about her life outside of the newspaper world—no birth date, or marriage date, for example. She does say she will be "50 until I die."

She became excited about writing in high school, where a piece for the school paper once caused her suspension for 3 days because it was termed disrespectful to the faculty. She did a variety of odd writing jobs after graduation before marrying Donald Alexander Craig, one-time crack Washington bureau chief for the New York Herald. As a young married woman she continued to find "quite a lucrative business floating around town" in writing feature stories for various papers. Her first paycheck, she recalls, came from a feature she wrote for the old New York World. She received $2.85 for a story no one else could get: how silent Cal Coolidge dictated to his secretary. ("He was awful—demanding and impatient.")

A member of the World's Washington Bureau, Buck Bryant, told her then: "You've got your foot in the door"; and she followed his advice to keep it in. She gratefully recalls that Bryant "really learned me." When the World folded, she and Bryant formed their own bureau, serving a group of small papers from Maine to Montana and from New York to North Carolina. "I covered the Capitol and he covered downtown."

Mrs. Craig had two children during those early writing days, Donald Alexander and Betty (Mrs. Albert A. Clagett). They both now have children of their own to make her a grandmother in fact as well as appearance. Her husband died in the 1930's.

After Bryant left newspapering, she decided that to cover Washington for all the bureau papers would be too much of a job to handle alone. She chose to stick with the Gannett chain for whose Portland papers she and her husband had written from time to time. By now its roster had grown to include the Portland Press Herald, the Evening Express, the Waterville Sentinel, the Kennebec Journal, as well as the radio station WGAN and WGAN–TV in Portland.

That svelte magazine, Vogue, once described Mrs. Craig, 5 feet 2 and compactly built, as quail-shaped. The description amuses her: "You know it's perfectly true."

Her day begins at 6:30 when she uncorks a thermos of coffee next to her bed, turns on a news broadcast and scans the daily papers. She shortly adjourns to the bookshelf-lined office near her bedroom and pounds out her 1,000-word, 7-day-a-week column, "Inside in Washington."

Inside in May Craig's house, a two-story red brick just seven blocks from the Capitol, everything is as pink and blue as are most of her 40 or more hats. She concedes that her hats have become almost a trademark, comments on them adding up to bundles of mail for the National Broadcasting Co. and "Meet the Press." But she "never meant to make a thing of wearing them." When Washington was just a village, she explains, "you never went anywhere without a hat." Most of hers are similar in size and shape—small-brimmed and close fitting.

By about 8:30, her column finished, Mrs. Craig is off for the day, either on foot to the Capitol or by cab to the White House or elsewhere downtown.

One friend maintains that she is a "Taft Republican and doesn't know it." But Mrs. Craig has never belonged to any political party and has never voted. She believes in the "Fourth Estate being the Fourth Estate." She admits she once said she was "75 percent New Deal" and also admits it comes back to haunt her from time to time misquoted as "75 percent Democratic." She insists the New Deal was a "long overdue" social movement.

Mrs. Craig hates to be thought of as a wisecracker. She says that she never asks a question for any purpose other than to bring out something important, and she maintains that a really shrewd person wants to get a tough question so that he can answer it.

As for the way her questions sound, Mrs. Craig says she doesn't like her voice over the air; but she had to learn to speak in a clipped way in order to be understood even if it sounds a bit harsh.

On Meet the Press she once asked her good friend in private life, James B. Carey, president of the Electrical Workers Union, "Don't you think it's un-American for a man to have to belong to a union to earn a living?" Carey afterwards sadly said he never thought she would ask him such a question. "Jim," she replied, "that's a question that needed asking."

After a certain touchy question once put to him, FDR asked her if she had stayed up all night thinking it up. Her answer, "I did." At another news conference when Roosevelt called columnists "an unnecessary excrescence on our civilization," Mrs. Craig spoke up to the delight of her writing colleagues and reminded him that he had one in his own family—his wife.

"I didn't mind being called an excrescence. After all, that's only a wart," she confided later. "But I did resent being called unnecessary. My goodness, what if my editor should get that idea too."

There apparently is no danger of that. A few years ago she asked her editor, the late Guy P. Gannett, to let her trim her output to less than a 7-day-a-week performance. His reply was that Maine readers had been having May Craig with their breakfast for 30 years and he wasn't about to stop the habit.

The debt Maine readers owe to her informed and dispassionate reporting is equal to the pride they take in her well-deserved reputation in Washington circles. In conferring a doctor of humane letters on May Craig in 1946 the University of Maine said in part in its citation: "Able journalist who has combined a successful career as a newspaperwoman with homemaking * * * known and admired by thousands of people in this State through her daily column * * * Inside in Washington; friend and trusted confidante of statesmen and military leaders; ardent defender of freedom of the press; accurate recorder of life in the Nation's Capital and in the crossroads of the world."

There are few who will disagree with this accolade—in Maine or anywhere else.

TRUTH IN LENDING

Mr. MUSKIE. Mr. President, there is increasing interest in Senate bill 2755, the so-called consumer credit labeling bill, introduced by the distinguished senior Senator from Illinois [Mr. DOUGLAS] and 19 cosponsors, of whom I am one. There is also considerable misunderstanding concerning the purpose of the bill.

On this subject, the Senator from Illinois on Tuesday of this week delivered an address entitled "Truth in Lending" before the National League of Insured Savings Associations. I ask unanimous consent that the address be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TRUTH IN LENDING

(Address by Senator PAUL H. DOUGLAS before the National League of Insured Savings Associations, Washington, D.C., May 10, 1960)

I welcome this opportunity to discuss with you today the subject of truth in lending.

Truth in lending is the objective of a consumer credit labeling bill (S. 2755) which I introduced in the Senate early this year on behalf of myself and 19 cosponsors.

The bill is basically a simple and moderate measure. It would require that anyone engaged in the business of extending credit at the retail level disclose the price of the credit to the customer, in writing, before the transaction is consummated.

The disclosure would contain two vital pieces of information for the American consumer:

1. The finance charge in dollars and cents; and

2. The finance charge as a simple annual rate on the unpaid, declining balance.

These are the two indispensable measures of the price of credit. The first tells you how much more you will have to pay for something if you buy it on credit rather than for cash. The second reduces the price of credit to a common denominator—a common standard or yardstick—in terms of an annual rate, which enables you to shop around and compare alternative offers of credit.

Extensive hearings were held by the Senate Subcommittee on Production and Stabilization, and an amended version of the original bill has been recommended to the Committee on Banking and Currency.

Although time is running out on this session of the Congress, I am hopeful that the bill will be given a high enough priority for favorable action this year.

The work of our subcommittee was somewhat delayed and embarrassed by the fact that a number of organizations which are critical of the bill did not wish to come forward and testify publicly, but contented themselves with submitting a statement for publication. The U.S. Chamber of Commerce, for example, which frequently purports to speak for the business community, flatly refused to discuss its statement in public hearings.

As subcommittee chairman, I personally requested and urged many associations to come in and discuss the issues—to give us their criticisms and suggestions. We received valuable help from opponents as well as proponents, and I think the bill has been improved as a result of their testimony.

I am a little baffled by the tactics of the opposition. I am certain they would agree that we conducted the hearings in a neutral and impartial manner. We leaned over backwards not to mention the name of any firm which may have been guilty of sharp practices. We did not pillory any individual. I refused to open our voluminous files to the Department of Justice, on the grounds that a legislative committee cannot legislate effectively if it serves as an arm of the prosecutor.

What we are trying to do is to clean up a situation which apparently has many abuses. We ask only for improvements in the future and are not concerned with apportioning blame about the present or the past.

Let me make it perfectly clear that I am not trying to indict the American business community. Undoubtedly, the overwhelming majority of lenders and sellers are honest and law abiding. But in pursuing the consumer at the retail level, businessmen have wandered into a competitive jungle, where they apparently believe—erroneously, in my judgment—that survival depends upon camouflaging the real price of credit.

CREDIT CAMOUFLAGE

Here are some typical examples of credit camouflage. As experienced lenders yourselves, you will recognize them as the prevailing rule in significant sectors of the finance industry—and not as exceptions to the rule.

1. The "easy terms" quotation. So much down, so much a month. The price of credit is not stated, either in dollars or as a rate. The true rate may vary up to 100 percent and more, but is never disclosed.

2. The price of credit is quoted as a percentage of the principal amount, rather than of the unpaid, declining balance. An extension of credit which is repaid on an installment basis gives the customer an average use of approximately one-half the principal amount over the life of the credit extension. Under this circumstance, the simple or true rate is roughly double the quoted "add-on" or "discount" rate. Thus, when a bank advertised: "We offer to finance your new car at a cost to you of 4 percent interest," the true rate was closer to 8 percent.

3. The price of credit is quoted as a monthly rate. This is typical of the small loan field and the relatively new field of revolving credit, in which the simple annual rate is 12 times the quoted monthly rate.

Most consumers first learn about rates early in grade school—in simple annual terms. As a saver in a bank or a savings and loan association, he is paid in simple annual terms. As a homeowner, he pays on his mortgage in simple annual terms. If he reads the financial pages, he sees that the price of credit extended to businesses such as sales finance companies, small loan companies, and merchants is invariably quoted in simple annual terms.

Only the installment borrower or buyer in the short-term credit market is denied a disclosure of the annual rate.

As mortgage lenders, you are accustomed to quoting the price of credit in simple annual terms. I have not heard of a 6-percent mortgage quoted in terms of a 3-percent add-on or one-half of 1 percent a month on the unpaid balance.

On the other hand, it may not be the universal practice for a mortgage lender to spell out the total interest charges over the life of the mortgage. I would think that a prospective home buyer would become a more rational manager of his family budget if he knew in advance, for example, that the interest charges on a $15,000 mortgage at 6 per-

cent would add up to a total of $17,400 over a 30-year period, compared with $10,812 for 20 years—a saving of $6,588, or more than a year's income for the average family. I was encouraged by testimony, during the hearings, that many mortgage lenders make such a dollar disclosure as a matter of routine business practice.

As I see it, there are at least three reasons why S. 2755 should be enacted. First, ethics; second, economic stabilization; and, third, competition. I would like to comment briefly on each of these.

THE ETHICAL OBJECTIVE

Because of the widespread use of misleading and deceptive methods of stating the price of credit, an ordinary citizen finds it difficult to understand and make sense out of business practices. In the current era of payola, there is a tendency to believe that the economic end of profit justifies unethical means of achieving it. Nothing could be further from the truth.

Is the American consumer entitled to the truth about credit rates and charges? The ethical question is basically as simple as that.

For example, the American Bankers Association has taken a significant step toward a higher ethical standard of rate advertising. In connection with the case I cited a few minutes ago, of a bank's "offer to finance your new car at a cost to you of 4 percent interest," which was presented to the association witnesses for comment during the hearing last week, the vice president of the association expressed the opinion that it was untruthful. Moreover, he indicated that he would instruct the chairman of their installment credit commission that a bulletin go out to all the advisory board members and that the banks in each State be canvassed and have called to their attention that "this is inadequate and improper disclosure of the rate being charged."

Another example of an ethical problem is the promotion of teenage credit. It is one of the unfortunate new developments in consumer credit. It is aimed at a youngster too old to spank, too young to garnishee, who should be learning the savings habit. In the forthright words of President Earl Schwulst of the Bowery Savings Bank, teenage credit "is something like teaching the young to use narcotics * * * ; merchants and merchants' associations ought to repudiate this sort of thing. * * * It is this kind of thing which gives the Russians ammunition against our private enterprise system, saying that all we are interested in is building up volume, and anything for the buck."

THE STABILIZATION OBJECTIVE

The declaration of purpose in the bill reads as follows: "The Congress finds and declares that economic stabilization is threatened when credit is used excessively for the acquisition of property and services. The excessive use of credit results frequently from a lack of awareness of the cost thereof to the user. It is the purpose of this act to assure a full disclosure of such cost with a view to preventing the uninformed use of credit to the detriment of the national economy."

At the end of 1959, personal debt reached the alltime high of $183 billion, divided between mortgage debt on nonfarm 1- to 4-family properties and consumer credit, as follows:

	Billion
Mortgages	$131
Consumer credit	52
Total	183

Since the end of World War II, mortgage debt has increased nearly 6 times—from $18.6 billion in 1945 to $131.2 billion in 1959; consumer credit has increased more than 8 times—from $5.7 billion in 1945 to $52 billion by the end of 1959.

During the 1950's alone, personal debt increased 160 percent.

By the end of this year, the American consumer will be entangled in a $200 billion web of debt.

At this rate, personal debt could exceed the Federal public debt in just a few years from now.

The increase in consumer debt held by commercial banks may be of particular interest in a tight-money period. Banks increased their total loans and investments about $2.7 billion from February 1959 to February 1960. They increased their residential mortgage holdings $1.8 billion, but their consumer credit outstanding increased by $2.5 billion in the same period.

The banks have followed the path of retail merchants in the devices by which they have increased consumer credit—a heavy use of advertising, and a notable development of revolving credit. Revolving credit has been described by one commercial banker as a "perpetual loan scheme." Another banker characterizes it as putting the borrower rather than the banker in control of the volume of credit; this same banker stated that revolving credit makes the customer much more able to yield to his impulses in buying, and that it allows him to continue to pile up debt even if his income should decline or stop.

Implicit in these developments are the possibilities that consumer credit will initiate and carry booms too far, and that retrenchment of purchasing will intensify future recessions.

The danger is greater because the cost of consumer debt is not advertised, and is quoted in various fashions, all of which are designed to understate the cost. The consumer-debtor is not flagged down by being told that the credit he uses will cost him 12 percent, 18 percent or more.

The Senate bill to require disclosure of the amount and rate of charge on consumer credit would give consumers information about the price of credit which would lead any rational family manager to control and stabilize buying and borrowing. When rates are increased in tight money periods, the increase would become apparent, and encourage consumer restraint. I firmly believe that the American consumer is his own best credit manager, if he has all the information about the costs involved.

It is important to remember that the sole product of the bill is information. It does not set a ceiling on finance charges. Nor does it control credit terms. Its immediate impact would stem from a change in the state of buyer knowledge, not in the price of installment credit.

There is a possibility that this effect might be very small, for most experts in the field agree that the volume of consumer demand for credit is quite unresponsive to changes in credit prices—especially in contrast to contract terms (downpayment and maturity) which have a relatively larger effect on the size of the monthly payment. On the other hand, this lack of response might be traced directly to the lack of information about the price of credit. Once the price of credit use becomes identifiable, it may become a much more important determinant of changes in the total volume of credit.

There is another reason why the immediate impact of a change in the statement of finance charges would not be very large. The use of consumer credit has had ever-widening acceptance and practice. Indeed, for many families, the increase in savings in institutionalized forms such as social security, insurance, and payroll savings bonds precludes additional private savings in advance of major purchases. Furthermore, a large part of credit buying is replacement purchasing or in the category of necessity, or whatever the family may decide to put in the category of necessity. Given the habits of our economy, then, there is probably a fairly high minimum level of installment purchases to be made as long as incomes are maintained. Finally, since monthly payments would not be changed at all, and since the bill would affect all installment lenders and sellers at the same time, the period of consumer adjustment should be very short.

CONSTITUTIONAL BASIS OF S. 2755

The question has been raised from time to time of the constitutional basis of S. 2755. The *Legal Tender Cases* (79 U.S. 457 (1870)) support the following propositions:

"1. The power conferred on Congress by article I, section 8 of the Constitution 'to coin money, regulate the value thereof, and of foreign coin * * *' does not limit by its terms the power of Congress with respect to the currency.

"2. This power, coupled with (i) the 'necessary and proper clause,' and (ii) the denial to the States (art. I, sec. 10) of any power to coin money, emit bills of credit, and to make anything but gold and silver coin a tender in payment of debts, vests whatever power there is over the currency in Congress.

"3. For an act to be constitutional it is not necessary to show that it is indispensable in order to give effect to a specified power. Congress has the choice of means to a permissive end."

From these general propositions one may reasonably contend that the control or regulation by Congress of the use of credit is supported as an exercise of its power over the currency; such control or regulation having been determined by the Congress to be necessary in order to stabilize the economy and thereby protect the value of the currency.

The competitive reason for the Senate bill was stated very aptly by a witness at our hearings who described the annual rate disclosure as "* * * part and parcel of the purest of classical economics and the basic principle of the free enterprise system—the rational informed man buying in the free market place, with full knowledge of the prices, and making a decision which is best for him and, therefore, best for the entire economy."

The benefits of effective competition cannot be realized if the buyers (borrowers) do not have adequate knowledge of the alternatives available to them.

S. 2755 would invigorate competition in the consumer credit market by stimulating a return to price competition.

Extra-normal profits earned through the ability to mislead borrowers would be minimized.

FEDERAL MINIMUM STANDARDS

In the amended version of the Senate bill, we have spelled out a Federal-State relationship that I sincerely hope will place the burden of enforcement on the States, and avoid Federal preemption of State responsibilities.

This is accomplished by setting forth minimum standards for an acceptable system of State enforcement. Where these minimum standards are met, the States would run the program. Where they are not met, either because a State has no law or an inadequate law, the Federal Government would undertake to fill the gaps and require the appropriate disclosures.

Administration of the bill is placed in the Federal Reserve Board. The Board has unusual knowledge of financial institutions throughout the Nation, and the system which it governs provides a very large part of the total of consumer credit. The Board, however, desires to avoid substantial enforcement duties. The possible alternative administrative agency, the Federal Trade Commission, is experienced in enforcement problems arising from other Federal disclosure

legislation. However, by its own admission, the FTC is not acquainted with the practices of credit and financial institutions.

The problem of evidence of failure to comply with the requirements of S. 2755 is not serious; whether disclosure was or was not made in any transaction could be established readily.

I fully expect that the burden of enforcement will be assumed by the States in accordance with minimum Federal standards. I also expect the statute to be virtually self-enforcing, because local publicity, local legal aid societies, better business bureaus and chambers of commerce would uphold it in the interests of equity and fair competition. If I am correct in these assumptions, then the remaining tasks of definition and exemption are peculiarly appropriate subjects for the financial expertness of the Federal Reserve Board.

A pointed observation was made by the Federal Reserve Bank of Philadelphia in the April 1960 issue of its Business Review. In a lead article entitled "$52 Billion on the Cuff," the Philadelphia bank states that a real burden for the economy "occurs because consumers often buy on time in an uninformed way without knowing the cost of the money they are borrowing. When they do this, they do not only hurt themselves, but they reduce the efficiency with which the economy provides goods and services in accordance with consumer tastes."

TRIBUTE TO RABBI HAROLD H. GORDON

Mr. JAVITS. Mr. President, the New York Board of Rabbis is an organization with one of the most distinguished records in my State. Over the years it has rendered notable service in areas that required sympathy and understanding. Rabbi Harold H. Gordon has been at the helm of the New York Board of Rabbis for 13 of his 25 years in the rabbinate, as its executive vice president and director of chaplaincy services. A testimonial dinner was held in Rabbi Gordon's honor by his colleagues in New York on March 24 to mark his many years of high services which was attended by Gov. Nelson A. Rockefeller and many other civic and religious leaders.

I ask unanimous consent to have printed in the RECORD the remarks of Gov. Nelson A. Rockefeller on this occasion:

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

TRANSCRIPT OF REMARKS OF GOV. NELSON A. ROCKEFELLER, AT NEW YORK BOARD OF RABBIS' TESTIMONIAL DINNER IN HONOR OF RABBI HAROLD H. GORDON'S 25TH YEAR IN THE RABBINATE AND 13TH YEAR AS EXECUTIVE VICE PRESIDENT OF THE NEW YORK BOARD OF RABBIS, NEW YORK, N.Y., MARCH 24, 1960

Rabbi Golovensky, Rabbi Gordon, Mr. Chairman, Louis Lefkowitz, Arthur Levitt, Mr. Levy, distinguished guests, distinguished rabbis, and friends, what a privilege it is for me to be here with this wonderful group this evening which is gathered to honor a great leader, a man who has dedicated his life to service, to those spiritual values which have brought this group together here this evening in the presence of so many spiritual leaders of our great community. It is an aspiration in the busy life which we all lead to have the opportunity of stopping and pausing to join together quietly in respect and reverence and gratitude to a man who has given so generously and so completely of himself, in his own community and throughout the world, in peace and in war. What an inspiration to each of us. What a wonderful thing to see his family here with him on this occasion from all over our great country.

Therefore, we join with you, Rabbi Gordon, on this occasion, each one of us more determined to live better lives ourselves, to reach out to our fellow men with more courage, with more integrity, with more love.

I will never forget attending a Brotherhood meeting in Boston where a young Rabbi asked the blessing. He said, "Oh God, give us the courage to love."

What a wonderfully penetrating and simple prayer.

And here this evening is a man who has had that courage to love, and who has lived a life of love. We are grateful to you for giving us this opportunity to be here this evening.

Rabbi Golovensky referred to the political side of life, and he said he was politically naive. So I am in the same class?

I will never forget going with Louis Lefkowitz during the campaign 2 years ago when he first took me down to Delancey Street. After we had been in Rattners for my first blintz and sour cream, we went out and were doing a little—excuse me, Bob (Wagner)—we were doing a little work on the sidewalk there, and a lady came up to me and said that she could not find a place to live that was within her means. Well, I was definitely concerned, and I had been studying the situation in the State and I knew of the two bond issues which were up for a vote and I explained to her about the $100 million for low-cost housing and the other $100 million for middle-income housing and for urban renewal, and I told her to get all her friends to vote so that we would have the money to get the construction started. She looked at me and said, "So I should live so long?"

Then we went into a little delicatessen. I had been set back a bit by this lady, but I was coming forward again and reaching out and there was a man there who was having a bite to eat and I said hello, and he picked up his food and walked away. Some of the boys from the press went up to him and asked him why he walked away, that the candidate had merely said hello. And he said, "You can put a hello in the bank?"

So you can see, Rabbi, I have been learning from the very beginning the hard way.

I will say it is hard enough to have a baby in the family and handle everything else, but I want to tell you, this business of what Bob and I are going through—two families trying to have a baby together, but we are almost there.

Now I should like to express to all of you my appreciation and admiration to the New York Board of Rabbis for the wonderful cooperation that they have given us, and I mean all of us in Albany, both parties of the legislature and the executive branch—that is, Arthur Levitt and myself. We appreciate tremendously the spirit with which you have dealt with the matters before the legislature, your consideration and understanding, your helpful service and counsel, and I should like also to express my appreciation before all of you to the New York Board of Rabbis in helping the selection of chaplains for the various institutions in the State. It has been a happy association indeed.

As one thinks of political life and the rough and tumble that goes with it, in fact all phases of the changing world in which we live, revolutions in science, revolutions in social and economic and political life throughout the world, it is clear that we are faced with change, and with change come uncertainty, and with uncertainty there is fear. So, probably as at no other time in history we in this country, and people throughout the world, are faced with this sense of movement and change.

In this we have to make decisions and we, who have the benefit of Judeo-Christian heritages, are indeed fortunate because in the confusing times, in sorting out the problems that are before us, in trying to make the decisions that are going to reflect the best interests, the hopes, the aspirations, not only of our own people, but of mankind, we in this room, and so many throughout the country, in fact most of our country, are indeed fortunate to have constant guidance in these spiritual values. And you distinguished rabbis, through your synagogues, are playing such an important role in instilling in the on-coming generation those basic forces that will give us the foundations on which to build for the future so that we can seek and find a world at peace, a world of opportunity, equal opportuniity. As Lincoln said, the unity of the Confederacy was based importantly on the common effort to lift the burdens from the shoulders of man.

Today we have that capacity to lift the burdens from the shoulders of man and let us use it. We will find that it will give us not only throughout the Confederacy alone, but throughout the world, the unity in achieving true brotherhood under the fatherhood of God.

Thank you very much.

THE TWENTY-FIFTH ANNIVERSARY OF ESTABLISHMENT OF THE RURAL ELECTRIFICATION ADMINISTRATION

Mr. RUSSELL. Mr. President, yesterday—May 11—marked the 25th anniversary of the establishment of the Rural Electrification Administration.

Ceremonies commemorating this historic occasion were conducted in my State at Franklin Roosevelt's beloved "Little White House" at Warm Springs, Ga., where the President signed the Executive order creating the original REA.

It was entirely fitting that the Silver Anniversary ceremonies of the REA should be conducted in my State, the adopted State of President Roosevelt. Georgia is also honored to be the home State of the current able president of the National Rural Electric Cooperative Association, the Honorable Walter Harrison. Mr. Harrison is doing an outstanding job in carrying forward the work of this great program.

It was my privilege to be a Member of this body when the original REA was created 25 years ago, and I am proud that I have had an opportunity to support this noteworthy program throughout the years.

At a time when I was a member of the Standing Committee on Agriculture and Forestry, I had the opportunity of serving as floor manager of the bill under which the REA now operates; and as chairman of the Agricultural Appropriations Subcommittee, I have had the honor throughout the years of handling the appropriations for the REA program. It is a matter of note that at no time have adequate funds failed to be available to provide for any worthy application for a loan by one of the cooperatives.

Mr. President, I am proud of my association with the REA program. It

has been one of the most successful programs ever undertaken by the Federal Government, both in terms of its operation and administration and in terms of its genuine service to the people of the country. Its contributions to the betterment and enrichment of the lives of our farm people have been immeasurable.

Mr. President, I ask unanimous consent to have printed in the body of the RECORD an editorial, published on May 11 in the Atlanta Constitution, commenting on the 25th anniversary of the REA and on the ceremonies conducted at Warm Springs, Ga.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REA CELEBRATION TO BE IN APPROPRIATE SETTING

It is most appropriate that the national celebration of the Rural Electrification Administration's 25th birthday Wednesday be held at Warm Springs.

It was, in the words of the late President Roosevelt, in "a little white cottage at Warm Springs, Ga.," that the REA was born.

Back in those days only 11 percent of America's farms had electricity. Those now without it are a rarity. Not only has REA made life on the farm more pleasant but it has played a significant role in increasing the efficiency of farm operations. In addition a new billion-dollar annual market in electrical appliances was created by the program.

Congress and the executive branch of Government will accord due recognition to the 25th anniversary of REA. But the real celebration will be at Warm Springs where a man with vision and compassion saw the need for rural electrification and then with the vigor that marked all his endeavors, turned on the lights for rural America.

ORDER OF BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

PAYMENTS IN LIEU OF TAXES

The PRESIDING OFFICER (Mr. HOLLAND in the chair). The Chair lays before the Senate the unfinished business, which will be stated.

The LEGISLATIVE CLERK. A bill (S. 910) to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes.

The PRESIDING OFFICER. Under the unanimous-consent agreement entered into yesterday, the time for debate during the further consideration of the bill (S. 910) is limited to 30 minutes on any amendment, motion, or appeal, except a motion to lay on the table; and on the question of the passage of the bill debate is limited to 1 hour.

The question is on agreeing to the amendment offered by the Senator from Florida [Mr. HOLLAND] identified as "5-11-60—A."

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. TALMADGE in the chair). Without objection, it is so ordered.

Under the unanimous-consent agreement, the amendment of the Senator from Florida [Mr. HOLLAND] is the pending business. Five minutes are allotted to each side. The Senator from Florida is recognized.

Mr. HOLLAND. Mr. President, before the adjournment of the Senate last night, I stated the argument which I thought was appropriate in support of the amendment. It has already been printed in the RECORD. I do not like to burden the RECORD by restating it.

My understanding is that the sponsor of the bill, the distinguished senior Senator from Minnesota [Mr. HUMPHREY] is inclined to agree with me that the amendment is a proper one and should be adopted. That being the case, I am prepared to yield back my time on the amendment.

Mr. HUMPHREY. Mr. President, I am prepared to yield back my time on the amendment.

The PRESIDING OFFICER. Is all time on the amendment, on both sides, yielded back?

Mr. MUNDT. Mr. President, I believe the Senate is operating under a unanimous-consent agreement.

The PRESIDING OFFICER. Does the minority leader yield time to the Senator from South Dakota?

Mr. DIRKSEN. Yes; I yield 5 minutes.

Mr. MUNDT. I shall not require much time. I simply wish to say, speaking as one who comes from a rural section of the country, that while I do not know the parentage of the language of this provision, or how it got into the bill, the elimination of this provision would certainly make the bill even more unacceptable. If this type of payments in lieu of tax program is to be adopted a State such as mine certainly should receive such benefits as it would be entitled to obtain in order to offset the sharply increased taxes which the people of my State would be compelled to pay, following the adoption of this entirely new concept of Federal taxation. In that situation, some consideration should be given to the people who are definitely affected by the giant hydroelectric installations along the Missouri River.

In areas where such dams are constructed, if the Federal Government is to go into the business of making payments in lieu of taxes, I see no reason for excluding from the bill the provision the committee included, which deals with this type of Federal installation.

Although—as I tried to make clear on yesterday—I am not in favor of the concept of having the Federal Government pick up the tax check for its installations all over the country, until and unless some criteria have been established and until and unless some high-level study has been made, so we know whither we are bound, and so we know what amounts of money are involved, certainly I could not sit quietly by and accept the exclusion of the one provision whereby conceivably the people of a great many States such as South Dakota in which these hydroelectric installations have been made, could receive some benefits.

I agree that this is a highly speculative venture; and I agree that if the proposed board, to be established with such great powers—it would be an omnipotent oligarchy which would serve as a third Appropriations Committee and would determine what would be done with the money of the taxpayers—were to decide to make payments in lieu of taxes for these hydroelectric installations, the payments could conceivably be very large.

On the other hand, if this new fiscal policy is to be established, there is an element of justice in providing that when the Federal Government makes such installations in our communities, with the result that the people who live there are deprived of opportunities they formerly had, those who are seriously affected by the installations should receive some benefit by way of payments in lieu of taxes. That would be proper and just under the payments-in-lieu-of-taxes plan, because—quite to the contrary of what the Senator from Florida believes; he comes from a State where the land is flat—such installations are not unmitigated blessings. They are built in part to protect those who live downstream from temporary flood waters; and such installations result in the permanent flooding of thousands of acres of rich, valuable rural land; in our State, it is river-bottom land, and is highly productive, and is tax-producing. When that land is permanently covered by these waters, of course those who owned the land can no longer produce on them the grain crops and the cattle they formerly produced there. As a consequence of the action of the Federal Government, the living practices and the taxpaying practices of those areas have been vastly changed.

Therefore, Mr. President, if the Federal Government is to pick up the check generally, I see no reason to single out and to except from the great array of potential beneficiaries of such payments in lieu of taxes, this particular group.

It is true that hydroelectric power is of benefit to our area; but frequently it is forgotten that the same power is also available to Minnesota, Nebraska, and Iowa. Frequently it is also forgotten that one of the great purposes and results of the construction of these great multipurpose dams is the protection of the people who live in the large cities, such as Omaha, Kansas City, and other urban centers downstream from the installations, from the threat of devastating floods.

In these circumstances, our State has become the host State for a number of these great bodies of water, which are wonderful for recreational purposes; but from the standpoint of the farmers who have been dispossessed, and whose lands have been flooded, as well as the local tax collecting authorities, these installations are not unmitigated blessings.

Therefore, although I dispute the desirability and wisdom of passing out Federal funds without any check, without any limitation, without any possibility of a Presidential veto, and without congressional review, and although I oppose setting in motion such a financial apparatus, if it is, nevertheless, to be done, certainly I oppose doing it for all such areas except the rural areas which happen to have some problems as a result of the construction of great hydroelectric dams.

Mr. HOLLAND. Mr. President, I should like to state briefly that it seems to me the Senator from South Dakota [Mr. MUNDT], my good friend, is in an almost indefensible position when he objects to the bill and its principles, but insists on retaining in the bill probably the most indefensible position in it. That provision is that when the Federal Government, after the cutoff date established by the bill—a date 10 years ago—constructs a large dam, and uses the dam and the power installations added to it and the great lake which is created for the production of hydroelectric power for sale generally in that community, notwithstanding that fact, the local units of government—cities, school districts, counties, and the like—may have the right to receive from the Federal Government payments in lieu of local taxes.

Those are the very areas which are the beneficiaries of the investment and expenditure of Federal money. Those are the areas which get the benefit of small electrical power rates, due to the fact that it is a Federal installation and does not have to pay a profit to investors. It exists simply because Federal money has been spent there. Further, the representatives of those areas, or any such area, have been the ardent advocates of the location, construction, and operation of such developments in those areas.

The Senator from Florida has served on the Public Works Committee for a number of years, and for a good many years on the Public Works Subcommittee of the Appropriations Committee. There is no other Senator who has been more diligent, and I compliment him for his diligence, than has the Senator from South Dakota [Mr. MUNDT] in urging the authorization, first, and later the appropriation, of funds for the construction of such developments in his own State. I compliment him on that. I think it was completely within his right. I think it was a part of his duty as a diligent representative of the people of his State and of the United States.

To follow that up with the assertion that people from a State where there are no possibilities of hydroelectric development, such as my own, must pay Federal taxes which must eventually go—in part at least—to pay the local units of government which are receiving the benefits and which have ardently sought these developments in their areas, it seems to me is carrying that matter clearly beyond any limit of defensibility.

The mere fact that the advocates of this bill, the distinguished Senator who is sponsoring it and has charge of it on the floor, the Senator from Minnesota [Mr. HUMPHREY], the Senator from Alaska, who spoke out immediately yesterday when he realized what this involved, and said he wished my amendment to be adopted, and thought it was in the interest of fairplay, and other Senators whom I shall not mention, have taken that position, I say shows it is a fundamental defect, one of several, in the bill.

Before I conclude, I wish to say that I, as Governor of my State, initiated this effort a long time ago. I want the day to come when there shall be a fair method of offsetting tax losses to some communities which are very badly hurt because of the exemption from local taxation of Federal property.

But, Mr. President, here is a provision which I think is so indefensible that I could not possibly support it, just as was the provision, which was corrected yesterday by the amendment of the distinguished Senator from Ohio [Mr. LAUSCHE]. I do not expect us to find all the defects and accept all the required amendments in this bill. What we are doing is a beginning. I think the principal purpose of the legislation is to have a longtime, wise study started, with a program which is effective.

I do not like that part of the bill which gives no community in the field of real estate taxation any right to come, as a matter of right, to the Federal Government, but, instead, puts it in the position of a supplicant, coming with a tincup in its hand, asking the Federal Board whether it is entitled to Federal funds. I do not like that provision; but this is a beginning, which will begin to take care of such inequities and inequities in special areas like Arlington, the State of Florida, and other areas which are so adversely affected.

Mr. ROBERTSON. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. ROBERTSON. Yesterday the question was asked as to the meaning of the term "suburban." The response would be subject to a little interpretation. Of course, the prefix "sub" means below. So such an area would be below an urban area, but, presumably, it would not be a rural area.

Is it true that if a large hydroelectric plant in the West, in a rural area, were constructed, and then a small enterprise were brought into that area to use the electricity, a suburban area could be created, and the whole plant could be taxed for its support?

Mr. HOLLAND. Of course, that is correct. The real accomplishment of the building of great powerplants is to create tremendous development of industry in the areas affected.

My recollection is that the definition of urban and suburban areas relates to that part of the bill which has to do with the payment of assessments for special construction and development, and not to the general right of property taxation.

Mr. President, I hope that we can get the bill in such shape that we can at least make a beginning in the solution of this important problem. So far as the Senator from Florida is concerned, he could not support the bill containing the provision to which his amendment is addressed; and he hopes, since the amendment has been accepted by the sponsors of the bill, it will be promptly adopted by the Senate, and that we can proceed to other matters.

Does the Senator from Minnesota wish any time?

Mr. HUMPHREY. Mr. President, I believe the argument made by the Senator from Florida is a cogent argument. I certainly wish to associate myself with the desire of the Senator from Florida to make this correction in the bill.

The PRESIDING OFFICER (Mr. TALMADGE in the chair). Does the minority leader desire to yield further time?

Mr. DIRKSEN. I yield 5 minutes to the Senator from South Dakota [Mr. MUNDT].

The PRESIDING OFFICER. The Senator from South Dakota is recognized for 5 minutes.

Mr. MUNDT. Mr. President, I merely point out that the Senator from Florida, with his usual capacity to discover errors in the philosophy of a bill of this type, in his argument in support of his amendment has emphasized one of the glaring weaknesses of the approach we are called upon to make. He has said it is utterly indefensible, from the standpoint of the Senator from Florida, to have the bill contain language which would provide for payments in lieu of taxes to an area like South Dakota, Nebraska, Nevada, or any other State where hydroelectric plants were located, because, he has said, and has said understandably, he could not go back to his people and say he has asked the people to make payments in lieu of taxes in an area far removed from Florida, because projects of this type cannot be built there.

It would seem to me very unjust to the people of Florida; but not a bit more unjust than to say to the people of South Dakota, a rural State, "Well, it is all right to exclude us," because this is one area where we might benefit and then vote for a payment in lieu of taxes to benefit big urban areas, since, just as big hydroelectric dams are not going to be built in Florida, big warehouses and defense industries are not often going to be constructed in rural areas. They are constructed where industry is concentrated and where defense plants are. While we have dispersal programs, rural areas have not often successfully been utilized. So the same philosophy which applies with respect to areas where large hydroelectric plants cannot be constructed applies, it seems to me, to areas which cannot benefit from the construction of large buildings and enterprises such as I have mentioned.

This underscores my belief that we ought to have a high-level study which considers the needs of the country as a whole, and a law which does not discriminate against rural people in favor of urban people, which this bill inevitably does, and does not discriminate against flat States in favor of mountain or rural States, as the Senator believes this bill does. What we require is an equitable overall solution to these problems and not one which creates new inequities.

Mr. HOLLAND. Mr. President, the Senator recognizes, of course, that the

Senator from Florida has eagerly, actively and gladly supported his efforts to get authorizations for such projects and to get appropriations for such projects.

Mr. MUNDT. I do. I am grateful to the Senator.

Mr. HOLLAND. Does the Senator from South Dakota think the Senator from Florida would be naive enough to do that again, if this kind of a provision is written into law?

Mr. MUNDT. I am afraid that if this kind of a provision is written into law we will have many new cleavages between areas of the country which should be working together.

The Senator has been helpful, and we have appreciated his help. The Senator does not quite recognize the problems which also are created by these tremendous bodies of impounded waters insofar as the recipient county and the recipient State are concerned.

Our most valuable land, our most tax-productive land, in many instances, has been inundated. We accept that. That is part of the game. However, if we are to change the rules of the game and to say, "We are going to make payments in lieu of taxes to cover Government installations of every type except hydroelectric plants," I certainly do not see how the Senator from South Dakota could be expected to support that kind of amendment, which would increase the tax burden for his folks, and would exclude, by amendment, even consideration by this high and mighty Board of the problems and payments which might otherwise be brought before it for adjudication.

The Senator from Florida is correct; I consider this to be an indefensible approach to fiscal policy and an indefensible method of trying to rewrite the tax laws of America. However, the Senator from South Dakota opposes emphatically any amendment which would deny the right of the people of his State and of neighboring areas to present their problems in regard to inundated acres and hydroelectric installations. It is indefensible, if, in fact, we are going to go into this whole new approach to our national fiscal policy.

I shall continue to oppose the amendment of the Senator from Florida, and I shall vote against it. I shall certainly vote to recommit S. 910, if the opportunity is presented, or I shall vote against passage of the bill, in favor of a study being made which will make it possible to solve the existing problems in an equitable and in an enduring manner.

Mr. HUMPHREY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Florida yield time to the Senator from Minnesota?

Mr. HOLLAND. Mr. President, if I have any time remaining I will yield.

The PRESIDING OFFICER. The Senator from Florida has 6 minutes remaining.

Mr. HOLLAND. I yield to the Senator from Minnesota.

The PRESIDING OFFICER. The Senator from Minnesota is recognized.

Mr. HUMPHREY. Mr. President, I merely wish to say that the statement of the Senator from South Dakota that this subject matter is excluded from consideration by the study board is not accurate. The study board, under the provisions of S. 910, can study any part of the problem of payments in lieu of taxes. There is no restriction upon the jurisdiction of the board in terms of study. The board can study any and all phases of Federal-State-local fiscal relationships.

What the Senator from Florida seeks to do is to exclude, for the purpose of payment by the Board in the initial stage, the one area of the generation of electrical energy, other than those installations already covered under current law.

I will say that everything which is presently constructed is covered by some kind of Federal statute, with revenue-sharing, direct taxes, payment in lieu of taxes, or direct appropriations.

I have in my hand committee print No. 23, of the Committee on Interior and Insular Affairs, of the 83d Congress, which relates to taxes and other in-lieu payments in respect to Federal property, which was prepared by the Legislative Reference Service of the Library of Congress. There is in it an outline as to all of the many categories of Federal properties which are to be compensated for by some form of payment by the Federal Government.

I invite the Senator's attention to the reclamation properties of the Bureau of Reclamation. The language is:

> Incidental to these operations, there are facilities for the generation of hydroelectric power, drainage and flood control, improvement of navigation, etc. Up to June 30, 1953, the total cost of all plant, property, and equipment of all reclamation projects amounted to $2.4 billion. Including projects authorized, the total ultimate investments of Federal funds will approximate $6.7 billion.

The report goes on to point out the amount of land owned by the Bureau of Reclamation. I invite attention to page 77 of the report to which I referred, committee print 23 of the Committee on Interior and Insular Affairs of the 83d Congress, 2d session, which is the report prepared by the Legislative Reference Service of the Library of Congress as to the payments made. It states:

> Generally the lands and property of the Bureau of Reclamation are exempt from taxation and no payments in lieu of taxation are made. One important exception is Boulder Dam. Under the act as presently written, Arizona and Nevada each receive $300,000 each year from the revenues derived from the operation of the Boulder Canyon project. As originally enacted, the statute called for payment of 37½ percent of its net income (after operating expenses, interest, and amortization payments) to be divided equally between the States.
>
> The Bureau of Reclamation has also been making some payments in lieu of taxes with respect to particular projects. Thus it is said that $10,000 a year transitional payments are being made for 10 years with respect to 8,350 acres of acquired lands on the Big Thompson project in Colorado. It is also noted that tax equivalent payments are being made pending the development of irrigation systems on 219,000 acres of land in Washington.
>
> Finally it may be noted that there have been and are instances in which the Federal Government has supplied and maintained school buildings or the contractor has been required to make suitable arrangements for the education of the children of Federal employees as well as those of the contractor. In other cases the law has provided that payments may be made to local school districts where an undue burden is imposed by reason of the attendance of children of employees working on the construction of Bureau of Reclamation projects.

The report goes on to point out that in the reclamation areas there are payments made either for the purpose of public services or for education, or there are outright payments made for land which may be acquired by the Bureau of Reclamation.

I say to the Senator from South Dakota that we have established a precedent already in existing public law for payments to these hydroelectric projects under the Bureau of Reclamation. There is nothing in the present bill which would deny the Board which is to be set up the right to examine the matter and to make whatever recommendations it desires with respect to projects other than those presently covered.

What the Senator from Florida seeks to do is to exclude for a brief period of time, for the 5-year period during which payments are to be made, the electrical generation facilities which are not currently covered by some other form of Federal statute. All of the major hydroelectric projects to date have been covered by some form of compensation; either under a revenue sharing plan or some form of special payment to the areas affected by the hydroelectric project.

The PRESIDING OFFICER. The time of the Senator has expired. All time for the proponents of the amendment and all time for the opponents of the amendment has expired. The question is on agreeing to the amendment offered by the Senator from Florida [Mr. HOLLAND].

Mr. HOLLAND. Mr. President, I ask for a division.

On a division, the amendment was agreed to.

Mr. MUNDT. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DIRKSEN. Mr. President, I move to recommit the bill to the Committee on Government Operations.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Illinois.

Mr. BUSH. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BUSH. Under the agreement, is this motion treated as an amendment?

The PRESIDING OFFICER. The Chair will state for the information of the Senator that it is a motion, and it is subject to the time limitation under the

unanimous-consent agreement, of 15 minutes on each side.

Mr. DIRKSEN. Mr. President, I yield myself 1 minute.

The PRESIDING OFFICER. The Senator from Illinois is recognized for 1 minute.

Mr. DIRKSEN. The Bureau of the Budget is opposed to the bill. I say that with authority, because I talked with representatives of the Budget Bureau this morning. They reaffirm what they previously stated. There are many unresolved issues; and, in addition, the bill could cost the Treasury half a billion dollars a year.

So, speaking for the Bureau of the Budget and the Treasury—and I believe they make a good case—the very fact that amendments have been adopted the effect of which is unpredictable at the moment is the best reason I know of why the bill should go back to the committee.

Mr. President, I suggest the absence of a quorum.

Mr. JOHNSON of Texas. Mr. President, will the Senator withhold that suggestion for a moment?

Mr. DIRKSEN. Certainly.

Mr. JOHNSON of Texas. I understand that the Senator from Minnesota [Mr. HUMPHREY] will take only 1 minute. Does the Senator from Illinois desire the yeas and nays on his motion?

Mr. DIRKSEN. Yes. Mr. President, I ask for the yeas and nays on my motion.

The yeas and nays were ordered.

Mr. JOHNSON of Texas. Mr. President, I yield 2 minutes to the Senator from Minnesota.

Mr. HUMPHREY. Mr. President, I recognize that the present Director of the Bureau of the Budget is opposed to the bill. I also wish to state that the bill was drafted in 1956 by a task force composed of the senior Senator from Minnesota, a member of the professional staff of the Committee on Government Operations, a representative of the Legislative Counsel's office of the Senate, and technicians from the Bureau of the Budget, and the Department of Defense. We spent 3 months in negotiations and we trimmed the bill down to a very basic minimum. The bill has safeguards in it so that no local community can have a windfall. The bill has standards in it to guide the Federal Board. The bill will for the first time give some recognition by the Federal Government to local government fiscal problems, particularly, to revenues.

Almost every Senator is concerned about State rights and local government. The Presiding Officer [Mr. TALMADGE] is one of the most valiant champions of local government and State rights. The bill makes State rights a meaningful reality first, by providing for a study of the revenue needs of local government, and, second, a modest beginning in terms of a limited program dealing with a number of cases in which the Federal Government has a clear-cut responsibility to local government.

Mr. KUCHEL. Mr. President, I wish the RECORD to show that I agree with what the able Senator from Minnesota has said. This is a modest program. It has been all too long delayed. Seven years is a long time for a study of the means by which the Federal Government should live up to a responsibility which it has recognized by passing similar legislation. Twenty years is all too long. I hope the motion will be defeated, and that the Senate will stand up and recognize the need for this legislation, which has been fashioned by the Senator from Minnesota and all those who have stood with him.

Mr. JOHNSON of Texas. Mr. President, I yield 2 minutes to the Senator from Connecticut.

Mr. BUSH. Mr. President, I support the bill, and I speak in opposition to the motion to recommit. I oppose the motion to recommit on the grounds which I stated yesterday. The bill is a positive recognition of the need to help communities upon which Federal installations, principally war plants, have imposed an unduly heavy burden.

I believe that the most significant sentence in the statement of Mr. Bernard F. Hillenbrand, executive director of the National Association of County Officials, is this:

> With the tremendous expansion of the National Government and with the complex industrial defense and commercial and business activities of the Federal Government, the traditional immunity of Federal property from local taxation must be modified to meet the realities of the situation.

Mr. President, we are already doing this in connection with education payments in lieu of taxes to communities, to support education, where a heavy overload has been created by Federal installations. I see no difference at all between making a grant-in-aid payment in lieu of taxes to a community for education and making such a contribution for the roads that lead to the schools and for police and fire protection with relation to these centers, and to take care of other needs of the community, proportionately, with respect to the property belonging to the Federal Government.

Finally, I observed that the assistant to the Secretary of the Treasury, Mr. David A. Lindsay, as shown at page 37 of the committee report, supports S. 910.

For these reasons I hope the motion to recommit will be defeated.

Mr. DIRKSEN. Mr. President, I yield 1 minute to the Senator from South Dakota.

Mr. MUNDT. Mr. President, in response to what the Senator from Minnesota has said, let me say that it is correct that in 1956 the Bureau of the Budget did favor a limited program of this kind.

However, since then there has been a U.S. Supreme Court decision which has opened up the horizon of spending tremendously, and the Bureau of the Budget is now against the program in view of that Supreme Court decision.

The minority leader has pointed out that the Bureau of the Budget has stated that this budget-busting bill would cost the Government $500 million the first year. Then it will grow like Topsy. Once we start out on the trail of spending with a Presidentially appointed board, the cost will not only be $500 million, which is the cost for the first year. Nobody knows how much it will cost from then on. Then we can kiss goodby to any chance of ever again balancing the American budget.

I hope the motion to recommit for further study will be agreed to.

Mr. JOHNSON of Texas. Mr. President, I yield back the remainder of my time.

Mr. DIRKSEN. I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). All time for debate on the motion has expired. The question is on agreeing to the motion to recommit. The yeas and nays have been ordered, and the clerk will call the roll.

The Chief Clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. ANDERSON], the Senator from West Virginia [Mr. BYRD], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Illinois [Mr. DOUGLAS], the Senator from Mississippi [Mr. EASTLAND], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Hawaii [Mr. LONG], the Senator from Wyoming [Mr. McGEE], the Senator from Michigan [Mr. McNAMARA], the Senator from Oklahoma [Mr. MONRONEY], and the Senator from Montana [Mr. MURRAY] are absent on official business.

The Senator from Missouri [Mr. HENNINGS] is absent because of illness.

The Senator from North Carolina [Mr. JORDAN] and the Senator from Massachusetts [Mr. KENNEDY] are necessarily absent.

On this vote, the Senator from Mississippi [Mr. EASTLAND] is paired with the Senator from Missouri [Mr. HENNINGS]. If present and voting, the Senator from Mississippi would vote "yea," and the Senator from Missouri would vote "nay."

I further announce that, if present and voting, the Senators from New Mexico [Mr. ANDERSON and Mr. CHAVEZ], the Senator from West Virginia [Mr. BYRD], the Senator from Illinois [Mr. DOUGLAS], the Senator from North Carolina [Mr. JORDAN], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Hawaii [Mr. LONG], the Senator from Wyoming [Mr. McGEE], the Senator from Michigan [Mr. McNAMARA], the Senator from Oklahoma [Mr. MONRONEY], and the Senator from Montana [Mr. MURRAY] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Nebraska [Mr. HRUSKA] is absent on official business.

The Senator from Kentucky [Mr. MORTON] is necessarily absent.

The Senator from Massachusetts [Mr. SALTONSTALL] is detained on official business.

On this vote, the Senator from Nebraska [Mr. HRUSKA] is paired with the Senator from Massachusetts [Mr. SALTONSTALL]. If present and voting, the Senator from Nebraska would vote "yea,"

and the Senator from Massachusetts would vote "nay."

The result was announced—yeas 30, nays 52, as follows:

[No. 196]

YEAS—30

Aiken	Cotton	Long, La.
Allott	Curtis	McClellan
Bennett	Dirksen	Martin
Bridges	Dworshak	Mundt
Brunsdale	Ellender	Robertson
Butler	Fong	Russell
Byrd, Va.	Goldwater	Stennis
Capehart	Hayden	Thurmond
Carlson	Hickenlooper	Wiley
Case, S. Dak.	Lausche	Williams, Del.

NAYS—52

Bartlett	Hartke	O'Mahoney
Beall	Hill	Pastore
Bible	Holland	Prouty
Bush	Humphrey	Proxmire
Cannon	Jackson	Randolph
Carroll	Javits	Schoeppel
Case, N.J.	Johnson, Tex.	Scott
Church	Johnston, S.C.	Smathers
Clark	Keating	Smith
Cooper	Kerr	Sparkman
Dodd	Kuchel	Symington
Engle	Lusk	Talmadge
Ervin	McCarthy	Williams, N.J.
Frear	Magnuson	Yarborough
Gore	Mansfield	Young, N. Dak.
Green	Morse	Young, Ohio
Gruening	Moss	
Hart	Muskie	

NOT VOTING—18

Anderson	Hennings	McGee
Byrd, W. Va.	Hruska	McNamara
Chavez	Jordan	Monroney
Douglas	Kefauver	Morton
Eastland	Kennedy	Murray
Fulbright	Long, Hawaii	Saltonstall

So the motion to recommit was rejected.

Mr. HUMPHREY. Mr. President, I move that the vote by which the motion to recommit was rejected be reconsidered.

Mr. KUCHEL. Mr. President, I move to lay on the table the motion to reconsider.

The PRESIDING OFFICER (Mr. HART in the chair). The question is on agreeing to the motion to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.
